

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E .

THE present volume has a peculiar interest in that it records the history of the closing year of the greatest of all the centuries—the century of steam, electricity, photography, and anæsthetics; of railways and telegraphs, sewing machines, typewriters, telephones, phonographs, armored ships, and smokeless powder. Many readers, on opening the volume, will naturally turn first to the article entitled “Nineteenth Century, Important Events of the,” where they will find a rapid chronological survey, showing—not, indeed, everything that has happened since the death of George Washington, but the principal significant and suggestive events. And this is supplemented by a review of the events of Queen Victoria’s long reign, which closed with the century.

Among the beneficent advances of the closing years of the century none is more worthy of note than the now widespread practice in the care of the sick of supplementing the skill of the physician with the skill of a specially educated nurse. This subject is treated fully in the present volume under the title “Nurses, Trained.” And a similar interest attaches to the growing habit of giving liberally for the endowment of charitable, religious, and educational institutions. What was done in this way in 1900 may be seen by a glance at the article “Gifts and Bequests.” Another advance of recent years is set forth in “Visual Instruction,” a subject here presented in cyclopædic form for the first time. The greatest examples of visual instruction are afforded by the world’s fairs, now so common that not many years pass without one. The beautiful exposition held in Paris in 1900 is here described, with illustrations.

At the same time, instruction by alphabetical means has progressed at its usual pace, and we present an interesting article on the public libraries of the United States, written by a veteran in the service, which is full of significant statistics, and is illustrated with portraits of some of our most eminent librarians. Our circulating libraries still show a preponderance of fiction, though the proportion of this to more solid reading is steadily decreasing; and in the book world the past year has been marked by phenomenal sales of half a dozen novels. This curious occurrence is discussed by an able critic under the title “Fiction, American.” There is also a development of education which is attained by reaching backward through the centuries and reading the monuments of vanished races. Those who take an interest in this will look at our regular article on “Archæology” and also at the special article on the “Congress of Christian Archæology.”

The regular articles on the great religious denominations, showing their growth and work in the year, are full as usual, and to them is now added the new one on “Christian Science.” Whatever any one may think of this manifestation, its believers and supporters are now so numerous and so definitely organized that it can

not be ignored by a faithful chronicler of the time. Those who are curious as to its history should read not only the article "Christian Science," but that entitled "Metaphysics, American," which also is in this volume.

The material and scientific advances are recorded in the regular articles on "Chemistry," "Metallurgy," "Physics," and "Physiology"; and the reader should look also at the special articles on "Explosives," "Steel Cars," and "Voting Machines," and perhaps at the curious array of information under "Gold Nuggets."

The notable event of the year in the United States was the presidential election, of which a full account is presented, with the platforms of all the parties that entered into the contest. The usual decennial Federal census was taken in June, and the population figures will be found in the articles on the several States, showing the population of each county. Very few of the other results of the census have been compiled, and therefore they can not be presented in this volume. From this subject we are naturally led to the Australian colonies, which have just federated themselves in a union closely modeled on that of the United States. The story of the federation, which went into effect Jan. 1, 1901, is told at length in "Australasia."

England has a new monarch, and we give a full-page portrait of him and a brief sketch of his life in the article on his kingdom. And last year England lost one of the most picturesque and original of all her authors and one of the most interesting of men—John Ruskin, of whom we present an extended biographical sketch, largely in his own words, and a beautiful portrait. Our own country lost one of its ablest statesmen and financiers in John Sherman, and the story of his life is here told by his friend and assistant secretary of the treasury, with a full-page portrait engraved for this work. There are also sketches and portraits of the new Vice-President and the new Speaker of the House of Representatives.

Among the eminent dead of the year, of whom sketches may be found in this volume, accompanied in some instances by portraits, are the actors Charles H. Hoyt, Edward S. Marble, and Frank Mayo; the artists William H. Beard, Francis B. Carpenter, Frederick E. Church, Jasper F. Cropsey, Thomas Faed, John S. Sargent, and William L. Sonntag; the authors Richard D. Blackmore, Clarence Cook, Stephen Crane, Archibald Forbes, Lucretia Hale, Richard Hovey, James Martineau, Moses Coit Tyler, and Charles Dudley Warner; the clergymen Cyrus A. Bartol, Thomas K. Beecher, A. J. F. Behrends, Edward McGlynn, Richard S. Storrs, and Richard H. Wilmer; the educators Henry Barnard, Charles F. Dunbar, Sigmund Fritchel, Burke A. Hinsdale, Joseph Jessing, George W. Northrup, Olaf Olsson, and William L. Wilson; the jurists Cushman K. Davis, William C. Endicott, and David M. Key; the naval officers John W. Philip and Montgomery Sicard; the physicians William A. Hammond, Oliver P. Hubbard, Lewis A. Sayre, Edwin O. Shakespeare, and Alfred Stillé; the scientists Frank H. Cushing, Thomas Egleston, James E. Keeler, St. George Mivart, and Fairman Rogers; the soldiers William W. Averell, Zenas R. Bliss, Gustave P. Cluseret, Jacob D. Cox, Petrus Joubert, Emerson H. Liscum, and John G. Parke; the statesmen Count Benedetti, John A. Bingham, Paul Falk, John J. Ingalls, Edward John Phelps, and the Duke of Argyll; the capitalists Collis P. Huntington and Henry Villard; the journalist Oswald Ottendorfer, the circus performer Dan Rice, the chess player William Steinitz, and King Humbert of Italy.

The illustrations include two colored plates, four full-page pictures in black and white, and an unusual number in the text.

The volume closes with an index covering this and the four that preceded it.

NEW YORK, April 4, 1901.

CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopædia are the following:

- Oscar Fay Adams,**
Author of A Dictionary of American Authors, etc.
BARTOL, CYRUS AUGUSTUS,
BLACKMORE, RICHARD DODDRIDGE,
CRANE, STEPHEN,
MARTINEAU, JAMES,
MULHALL, MICHAEL GEORGE,
MAX MÜLLER, FRIEDRICH,
RUSSELL, HENRY,
TYLER, MOSES COIT,
and other articles.

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa, known also as Ethiopia. The ruler, whose title is Negus Negusti, meaning King of Kings, is Menelek II, originally King of Shoa, who established himself on the throne with the aid of arms and munitions furnished by the Italians after Johannes II, his predecessor, had been slain in a battle with the dervishes. He signed a treaty at Ucciali on May 2, 1889, under which Italy claimed a protectorate over all Abyssinia as well as sovereignty in the territories north of Tigre and inland from Massowah, which before the

ritory all the country north of the Mareb, Balesa, and Muna rivers.

Ethiopia proper comprises the kingdoms of Tigre, Amhara, with Gojam, and the powerful kingdom of Shoa. The dependencies extend into Somaliland as far as Harrar, and to the west and southwest the present Negus has made efforts to establish his dominion over the Gallas and the tribes beyond to the borders of the already occupied parts of British East Africa and to the White Nile.

The area of the empire is estimated at 150,000

ADNA, CAPITAL OF TIGRE.

Italian occupation were dependencies of Abyssinia. The protectorate was denied by Menelek, whose troops, on March 1, 1896, defeated at Adowa an Italian army that invaded Tigre and Amhara, and on Oct. 26, 1896, through the mediation of Russia, a new treaty was signed at Adis Abeba, by which Italy renounced the protectorate over Abyssinia, and Menelek recognized as Italian ter-

square miles, the population at 3,500,000. The Negus has a regular army of about 150,000 men stationed in garrisons in various parts of the country, supplemented by irregular forces and territorial levies.

The Abyssinians are Christians of the Alexandrian rite, whose ecclesiastical chief, called the *abuna*, is always a Copt, appointed by the Alex-

andrian patriarch. The *echeqeh*, who presides over the monastic establishments, which contain about 12,000 monks, possesses more real authority. Jewish ceremonies, survivals of an early conversion to Judaism, are mingled with the Christian rites. The ruling caste shows an admixture of Hebrew and Arab blood.

The natives raise cattle, goats, and sheep in great numbers. Tillage is not much practiced, although the soil is fertile. Sugar and cotton are easily grown, and the vine and the date palm thrive, while the coffee plant is a native of the country. The chief products for export are hides and skins, civet, coffee, and wax. Gold and ivory are royal monopolies. Barley, millet, and wheat are raised for domestic consumption. The chief imports are cotton goods of English, American, and Indian manufacture, wool and woolen goods, cutlery, and matches. The Maria Theresa dollar has been the current coin for more than a century, and Menelek has had pieces of the same weight coined with his own effigies. The most populous town is Ankober, in Shoa, with 7,000 inhabitants. The French are building a railroad from Jiboutil to Harrar, to which place a telegraph has been erected from Adis Abeba, the present residence of the Negus. As the result of negotiations that have been in progress since 1891 the French minister to Rome, M. Barrère, and the Italian Minister of Foreign Affairs, the Marquis Visconti Venosta, signed on Jan. 24 a protocol delimiting the French and Italian possessions on the Red Sea littoral. The frontier line, starting from the extremity of Ras Dumeira, follows the water parting for some distance inland, and then turns in a southwesterly direction so as to leave within Italian territory the caravan routes leading to Assab, in Aussa. The contracting parties leave for future settlement the question of the small islands opposite Ras Dumeira, both undertaking to oppose any attempt of other powers to occupy the islands. Capt. Ciccodicola, the Italian resident at Adis Abeba, came to a settlement of the Italo-Abyssinian boundary question with the Emperor Menelek, who agreed to the retention of the Mareb, Belesa, and Muna line, thus sanctioning the Italian possession of a considerable portion of the Abyssinian plateau. The Abyssinian frontier along the British possessions in East Africa has been strengthened by the occupation and administration of the country bordering on the equatorial provinces and on Lake Rudolph by Europeans in the employ of Menelek, led by Capt. Leontieff, a Russian, who with a force of Senegalese soldiers erected forts at the principal strategic points. The Mohammedan tribes in Ogadayn, roused by a so-called Mahdi, rebelled, but were routed, on March 19, at Digdiga, with a loss of nearly 3,000 men, by Benti, the Governor of Harrar, who lost only 21 killed and wounded. The prompt arrival of re-enforcements from the Negus further checked the rising and prevented it from extending into Somaliland.

AFGHANISTAN, a monarchy in central Asia, lying between Russian Turkestan and British India. The ruler, or Ameer, is Abdurrahman Khan, who was placed on the throne in 1880 by the British after they had occupied Cabul, the capital, and driven out Yakub Khan, the son of Shere Ali, the preceding Ameer. The Indian Government has since paid an annual subsidy, first 1,200,000 rupees, and in 1893 increased to 1,800,000 rupees, to enable Abdurrahman to consolidate his power and preserve a strong, united, and independent Afghanistan as a buffer state between the Russian dominions and India. The military forces of the Ameer consist of the feudal militia and his

regular army of about 20,000 men. The artillery has 76 modern guns, and in the arsenal at Cabul are manufactured gunpowder, cartridges, rifles, and cannon with modern machinery. The boundary between Russian and Afghan territory starts at a point in the Kwaja Amran range, runs first westward to the peak of Kohimalik Siuh, southwest of the Helmund, thence northward to Zulfi-kar, on the Heri Rud, thence northeastward to Khamiab, on the Oxus; this river it follows up, and the Panjah, its longer, southern branch, to Lake Victoria, from which it runs eastward to a point in the Sarikol mountains, which form the boundary of Chinese Turkestan. The boundary between Afghanistan and India as finally demarcated leaves Chitral, Bajaur, and Swat within the British sphere and Waziristan in the east, while Afghanistan retains Kaftristan and Asmar, with the Kunar valley. The area of the Ameer's dominions is estimated at 215,400 square miles. The population is about 4,000,000. The taxes, levied in kind, are from a tenth to a third of the produce, according to the benefit derived from irrigation. The revenue, estimated under a former Ameer at \$3,600,000, is subject to fluctuations. The cultivators raise wheat, barley, beans, peas, etc., as a winter crop and plant rice, millet, or maize in the summer. Fruits are abundant and fine, and are the principal food of the people. Preserved fruits are exported to India. Other exports are nuts, asafoetida, madder, castor oil, carpets, and other manufactures of wool and camels' hair, felt, silk, postins, or sheepskin coats, tobacco, cattle, hides, and rosaries. The chief imports are cotton goods, indigo and other dyes, sugar, and Chinese tea. The trade is with British India and with Bokhara and Russian Turkestan, but there are no statistics of the amount.

At the beginning of the year a detachment of Russian troops arrived at Kushk, the terminus of the Russian railroad to the Afghan frontier, having been only a week on the journey from Tiflis. The sending of re-enforcements to the new fortress at Kushk was regarded as a menace to Herat. All the materials for a siege train to be held in readiness for a rapid advance to Herat were accumulated at Kushk. The demonstration was intended, perhaps, as a warning to England not to extend the Indian frontier, an advance beyond the Raskem mountains north of Kashmir having been contemplated.

The attitude of the Ameer toward Great Britain since the conquest of the Afghan tribes on the northwest frontier of India, while outwardly friendly, has been far from cordial, and by commercial regulations he has endeavored to isolate Afghanistan from India as far as possible. By the imposition of heavy duties and prohibitory regulations he almost extinguished the trade with India by Dakka and the Khaiber pass. In 1900 he created a monopoly in postins, asafoetida, almonds, and pomegranates, having already prohibited the export of horses and mules and the import of Indian salt. The tax on the exportation of sheep was placed so high that the number sent to India fell from 16,000 to 6,000 in the first year. To the representations addressed to him by the Indian Government Abdurrahman paid no attention. The Englishmen who were formerly in his service he has dismissed one after another, and the factories and arsenals go on without them. His political relations with Russia were not more intimate than before, though trade with Asiatic Russia was not checked by artificial barriers as was the Indian trade. Since the Afridi campaign the Ameer has devoted himself to increasing the efficiency of his regular army. More regiments

have been raised and a reserve has been started. The export of grain has been rigorously prohibited, and large military granaries have been built and filled at Cabul, Candahar, and Herat. The transport arrangements have been completed by the purchase of many thousand horses so as to place the army on a war footing. The troops are well armed with breechloaders, several thousands with magazine rifles.

AFRICA, SOUTHERN, COLONIES IN. The Cape of Good Hope, which was first settled by the Dutch and the Huguenots in the seventeenth century, was taken from the Netherlands by the British in 1806 and was formally ceded to Great Britain in 1815. Many descendants of the original settlers who were unwilling to accept British rule migrated in 1834 and 1835, and beyond the Great Fish river, which was then the eastern boundary, founded an independent commonwealth in Natal; others crossed the Orange river, which had been declared the extreme northern boundary of the British possessions, and in 1837 established the settlements that were declared independent and organized into the Orange Free State, which was recognized by Great Britain in 1854. In the meantime Great Britain annexed the Natal settlements, whereupon a majority of the Boer colonists abandoned their farms and, joining others who had settled on the farther side of the Vaal river, established in 1849 the new commonwealth called the Transvaal Republic, whose independence was acknowledged by the British Government in 1852. Natal was separated from Cape Colony and erected into a colony in 1856. British Kaffraria was incorporated in Cape Colony in 1865, and Tembuland, East Griqualand, and the Transkei territories were annexed in later years; also the harbor of Walfisch Bay, on the southwest coast. Griqualand West, originally a part of the Orange Free State, was annexed by Great Britain as a result of the discovery of diamond mines in the vicinity of Kimberley, and it also now forms an integral part of the colony of the Cape of Good Hope. Basutoland was annexed to Cape Colony in 1871, but after the Basuto war it was detached and made a direct dependency of the Crown in 1884. In that year Germany declared a protectorate on the southwest coast of Africa over Damaraland, extending from Cape Frio, the southernmost point of Portuguese West Africa, to Walfisch Bay, and over Namaqualand, extending from Walfisch Bay southward to the Orange river, which forms the northern boundary of Cape Colony. Great Britain occupied the South African or Transvaal Republic in 1877 in consequence of internal dissensions among the burghers. They rebelled in 1880, expelled the British officials and drove out the garrison, defeated the first detachment of troops that were sent against them, and a new Government in England, presided over by Mr. Gladstone, made peace in 1881 on the basis of the restoration of their independence in internal affairs, reserving the suzerainty of the Queen, including the right to maintain a British resident, the representation of the Transvaal Republic in its foreign relations, the right to move troops through the country, etc. In 1884 a new convention was signed in London, from which the word suzerainty was omitted, the old name of South African Republic was recognized once more, the British resident gave place to a diplomatic agent, and the only right reserved by Great Britain was that of vetoing any treaty made by the South African Republic with foreign powers or with native tribes, six months being allowed for the British Government to approve or disapprove. Zululand was made a protectorate of Great Britain and a part

incorporated in the colony of Natal in 1880, and in 1897 the rest of Zululand was annexed to Natal. A part of Bechuanaland was occupied by British troops in 1884 and after the forcible expulsion of Boers from the Transvaal, who had proclaimed the independent republic of Stellaland, with its capital at Vryburg. In 1885 a British protectorate was declared over independent Bechuanaland, the country still ruled by Chief Khama. In the east British control was established over Zululand after the Zulu war of 1879. A portion next to the Natal border was set apart as a reserve for loyal Zulus who had aided the British in the war; the rest was restored to Cetewayo in 1883, but in 1887 about two thirds of this territory, together with the Zulu reserve, was formally declared British territory and placed under the administration of the Governor of Natal, and in 1897 the whole of Zululand and British Amatongaland were incorporated in Natal. A new republic founded by Boer trekkers in Zululand was subsequently incorporated as the district of Vryheid in the South African Republic with the assent of Great Britain. By the convention of 1890 a part of Swaziland also was added to the South African Republic. All the territories north of the Transvaal, including Matabeleland, ruled by King Lobengula, with the neighboring country of Mashonaland and the territory inhabited by the Makalakas and other vassals of Lobengula, comprising all the region north of 22° of south latitude, east of 20° of east longitude, and west of the Portuguese district of Sofala, were declared to be within the British sphere of influence. In 1889 a royal charter was granted to the British South Africa Company, which was authorized to organize an administration for these territories, known collectively as British South Africa or, subsequently, Rhodesia, from the name of Cecil Rhodes, founder of the company. The company was empowered to take also under its administration, subject to the approval of the Imperial Government, the regions north of the Bechuanaland protectorate and the Kalihari region west of it, as far as the German boundary. Portugal originally claimed, by virtue of early conquests and continuous occupation more or less effective, both banks of the Zambesi river, from its mouth up to its source, and the country still farther west, reaching to the Portuguese possessions on the west coast—a continuous zone extending across the whole of Africa from Mozambique to Angola. Yielding, under threat of war, to superior force, the Portuguese Government in 1891 agreed to recognize as a British protectorate these regions known later as British South Africa and British Central Africa, or Zambesi, including Matabeleland, Mashonaland, and the Manica plateau south of the Zambesi, and north of that river the Barotse kingdom, and all other regions as far north as the boundary of the Congo Free State. The Shire highlands and the Nyassa region, where British missionaries already were active, were included, and this district, which had been declared to lie within the British sphere in 1889, were now proclaimed a British protectorate separate from British Central Africa, or Northern Zambesia, over which the British Government extended the administrative authority and commercial privileges of the British South Africa Company. Pondoland was annexed to Cape Colony in 1894, and in 1895 the Crown colony of British Bechuanaland was also handed over to the colonial administration.

Cape Colony.—The colony of the Cape of Good Hope has possessed responsible government since 1872. The legislative power is vested in a Legislative Council of 23 members elected for seven years and a Legislative Assembly of 79 members

elected for five years. The franchise is possessed by all adult males able to register their names, addresses, and occupations, and further qualified by the occupation of house property of the value of £75 or the receipt of a salary of £50 or more per annum.

The Governor is Sir Alfred Milner, appointed in 1898. The Cabinet at the beginning of 1900 was composed of the following members: Prime Minister and Colonial Secretary, W. P. Schreiner; Treasurer, J. X. Merriam; Attorney-General, R. Solomon; Commissioner of Public Works, J. W. Sauer; Secretary for Agriculture, A. J. Herholdt; without portfolio, Dr. Te Water.

Area and Population.—The area of the colony, including Griqualand West, East Griqualand, Tembuland, Transkei, and Walfisch Bay, is 221,311 square miles, with a population at the census of 1891 of 1,527,224. The white population was 376,987; colored, 1,150,237. Pondoland, with an area of 4,040 square miles, had in 1894 a population of 188,000; British Bechuanaland, with an area of 51,424 square miles, had in 1891 a population of 72,736, of whom 5,211 were whites. Cape Town had 51,251 inhabitants; including suburbs, 83,718. The number of marriages in Cape Colony in 1898 was 8,709; of births, 15,340 Europeans and 37,864 colored; of deaths, 6,936 Europeans and 34,031 others; excess of births, 8,404 Europeans and 3,833 others. The number of arrivals from over sea in 1898 was 28,513; departures, 20,638.

Finances.—The revenue of the colony for the year ending June 30, 1898, was £7,212,225 from all sources. Of the total £2,318,190 came from taxation, £3,695,199 from services, £336,953 from the colonial estate, £186,133 from fines, stores issued, etc., and £675,750 from loans. The total expenditure was £8,431,398, of which £1,248,700 went for interest and sinking fund of the public debt, £2,058,587 for railroads, £435,338 for defense, £534,896 for police and jails, £176,210 for the civil establishment, and £1,349,143 under loan acts. The expenditure for the year ending June 30, 1900, was estimated at £6,664,044.

The budget statement of Sir Gordon Sprigg showed a deficit of only £69,000 in the accounts for the year ending June 30, 1900, the late Government having reduced expenditure on having its proposed income tax rejected. For the next year the revenue was estimated at £7,252,000, and expenditure at £7,225,000, not including £2,582,000 of permanent expenditure on harbor works, rolling stock, irrigation, and local loans to be raised by borrowing.

The public debt on Jan. 1, 1899, amounted to £28,383,922, including £3,106,477 of guaranteed loans for harbor boards and other corporate bodies.

Commerce and Production.—The crop of wheat in 1898 was 1,950,831 bushels; of oats, 1,447,353 bushels; of tobacco, 3,934,277 pounds; of mealies, 2,060,742 bushels; the production of wine, 4,861,056 gallons; of brandy, 1,387,392 gallons; of raisins, 2,577,909 pounds. The number of fruit trees in the colony, including peach, apricot, apple, pear, plum, fig, lemon, orange, and naartje, was 4,195,624. The number of cattle was 1,201,522; of horses, 382,610; of mules and donkeys, 85,060; of sheep, 12,616,883; of goats, 5,316,767; of hogs, 239,451; of ostriches, 267,693. The wool product was 8,115,370 pounds; the product of mohair, 8,115,370 pounds; of ostrich feathers, 294,733 pounds; of butter, 2,623,329 pounds; of cheese, 36,729 pounds. The total value of imports in 1898 was £16,682,438, of which £15,261,949 represent merchandise and £1,420,489 specie. The exports of colonial produce were £24,112,483; the total exports £25,318,701 in value. The chief

exports of colonial produce were gold of the value of £15,394,442; diamonds, £4,566,897; wool, £1,766,740; ostrich feathers, £748,565; mohair, £647,548; hides and skins, £548,478; copper ore, £262,830; cereals, £18,602; wine, £15,043. The largest classes of imports were textiles and apparel for £4,367,027 and food and drinks for £3,791,849. Of the total imports £11,443,178 came from Great Britain, £1,048,126 from British possessions, and £4,130,050 from foreign countries. Of the total exports £23,969,425 went to Great Britain, £113,080 to British possessions, and £340,908 to foreign countries.

The beginning of the war in South Africa was followed by a serious interruption to the normal movement of commerce in the British colonies as well as in the Boer republics, of which Cape Colony is the principal outlet. The Boers and their sons had to go on commando, leaving a great part of the abundant crops to perish in the ground. In Cape Colony the call for volunteers and the disorganization caused by invasion or by the fear of invasion led to the same results, although in a less degree. By the end of 1899 there was a heavy fall in the principal exports and general depression was felt in trade. Later the war began to create an immense trade of its own, and exports of most products were stimulated, including mohair, ostrich feathers, copper ore, and sheepskins, the amount of increase over 1898 being £834,000. The export of diamonds, however, was much diminished, showing a loss of £1,579,000, and there was a reduction in the wool export, so that the total value of exports for the year showed a decrease of £1,176,000. The provisioning of the British troops more than supplied the loss on the side of imports caused by the stoppage of the trade in timber and mining machinery from the United States and the other requirements of ordinary times, which is destined to grow in a rapid ratio after the return of normal conditions. Australia and New Zealand furnished a large proportion of the frozen meat and butter required to feed the British forces. Australia sent 3,000 tons of corn beef before January, 1900, and, the supply becoming exhausted, 1,000 tons were ordered in the United States. The supply of cattle on the hoof in South Africa proving insufficient, cargoes were brought from the Argentine Republic, which also sent cavalry horses. Horses were bought in the United States also and in Hungary, the English horses having been found too heavy and not sufficiently hardy. Mules for transport were bought in the United States. The oats of the British Islands were too tender and unfit to stand the climate, and preference was given to Russian oats, and after them to American oats and what could be got from New Zealand. Canada supplied compressed vegetables and 3,000 tons of hay, and thousands of tons of oat hay came from Australia and alfalfa from the Argentine Republic. Canned meats could not be supplied in sufficient quantities by American packers, but 2,000 tons that were shipped from England were American cans rebranded.

Navigation.—The number of vessels entered at all ports during 1898 was 1,045, of 2,812,966 tons, of which 720, of 2,445,572 tons, were British; the number cleared was 1,065, of 2,789,989 tons, of which 720, of 2,401,772 tons, were British. In the coasting trade 1,288, of 3,897,088 tons, were entered and 1,293, of 3,927,311 tons, were cleared. The shipping belonging to the colony on Jan. 1, 1899, comprised 28 steamers, of 4,023 tons, and 7 sailing vessels, of 4,513 tons.

Railroads, Posts, and Telegraphs.—The railroads belonging to the Government had on Jan. 1,

1899, a total length of 1,990 miles, not including 350 miles not yet completed. Of private railroads there were 358 miles. The cost of the Government lines was £20,222,263, an average of £10,162 a mile. The receipts for 1898 were £2,953,000; expenses, £2,012,390. The number of passengers carried was £10,013,432; tons of freight, 1,507,600.

The postal traffic in 1898 was 23,339,379 letters, 9,862,080 newspapers, 750,568 postal cards, 2,303,400 books and samples, and 525,660 parcels.

The length of telegraph lines on Jan. 1, 1899, was 7,224 miles. The number of dispatches in 1898 was 2,321,082; receipts, £143,438; expenses, £132,867.

The Cape Rebels.—The invasion of Cape Colony by Republican commandos was followed in the districts bordering on the Orange river and those north of that river by the adhesion of a large proportion of the inhabitants. Whenever a commando entered a town the Free State flag was hoisted, a meeting was held in the courthouse or the market place, and a proclamation was read annexing the district. The commandant then made a speech, in which he explained to the people that the people must thenceforward obey the Free State laws, though for the present they would be under martial law. A local *landroest* was appointed, and those who refused to accept Republican rule were given a few days in which to leave the district. Their property was often commandeered, and those who stayed were commandeered themselves besides giving up whatever of their possessions were required for military purposes, and were compelled to join the Boer commandos. Some thousands of Cape Colonists became burghers of the South African Republic, and joined the Transvaal army immediately before or just after the outbreak of hostilities. When the Free State commandos encamped on their own side of the Orange river preparatory to their invasion of Cape Colony other thousands from the northern and western districts joined them. And when they crossed the river and proclaimed the annexation of the northern part of the colony they were augmented by at least their own numbers of colonial Boers and sympathizers. In Vryburg, Barkly West, and other districts north of the Orange river as many colonists volunteered in the Transvaal and Orange Free State commandos as in the older parts of Cape Colony. Sir Alfred Milner calculated that in January, 1900, more than 10,000 Cape Colonists were fighting against the British, and the rebellion had not yet reached its height. It broke out spontaneously in places where no Boer commandos had appeared, and was spreading secretly when a vigilant military police, aided by loyal colonists, put a stop to the movement in the districts still in British occupation. When the invasion of the Free State by Lord Roberts drew away most of the burghers for the defense of their own soil, and when the British occupation of Bloemfontein convinced the majority of the rebellious colonists of the hopelessness of the Boer cause and the gradual reconquest of the annexed districts by the British forces rendered them powerless to serve the cause further in Cape Colony, the bulk of them returned quietly to their homes or made their submission, and only a comparatively few ardent ones marched northward with the retreating Boer columns. The question of the treatment to be extended to those who had borne arms against the Queen or given active aid to the enemy seemed one of vital importance to the Cape ministers, and it was one that could not be solved without the concurrence of the imperial authorities. They submitted a minute, which Sir Alfred Milner forwarded on April 28,

proposing the appointment of a judicial commission, comprising two judges of the Supreme Court and a barrister acceptable to the Secretary of State, for the trial of persons implicated in the rebellion, the commission to be vested with the powers of both judge and jury and to decide on a verdict by a majority vote. A few days later they sent an appeal for clemency for all except the principal offenders, whose trials would mark the magnitude of their offense, and whose punishment would serve as a deterrent, pointing out that the insurrection was a consequence of invasion and generally subsided as soon as the invading force was withdrawn, and that it was accompanied with few, if any, cases of outrage or murder and no great destruction of private property. The interests of sound policy and public morality demanded, instead of a general proscription of the misguided men who joined the ranks of the rebels, that the Imperial Government should issue as an act of grace a proclamation of amnesty for all persons chargeable for high treason except the leaders selected for trial. The agitation and unrest prevailing in the colony was due to uncertainty regarding their fate, and the future well-being of the colony depended on a policy of well-considered clemency, which would have the best possible effect on the loyal majority of the Dutch population, which had shown commendable self-restraint, and would help to unite the white races, between which harmony was a necessity in view of the large and increasing barbarian population. The rebellion was of a milder type than the one in Lower Canada, where moderation was adopted with the happiest results in 1838. Mr. Chamberlain, in his reply, argued that amnesty would place rebels in a better position than those who have risked life and property in the determination to remain loyal, and while sympathizing with a policy of clemency to rebels he held justice to loyalists to be an obligation of duty and honor, and that it was necessary in the interests of future peace to show that rebellion can not be indulged in with impunity or prove profitable to the rebel even if unsuccessful. Even those who were tools of others who had deceived them should learn individually that rebellion is a punishable offense. He distinguished between different categories of rebels: ringleaders and promoters; those who have committed outrages or looted property; those who have committed acts contrary to the usages of civilized warfare, such as abuse of the white flag, firing on hospitals, etc.; those who have openly and willingly waged war against the imperial forces; those who have confined themselves to aiding the enemy by giving information or furnishing provisions; and those who can prove that they have acted under compulsion. Recognizing the difficulty of indicting for high treason all who had taken part in the rebellion, he suggested the expediency of investigating either the proposed judicial commission or a separate commission with powers to schedule the names of persons implicated in the rebellion under these various heads: the first three categories to be tried for high treason before the judicial commission, the fourth and fifth to be fined and disfranchised on pleading guilty, and the last to be merely disfranchised. The Secretary of State would not consider the Canadian rebellion a precedent because it was a rising in time of peace for the remedy of grievances and was not a formidable affair, whereas the Cape Colonists had gone over to the Queen's enemies and entailed danger and heavy losses on the troops. As to the duration of disfranchisement, he proposed that it should be for life. Mr. Chamberlain did not wait for the full text of the proposals of

the Cape ministers, but on receiving the telegraph summary made known at once the uncompromising policy of the Imperial Government. Not one of the ministers was willing to submit to the Cape Parliament a measure of the character demanded by the Secretary of State. Premier Schreiner and Attorney-General Solomon were willing to disfranchise the rebels for five years and compensate the loyalists for their losses, but they could not get any of their colleagues nor more than half a score of their followers even to agree to that measure of punishment for any except ringleaders. The Afrikaner Bond was willing to accept a bill indemnifying the Government and the military authorities for acts committed under martial law and to grant compensation for property commandeered by the Boers, but only on condition of a full amnesty to the rebels who furnished a guarantee of good behavior. Ministers Merriman, Sauer, and Te Water vehemently opposed the Premier's proposed compromise, and saw no ground for punishing men for taking up arms in what they considered a righteous war. The deadlock in the Cabinet could not be broken. Mr. Schreiner, who before the war incurred the animosity of the English party through his efforts to bring about an understanding and preserve the peace of South Africa, had during the progress of the war given deep offense to the more earnest Afrikaners by countersigning the proclamations of the High Commissioner, in taking off the meat duties for the particular benefit of the refugee Uitlanders and to the detriment of the colonial producers, and for recruiting bodies of troops in the colony to fight on the British side, and especially for raising native levies in the native reserves. Mr. Solomon offended the majority of the supporters of the ministry when, instead of interfering to secure the constitutional rights of citizens who fell into the hands of the military, he gave full consent to the operations of martial law. Some of the acts of the military tribunals seemed monstrous to the Afrikaners, and the prospect of obtaining a bill of indemnity ratifying the acts done and sentences passed during the period of martial law was not promising. The courts-martial had sentenced men to do convict labor for five or ten years in districts where they had been held in honor and had sanctioned the looting of homesteads and farms on the ground that it was the property of rebels. Boer farmers were arrested wholesale, herded together for weeks in noisome cells, and finally released for want of evidence. The evidence of Kaffirs was taken against their masters. The secretary and other members of the South African League and some of the Johannesburg reformers went into the rebel districts as they were reoccupied and took the lead in the investigations, a volunteer committee for what the Dutch called smelling out rebels. No sentence or act of military courts or military officers, if justified only by martial law, is legal according to English law, and officers who carry out the decrees of military tribunals are liable to prosecution for wrongful assault or illegal detention unless the proceedings are ratified by a special act of the Legislature. The Dutch colonists regarded many of the sentences and acts of confiscation to which their kinsfolk were subjected as barbarous, and wished to preserve for them the right of appeal. The charges of treason brought against many members of the Cape Parliament reduced the Bond majority in the Assembly to only 4 votes. Mr. Schreiner attempted to form a coalition ministry, having the assistance of Mr. Rose-Inness, who urged the Progressives to support Mr. Schreiner in a policy of moderation and conciliation, giving the special

tribunal full discretion in punishing the ringleaders, but subjecting the others to only temporary disfranchisement. The South African League, which controlled the Progressive party, would not consent to a coalition with the moderate members of the Bond, and the Progressive leaders, expecting a speedy termination of the war, were willing to accept the responsibilities of office, since the support or even the abstention of Mr. Schreiner's handful of followers would give them a majority to start with. On June 13 Mr. Schreiner, seeing the attitude of the Progressives and the impossibility of his forming a coalition Cabinet and hoping that Mr. Rose-Inness could form one, instead of accepting the resignation of the dissentient ministers and endeavoring to reconstruct his Cabinet by the inclusion of moderate Progressives, placed the collective resignation of the ministry in the Governor's hands. Mr. Schreiner, although the parliamentary leader of the Bond party, never identified himself with the principles of the Bond. As the war progressed he co-operated more heartily with Sir Alfred Milner, his chief anxiety having been throughout to save the colony from civil war. A conciliation movement that was started by the Bond after the capture of Cronje at Paardeberg left little doubt of the ultimate defeat of the republics, which had for its objects the preservation of the independence of the republics and immunity for all who had taken part in the rebellion, received no countenance from Mr. Schreiner nor from Mr. Solomon, who proposed to appoint a judicial commission to visit the rebel districts and put the rebels on trial. At a conciliation congress at Graaff Reinet the Bond leaders demanded the unqualified independence of the republics, a permanent arbitration treaty, and the withdrawal of British troops from South Africa. This led to Mr. Schreiner's convoking a conference of the party, at which his policy was condemned by three fourths of the delegates. The resignation of the ministry followed necessarily this action of the caucus.

Sir Alfred Milner accepted Mr. Schreiner's resignation and called on Sir Gordon Sprigg to form a ministry. The Progressive leader first proposed to Mr. Solomon that he should continue in the office of Attorney-General, but it was finally decided that he should form a purely Progressive ministry. In this he succeeded, and on June 18 the new Cabinet was announced as follows: Premier and Treasurer, Sir J. Gordon Sprigg; Colonial Secretary, T. L. Graham; Attorney-General, J. Rose-Inness; Commissioner of Public Works, Dr. Smartt; Secretary for Agriculture, Sir Pieter H. Faure; without portfolio, J. Frost. The chief task of the new ministry, that of framing the laws dealing with the rebels, was thus given to Mr. Rose-Inness, who enjoyed the confidence of the moderate Afrikaners. Even after deducting the members of the Bond party who were in prison on charges of treason or had escaped from South Africa the Progressives were in a minority of 5. Parliament was opened on July 20. The Attorney-General brought in a comprehensive bill for the indemnification of acts done in good faith under martial law, and confirming the sentences of the military tribunals for the punishment of rebels, and for the compensation of loyalists who had sustained direct losses during the war through military operations or the acts of the enemy or of rebels. The new Cabinet had adopted Mr. Solomon's measures just as he had drafted them. The special tribunal with the powers of a judge and the functions of a jury was to try only ringleaders. The sentence of disfranchisement was to be pronounced by commissions with quasi-judicial

powers, and not against any who could prove that they had gone into the rebel ranks under compulsion. The procedure of the commissions was to cite all who had delivered up their arms or who were denounced as rebels and pronounce them disqualified from voting or holding office for five years unless they appeared in court and proved their innocence. The Attorney-General was empowered to indict before the special court after preliminary investigation by the military authorities, without requiring that preparatory examinations should be taken in the usual manner; but if satisfied that the investigation was insufficient he could direct a supplementary investigation. The court could impose any penalty that a judge of the Supreme Court was entitled to impose for high treason. Its object was the trial and punishment only of those rebels who had been ringleaders in instigating rebellion or who were sufficiently influential in their districts to have seriously encouraged rebellion by their example. Martial law had already been suspended in three districts when Mr. Merriman offered a resolution for its general repeal on the ground that its continuance after the termination of armed resistance and the reopening of the civil courts was contrary to the inherent rights of British subjects. He described the rule of martial law in Cape Colony as a reign of terror, and said that the districts which had been occupied by the enemy were now overrun by informers who from political motives were anxious to proscribe the entire Dutch population. When the resolution was toned down by an amendment into a form which Mr. Schreiner and his followers felt constrained to approve, calling for the repeal of martial law in districts where armed resistance had ceased or where it was not indispensable for the success of the imperial forces, Sir Gordon Sprigg, while declaring that the Government could not accept the amendment any more than the original resolution, said that it would not consider a defeat on the amendment as in any way implying that it had not got the confidence of the house. Its adoption, therefore, did not upset the ministry, which carried through the treason bill after a long debate. Dr. Jameson sat in the Assembly as a member for Kimberley, and Gen. Brabant, whose cavalry had done more than the British troops to turn back the tide of rebellion, was there to defend the actions of his partisan troopers. Cape Colony raised altogether 24,000 volunteers to fight on the British side, more than all the other colonies combined. The act to punish rebels, compensate loyalists, and ratify martial law was the only legislative measure of the session. Mr. Schreiner explained that his ministry had not demanded amnesty, as that was the prerogative of the Crown, and that the Imperial Government had modified its first proposals at the suggestion of the ministers. He offered an amendment, which was carried, enabling the Governor to proclaim an amnesty at any time within five years if it were sanctioned by the Crown and by the Cape Parliament. The rebels themselves were generally willing to accept disfranchisement when it saved them from going to prison, but the Bond politicians asserted that it would make of South Africa a second Ireland instead of a Canada; that the disfranchisement of 10,000 citizens would perpetuate racial feeling and the animosities of the war.

Basutoland.—The Basutos, whose country lies between Cape Colony, the eastern part of the Orange Free State, and Natal, are governed by a Resident Commissioner, Sir G. Y. Lagden, under the direction of the High Commissioner for South Africa. The area is 10,293 square miles, with an

estimated population of 250,000. The natives raise sheep, horses, and cattle and grow mealies, wheat, and Kaffir corn. The imports in 1898 were £100,280 in value, and exports £138,500. The revenue, raised by a hut tax of 10s., the sale of licenses, and a contribution from the Cape Government of £18,000, amounted in 1899 to £46,847; expenditure, £46,417.

Bechuanaland Protectorate.—The Bamangwato under Chief Khama, the Bakhatla under Lenchwe, the Bangwaketse under Bathoen, the Bakwena under Sebele, and the Bamaliti under Ikaneng have been governed since 1895 by a Resident Commissioner, Major H. J. Goold Adams. The area of the protectorate is 213,000 square miles, with a population estimated at 200,000.

Natal.—The colony of Natal has had a modified form of responsible government since 1893. The Legislative Assembly contains 39 members, including 1 from Zululand, elected under a property qualification for four years. The Legislative Council contains 12 members, including 1 from Zululand, appointed by the Governor for ten years. The Governor at the beginning of 1900 was Sir Walter Francis Hely-Hutchinson. The ministry, constituted on June 9, 1899, contained the following members: Premier and Minister of Lands and Works, Lieut.-Col. A. H. Hime; Attorney-General and Minister of Education, H. Bale; Secretary for Native Affairs, F. R. Moor; Colonial Secretary, C. J. Smythe; Treasurer, W. Arbuckle; Minister of Agriculture, H. D. Winter. Money bills must be first introduced in the Assembly, and may be rejected but not amended by the Council; but, unless recommended by the Governor, no money bill can become law during the session in which it is passed. The assent of the Governor is required to all legislation, and under certain conditions this may be revoked within two years.

Area and Population.—The area of the colony, including that part of Zululand that has been annexed, is estimated to be 35,019 square miles. In a total population of 902,365 there are only 60,000 whites, in part the descendants of the early Boer settlers, but mainly of British origin or extraction. Labor is performed by natives and by imported Indian coolies.

Finances.—The revenue for the year ending June 30, 1898, was £1,964,315; expenditure, £1,812,318. The chief items of revenue were £1,000,323 from railroads, £383,813 from customs, £21,893 from excise duties, £39,094 from sales of land, £25,625 from telegraphs, £32,428 from stamps and licenses, and £129,596 from the native hut tax. The chief items of expenditure were £538,356 for railroads, £92,947 for public works, and £61,054 for defense, besides £607,464 from loans. The public debt on June 30, 1898, amounted to £8,019,143.

Commerce and Production.—The chief cultivated commercial crop is sugar, of which 581,533 hundredweight were produced in 1898. Tea is also grown for export, the crop in 1898 amounting to 1,037,500 pounds. Europeans had 157,370 acres under cultivation in 1898, natives 360,232 acres, and Indians 24,725 acres. Europeans owned 155,456 cattle, 98,510 goats, 543,619 sheep, and 32,771 horses; natives possessed 122,077 cattle, 351,528 goats, 56,403 sheep, and 24,611 horses. The coal raised in 1898 amounted to 387,811 tons.

The total value of imports in 1898 was £5,323,216, about 70 per cent. coming from Great Britain. The value of exports was £1,246,000, of which 68 per cent. went to Great Britain. Of imports, clothing amounted to £368,072; haberdashery, £492,618; flour and grain, £368,101; iron manufactures, £539,046; leather manufac-

tures, £246,054; cotton goods, £116,677; woollens, £85,673; machinery, £306,035; wines and liquors, £166,741. Of the exports the chief articles in value were wool for £565,479, hides and skins for £184,850, coal for £125,666, gold for £40,635, mohair for £36,545, and bark for £30,929.

Navigation.—The number of vessels entered during 1898 was 690, of 1,264,591 tons; cleared, 687 vessels, of 1,264,591 tons.

The shipping registered in the colony consisted in 1898 of 14 steamers, of 2,495 tons, and 14 sailing vessels, of 699 tons.

Railroads.—The railroads within the colony have a total length of 505 miles, all belonging to the Government. One joins at Harrismith a railroad running through the Orange Free State, and one runs from Durban through Pietermaritzburg to the Transvaal border, whence it extends through Johannesburg to Pretoria, the total distance being 511 miles. The cost of the Natal railroads was £6,950,621. The receipts for 1898 were £986,417; expenses, £589,815.

Effects of the War.—The colonists of Natal, being mainly of English extraction, were most eager for the war with the Boers, anticipating a brilliant political and commercial future for their colony in the event of victory by British arms, because Natal is the natural outlet for both the Transvaal and the Orange Free State. The Boers on their part made the conquest of this land, which was once theirs, and would give them access to the sea, their first object, as in all their history they have sought a seaport of their own and railroad communications under their sole control as the best guarantee for the political and economic independence which they wanted. Thus political rather than strategic considerations made Natal the theater of the Transvaal war in its early stages, and political hopes as well as patriotic and racial feeling moved the colonists of British descent to take an active part in the contest, while those of Boer descent, the sons and grandsons of the Dutch emigrants who first won the country from the Zulus after a heroic campaign and then had it wrested from them by a British armed expedition, gave aid and comfort to the Boer invaders. Refugees from Johannesburg flocked into Maritzburg and Durban, and had to be fed by charity except those who, with many young men of Natal, were accepted as volunteers in the South African corps, which the British commanders were in the beginning reluctant to employ, but came to depend upon more and more. Before the tide of war turned Boer commandos marched through Natal at will, threatening even Maritzburg; and when British re-enforcements were poured in for the relief of Ladysmith, the corner of Natal of which the besieged town was the center became the seat of military operations, and from there down to the sea were stretched the British camps. Bodies of Boers rode through the parts of the colony that were unguarded and through Zululand. They commandeered what they wanted more harshly as the war became more bitter and their necessities and perils grew greater. Still Natal was not so great a sufferer from the vindictive reprisals and barbarities of the war as other parts of South Africa, where later phases of the struggle were enacted. When the armies faced each other on the Tugela not only were the ferocious passions of warfare not yet aroused, but the commanders on both sides were anxious to spare the Natalians as much as possible, the British because they were generally loyal colonists who suffered for their loyalty, the Boers because they hoped to gain the country for their own, and British and Boers alike because they were vying

with each other in affording to the world an example of humane warfare. Nevertheless Natal, being for the longest period the field of operations and the camping ground for the main armies, suffered as great loss and disturbance as the scenes of the later and more desperate conflicts. Loyal colonists were compelled to leave their homes and abandon their property. Many of the volunteers and police lost their lives in repelling Boer raids. When the British generals began to select colonial troops for the most difficult and dangerous duties the casualties among them increased more rapidly than the recognition that they won by their bravery and intelligence. The Government suspended all public works, and yet the revenue was far from sufficient to defray the expenditure, which necessarily increased in consequence of the war. The ministers were compelled to apply to the Imperial Government for temporary financial support, which was promptly rendered. An inquiry into the financial condition of the colony is in prospect, and after the conclusion of the war Natal, which, owing to its peculiar labor conditions and the great preponderance of the native population and paucity of whites, has never received the attention that is given to larger British communities, expects an extension of boundaries or an improvement in its political and financial position to result from the determined and unswerving support the colony has afforded the Imperial Government during the war and the sacrifices suffered by the colonists. The parliamentary session was opened on May 3. A bill for more effectually dealing with persons accused of treason was directed against the Boer colonists, who are only numerous in the higher northwestern part of the colony. Another bill was passed in order to indemnify the Governor, the ministers, and the military in respect of acts not protected by the existing laws, but which were rendered necessary through the enforcement of martial law and the invasion of the colony. The Zulus were kept quiet during the war by the admonitions they received from both the British and the Republican authorities. The Swazis, who are by race and customs a branch of the Zulu nation, were handed over to the administration of the South African Republic in 1894, having previously been recognized as independent in 1884 and in 1890 as under a joint British and Boer tutelage, a committee of Boers and British traders looking after the interests of the whites, who numbered from 900 to 1,200, while of the natives there are from 40,000 to 50,000, occupying a country about 8,500 miles in extent. Under Boer sovereignty the Swazis still were governed by their native rulers according to their own customs. When the Anglo-Boer war broke out the burghers, who use their farms in Swaziland for winter pasturage and generally have their homes elsewhere, left the country to go to the war. In October, 1899, Gen. Schalk Burger went to the king's kraal and told him that the Transvaal Government handed back the country to the natives to administer as the king thought fit. A few days later the British consul brought a message from the High Commissioner admonishing the natives not to interfere in the war nor to kill off one another, as they sometimes do in intestine feuds when the restraint of white rule is not upon them. There was a standing feud between the king and the old queen, she having always been a partisan of British predominance and having lost power and prestige by the relinquishment of the country to the Transvaal, while the king was a friend of the Boers. The queen had her devoted followers in the nation, but they were not strong enough to dispute the

authority of the king, at any rate as long as the whites remained in the country. A month after the visit of Schalk Burger the king died from some cause and the queen suddenly acceded to power. She nominated her son Isitoso to be king in succession to Ngwane, and immediately began to kill off her old adversaries and all possible rivals to her son in order to secure his position against the coming of the British. Ngwane succeeded his father in 1889, and under white tutelage considerable advancement toward civilization was made during his reign. After his death the queen established herself in the royal kraal about 9 miles from Bremersdorp, the capital, assumed absolute power, and after her enemies were disposed of revived all the savage customs that existed many years before.

Rhodesia.—The order in Council published on Nov. 25, 1898, transferred the government of Southern Rhodesia, formerly intrusted to the British South Africa Company, to a Resident Commissioner, appointed by the British Colonial Secretary, assisted by an Executive Council, consisting of the Resident Commissioner, the Administrators of the two provinces, and not fewer than 4 members appointed by the British South Africa Company with the approval of the Secretary of State. There is a Legislative Council, of which the Senior Administrator is president, composed of the Administrator of Matabeleland, the Resident Commissioner, 5 members appointed by the British South Africa Company and confirmed by the Secretary of State, and 4 members elected by the registered voters. The legislative period is three years. Ordinances of the Legislative Council obtain the force of law when approved by the High Commissioner, but may be annulled within a year by the Secretary of State. There is a Secretary for Native Affairs appointed by the High Commissioner, and under the direction of this secretary are native commissioners. The military police are under the direct control of the High Commissioner for South Africa.

The area of Southern Rhodesia is 174,728 square miles. It is divided into the province of Matabeleland, which has an extent of 60,728 square miles, with a population of about 155,000, and the province of Mashonaland, which has an estimated area of 114,000 square miles and an estimated population of 270,000. A railroad from Vryburg to Buluwayo is being extended to Gwelo and across the Zambesi to the southern end of Lake Tanganyika, whence it will run northward through German East Africa into Uganda, and eventually connect with the Egyptian line from Cairo to the Soudan. The Rhodesian Railroad is operated by the Cape Government. The net earnings for the year 1898 were £99,290, not including a subsidy of £20,000 from the Imperial Government and £10,000 from the British South Africa Company. Another railroad enters Mashonaland from the Portuguese port of Beira and has been completed to Salisbury, with an extension to Buluwayo in progress. The Rhodesian post office in 1899 dispatched 706,751 letters and postal cards to places in South Africa and 253,662 to foreign destinations, besides 247,311 newspapers and parcels and 38,857 registered articles. The postal receipts were £18,197; expenses, £20,364. The telegraph system of Rhodesia embraces 2,536 miles of line. The number of private telegrams received in 1899 was 79,955, including 5,652 from over sea; dispatched, 79,798, including 6,156 cable messages. The revenue from telegraphs was £23,278; expenses, £40,000.

The British South Africa Company, which has issued £4,375,000 of capital stock and £1,250,000 of debentures, derives revenue from mining, trad-

ing, and professional licenses, leases of stands, and postal and telegraph services. The estimated receipts for the year ending March 31, 1900, were £381,000; expenditures, including supplementary estimates, £793,066.

The charter of the British South Africa Company included in the territory given over for its administration the British sphere north of the Zambesi, with the exception of the British Central Africa Protectorate in the vicinity of Lake Nyasa. These regions, known as Northern Zambesi, comprise all of Central Africa south of the Congo Free State and German East Africa excepting the possessions of Portugal on the Atlantic and Pacific coasts. The area is estimated at 251,000 square miles and the population at 650,000. Only about 350 Europeans are found in the whole territory.

The Administrator of Mashonaland, who is the Senior Administrator of Southern Rhodesia, is W. H. Milton. Capt. A. Lawley is Administrator of Matabeleland. Robert E. Codrington, residing at Fort Jameson on the Tanganyika plateau, is Deputy Administrator for Northeastern Rhodesia, and Major R. T. Coryndon, staying at Lialui, the kraal of the King of the Barotse, represents the British South Africa Company in the western division of Northern Rhodesia.

British Central Africa Protectorate.—The protectorate on the southern and western shores of Lake Nyasa grew out of a missionary settlement established as a refuge for the natives pursued formerly by Arab slave raiders. The area is 42,217 square miles and the population is about 900,000, with 377 Europeans and 250 Indians. In the Shire highlands Europeans have plantations where coffee of superior quality is grown—700 tons in 1899—besides rice, wheat, oats, barley, and other products. Horses thrive there also. The administration is in charge of a Royal Commissioner, who is responsible to the Foreign Office in London. The present Commissioner is Alfred Sharpe. The value of imports in 1899 was £99,290; exports, £35,623. The principal articles of export are ivory, coffee, and rubber. The revenue for 1899 was £24,538; expenditure, £65,715. A Sikh force of 215 men and a native force of 1,070 men trained by Sikh drill sergeants preserve order in the protectorate and in the northeastern part of the British South Africa Company's territory. A battalion of 1,048 natives under British officers was raised and trained for service abroad and sent to do garrison duty in Mauritius, but came into collision there with the inhabitants and had to be withdrawn. They were kept on shipboard till many of their number died, and were then sent to do garrison duty in British Somaliland. There is a force of 200 civil police in the protectorate, also an artillery force of 2 mountain guns and 2 Maxims. On the upper Shire river and in Lake Nyasa 3 gunboats are kept, while British gunboats patrol the lower Shire and the Zambesi. The boundary between the protectorate and German East Africa, from the mouth of the Songwe on Lake Nyasa to the mouth of the Kilambo on Lake Tanganyika, has been delimited by a joint commission. The white settlers in the protectorate have requested the Imperial Government to make regulations prohibiting the emigration of laborers attracted by the high wages offered for native labor in Beira and in the gold mines of Southern Rhodesia, taking them away from the coffee plantations for long terms of work south of the Zambesi, where they are tempted to spend their wages in drinking and other vices and are no better off in the end than if they remained in their villages earning the accustomed low wages of agricultural laborers and carriers in Central Africa.

Portuguese East Africa.—The Portuguese possessions on the east coast of Africa have an area of about 301,000 square miles, with an estimated population of 3,120,000. Mozambique, Zambezia, and Lourenço Marques are the chief provinces. The Manica and Sofala regions in the south are administered under a royal charter by the Mozambique Company and the district between the Rovuma, Lake Nyasa, and the Lurio by the Nyasa Company. Inhambane is now under the colonial administration, and Gazaland, where disturbances have occurred, is governed as a military district. The revenue for 1898 was estimated at 4,232,326 milreis, and expenditure at 3,945,765 milreis. The imports at the port of Mozambique for 1898 were valued at £174,456, and exports in 1897 at £160,571; imports at Quillimane in 1898 at £67,557, and exports at £71,533; imports at Beira at £911,163, exports at £31,106, and transit trade at £176,606; imports at Chinde at 379,275 milreis, and exports at 550,358 milreis; imports at Lourenço Marques at £751,931, and exports at £16,800. The Delagoa Bay Railroad extends from Lourenço Marques 57 miles to the Transvaal border, and thence 290 miles to Pretoria. The Beira Railroad has a length of 203 miles in Portuguese territory and is continued from the frontier of British South Africa to Salisbury. There are 950 miles of telegraphs. The colonial military force consists of 1,642 Europeans and 3,246 natives. The Beira Railroad was the outcome of an agreement made between Great Britain and Portugal on June 11, 1891, mainly for the purpose of fixing the respective frontiers in consequence of the occupation of Mashonaland and Matabeleland by the British South Africa Company. The frontier question was not settled till later, but in the agreement of 1891 the Portuguese Government undertook to construct a railroad from the frontier to the sea at Beira, and agreed not to impose any transit duties higher than 3 per cent. The concession for the railroad, originally granted to the Mozambique Company, was transferred to an English syndicate, which completed the line up to the frontier at Umtali in July, 1898. From there to Salisbury, a distance of 170 miles, the line was constructed with guarantee of interest from the British South Africa Company. The journey from Beira to Umtali takes two days, as the service is very slow. When the British military authorities wished to send a body of troops under Sir Frederick Carrington into Rhodesia to march to the relief of Mafeking after the failure of the force that attempted to advance from the south after the siege of Kimberley was raised, a request was presented to the Portuguese Government to allow the troops to be transported over the Beira Railroad. The Boer governments protested against the proposed violation of neutrality, intimating that they would regard permission for the passage of British troops through Portuguese territory as tantamount to a hostile action. No other Government supported their objection, and the Portuguese Government, while denying any hostile intention against the Boers, insisted that by treaty with England Portugal was bound to permit the passage of British troops. This right of way was stipulated as one of the conditions under which Great Britain recognized Portuguese rule in the Beira territory in the extension given to it in the Anglo-Portuguese agreement. A secret Anglo-German agreement to respect the integrity of Portuguese possessions in Africa was made at a time when Portugal was in financial difficulties and when the two governments were disposed to guarantee the success of a loan which might be secured on the colonial customs receipts.

Delagoa Bay Award.—After the confiscation of the unfinished Delagoa Bay Railroad by the Portuguese Government the American and British governments, on behalf of contractors and bondholders, made a protest, and as the result of negotiations it was agreed to refer the controversy to the arbitration of the Swiss Federal Council. The Swiss Government appointed an arbitration tribunal in June, 1891. This tribunal did not deliver its judgment till March 29, 1900. The original charter for the railroad from Lourenço Marques to the Transvaal frontier was granted in December, 1883, to Col. Edward McMurdo, an American citizen, who in May, 1884, organized a Portuguese company. The Transvaal Government signed a convention with the Portuguese Government by which it agreed, as soon as the railroad should reach the frontier, to continue it to Pretoria. By the terms of the McMurdo concession the company had the right to fix the rates to be charged on the railroad and to operate the same for ninety-nine years, unless the Portuguese Government exercised its reserved right of purchasing the line after thirty-five years. The Portuguese Government bound itself not to construct or permit a competing line within 100 kilometres on either side. The absolute right to fix tariffs granted to the American concessionaire was objectionable to the Transvaal Government, which obtained from the Portuguese Government a secret provisional concession for a tramway to be built in case the Delagoa Bay Company failed to complete the line to the frontier within a reasonable time, and to be used for the conveyance of passengers and freight if the company would not come to an agreement with the Transvaal authorities establishing reasonable rates for the through traffic. Col. McMurdo finally formed a company in England in March, 1887, to build the line under the Portuguese charter, the Lisbon authorities having meanwhile denied that they had any secret agreement with the Transvaal. The construction by an English syndicate of the Delagoa Bay section of what was intended to be the national Transvaal Railroad, giving an outlet on the seaboard independent of the railroads of Cape Colony and Natal, was not regarded with favor in Pretoria when this syndicate retained the unrestricted power to fix and regulate tariffs. It was to the secret influence of the Transvaal Government, moved by these political considerations, that the subsequent action of the Portuguese Government was attributed. The frontier was assumed to be about 80 kilometres from the coast, but it had never been fixed. The Government finally settled on a line and demanded of the company that the railroad should be completed up to it within a certain time. The company protested that the period was too short. Nevertheless as soon as it expired the Portuguese Government confiscated and took possession of the railroad, which it completed and has since operated in conjunction with the Dutch company that built and operated the main part of the line in Transvaal territory. The English company applied to the British Government for its assistance and the widow of Col. McMurdo, the original concessionaire, he having died in the meantime, applied to the American Government. In accordance with the agreement concluded in 1891 the three arbitrators were to determine the amount of compensation to be paid to the claimants by the Portuguese Government for the seizure of the railroad and the cancellation of the concession, which included a considerable grant of lands. The long delay was charged by the claimants to the arbitrators, while the latter said that the parties to the suit filed such a mass

of documents and raised so many difficult and complex questions requiring expert opinion and local investigation that they could not complete their task earlier. The decision was a voluminous document. The tribunal condemned as arbitrary and illegal the action of the Portuguese Government in seizing the railroad and rescinding the charter. The amount of damages awarded to the claimants was only about a third as much as they contended for, but on the other hand it was three times as much as the Portuguese Government had offered in settlement. In addition to £28,000 sterling paid in by Portugal on account at the beginning of the proceedings, the arbitrators unanimously directed Portugal to pay over to the British and American governments the sum of 15,314,000 francs, with simple interest at 5 per cent. from June 25, 1889, the date of the seizure of the railroad by the Portuguese authorities. The costs were directed to be borne in equal shares by each of the three parties to the suit, and the award to be divided between Mrs. McMurdo and the British bondholders in accordance with a scale of distribution to be drawn up by the claimants themselves. In fixing the amount of the award the arbitrators took into account the capital actually invested in the railroad by the company and the capital invested since 1889 by the Portuguese Government and computed the profits for thirty-five years and the price that Portugal would have to pay for the railroad at the end of that term, which was taken to be twenty times the estimated average profits for the last seven years. The total capitalized value was credited to the company and to the Portuguese Government in the proportion of their respective contributions of capital. The arbitrators refused to take into consideration the market value of the bonds and shares at the time of the confiscation or to grant exemplary damages against the Government for its breach of contract, for which the unstable financial condition of the company afforded some excuse.

Angola.—The Portuguese territory on the southwest coast of Africa is divided into the districts of Congo, Loanda, Benguela, Mossamedes, and Lunda. The area is 484,800 square miles, with a population estimated at 4,119,000. The revenue for 1900 was estimated at 1,673,111 milreis, and expenditure at 2,013,871 milreis. The imports in 1897 were valued at 6,380,368 milreis; the exports, chiefly coffee and rubber, at 6,577,791 milreis. Wax, oils, coconuts, and ivory are minor exports. Sugar is grown for the distillation of rum, and cattle do well on the higher elevations. Gold, petroleum, iron, copper, and salt are found in considerable quantities. Fish are caught and preserved. The Mossamedes Company, formed with German capital, has a concession for cattle growing, fishing, and mining throughout a large region, including the gold field discovered in Cassinga.

German Southwest Africa.—The German possessions in Southwest Africa have a total area of 322,450 square miles, with a native population estimated at 200,000 and 1,840 Europeans, of whom 1,557 are Germans. The European military force numbers 761 men. A concession for the colonization of the lands in the north that are adapted for grazing has been granted to a German company, and the Government offers to advance 4,000 marks free of interest to any *bona fide* German settler. From the new harbor at Swakopmund a railroad is being constructed to Windhoek. Over 80 miles were completed before the end of 1899, and an imperial subsidy of 2,300,000 marks was granted for 1900. The expenditure for 1899 was estimated at 7,479,000 marks, of which the Im-

perial Government contributed 6,909,000 marks. For 1901 the German Reichstag voted 7,181,300 marks. The imports in 1899 were valued at 5,868,281 marks, of which 4,883,753 marks came from Germany; exports, 915,784 marks, of which 773,000 marks represent guano and the remainder mostly ostrich feathers.

The railroad agreement concluded on Oct. 28, 1899, between the German Government and the British South Africa Company, as the result of Cecil Rhodes's negotiations in Berlin, provided for a connection of the projected railroad from the Cape to Cairo, with a line to the west coast of Africa passing through German territory. If the German Government be not ready itself to construct the railroad from the British frontier to the coast when the British South Africa Company shall communicate its intention of connecting its system with the west coast, then the British South Africa Company will be entitled to build the section across German territory. An Anglo-German company was organized in 1900 to construct a railroad 400 miles long from Great Fish Bay, in the Portuguese territory of Angola, to Otavi, in German Southwest Africa, where the company intends to carry on mining operations. An expedition was sent out to prospect the copper mines in that neighborhood. Half the capital of £2,000,000 to be embarked in the railroad and mining enterprise was subscribed by German and half by English capitalists. The Southwest African Company obtained the Damaraland concession, granted in 1892, which covers the Otavi district, where surveys were made in 1893 and 1894 with promising results. The German Hanseatic Land and Mining Company sent an expedition to prospect in the district of Rehoboth, 250 miles inland from Walfisch Bay. Copper mines have been discovered within 75 miles of Walfisch Bay, for the working of which private individuals have taken out licenses.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; 1,513,017 in 1890; and 1,828,697 in 1900. Capital, Montgomery.

Government.—The following were the State officers in 1900: Governor, Joseph F. Johnston; Secretary of State, Robert P. McDavid; Treasurer, George W. Ellis; Auditor and Comptroller, Walter S. White; Attorney-General, Charles G. Brown; Superintendent of Education, John W. Abercrombie; Commissioner of Agriculture, Isaac F. Culver, succeeded in September by Robert R. Poole; Adjutant General, W. W. Brandon; President of the Railroad Commission, James Crook; President of the Convict Board, S. B. Trapp; Back Tax Commissioner, W. J. Wood; Examiner of Public Accounts, John Purifoy; State Geologist, Eugene A. Smith; Chief Mine Inspector, J. de B. Hooper; Agent for Swamp Lands, W. M. Byrd; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, and James R. Dowdell; Clerk, Robert F. Ligon, Jr. All are Democrats.

The new State administration came in Dec. 1. For names of officers elected see under Political, this article. The office of Commissioner of Agriculture is created by statute, and the term begins Sept. 1, while the terms of the constitutional officers begin Dec. 1.

Population.—The census returns show no change in the order of the largest three cities

of the State. Mobile is still first with 38,469, against 31,076 in 1890. Birmingham has risen to 38,415 from 26,178 in 1890. The territorial limits of Birmingham have been enlarged since 1890. Montgomery, which had 21,883 in 1890, has now 30,346. The population of the other larger places is: Anniston, 9,695; Selma, 8,713; Huntsville, 8,068; Florence, 6,478; Bessemer, 6,358; Tuscaloosa, 5,094; Eufaula, 4,532; New Decatur, 4,437; Gadsden, 4,282; Opelika, 4,254; Phenix, 4,163; Troy, 4,095; Girard, 3,840; Pratt City, 3,485; Sheffield, 3,333; Dothan, 3,275; Greenville, 3,162; Decatur, 3,114; Avondale, 3,060.

Of the 66 counties, 2, Cleburne and Lawrence, have decreased slightly in population since 1890; all others have grown. The figures for the two dates are as follow:

COUNTIES.	1900.	1890.	COUNTIES.	1900.	1890.
Autauga.....	17,915	13,390	Henry.....	36,147	24,847

Finances.—The statement of the Auditor for the fiscal year, issued in October, showed a deficit of \$184,564.22. During the past four years the revenue has increased by about \$1,000,000 in all, and the deficit has been reduced \$168,389.35. The receipts for the seven months ending April 30 were \$2,243,191.53, and the disbursements \$1,428,179.28.

The valuations for the current year were: Real estate, \$158,025,028; personal property, \$108,218,142; total, \$266,243,170. The tax on real estate was \$874,573.42, and that on personal \$595,102.87. This does not include the figures for Winston County.

The last Legislature imposed an additional mill for the public schools, estimated to amount to about \$250,000, and an additional half mill for soldiers and widows of soldiers. The amount placed to the credit of the school fund Oct. 1 was \$442,810.19.

The State Supreme Court declared the revenue law passed in 1899 unconstitutional.

Education.—The number of school children by the last census was 633,546, of whom 282,879 were colored. The amount apportioned for public schools for the year ending Oct. 1 was \$672,239.47. The contingent fund was \$1,000, and the Winston County special appropriation \$800. Amounts appropriated to higher institutions were as follow: Troy Normal College, \$5,000; Florence Normal College, \$7,500; Livingston Normal College,

\$2,500; Jacksonville Normal College, \$2,500; Montgomery Normal College, \$7,500; Tuskegee Normal College, \$3,000; Huntsville Normal College, \$4,000. The total for distribution was \$710,817.62, of which \$4,778.25 was unappropriated. For the year ending Oct. 1, 1901, the amount for distribution was \$794,858.91, an additional mill having been added to the State tax for the support of schools. The average school year is about four and a half months.

Records of attendance at the various institutions for higher education have been published, as follow: Alabama Polytechnic Institute, at Auburn, 384 for the session 1899-1900; Southern University, at Greensboro, 150 at the opening in September; Lineville College, at Ashville, 300 in 1899-1900; Troy Normal College, 250 in September; West Alabama Agricultural School, 150 at the same date; Florence Normal College, 39 graduates in June; Tuskegee Normal and Industrial Institute, more than 800 enrolled by Sept. 29; State University, at Tuscaloosa, 233 by Sept. 28, not including the medical department, at Mobile.

The sale of university lands at prices believed to be far below their value was declared by the trustees to be illegal, and suit was brought to annul it.

Military.—From the statement issued by the Adjutant General it appears that the organized military force of the State is 2,471, while the number of men available for military duty, but unorganized, is 165,000. The Adjutant General estimated in the summer that about 80 per cent. of the State Guard would volunteer for service in China if called upon. The State appropriated \$12,500 for encampment expenses, and the entire amount was used, together with funds subscribed in Mobile and Birmingham.

The number of persons allowed pensions this year was 11,214; in 1899 it was 9,628. The amounts available for distribution were \$105,506 the former year and \$244,303 the present.

The Governor and other citizens of the State made a trip to New Hampshire in September, on the occasion of the presentation of tablets to the battle ships Kearsarge and Alabama. The Governor of New Hampshire gave to Gov. Johnston two Confederate flags captured by two New Hampshire soldiers in front of Petersburg—the only captured flags that had not been turned over by the State to the National Government. The regiments and States to which they belonged were unknown. The Governor and members of his staff sent afterward to the Governor of New Hampshire a loving cup bearing the motto "Non Armis sed Amore Victi."

Talladega.—The Andrew Jackson Chapter of Daughters of the American Revolution asked and received permission to remove from the battlefield of Talladega the remains of the 17 Tennessee soldiers who fell there Nov. 9, 1813, and to reinter them in the city cemetery. The battlefield has passed into the possession of a coal and iron company, and the Talladega furnace stands on the grounds.

Mobile.—The increase of the commerce of Mobile during the past decade is given as being nearly threefold—from \$3,479,444 to \$10,485,072.

Insurance.—From the report of the Insurance Commissioner it is learned that 115 companies are doing business in the State. Five retired during the year and 16 came in. The net gain to the State from the office was \$50,000.

Products.—In the production of iron ore in 1899 Alabama took the third place among the States, with 1,009,327 tons.

The coal product for the year was estimated at not less than 8,500,000 tons.

The cotton acreage in 1900 was 2,911,167, an increase of 5½ per cent. The estimate of the crop made at the Convention of Cotton States Commissioners at Raleigh, in August, gave it as 821,000 bales. The consumption of cotton in the mills of the State, by Mr. Hester's estimate, was 137,922 bales.

The Dispensary.—The dispensary law passed by the last Legislature, applying to some counties, went into effect Jan. 1. Some of the larger towns in counties where it applies are excepted. According to newspaper report, candidates favoring it in some counties where primaries were held found the question rather a drawback to their popularity.

Lawlessness.—A negro guilty of criminal assault was taken from jail at Huntsville, July 23. The sheriff made a brave resistance to the mob, but the doors were battered down, dynamite was thrown into the prison, and the man was hanged just before the arrival of militia from Decatur. In October a negro boy, sixteen years old, was burned at the stake near Eclectic for the same crime. In August part of a letter was published said to be written by the supreme commander of the so-called Regents of the White Shield in Alabama to a woman who was reported to be about to lead an army of negroes to avenge the lynching of a Southern negro. The extract from the letter read: "It gives me pleasure to inform you that the Regents of the White Shield are a very substantial body of organized patriots, who are ready to receive you and your Ethiopian escort and extend such other service as would be appropriate to express our contempt for a white with a black heart and at the same time to add another hue of darker shade to that of Hades. So come on, fair Joan of Arc, and don't be too modest about the number of black crusaders you bring with you. Ten thousand are not enough to tax our hospitalities in furnishing you sleeping accommodation in our potter's field. In conclusion, let me state that as we raise large crops of cotton in this section we have an abundant supply of rope on hand for every emergency, and we'll know when and how to use it."

Political.—The primaries in April resulted in a victory for John T. Morgan as candidate for re-election to the United States Senate. There were originally 4 candidates: Senator Morgan, Gov. Johnston, W. C. Oates, and J. D. Roquemore. Col. Roquemore died and Gen. Oates withdrew, leaving the contest to the two first named, who "stumped the State" before the primary elections. The proposed constitutional convention and the so-called "land scandal" (see Annual Cyclopædia for 1899, page 4) played a prominent part in the campaign. Senator Morgan carried all the 55 counties that acted on the senatorship, and he was chosen by the Legislature, Nov. 15.

The State elections were held Aug. 6. There were 4 tickets in the field, as follow: For Governor, William J. Samford, Democrat; John A. Steele, Republican; G. B. Crowe, Populist; H. L. Hargett, Prohibitionist.

For Secretary of State, Robert P. McDavid, Democrat; John H. Porter, Republican; T. W. Powell, Populist; L. F. Whitten, Prohibitionist.

For Auditor, T. L. Sewell, Democrat; J. C. Swan, Republican; M. W. Whatley, Populist; R. O. Simpson, Prohibitionist.

For Treasurer, J. Craig Smith, Democrat; Pope M. Long, Republican; O. L. McKinstry, Populist; D. C. Batchelor, Prohibitionist.

For Attorney-General, Charles G. Brown, Demo-

crat; C. D. Alexander, Republican; Leroy Watson, Populist; H. L. Martin, Prohibitionist.

For Superintendent of Education, John W. Abercrombie, Democrat; James I. Abercrombie, Republican; W. M. Wood, Populist; — Porter, Prohibitionist.

For Commissioner of Agriculture, Robert R. Poole, Democrat; John B. Shields, Republican; J. M. Askew, Populist; C. D. Alverson, Prohibitionist.

Walter H. Matthews was nominated for the office of Auditor at the Democratic convention, but died in July, and the State committee filled the vacancy.

Samuel M. Adams was the nominee of the Populist convention for Governor. He declined because he disapproved the policy of the naming of a State ticket by his party. A. G. Dake declined the nomination for Treasurer, and the two vacancies were filled as above.

Following is an abstract of the principal declarations of the Democratic platform: "An honest and economical government. A scrupulous regard for the American Constitution. For commercial expansion. The construction of the Nicaragua Canal. Denunciation of unjust treatment of Porto Ricans. The legitimate expansion of home and foreign trade. The regulation of trusts and riddance of the protective tariff. Belief in renomination of W. J. Bryan and a demand for his renomination. Belief in the Chicago platform, but no demand or instruction for its reaffirmation. The furtherance of public education."

The more important articles in the Populist platform were: "That we advocate and urge upon all voters who are opposed to the liquor traffic the necessity of supporting candidates who favor the dispensary system as an improvement upon the license system. That we condemn in unmeasured terms the proposed constitutional convention as being inimical to the best interests of the people of Alabama. That we condemn the resolution passed by the late Democratic convention which recommends that defeated Democratic candidates for the Legislature be consulted in regard to local legislation."

The Republicans were divided into two factions at the time of their State convention, in April. The dispute over the right to control resulted in violence, during which a young man was seriously wounded. The differences were adjusted later, and in July the State committee put out the ticket with candidates drawn from both factions.

All the Democratic candidates were elected in August. The vote for Mr. Poole, the Democratic candidate for Commissioner of Agriculture, was 105,429; for Mr. Shields, Republican, 21,525; for Mr. Askew, Populist, 14,131; and for Mr. Alverson, Prohibitionist, 2,203. This makes a total of 143,288 votes cast. This is much less than the regular vote of the State. The vote for Governor would probably show larger figures, but the returns are not at hand. The Democratic majority was given in round numbers as 75,000. The Legislature is overwhelmingly Democratic. One Senator holding over is a Populist, and the Populists and Republicans have about 9 Representatives.

At the November election Democratic congressmen were elected in all the 9 districts. The Bryan electoral ticket was successful.

ANGLICAN CHURCHES. Statistical.—The Official Yearbook of the Church of England gives the number of communicants of the Established Church as 1,941,760, with church accom-

modation for 6,979,150 persons; number of pupils in Sunday schools, 2,394,804, with 207,539 teachers; net clerical income, £3,357,006; amount of voluntary contributions, £5,954,738; number of incumbents, 13,873. Another table of voluntary contributions given in the work increases the total and allots them as follows: I. To central and diocesan societies and institutions: (1) home missions, £548,881 4s.; (2) foreign missions, £772,246 9s. 1d.; (3) educational work, £119,387 10s. 5d.; (4) the clergy (educational and charitable assistance), £197,195 19s. 8d.; (5) philanthropic work, £428,273 6s. 2d.; total, £2,065,984 9s. 4d. II. Funds locally raised and locally administered: (1) for the parochial clergy, £798,521 4s. 11d.; (2) for elementary education and Sunday schools, £1,177,288 15s. 7d.; (3) for general parochial purposes, £3,422,639 15s. 1d.; total, £5,398,449 15s. 7d. The total voluntary contributions thus amounted to £7,464,434 4s. 11d.

Statistics furnished by 990 out of 1,000 incumbents of Welsh parishes give the number of communicants in them as 133,223.

The accounts of the Representative Body in the Episcopal Church in Ireland showed that the amount of voluntary contributions had decreased by nearly £40,000. Yet a balance was left of £60,000 over the expenditures.

The Synod of the Episcopal Church in Ireland was held in Dublin in April. The primate, in his inaugural address, referred to the considerable decline of voluntary contributions which had taken place, and to the decrease of the receipts from assessment. The synod, however, possesses a capital fund of £8,000,000.

Grants were made from the incorporated Church Building Society during 1899 to 34 new churches and 25 mission or temporary churches, besides 6 grants for rebuilding churches and 28 for enlargements. The total cost of the proposed church works was £297,217, while the society's grants were £16,035, in addition to £665 for mission buildings. The society had since its formation given £885,143 toward works involving a further expenditure of £14,840, and adding about 2,000,000 seats, three fourths of which were free. The year's income had been £6,869.

The annual report of the Bishop of London's fund, presented May 10, showed that the receipts for the year had been £28,172 and the payments £25,709. The temporary investments amounted to £36,913. Up to the end of the year sums aggregating £1,052,722 had been received for the fund, including £3,000 from the Queen, £1,000 from the Prince of Wales, £25,000 from the Commissioners of Woods and Forests, £25,081 from city companies, and a number of large gifts from individuals. The past year's grants had amounted to £5,067 for clergy, £3,058 for lay agents, £7,099 for mission buildings, £6,725 for churches, £319 for vicarages, and £676 for schools.

At the annual meeting of the Additional Curates Society, April 30, the secretary reported that the general income of the society for 1899 showed a decrease of £1,500. An increase of £700 over the corresponding period of the previous year had, however, taken place during the past four months. The last year's expenditures had been £58,785. Aid had been given to 1,020 parishes with 1,217 grants, amounting to £56,968.

The two hundred and forty-sixth festival of the Sons of the Clergy was held May 9. The total number of pensions and grants in 1899 was 1,689, on account of which £24,374 were paid.

Society for the Propagation of the Gospel.—The annual meeting of the Society for the Propagation of the Gospel in Foreign Parts, marking its

two hundredth anniversary, was opened April 27. The report showed that the gross income of the society for the year had been £136,846, indicating an increase of £4,490. The number of ordained missionaries, including 12 bishops, was 785, distributed as follows: In Asia, 253; in Africa, 185; in Australia and the Pacific, 47; in North America, 209; in the West Indies and Central and South America, 53; and 38 chaplains in Europe. Of these, 135 were natives laboring in Asia and 48 in Africa. There were also in the various missions about 2,000 lay teachers, 3,200 students in the society's colleges, and 38,000 children in the mission schools in Asia and Africa. With the exception of North America, it might be said that in every part of the empire, and beyond its limits, the work of the Church had been hindered in the past year by disasters and visitations which no human foresight could have reckoned with. The London Junior Clergy Missionary Association had advanced in work and in numbers, having now 500 members against 430 one year previously. The federation of all the Junior Clergy Associations numbered more than 5,000 members.

The two hundredth anniversary of this society was celebrated in London, June 16, 17, and 18. The exercises began June 16, the anniversary of the foundation of the society, with a communion in St. Paul's Cathedral, followed by a sermon by the Right Rev. W. C. Doane, Bishop of Albany. The bicentenary was the subject of special sermons in a large number of churches in London, Sunday, June 17. On Monday, June 18, a public evening meeting held in Exeter Hall was addressed by the Archbishop of Armagh and the Bishop of Kentucky. An historical review was read, which showed that the Society for the Propagation of the Gospel was established for the purpose of instituting a central organization to superintend the ministers of the Church of England who were sent out to serve the spiritual wants of the people in the colonies in America and elsewhere. It dates its origin from March 13, 1701, when a committee was appointed to inquire into the best means of promoting the Christian religion in the plantations (as they were called) or transmarine colonies. A charter was granted the society by William III in the following June, the object of the body being defined as "the religious instruction of the king's subjects beyond the seas," and the first two missionaries left a few months later for Boston, Mass.

One of the principles strongly held to by this society in its missionary work is that of caring for the religious welfare of all subjects of the Crown, without distinction of race or color. Its work has never, therefore, been limited to the conversion of the heathen to Christianity, although that is a most important part of its operations; but it has always endeavored to supply colonists with the means of maintaining those religious observances which they enjoyed in the mother country, and to do this by supporting clergy, endowing bishoprics, founding theological colleges, and other acts of similar nature. The first region in which the society carried on its work was that of the North American colonies, where the churches founded by it and their branchings have become the Protestant Episcopal Church in the United States. Newfoundland was another early object of the society's attention, where help was first sent in 1703, and 59 clergy are now laboring. The first colonial bishop, Bishop Inglis, whose diocese covered all British North America from Newfoundland to Lake Superior, was consecrated in Nova Scotia, Aug. 12, 1787. Since the establishment of its missions there the society has maintained in Canada 1,500 ordained missionaries, who have ministered

to races speaking 16 languages, and has expended on church work, including endowments of bishoprics and colleges, £1,867,852. In the West Indies and Central America the society has expended upward of £644,000. The first missionary to Africa was sent to the Gold Coast in 1752. With the first attempt at a regular colonization of South Africa, the first clergyman sent out by the society was stationed at Wynberg, near Cape Town, in 1820. At the present time there are 10 dioceses in South Africa between Cape Town and the Zambesi; and during the eighty years of its work the society has helped endow 8 of these dioceses, maintained 545 missionaries, and spent £821,395. It still has 155 missionaries among the 370 clergymen in South Africa, 23 of whom are natives. Work was begun in Australia in 1793, and the country was made a diocese in 1836. There are now there 15 bishoprics and about 850 clergymen. The society's expenditure in Asia has amounted to £2,340,799. Of 781 clergymen in India, 169 are chaplains maintained by the Government, 38 others are employed by the additional clergy societies and ministering to Europeans, 53 are engaged in educational work, and 521 are missionaries proper, 245 of whom are natives of the country, in the great majority of cases supported by their own people. Other fields of the work of the society to which it has made liberal grants and where active labors are carried on among both colonists and the native populations are Mauritius and Madagascar, New Zealand and the Pacific, Borneo and the Straits Settlements, China, Japan, and Korea. The expenditure of the society throughout the world during the one hundred and ninety-nine years of its existence has amounted to £6,419,608; of the 94 colonial and missionary bishoprics now existing it has helped to endow 45; and at the present time it is wholly supporting 5, and partially 7, bishoprics. It also supports 787 missionaries, working in 55 dioceses and preaching the Gospel in 54 languages or dialects.

On Tuesday, June 18, an address from the Church Missionary Society was presented by Bishop Doane, and was acknowledged by the archbishop. Greetings were received from New Jersey, Connecticut, and Rhode Island, and an address was delivered by the primate. The Marquis of Salisbury was introduced, and made an address expressing sympathy with the cause of missions, but recognizing certain dangers that were likely to arise when their work is followed by commercial adventure and the intrusion of political schemes, and the missionary might be made to play a part against his will for these things. In closing, he said: "The world, however slowly, is traveling to a point where the government of all races will be not by organized force but by recognized and advancing public opinion. You have in your hands one of the most powerful and one of the most sacred forces that ever acted on opinion, and the results for which we all pray will be dependent not only on the zeal, but also on the wisdom and Christian prudence with which you work." The Bishop of Kentucky was another speaker. A resolution of humble thankfulness was proposed by the archbishop and seconded by the Bishop of Albany.

Church Missionary Society.—The one hundred and first annual meeting of the Church Missionary Society was held in London, May 1, Sir John Kennaway presiding. The treasurer's report showed that the gross income of the society for the year had been £404,905, of which £32,883 had been derived from legacies, £80,619 taken from the centenary funds, and £20,611 had come in the form of special funds not available for ordinary purposes. Omitting the two latter items, £303,675

were left to constitute the net proper income. The expenditures had been £367,268, of which £14,002 had been from the special funds. The centenary gifts had amounted to £198,948. This sum had been variously appropriated, with the exception of £16,280, which were kept in reserve for future contingencies. The society had in its mission fields 520 stations, which were manned by 418 ordained and 140 lay missionaries, 358 native clergy, and 6,459 native lay teachers; 71,051 native communicants, 268,240 native adherents; 2,144 schools with 104,388 pupils; and in the medical missions, furnished with 1,484 beds, 11,457 in-patients and 630,356 out-patients had been treated. The baptisms numbered 19,161. A resolution was passed earnestly welcoming every effort aiming at the full and orderly development of native churches, as the speedy evangelizing of the world before the coming of the Lord depended very largely upon the labors of the Christian people of non-Christian lands. A message of greeting was sent to the Society for the Propagation of the Gospel, which was celebrating its two hundredth year.

Universities' Mission.—The report of the Universities' Mission in Central Africa showed an income of £37,549, nearly £9,000 less than in the previous year. The expenditure had been £43,279.

Church Army.—The reports of the Church Army made to the annual meeting, May 2, showed that 116 trained workers had been added to the staff during the year. The demand for such workers far exceeded the supply. The income of the general and evangelistic account was returned at £54,022. The previous year's deficit of £1,718 had been reduced to £1,364. In the social departments the income had been £54,557 and the expenditure £55,779, but a balance of £4,404 still remained. The assets were £49,538 in excess over liabilities. The financial requirements of the coming year would amount to £173,000. The workers of the army had obtained admission to the convict prisons.

Liberation Society.—The Council of the Society for the Liberation of Religion from the Patronage and Control of the State held its annual meeting in London, May 2, Mr. Alfred Thomas, M. P., presiding. The report referred to the prospective amendment of the burial laws and the failure of the movement for obtaining a census of religious opinion. The tithe rent charge (rating) act was mentioned as having contributed much to promote the sentiment among the electorate against a church establishment. The report dwelt upon the educational condition, and regarded with regret the disposition on the part of influential men to accede to the demand for a Roman Catholic university for Ireland. The income of the society had fallen from £5,093 to £4,311. Resolutions were adopted urging upon the Liberal party, in view of a general election, to give a prominent place to disestablishment; appealing for such additional subscriptions as would enable the society to seize the unprecedented opportunities for extended work presented by the course of events in the Church of England and by the change in the opinions of a large majority of the members; calling on the friends of religious equality to press the subject on liberal organizations as one of the most urgent matters demanding legislative action; and describing the events of the past year in the English establishment as confirming the conviction that neither legislation nor the bishops' action would prove effectual in suppressing sacerdotalism or lawlessness.

Church Reform League.—The Central Representative Council of the Church Reform League reported to the annual meeting of the league, May

25, resolutions recommending the giving of power to the convocations to reform their own clergy, to constitute in connection with themselves representative houses of laymen, and to arrange for the joint sitting and acting of the two convocations and houses of laymen as representative bodies.

Missions to Seamen.—The report of the Missions to Seamen, presented at the annual meeting, May 2, represented that the expenditure in 1899, £42,514, exceeded the income by £3,898. Sailors had given £1,535 in offertories, had bought 5,741 Bibles and Prayer Books, and had furnished 98,500 attendances at 13,500 services or Bible readings afloat and 348,000 attendances ashore.

The Convocations.—At the meeting of the Convocation of Canterbury in February (Feb. 6) petitions were presented in the upper house from two rural deaneries in the diocese of Truro, praying the house not to initiate or take coercive measures to enforce compliance with the recent decision of the archbishops concerning incense and processional lights unless their lordships were prepared to enforce strict compliance to the Prayer Book impartially on all alike, having regard to variations of defect as well as of excess. A prayer was included in one of the petitions that their lordships would take steps in the endeavor to gain for the Church of England a larger power of self-government than it had at present, but not self-government incompatible with the position of an established church. In view of the failure of the two convocations in 1899 to agree upon a joint report upon ecclesiastical courts, a committee of conference with the committee of the Convocation of York was appointed. The resolutions passed by the lower house in February, 1899, respecting missions to Israelites, were agreed to. They recognize the title of such missions to special attention; advise co-ordination of the several agencies engaged in the work so as to avoid overlapping and wasteful expenditure; emphasize the responsibility laid upon incumbents by the presence of many Israelites in their parishes; advise the provision of prayers for the salvation of Israel for the annual day of intercession for missions; and invite the attention of divinity and other professors to the existing need of clergy to undertake the Jewish side of parochial work.

In the lower house, the prolocutor having resigned, Archdeacon Reginald Prideaux Lightfoot, of Oakham, was chosen to that office. A resolution was passed affirming the necessity of the spiritual agencies of the Church, and a committee was appointed to consider and report as to the desirability of a revival of the subdiaconate. A second report, drawn up by a joint committee, on clergy pensions, which explained in detail the work of the clergy pensions institution, was adopted in both houses.

A resolution was adopted in the House of Laymen, asking for a joint committee of the two convocations to consider and report upon the best means of securing a fit and adequate representation of the laity in the House of Laymen of each province.

At the meeting of the convocation, May 8, the upper house, upon the presentation of an article adopted by the lower house on the subject of temperance legislation, resolved unanimously, "That it is desirable that a bill be drafted and submitted to Parliament based upon such recommendations contained in the final report of the Royal Commissioners on Liquor License as are common to the majority and the minority reports of the commissioners." The Committee on Ecclesiastical Courts reported progress, representing

that they desired to confer with the committee of the Convocation of York on the subject. The Committee on the Position of the Laity in the Church submitted a statement that they had not yet been able to prepare their report. The question was a large and important one. The committee of the Convocation of York, with whom they had conferred, had appointed a committee of experts to examine fully the historical aspect of the question, and they were waiting before presenting their own conclusions until the report of that committee had been drafted.

A resolution was passed contemplating the appointment of a joint committee to confer with a committee of the House of Laymen to consider the desirability of appointing a central Church committee to work with the chaplain general and the chaplain of the fleet for all purposes concerning the moral and religious welfare of soldiers and sailors and their families, and the status of chaplains working among them. A draft bill was brought forward by the Bishop of Rochester which was characterized as an attempt to promote the object of giving the Church more voice in its own affairs. It did not deal with the question of the best means of carrying out the reform of Convocation, or of how the houses of laymen could be recognized by Parliament; but it aimed to provide a method by which, if it should please Parliament that power should be given, Convocation itself could take the initiative in the matter. The archbishop gave notice to both houses that the Archbishop of York and he had agreed to summon a meeting of both convocations in the form of committees, to meet July 5 and 6. In the consideration of the resolutions of the lower house on elementary education, an amendment was suggested proposing that voluntary schools should receive support from the public funds. The lower house approved the elementary education bill introduced into the House of Commons by Sir John Gorst and the Government burials bill, except as to certain sections, respecting which further information was desired. The action of the upper house contemplating the appointment of a joint committee on the moral and spiritual welfare of the soldiers and sailors was concurred in. The report of the Committee on the Supply and Training of Candidates for Holy Orders, embodying a series of recommendations to the schools, was adopted. A report on the reform of Church government was approved, to the effect that in the opinion of the house the next step toward the attainment by the Church of a greater measure of autonomy should be to urge her Majesty's Government to introduce a bill into Parliament declaring, first, that the convocations have power to reform their own constitution in respect of the representation of the clergy; second, empowering the convocations to constitute in connection with themselves co-operative houses of laymen; and, third, authorizing arrangements being made by the two convocations and houses of laymen for their joint sessions. The house expressed an earnest hope that legislative effect might be given to such of the recommendations contained in the final report of the Royal Commission on the Licensing Laws as received the support of all the commissioners. It also expressed general approval of the burial grounds bill.

At the meeting of Convocation, July 4, a discussion took place in the upper house over the report of the committee of the lower house on the supply and training of candidates for holy orders, in which the fact was brought into view that the number of candidates was diminishing at a time when the population of England was rapidly in-

creasing. Yet, although the circumstance had escaped notice, the number ordained into the Anglican communion outside of England had largely increased in recent years, and it was only fair to assume that there were some in that number who would otherwise have been ordained for work in England. The inadequate pay of the clergy was regarded as the chief cause of the decline, and questions on matters of belief and the attractions offered by other careers in various parts of the empire were mentioned as other possible causes. In the lower house resolutions were passed approving of the draft bill for the reform of Convocation. The report of the Committee on Elementary Education, embodying suggestions concerning the organization of school boards, was adopted.

Both houses resolved themselves into committee in order to sit in committee of the two convocations on the following day.

In the Convocation of York, Feb. 22, a joint committee was appointed to confer with the joint committee appointed by the Convocation of Canterbury on the subject of the reform of ecclesiastical courts. A resolution was adopted in the upper house directing the appointment of a committee to consider and report on the rights and responsibilities of the state "as intrusted in the Divine order with the guardianship of property and with coercive powers." In the lower house a gravamen protesting against the remarriage of divorced persons was made an *articulus cleri*.

The Convocation met again, April 25. A resolution was carried in both houses expressing the opinion that the points of agreement between the majority and minority reports of the Royal Commission on the Licensing Law constituted a practical basis for legislation. The upper house adopted the alternative evening service presented at its previous session, with the proviso that it was to be observed as an alternative service in mission churches and as "additional" elsewhere. A proposition was approved favoring the insertion of the name of St. Patrick in the calendar of the Prayer Book. The committee appointed at the last group of sessions to consider and report on the rights and responsibilities of the state as intrusted in the Divine order with the guardianship of property and with coercive powers presented as their opinion that "the true basis and character of the committee of appeal, as representing the state, not the Church, will be best understood, and the limited range of its decisions most clearly recognized, if it be divested altogether of ecclesiastical appendages and appearances, expert theological opinion and information being obtained as expert opinion is obtained in other cases, and in such a way as neither to compromise the Church in its corporate capacity nor to interfere with the final responsibility of the state in temporal matters." A suggestion was approved in the lower house in the consideration of the report of the Committee on Elementary Education that it would be expedient for the committee of the Convocations of Canterbury and York to meet in consultation with the standing committee of the National Society and the secretaries of the Aid Grant Associations to consider the question of the constitution and powers of the proposed local educational authorities. The report of the parliamentary committee on the burial grounds bill was received as a measure which might very well be welcomed. This bill was likewise approved in the House of Laymen. A motion, offered by Lord Halifax, "that inasmuch as the main object of the acts of uniformity of 1559 and 1662 has been definitely abandoned by the toleration act

of 1690 and the repeal of the test act and other acts of the same kind, the question of the repeal of the acts of uniformity should be seriously considered," was defeated in the house by 22 votes to 4.

The Convocation met as one house, July 4, and resolved itself into committee of the whole in order to meet a similar committee of the Southern Convocation in the Church House, Westminster, on the next day.

Joint Meeting of Convocations.—The two convocations, meeting jointly as committees of the whole, July 5 and 6, agreed "that it is desirable to strengthen the organization of the diocesan and provincial courts in such a way that complaints concerning ritual or doctrine should be tried in the diocesan court in the first instance; and that if an appeal be carried to the provincial court, it should be heard before a body of judges who would command general confidence; second, that the bishop sit in the diocesan court, accompanied by two theological and two legal assessors"; and, third, that appeals to the provincial court be heard and determined by the archbishop and two episcopal, two legal, and two theological assessors appointed by the archbishop, the episcopal assessors with the assent of the upper, and the theological assessors with that of the lower house of the Convocation. The meeting also expressed a desire "to see the laity of the Church taking their definite place in the management of the affairs of the Church in the parish, the diocese, and the province," and commended the matter to the convocations and the houses of laymen.

The Ritualistic Agitation.—In a pastoral issued in December, 1899, the Archbishop of York represented that the great majority of the clergy who had adopted the doubtful practices reviewed in the decision of the archbishops of July 31 (see Annual Cyclopædia for 1899) had yielded obedience to their bishops. There was still, however, a remnant of 30 out of the 300 clergymen implicated who had declined to comply—a number which in the whole of the clergy of the Church of England need occasion little anxiety. That small number, however, had power to do harm. The archbishop thought the bishops would not of themselves prosecute the nonconforming clergy, although they had the power, but that it was unlikely that they would place any impediment in the way of others who desired to take that step. As to the disobedient clergy, it would be impossible to give them the same advantages as were freely granted to the other clergy, or to place the same confidence in their judgment, and particularly in their fitness for dealing with their younger brethren as they would otherwise have deserved. The archbishop further discussed the possibility of the law concerning the abandoned customs being changed through the action of Convocation, sanctioned by the Crown.

A deputation waited on the Archbishop of Canterbury, Jan. 19, to express, on behalf of themselves and other signatories to a written protest which was handed to his Grace, their objections to the opinion of the two archbishops on the ceremonial use of incense and processional lights. The protest, to which 13,794 signatures were attached, was based on the following grounds: "First, that your Grace has attempted not merely to define by an individual and autocratic exercise of power the ceremonial practice of the Church in this land, but also to press such definition upon dioceses of which your Grace is not the ruler, and, however ready your Grace's suffragans may be to submit to this, we as Catholic lay people must strenuously protest, and will resist to the utmost, a prece-

dent which may lead us into a position differing but little from that against which the Church rightly protested three hundred years ago. Secondly, we protest against your Grace's attempt to foist upon the Church, as her rule of ceremonial, a penal act of Parliament passed in days of regal autocracy, and intended to meet circumstances entirely different from those of to-day. And, we are the more aggrieved because we were led to suppose that your Grace had intended to investigate the question upon the principles of Catholic law and custom and liturgical science, and not upon the construction of the alleged law of the state."

The Duke of Newcastle and Lord Edward Spencer Churchill spoke in support of the protest. The archbishop, replying to the addresses of these gentlemen, began with a reference to the closing sentence of the paper, saying he was quite certain that it would be impossible to quote any words of his that could fairly be said to convey the impression mentioned there as held by the protesters. "I gave no one to suppose," he said, "that I intended to investigate the question upon any other principles but the principles, as I understood them, of obedience to the law of the Church itself, and particularly of obedience to the law of the Church of England." He then reviewed the reasoning of the opinion, the grounds on which it was based, and the method of procedure adopted, justifying the course of the archbishops in reaching it, and intimated that the opinion need not be taken as a command to obey unless the bishops enforce it upon their clergy. "It is left for the bishops to call upon the clergy to take this opinion, but if they do not choose to act in this way that, of course, would set the clergy in that diocese perfectly free from obedience to that opinion. The clergy may very fairly say in that case, 'My bishop does not call upon me to obey this opinion, therefore I am not bound by it,' but there is not a word in the opinion which shows the smallest desire to set aside the separate opinion of the separate bishops in their various dioceses. It appears to me to be not quite borne out by any arguments that have been put before me, though some of the arguments that have been put before me do really express something more than is in the protest."

The Bishop of London, in his primary charge to the clergy of his diocese, delivered in St. Paul's Cathedral, Feb. 21, reviewed the principal questions in controversy as to their history and their significance. He took into account the motives of the reformers of the sixteenth century in introducing the changes they made in the Prayer Book, the differences in the thought and custom and conditions of that time and of the present, and the motives and purposes by which the partisans of both sides of the present controversy were animated. As to the questions concerning the holy communion, the bishop affirmed that the reformers in the later years of Henry VIII avowedly pursued the object of turning the mass into a communion, their purpose being to get rid of the abuses which had grown up around the idea and practice of the mass. The further changes made in the second Prayer Book of Edward VI were prompted by a doubt whether the first Prayer Book had adequately succeeded in this object. On this ground it was thought wise to drop the word mass in the second book, and to incorporate a condemnation of the mass in the Articles of 1553. "This is the object which the Church of England has ever pursued, to make the holy communion a service for the people to which they came prepared to receive the gifts of grace in the way which Jesus had appointed.

Our own time has seen a fuller accomplishment of that object than any previous period has witnessed. . . . It is greatly to be regretted that this advance toward the due appreciation of the mind of the Church should be checked by anything which even remotely suggests a desire to return to that perception of the holy communion which was so pernicious." The bishop traced the origin of "fasting communion" to the customs of the sixteenth century, when the hours for meals were so fixed that it was most convenient to attend the communion service before the midday meal. Customs "were not meant to be burdens to generations whose habits of life had changed."

The position of the Church of England on confession was that it was left to every man's discretion. It was not to be enjoined, still less was it to be enforced, by the clergy. Every one was advised to try and quiet his own conscience first, and if he needed further help he might seek it at his own responsibility. "The Church does not impose confession as a discipline; it recommends, in the first place, confession to Almighty God; it reserves private confession for cases where a man is unable to quiet his own conscience. No teaching should be given by the clergy which does not state all these facts." Further, the Bishop of London wrote, Feb. 26, to a correspondent who inquired of him: "Confession is a private and personal matter. There is no service provided for it except in the case of the sick. If any one seeks a clergyman's counsel and advice, he does so of his own free will. A clergyman is called 'a minister of God's Word.' He can only minister that Word, and his advice, in whatever form it is given, must rest on that, and that only."

At the annual meeting of the Protestant Alliance, April 25, resolutions were adopted expressing the belief that the revival of the mass, auricular confession, and other Roman Catholic practices was disastrous to the spiritual and moral welfare of the people; pledging the meeting to uphold the scriptural principles of the Reformation as the only effective guarantee of religious and civil freedom; and approving the endeavor of the Alliance to organize Protestant electors so as to return members of Parliament pledged to support legislation for the maintenance of those principles. Other resolutions expressed alarm at the continued lawlessness of a large section of the Anglican clergy and the culpable neglect of duty on the part of the authorities of the Established Church, as well as the delay of the Government in fulfilling their pledges to introduce a measure for the compulsory discontinuance of "Romish" practices; recording a renewed determination to continue the agitation against the illegalities complained of until they shall be effectually dealt with; and declaring that "in view of the increasing efforts of papal propagandists to restore the pre-eminence of sacerdotal authority in this country, the toleration of priestly interference in any measure with the affairs of the state is inconsistent with civil and religious freedom."

In A Further Indictment of the Bishops and of the Government (issued in April), the Church Association maintained that the bishops had continued to aid and abet lawlessness in the Church of England. Members of the English Church Union and of the Confraternity of the Blessed Sacrament had during the past year received promotion at the hands of the Archbishops of Canterbury and York and the Bishops of London, Durham, Winchester, Bangor, Chichester, Ely, Exeter, Carlisle, Gloucester, Lichfield, Lincoln, Llandaff, Newcastle, Oxford, Peterborough, Rochester, St. Albans, Salisbury, Worcester, and Truro.

At a meeting of the Ladies' League for the Defense of the Reformed Faith of the Church of England, held March 22, Lady Wimborne, presiding, explained that the work of the league was mainly educational. Its endeavor was, by the circulation of suitable literature and the delivery of lectures in various districts, to diffuse a wider knowledge of the history of the Church and of its teachings regarding the great doctrinal truths.

The Ladies' Protestant League was organized in 1899 for the purpose of enlisting the influence of women in opposition to ritualism. It was represented at the meeting held in London, May 10, that 2,000 members had been enrolled. The sum of £10,000 was needed for the establishment of a young ladies' high-class boarding school with teaching in accordance with the principles of the Reformed and Protestant Church of England.

On June 18 deputations representing the Church Association and other Protestant bodies waited on Sir W. Walrond, chief Conservative whip, and Mr. Herbert Gladstone, chief Liberal whip, to urge the necessity for Church reform and for the adoption of candidates prepared to put down ritualistic excesses by further legislation. Sir W. Walrond declined to go into the question of policy or to criticise the advisability of making the Church question a test at the next general election, but assured the deputation that headquarters would give them any assistance in their power, and that he would inform Mr. Balfour, who he was sure was alive to the gravity of the situation, of what had happened. Mr. Herbert Gladstone said that he could not undertake the responsibility of the Liberal party, but would communicate with Sir Campbell Bannerman and his colleagues.

At the thirty-fifth annual meeting of the Church Association, in May, Captain Cobham, presiding, claimed that much had been done by the society during the past year in concentrating and making effectual the Protestant vote of the country. The annual report accused the archbishops themselves of illegally encroaching upon the rights of the Church. A resolution was adopted pledging the meeting to support only Protestant candidates at parliamentary elections.

At the anniversary meeting of the English Church Union, held in the Church House, June 21, the following declaration, proposed by Lord Halifax, was adopted by a standing vote: "We, members of the English Church Union, holding fast to the faith and teaching of the one Holy Catholic and Apostolic Church—that in the sacrament of the Lord's Supper the bread and wine, through the operation of the Holy Ghost, become, in and by consecration, according to our Lord's institution, verily and indeed the body and blood of Christ, and that Christ our Lord, present in the same most holy sacrament of the altar under the form of bread and wine, is to be worshiped and adored—desire, in view of present circumstances, to reaffirm, in accordance with the teaching of the Church, our belief in the verity of the Christian faith, and to declare that we shall abide by all such teaching and practice as follow from this doctrine of the whole Catholic Church of Christ." Other resolutions declared that the Church Union, believing that many of the differences which divide the members of the Church of England are largely due to misunderstandings, and are often more apparent than real, expresses its thankfulness that the holding of a conference for mutual explanation has been brought before the London Diocesan Conference, and the desire of its members to support by all means in their power this effort to promote the peace of the Church,"

and "that the Church of England can not discharge her responsibilities unless she herself freely interprets her own formularies and is free to take all such other steps as in the light of her living experience she may deem necessary for the spiritual welfare of the people committed to her charge."

It was represented, pending the adoption of the annual report of the council of the union, that the organization had now nearly 40,000 members, the increase having been as great during the past thirty months as in the previous eight years.

Reservation of the Sacrament.—The Archbishops of Canterbury and York gave decisions, May 1, on three cases involving the question of the reservation of the sacrament, the arguments in which had been heard in July, 1899. In two of the cases the Archbishop of Canterbury was the principal and the Archbishop of York the assessor, while the Archbishop of York was the principal in the third case. The question was defined by the Archbishop of Canterbury in rendering his opinion as being whether the clergy of the Church of England are at liberty to reserve a portion of the bread and wine that have been consecrated in their churches at the holy communion and administer it to those who are not present in the church at the time when the prayer of consecration has been said. The practice, which is commonly spoken of as reservation, takes three distinct forms. In the first place, it is sometimes the practice to treat sick persons who are not in the church, but are living close by, as if they were part of the congregation, and at the time of administration to the communicants generally to take the elements out of the church to them as well as to those who are actually present. It is claimed that this is not reservation at all, inasmuch as the administration goes on without interruption, and it can not be said that what is sent in this way is part of what remains after the service is over. The second form of the practice is, instead of consuming all that remains of the consecrated elements as the rubric directs, to keep a portion back and to administer this portion to people known to be sick at some later period of the day. This is acknowledged by all to be reservation, and the reserved elements are kept in the church until the time when they are taken to the sick. Third, the elements after consecration are sometimes reserved, not only to be used for those who are known to be sick at the time, but also for any case of sudden emergency which may occasion a demand for the sacrament in the course of the week. Now, the canon requires that every clergyman shall promise that in the administration of the sacraments he will use the form prescribed in the Prayer Book and none other, except so far as shall be otherwise ordered by lawful authority. On examining the Prayer Book, we do not find any single mention of or allusion to the practice of reservation except in the close of the twenty-eighth article, where it is said the Sacrament of the Lord's Supper was not by Christ's ordinance reserved, carried about, lifted up, or worshiped. It will obviously require overwhelming evidence to prove that reservation in any sense whatever is part of the form prescribed in the Book of Common Prayer. Further, the language of the Thirty-nine Articles can not be taken otherwise than as condemning the practice altogether. All the four prohibitions must be taken together, and all of them in connection with the doctrine of transubstantiation emphatically repudiated just before. The reason for the prohibition is clear. These practices led to gross abuse which the Church of England felt

bound to stop; and even the administration from the church direct during the service is shown to come under the same head, for it gives an opening to the same abuse. Reservation is, moreover, not necessary. The Prayer Book appoints a shortened service of communion for the sick; and if this was still too long and entailed too much strain upon the mind, the administration to those who are too ill to understand fully what they are doing is certainly not to be desired under any circumstances. "The holy communion is not to be treated as if it worked like a magical charm, without co-operation on the part of the recipient. In conclusion, after weighing carefully all that has been put before us," the archbishop said, "I am obliged to decide that the Church of England does not at present allow reservation in any form, and that those who think it ought to be allowed, though perfectly justified in endeavoring to get the proper authorities to alter the law, are not justified in practicing reservation until the law has been altered."

The judgment of the Archbishop of York coincided with that of the Archbishop of Canterbury, he saying that he could come to no other decision than that "the practice of reservation has no sanction in the Church of England at the present time, that it was deliberately abandoned at the time of the Reformation, and that it is not lawful for any individual clergyman to resume such practice in ministering to the souls committed to his charge."

The opinion of the Archbishop of Canterbury embodied some observations respecting fasting communion. Pleas were cited to the effect that it was a hardship to be required to consecrate the sacrament in private houses, since this can not always be done in the early part of the day, and to continue their fast till later is sometimes a serious strain. The archbishop quoted the remarks of St. Chrysostom as fairly representing the general mind of the Church in his day, when fasting communion had become almost universal. That divine treated fasting as not having any virtue of its own, but as a means to the end of making true repentance and amendment of life easier, and admitted bodily weakness as a reasonable plea for omitting a fast. Without taking a full meal, such moderate partaking of food as will relieve any serious strain would be fully consistent with any obligation that the early Christians recognized. For to diminish the usual quantity of food is to fast, even though the diminution does not amount to a total abstention.

Removal of Ornaments ordered.—In the case of the application of Mr. George Davey, a parishioner, for a faculty for the removal of illegal ornaments from the Church of the Annunciation, Brighton, Dr. Tristram, chancellor of the diocese of Chichester, in August, ordered the stations of the cross, confessional boxes and their adjuncts, holy water stoups, crucifixes, two "tabernacles" before which red lights were kept constantly burning, and images of the Good Shepherd, the Virgin Mary, and various saints removed within three months; failing which the petitioner would have authority to remove them himself.

A "Round-Table Conference."—In the London Diocesan Conference, in May, Prebendary Webb-Peploe moved a resolution to consider the desirability of appointing a "round table conference" in which all the parties in the ritualistic controversy might be represented and exchange and compare their views, the objects of the conference being, as defined in the resolution, to ascertain what agreement about principles exists, where difficulties begin, and what is their exact

nature. The resolution was prompted, the mover afterward explained, by special request and desire from those in authority; and in moving it he emphasized the fact that it was interrogatory and not affirmative, and spoke as with the conviction that the calling of a conference of the kind would be futile and absurd unless all the parties were bound by conditions of deference to the law as authoritatively declared. The motion was approved by the bishop and was supported by Lord Halifax. Afterward, in his president's address at the annual meeting of the English Church Union, June 21, Lord Halifax asked: "Is it possible for Christian men, realizing the effects of their divisions, not resolutely to determine to take any step which might hold out even the faintest hope of promoting union and peace? They could not sacrifice truth, but they could ascertain whether their differences were really as irreconcilable as they seemed. Prebendary Webb-Peploe had laid it down that such a conference could be held 'on the acceptance of God's Word and the formularies of the Book of Common Prayer of the Church of England in their plain meaning.' It was clear, therefore, that there was no question of a difference of first principles. On such a basis, with a careful definition of terms, a sufficient knowledge of theology and history on the part of those summoned to meet, and a charitable desire on the part of both sides to put the best possible construction on the explanations which might be offered, a great step might be taken in the direction of peace." But insistence on the acceptance of the judicial commission's decisions as an indispensable condition for entertaining the notion of a conference would make the conference impossible.

The Council of the Church Association, May 24, declared by resolution that it had read with feelings of profound regret the proposal to hold a "round table conference" with representatives of the Romanizing party in the Church of England. "They desire publicly and explicitly," the resolution continued, "to dissociate themselves from any recognition of the possibility of finding a *modus vivendi* with Romanism. They regret also that any suggestion, either of slackening activity of action or of making a definite appeal to Parliament, which is now being so prosperously initiated, should be even tolerated by professed friends of the Protestant cause. And they can not consent for a single moment to relax their own efforts in behalf of the Protestant principles of the Established Church which are being betrayed on a large scale by its own salaried servants."

The "Round-Table Conference" was held at Fulham Palace, Oct. 10 to 13, for the discussion of the subject of The Doctrine of the Holy Communion and its Expression in Ritual. It was attended by Prebendary Barlow, Prof. H. E. J. Bevan, Dr. Bigg, the Rev. N. Dimock, Canon Gore, Prof. Moule, Canon Newbolt, Dr. A. Robertson, Canon J. A. Robinson, Prof. Sanday, Prebendary Wace, Mr. W. J. Birkbeck, Viscount Halifax, the Earl of Stamford, and Chancellor P. V. Smith. Dr. Wace was elected chairman. The meeting was private. The report of the proceedings was to be submitted to the Bishop of London, and would then, it was announced, probably be published by authority.

Prayers for the Dead.—A prayer for the dead having been included in a form of intercession which had been issued for use with reference to the South African war, a number of protests were made to the archbishops against the authorization of such a service. To some of these objections the Archbishop of Canterbury said that it had been decided at law that prayers for the dead were

not forbidden in the Church of England, but had been sanctioned by the Court of Arches in 1858. At a public meeting in connection with the National Protestant Church Union held at the Church House, March 30, to consider this subject and that of the confessional, resolutions were adopted declaring the admission of a prayer for the dead in the form of an intercession on behalf of her Majesty's troops in South Africa to be "unscriptural and contrary to the express mind of the Church in her public worship," and deploring "the mischief caused by the circulation of manuals advertising auricular confession and its practice among many of the clergy of the Church of England as one of the worst revivals of mediævalism."

To a protest by members of the National Protestant Church Union, presented by Prebendary Webb-Peploe, the archbishop replied, March 19, acknowledging that the prayer for the dead, not being found in the Prayer Book, could not be used by any clergyman without express authority, and could not be authorized by any bishop; but that the usual restraints did not apply to the form of prayer lately issued under the authority of her Majesty's Privy Council. "If it could be said that prayers for the dead, in whatever circumstances and whatever language expressed, are forbidden by the law of the Church of England, the order of the Council would certainly go beyond its powers, and ought not to have been made. But it is well known that this is not the case. The law has been clearly declared by the Court of Arches, and the question whether such a prayer should be used is not a question of law, but of expediency. On such a question different men will hold different opinions, and I regret that the opinion of the memorialists is different from mine."

"We know why prayers for the dead were discontinued and discouraged at the time of the Reformation. They were bound up in the minds of the people with the Romish doctrine of purgatory and pardons, and this doctrine had led to such scandalous abuses—e. g., the sale of indulgences—that the authorities were obliged to use very strong means in dealing with it. Prayers for the dead were therefore omitted altogether lest such prayers should keep alive the doctrine that had done so much mischief. And any prayers for the dead which implied this Romish doctrine have been and still are unquestionably unlawful."

"It would have been easy to forbid such prayers altogether by putting in the words 'prayers for the dead' before the word 'purgatory' in Article XXII, but this the Church stopped short of doing."

"I do not think it would be expedient to insert in the Prayer Book any prayer for the dead different in any way from the prayers already there. The constant use of such a prayer in the ordinary worship would, I think, be likely in course of time gradually to modify the teaching of the Church in ways that would not be wise."

"But this is a special and exceptional occasion. There are hundreds of sorrowing souls grieving over the sudden loss of friends and relations dearly loved. And the general emotion that thrills through the country adds to the keenness of their feelings. They have been praying for them daily, and pouring out their affection in their prayers. They know (it is common knowledge now) that prayers for the dead are not forbidden by the law of the Church of England. They ask whether some form of prayer can not be framed which will allow them to express their feelings."

"The objection that the blessed dead are so

happy that they can not receive any addition to their happiness can hardly be reconciled with the teaching of St. Paul. He tells the Thessalonians that on the last day, when the Lord Jesus will come again, God will bring with him those that sleep in Jesus. He tells them this to save them from sorrowing for the departed, and bids them comfort one another with these words. It is impossible to maintain that this does not imply that it will be a joy to us to be once more with them, and assuredly if so a joy to them to be once more with us. The whole spirit of this teaching is against the idea that the blessed dead are so happy that it is a matter of indifference to them whether we rejoin them or not. When we pray for reunion, our prayer is not for ourselves only, but for them also. And when any use the prayer of which you complain they pray that the departed in Christ Jesus may have what they certainly long for, and it is a comfort to many souls thus to express their confidence that those who have gone before them love them still."

"Moreover, the form is a national form. It is right that on such an occasion, when the whole of England is invited to unite in prayer to God for his blessing on the national action, provision should be made as far as possible for every variety of feeling that exists within the land of the national Church, and that there should not be even the appearance of a desire to narrow the breadth and comprehensiveness of her tolerance. Five different forms of Litany are included, and this prayer is only in one of them, and no clergyman is asked to use the prayer to which the memorialists object."

"In conclusion, let me observe that the broad toleration which is the marked characteristic of our courts of law is true to the essential spirit of Protestantism. A church which, resting on the Bible, makes it not only the right, but the duty, of every Christian to satisfy his conscience concerning what the Bible teaches could not possibly hold together if the largest toleration consistent with what the Church has ordered be not allowed to all who endeavor to exercise this right and discharge this duty to the best of their power."

Church Defense and Church Instruction.—The fourth annual meeting of the General Committee of Church Defense and Church Instruction was held at the Church House, March 30, the Archbishop of Canterbury presiding. The report stated that only 200 sermons had been preached and only 100 offertories taken out of a total of nearly 14,000 benefices, in response to requests made to every beneficed clergyman in the country. The income showed a slight diminution. Resolutions were passed declaring the need for continued effort "to complete the organization of Church defense and Church instruction by the appointment of a committee, or at least a secretary, in every parish to co-operate with the diocesan and decanal secretaries for the arrangement of lectures, the distribution of literature, and the collection of funds necessary for the support of the work"; urging the vital importance of disseminating an accurate knowledge among all classes of society of the history and work of the national Church; expressing regret that no provision had been made in the census bill for a census of religious profession; and advising greater effort on the part of Church people to promote a larger representation of members of the Church of England among district councilors and guardians, with a view to the appointment of Episcopal chaplains to workhouses.

The Church Congress.—The fortieth Church Congress met at Newcastle-upon-Tyne, Sept. 25.

The Bishop of Newcastle presided, and in his inaugural address reviewed the questions to be considered by the meeting. Upon the first of the subjects on the programme of discussions—Home Work: Review of the Church's Progress during the Nineteenth Century—generally and in the dioceses of Durham and Newcastle, the Bishop of Ripon spoke of what had been accomplished during the second half of the century, placing emphasis upon the deepening of the unseen hold of Christianity upon mankind and the enlargement of the scope of Christian aim which had taken place in the direction of Christian and social ethics. This was particularly illustrated in the work of the Salvation Army, the Church Army, and the Social Settlements. Canon Overton dwelt upon the "enormous effects" that were due directly or indirectly to the Church revival which began in 1833. Other topics of the first day's discussions were The Church's Policy in Elementary Education and The Cathedral System, with Reference to the Supply and Training of Candidates for Holy Orders. A number of carefully prepared papers were read upon the subject of The Reformation in England: (a) What was it in its Essence? (b) To what has it committed the Church of England? Respecting Old Testament Criticism and its Bearing on Teaching, Prof. Ryle held that inspiration was no special operation, but a spiritual informing force, and commended the teaching of the Old Testament as an evolution of religion. The Rev. Prof. Margoliouth urged that in teaching we should not look to results which were being fast discredited, but to those which the future was likely to see replaced and sustained. Other subjects on which papers were read were: Art: Its Relation to Religion; War: Attitude and Duties of the Church; The Church's Policy in Elementary Education; Autonomy of the Church: Mode of Achievement; The Ascension (at the devotional meeting); The Church's Progress in the Foreign Field in the Nineteenth Century: (a) In the Colonies, (b) In India, (c) In Other Mission Fields; The Housing of the Poor. The evening meeting for men was addressed by the Bishop of Newcastle, the Archbishop of Canterbury, the Bishop of Derry, and the Bishop of Thetford, all of whom pressed the claims of Christianity upon the reason and heart of man and its living power to elevate and ennoble him. At a Conference of Christians of various denominations in furtherance of Christian unity, held in connection with the congress, Earl Grey presided, and a resolution, moved by the Dean of Ripon and seconded by the Rev. F. W. MacDonald, President of the Wesleyan Conference, was adopted, declaring increased co-operation among Christians, where sacrifice of principle is not involved, to be both desirable and practicable.

Church of England in Australia and Tasmania.—The General Synod of the Church of England in Australia and Tasmania met in Sydney, Aug. 28. A committee was appointed to have charge of the raising of a twentieth century fund, and of provision for such objects as clergy pensions, religious education, clergy training, and Church extension. British New Guinea, already constituted a diocese, was included within the territorial limits of the synod. A proposal to change the name of the Church in such a way as to convey a closer identification of it with Australia was rejected. The synod decided that the primate should be selected from among the metropolitans of Australia and Tasmania, or until these provinces shall have been formed from among the occupants of the sees of Sydney, Melbourne, and Brisbane. Other action of the synod related to clergy discipline, thanks and public prayer for the

inauguration of the commonwealth, the abolition of the primate's veto on the confirmation of bishops, enlargement of the powers of the synod, the College of Theology, the Clergy Superannuation fund, the relation of the Church and industrial problems, and the Centenary Thanksgiving fund.

ARCHÆOLOGY. The results of the Oriental and Grecian archæological discoveries of the season of 1899-1900 are among the most fruitful recorded in any single year. They have established the historical character of the first dynasty of Egypt and have brought to light some of its art, and of the art even of the pre-Menite period. They have proved the existence in Crete of Greek or Mycenaean writing eight hundred years earlier than any previously known and furnished palpable data concerning times and scenes which the Greeks invested with myths of fanciful character; and have brought to light in Babylonia a library of cuneiform cylinders, all antecedent to 2280 B. C., from the study of which an amount of information may be expected to accrue respecting the most remote past exceeding all present possibilities of estimation.

American.—The archæological investigations conducted by Mr. Harlan I. Smith for the Jesup north Pacific exploring expedition on the north Pacific coast during 1899 were in continuation of researches made on the same field during the preceding two summers, and were designed, in the State of Washington, to extend existing knowledge of the distribution and character of cairns and burial mounds; to make reconnoissance of the shell heaps of Puget Sound and the western coast, with special reference to the determination of their character and the distribution of the southern limits of north Pacific coast culture in North America, and of any possible influence from the region of the lower Columbia; and to learn if the shell heaps of the lower Fraser river had any analogy with those of this area. In British Columbia a further investigation was desired of the cairns and shell heaps of northeastern Vancouver island. It was further necessary to study the archæology of the Lilloet valley with reference to possible communication of coast culture with the interior and *vice versa*. The southern limit of north Pacific coast culture and the southern limit of important influence from the Columbia valley seemed to coalesce in the region from Shoalwater Bay to Seattle.

Explorations carried on under the direction of the American Museum of Natural History among the relics of the Zapotecs in the state of Oajaca, Mexico, were to be continued during the winter of 1900-1901, under the superintendence of Prof. Marshall H. Saville. The Zapotecs are one of the hardest of the native races of Mexico, exhibiting affinities with the Mayas in language and with the Nahuas in religion and some of the features of their architecture. Their ancient capital was Mitla, a city the ruins of which are extensive and important, and have received much attention from Americanists. The present work of exploration is directed to ruins in the vicinity of Cuilapa, Tectipac, and Maculixochitl, all of which are situated within a radius of 50 miles. The previous explorations made by Prof. Saville have left some curious problems to be solved. At a site known as the Mogotes de Xoxo royal tombs were found, seven of the mounds being arranged in a group, while others were detached. One is marked by a pyramid of the style common in Central America, 60 feet high, with a base 160 feet square. Within the mounds were cemented floors and ruins of walls of adobe. Vessels were found, some not ornamented, one bearing the figure of a large

clawed foot of a carnivorous animal. In one mound was a statuette of a man with a tiger's head. In another mound, where a cemented wall was discovered running along at a considerable depth under the ground, the workmen came upon a series of earthenware pipes, 36 feet in length, the smaller end of each section being cemented into the larger end of the preceding section, running apparently from the entrance of the tombs down toward the valley. As the situation affords little need for drainage, the possibility of finding some other motive for this construction—perhaps a mythological one—has been suggested. A more thorough examination of this work will be one of the objects of the present exploration. Pieces of similar pipes have been observed on Mount Alban and at two or three other points in Mexico, but nowhere before in place. Curiously shaped fu-

78 chapels which, according to Sahagun, surrounded the main temple have been discovered.

As much of the anthropological department of the American Museum of Natural History in New York as has been put in order was opened Oct. 29. It comprises at present five collections: the north Pacific collection, containing costumes, household implements, and ceremonial masks of the tribes of that region, the fruits of the Jesup expedition of 1897-1900; the Mexican collection, consisting of casts and specimens from the ruined cities and temples of Mexico and Central America; the South American gallery; the Indian gallery, in which is a very complete collection of the clothing and utensils of the Eskimos of the Arctic coast on both sides of the Pacific; and the collections made by missionaries in Japan and other Asiatic countries, which were shown at the Ecumenical Con-

STATUETTES IN TERRA COTTA, BEFORE A ZAPOTECO TOMB.

neral urns were found in different situations. Of one group of five such urns, the central figure embodied a portrait of a man, while those to the right and left of it wore grotesque masks. Other tombs contained human relics and fragments of domestic pottery. Among the objects that have been found in different tombs are censers, like some that have been discovered at Oajaca, and a terra-cotta statue measuring about 6 feet in length, which has been placed in the National Museum of Mexico. Additional value is given to the Zapotecan collection of the American Museum by the fact that the history of every article in it is known, the place where it was found, the name of the finder, and the circumstances of the discovery being all recorded.

In the course of excavations for public works in the city of Mexico numerous Aztec relics, images, censers, implements, and other objects, have been recovered from the site of the ancient temple of Huitzilopotchli, the god of war. Two of the

ference of Missions in 1890 and afterward presented to the museum. The museum has several exploring parties at work, which are maintained by private contributions. Their fields during the last year were Peru, the western Indians, the Eskimos, and the whole region of the north Pacific. Explorations have been begun and are to be continued in the neighborhood of New York city, where some sites of former Indian villages are supposed to exist.

Recent explorations among the ruins of the cliff dwellers by Dr. George I. Cole, of the University of Southern California, included an examination of the structure called the castle of Montezuma on Beaver creek, Arizona, which, although a very large ruin, yielded few antiquities; and the region of Mesa Verde, a mountain district of considerable extent. The numerous side cañons along the Maricosa river, in which very ancient ruins were found, were fortified at their openings by large watch towers. The cities were built on the sides of sheer

precipices, the entrances to many of the dwellings being 700 feet above the river, and accessible only by climbing up from the bottom or down from the top. One building in this region had 1,500 rooms, and another, a pyramidal structure, was 3 stories high, with 500 rooms on the ground floor. Many skeletons, representing different Indian races, were recovered.

The Archæological Institute of America has for several years sustained an archæological school at Athens, which has accomplished much that is valuable in the exploration of Grecian sites. The new school at Rome had in 1899-1900 a year of successful work with American and Italian teachers. A school of Oriental studies in Palestine was to open in October, 1900.

An expedition is in course of organization under the direction of President William R. Harper, of the University of Chicago, Bishops Potter and Hurst, and others, to explore the ruins of Ur of the Chaldees, the city of Abraham. The site was visited by Mr. Tayler, an English consul, in 1854, who made sufficient excavations to reveal the wall of an ancient temple which was described as being an unusually perfect specimen of Babylonian architecture. In some of the graves Mr. Taylor found inscribed tablets, pottery, and ornaments of gold, silver, and precious stones. Ancient inscriptions uncovered by Arabs quarrying bricks from the mounds are to be found lying on the surface of the ground. From the importance of Ur in very ancient times, the excavations are expected to afford results of great value.

British.—Closing his presidential address before the anthropological section of the British Association on The Early Ethnology of the British Isles as studied from the sides of language and folklore, Prof. John Rhys summarized his conclusions by saying that "the first race we have found in possession of the British Isles consisted of a small, swarthy population of mound dwellers, of an unwarlike disposition, much given to magic and wizardry and, perhaps, of Lappish affinities; its attributes have been exaggerated or otherwise distorted in the evolution of the little people of our fairy tales. The next race consisted of a taller, blonder people, with blue eyes, who tattooed themselves and fought battles. These tattooed or Pictish people made the mound folk their slaves, and in the long run their language may be supposed to have been modified by habits of speech introduced by those slaves of theirs from their own idiom. The affinities of those Picts may be called Libyan, and possibly Iberian. Next came the Celts in two great waves of immigration, the first of which may have arrived as early as the seventh century before our era, and consisted of the real ancestors of some of our Goidels of the Milesian stock and the linguistic ancestors of all the peoples who have spoken Goidelic. That language may be defined as Celtican so modified by the idioms of the population which the earlier Celts found in possession that its syntax is no longer Aryan. Then, about the third century B. C., came from Begica the linguistic ancestors of the peoples who have spoken Brythonic, but in the majority of cases connected with modern Brythonic they are to be regarded as Goidels who adopted Brythonic speech, and in so doing brought down into that language their Goidelic idioms, with the result that the syntax of insular Brythonic is no less non-Aryan than that of Goidelic, as may be readily seen by comparing the thoroughly Aryan structure of the few sentences of old Gaulish extant."

The author had proceeded in his study on the principle that each successive band of conquerors had its race, language, and institutions eventually

more or less modified by contact with those whom it had conquered, and he had endeavored to substitute for the supernatural beings of Celtic legend a possible series of peoples. These views await confirmation by archæology.

The excavations at Silchester, prosecuted from July 20 to the end of August, 1899, consisted very largely in the exploration of the granary, where the marks of destruction by fire and the fall of the floor and roof into the vault of the hypocaust were very evident. On a paved floor between two walls of an adjoining building, supposed to be the prætorium, were found three coins—including a second brass of the second century and a third brass of the third. Between two other walls was a piece of solid masonry, somewhat resembling a doorway. At another point a small turret was found, which proved to be a guard chamber of the westerly gateway. Among the smaller objects turned out were a first brass coin of Antoninus Pius and a third brass of Constantine the Great, a somewhat delicate pair of tweezers with a ring clip, a bone bodkin, a pin, several pieces of stamped and ornamental pottery, and a broken pillar, about 9 inches high, bearing six letters of a former inscription.

Roman.—At the time of the suspension of the excavations of the Basilica Æmilia, in the winter of 1899-1900, although the section laid bare was less than half of the total area, yet, according to Prof. Rodolfo Lanciani, by reason of the symmetry of the lines, a sufficient knowledge of the general plan and elevation of the structure had been gained. The building comprised three parts: a central hall, divided into nave and aisles by a double line of columns; two rows of cells or tabernæ on either side of the central hall, opening on the outside porticoes; and these porticoes, which decorated the longitudinal side of the building—the side facing the forum, the only one as yet brought to light. The decoration of the front, on the side of the argiletum, and of the back, on the side of Faustina's Temple, has not been made clear. The basilica, or central hall, resembles in design that of Trajan, except that it has only two aisles instead of four. The line of separation between the aisles and the nave was marked by a row of columns, of which hardly any sign is left. The wall runs plain and flat, without any pilasters corresponding to the columns. The pavement of both aisles and nave is in a good state of preservation. It is composed of large slabs of giallo, portasanta, africano, cipollino, etc., all rectilinear and arranged so as to harmonize in design with the site of the columns. This pavement was found covered with loose copper coins of the end of the fifth or beginning of the sixth century, which with other rubbish bore marks of the action of fire. The central hall had an upper story or colonnade—a kind of structure which, according to Vitruvius, was set aside for the women of the audience. The Corinthian capitals are very graceful and skillfully executed. "In fact," says Prof. Lanciani, "every particle of the architectural decoration of this building is absolutely perfect." A commemorative inscription was engraved on the frieze of the lower order, of which only two fragments have been recovered. The Basilica Æmilia, originally constructed B. C. 179, underwent five restorations, the last under Tiberius, from whose time the fragments discovered date.

Among the epigraphic discoveries described by Prof. Rodolfo Lanciani as having been made in the excavations of the Basilica Æmilia is a fragment of the Fasti Consulares, which before its mutilation contained the list of the military tribunes from A. U. C. 374 to 378 and the list of consuls

from 422 to 433. The block of marble on which the lists were inscribed had been taken from the walls of the Regia many hundred years ago and turned into a threshold at the entrance door of a public office lodged among the ruins of the basilica. About four fifths of the inscriptions had been worn away, so that only the names of the tribunes for the year 374 and of the consuls for the years 422-424 were left. "To value rightly the importance of these records," says Prof. Lanciani, "we must remember that the mention of the Tribuni Militum for 374 is to be found only in Diodorus, xv, 50, and Livy, vi, 27, both being incorrect as regards the number and the names of those officers. Diodorus mentions only seven, Livy six; the newly found Fasti nine, with names and genealogy in full, ending with the record that toward the end of the same year, on the approach of the Prænestinian army to the walls of the city, T. Quintius (Cincinnatus) Capitolinus was elected *dictator rei gerundæ causâ*, and that he chose as the head of his staff Aulus Sempronius Atratinus." The column of consular names begins with that of Spurius Postumius Albinus, A. U. C. 422, and ends with that of Lucius Plautus Venno, consul with Lucius Papirius in 424. Record is made between them of the dictatorship of Cnæus Quintius Capitolinus *clavi fregendi causâ*—or for the ceremony of driving a nail on Sept. 13 on the right side of the cella of Jupiter Optimus Maximus on the Capitol. This custom, which was a very old one, was derived from the Etruscans, who used it to keep account of the years. But in process of time the ceremony came to be performed only in extraordinary circumstances—in this case on account of a terrible mortality among the patrician families.

Grecian.—The latest publication by the Hellenic Society is the Plans and Drawings of Athenian Buildings, a part of the work upon the topography of Athens begun by the late Dr. Middleton shortly before his death, with a view to producing a book similar to his work on ancient Rome. The sketches made by the author have been revised on the spot by Mr. T. D. Atkinson, architect. During the year 1901 the society hopes to issue the record of the excavations carried out by the members of the British school at Athens upon the site of Phylakopi, in the island of Melos. These excavations have revealed the existence of a primitive city comparable to the ruins of Tiryns and Hissarlik. A successful beginning of excavations in the island of Crete has been made by Mr. Hogarth, director of the British school, and the discoveries made by him in the Dictæan cave and by Mr. Arthur Evans, of the Cretan Exploration Fund, on the site of Cnossus, are mentioned in the report of the society as being of such a character as to promise a rich harvest in the future.

The explorations at Corinth were continued under the auspices of the American investigators. In the excavations on the west side of the Propylæa numerous architrave blocks and parts of statues were met with. Two figures, 8 feet high, wearing the Phrygian cap, were found attached to pilasters at the back, to the tops of which Corinthian square capitals were attached. The tops of the heads of the statues were cut away, so that they might come closer up against the capital, which was also cut away a little. The figures thus appeared to assist in bearing the architrave, and were analogous to the caryatides. The bases of these statues were also found. Two other large, fine female heads were discovered, evidently belonging to the same series. No foundations were found to fit these and other pieces of superstructure, and they were therefore sup-

posed to have come from the Propylæa, of which massive buttresses remain. About 75 feet south-west of the west end of the Propylæa was a platform with a façade which extended beyond it as a balustrade. Digging from here, about 25 feet from the surface which they had broken the explorers came upon the floor of an irregular quadrangular room. In the west wall of this room were two lions' heads of bronze with wide-open mouths, as if for the flow of water. Beneath these heads were the round holes in the pavement in which pitchers were placed for filling. Above them the edge of the native ledge projected forward. This was an ancient Greek fountain, remaining absolutely intact, the only example of the kind known, for the other fountains that have been discovered had been changed in some way. But although it is certain that this fountain is Greek, the balustrade at the top of the steps leading to it is Roman, and made from the temples which Mummius destroyed. Pausanias mentions a single fountain situated in the Agora, on which stood a bronze statue of Poseidon with a dolphin at his feet ejecting water from its mouth. A base was found on the platform, which may have been connected with this statue.

In a summary of the results of the excavation of the Argive Heræum issued in advance of the official publication Dr. Waldstein, agreeing apparently with Dr. Dörpfeld, assigns the remains of the earliest Greek civilization yet found to the third millennium B. C. A continuous indigenous development from that period is shown in buildings, pottery, and other features, for the study of which the Heræum, a religious center from the most remote period of the Argive territory, affords excellent facilities. The earliest constructions found on the site date, according to Dr. Waldstein, from the nineteenth century B. C., a dating which corresponds with the old Greek tradition of the number of generations of kings who ruled in Argos, and goes about four hundred years back of the Mycænean age.

The final report by Prof. Dörpfeld of the latest excavations at Hissarlik was announced for publication during the winter of 1900-1901. Besides Prof. Dörpfeld's own contributions respecting the positions of the several buried cities, the work contains accounts of the archaeological researches of his collaborators, Winnefeld, Schmidt, Brückner, Götze, and Wiberg, concerning the earlier and later finds.

Cretan.—Archæological interest has been directed to Crete since about 1881, when Mr. W. J. Stillmann reported the discovery of the remains of a wall at Cnossus, fragments of Mycænean pottery, and curious signs upon stone blocks on the hill of Cephala, near Candia. He desired to excavate there, but was not permitted by the authorities to do so. Dr. Schliemann also tried to secure the right to explore the site, but could not come to terms with the Turkish officers. In 1894 Mr. Arthur J. Evans announced that he had discovered the existence in this island of a system of writing long anterior to that of historic Greece, and at the same time distinct from the Phœnician and from the Hittite script of Anatolia. The writings were found on seal stones bearing groups of pictographs and characters in the linear style. Researches continued since then have added to the data, and have culminated in the discovery in the Dictæan cave of Zeus of part of a steatite libation table of Mycænean date, consisting of nine similar characters cut in the monumental style. Characters in the linear style were also found at Cnossus in 1894 and afterward. In 1896 Mr. Evans acquired an undivided interest in the hill at

Cephalà to which Mr. Stillmann had directed attention, but was still not able to excavate. Finally, after a succession of difficulties, including a lawsuit, a forced sale of the property, and other complications, Mr. Evans became sole owner of the site and began excavations early in 1900. A building was revealed, which there seemed every reason to believe was a palace of the Mycenaean kings. Nothing was found that could be regarded as later than the fourteenth century B. C. The structure appeared to be of unsurpassed magnitude and magnificence, with fresco paintings and stone carvings of which the author declared, in the first letter announcing his discovery, "the remains excelled anything of the time yet found in Greece," the royal bathroom displaying a luxury not found in Mycenæ itself. Of even greater interest than this palace were the clay tablets bearing the characters which had already attracted attention. They were in shape generally more elongated than the cuneiform tablets of Babylon, but otherwise analogous to them, except that the records they bore were in Mycenaean script. These tablets were oblong slips of hand-molded clay, flat on the engraved side, with almost adzelike ends, but thickening toward the center of the back, and of lengths varying from about 2 inches to 7 inches, and in breadth from half an inch to 3 inches. Lines were ruled at intervals for the convenience of the scribes, one of the largest of the tablets showing 18 such lines—a certain proportion of them left blank. The most usual type consisted of two lines, or even a single line, of inscription, written from left to right lengthwise along the tablet, but some of the broader tablets had the lines arranged across the narrower diameter. The majority of the tablets were broken in consequence of a great conflagration they had passed through, but it may be possible to reconstitute some of them. The tablets had been deposited in several chambers and corridors. Some of them were in a clay chest shaped like a bath, some in wooden coffers, the remains of some of which have come to light, with the bronze hinges, and even the clay seals with which they were secured, still bearing impressions of Mycenaean gems. Fresh material of this sort was accumulating daily. Some of the signs in the inscriptions are identical with later forms, others suggest forms of the Cypriote syllabary, as well as Lycian and Carian characters; others are ideographic, and others are "unquestionably numerals." Some of the tablets have indorsements and additional inscriptions on the back. "These palace archives of Cnossus," says Mr. Evans, "not only prove to demonstration that a system of writing existed on the soil of Greece at least centuries before the introduction of the Phœnician alphabet, but they show that already at that remote date this indigenous system had attained a most elaborate development. These inscriptions are the work of practiced scribes, following conventional methods and arrangements which point to long traditional usage. Yet this development has been arrived at on independent lines; it is neither Babylonian nor Egyptian, neither Hittite nor Phœnician; it is the work on Cretan soil of an Ægean people. It is the fitting product of a country to which all later Greek tradition looked back as having supplied the earliest model of civilized legislation. There is, indeed, an air of legal nicety about these documents themselves the effect of which is enhanced by an interesting particular as to the method by which they were originally secured. It was not thought sufficient for the official concerned with their safe-keeping simply to impress with his signet gem the clay seals that made sure the coffers containing the tablets

while the clay was still moist, but the impression of the intaglio itself and the back of the seal were in several cases signed and countersigned with incised characters in the same Mycenaean script." These inscriptions were written in a linear and highly developed script, with only occasional resort to more pictorial forms, while the previous studies of the seal stones had made it clear that there had existed in the island, from a very remote period, another form of writing, of a pictographic kind, and in its general aspect recalling Egyptian hieroglyphics, but in which "the methodical recurrence of groups of signs in the same collection sufficiently showed that one had here to do with a kind of writing and not with a mere aimless parody of Egyptian or Hittite forms." On further excavation a deposit of clay tablets was found of different forms from those exhibiting the linear script, and inscribed with a hieroglyphic type of writing identical with that of the prism seals. These tablets were of a variety of shapes. Together with the pictographic, they contained a proportion of signs as purely linear as any of the other category; and it was remarked that the written forms assumed in many cases a much more alphabetic character than their glyptic equivalents as seen on the seal stones, showing "a distinct step in the evolution of writing out of mere pictorial signs." Two examples of this sort are illustrated in the accompanying figures, the first of which is taken from a four-sided bar and the second from a three-sided crescent "label." For reasons which he sets forth, Mr. Evans believes that these pictograph characters and those upon the seal stones were the work of the Eteocretan stock, or the race which preceded the Mycenaean.

PICTOGRAPHIC AND LINEAR SIGNS ON A FOUR-SIDED BAR, CNOSSUS, CRETE.

The pictorial illustrations, Mr. Evans adds, which not infrequently accompanied the linear inscriptions enabled him in many cases to learn the purport of the clay documents. They thus were seen to refer to the royal stores and arsenals, and showed a decimal system of numbers akin to the

Egyptian. Mr. Evans hence infers that the particular chamber of the palace in which the tablets bearing pictographs were discovered contained rec-

PHOTOGRAPHIC AND LINEAR SIGNS ON A THREE-SIDED CRESCENT "LABEL," CNOSSUS, CRETE.

ords of tribute or other matters from districts which probably stood in a subject relation to the city of Minos.

The building in which the excavations were made is described by Mr. Evans as being of vast extent, before which the palaces of Mycenæ, Tiryns, and other similar structures shrink into comparative insignificance. The entrance is approached from a paved court on the eastern side, and, flanked by two columns, leads into a large antechamber furnished with stone benches. Hence the visitor passes into an apartment which has been given the name of "the council chamber of Minos." Against the wall on the right stands a throne of gypsum, having a low seat and a tall, curiously carved back, which still shows traces of painting. Along the walls on either side are continuous stone benches; on the opposite side, protected by a high parapet to which seats are also attached, is an oblong rectangular depression, constructed with finely compacted slabs and evidently intended to contain water, but without visible outlet. It is approached by descending steps. The walls of the council chamber are ornamented with frescoes, still sufficiently preserved to enable landscapes, flowing water, and flowering plants to be distinguished. On either side of a door leading into a smaller apartment are two griffins, seated on baskets and apparently engaged in hatching. In another part of the building is a long corridor, on each side of which are a series of frescoes representing male and female figures arrayed in rich costumes, of most of which only the lower parts of the bodies have been preserved; but one piece, which had fallen, showed the figures of two men to above the waist, draped in long flowing mantles. On the left side, the central figure is a lady distinguished from the rest by her wide flounces. In another room were found parts of a fresco in a new miniature style, showing groups of elaborately dressed young women, seated and engaged in animated conversation. A figure that has attracted especial notice is that of a youth putting crocuslike flowers in an ornamental vase.

The royal magazines or storerooms are approached by a long corridor which leads to a succession of 12 apartments. Some of these contained

rows of oil vases 5 feet high, some highly ornate and furnished with numerous small handles. Beneath the floor of several of the chambers and passages are receptacles of closely fitted stonework, one above the other.

Mr. W. J. Stillmann suggested in 1881 that this building, of which a wall of Cyclopean masonry was the only vestige then visible, was probably the Labyrinth. This view is confirmed not only by some of the features of arrangements, but also by the numerous figures of the double axe, *adzeus*, recurring often in different parts. The figure corresponds to one of the epithets of Zeus, and is found in both the linear and the pictographic inscriptions as a significant character. The remains of the life-size figure of a bull of painted *gesso duro*, of which the head is perfect, discovered in the later days of the work of excavation, suggest an allusion to the bull of Europa, or to the one associated with the name of Pasiphaë, whose progeny, the Minotaur, dwelt in the Labyrinth.

The sculpture and painting in this palace are characterized by Mr. Evans as of a higher level than those at Mycenæ or Tiryns. "For monuments of the Mycenaean painting, indeed, the palace of Cnossus stands almost alone. On many of the walls the frescoes are found still adhering, almost as brilliant as when they were executed, and we have here a new revelation of ancient painting. Quite new in ancient art are certain miniature groups of ladies fashionably dressed in somewhat *décolleté* attire, seated in animated conversation, apparently in the courts and balconies of the palace itself." In the decorative designs and the fabulous animals—griffins and sphinxes—the influence of Egyptian models of the eighteenth dynasty is evident, but these foreign elements are adapted in an independent manner. Of more special interest are processions of youths bearing various vases, which Mr. Evans regards as having a singular general resemblance to the procession of the tribute-bearing Keft chieftains on the tomb of Rekmara at Thebes, which dates from the first half of the fifteenth century B. C. The Kefts of the Egyptian monuments are accepted as representing the Mycenaean race of the Ægean isles and coast lands. "On the Cnossian wall painting we see them in their home." The upper part of one of these Cnossian figures is of the highest anthropological interest as presenting for the first time a careful naturalistic portrait of a Mycenaean man. The profile is of a pure European character, almost classically Greek. The type of head represented is essentially that of the race which through all the changes of Cretan history still remains predominant in the island.

A new and striking piece of evidence of intercourse between Crete and the Egyptian middle kingdom was found in the palace in the form of a diorite figure with hieroglyphic inscriptions. Its good style and material have been recognized by Egyptologists as indicating a work of the twelfth, or at most of the thirteenth, dynasty. "In other words, the latest date to which it can be safely referred hardly comes down to 2000 B. C. We have here, therefore, a valuable indication for the approximate chronology of the earlier elements of the palace of Cnossus itself, which in any case go back of the period to which the remains of Mycenæ have given a name."

Mr. Evans, in order to avoid confusion of periods, purposely did not go below the Mycenaean deposits; but Mr. D. C. Hogarth, digging at another spot, found a whole series of early painted pottery, many of the pieces showing artistic designs of lilies, tulips, and other flowers, with shapes in

some cases so graceful as never to have been surpassed in any age of Greece. This style of Cretan pottery, which has received the name of Kamaraes from the grotto where its first occurrence was described by Mr. J. L. Myers, has been found by Mr. Petrie at Kahun, in Egypt, again in a twelfth dynasty connection. The intercourse between Crete and the Nile valley in the third millennium B. C. has thus left its traces on both shores of the Libyan Sea. Such data "give additional interest to the fact that the palace of Cnossus, in its turn, overlies a vast neolithic settlement." Trial shafts were sent down by Mr. Evans through 14 feet of continuous stone-age deposits.

The great bulk of the remains explored at Cnossus were contemporary with the eighteenth and nineteenth Egyptian dynasties.

In describing his discoveries in the British Association, Mr. Evans said that they not only carried back the existence of written documents on Greek soil about eight centuries before the first known monument of Greek writing and five before the earliest Phœnician, as exhibited in the Moabite stone, but they afforded a wholly new point of view for investigating the origin of the alphabet. The letter forms borrowed by the Greeks from the Phœnicians seemed to have been even influenced by these pre-existing Ægean scripts. The common elements existing in the Phœnician alphabet itself were very noteworthy. De Rouge's theory of the derivation of the Phœnician letters from remote hieratic Egyptian prototypes must be definitely abandoned. The Phœnician, and with it the Greek, alphabet must be regarded as a selection from a syllabary belonging to the same Ægean group as the Cretan. Such a phenomenon on the Syrian coast was naturally accounted for by the settlement there in Mycænæan times of the Ægean island race, the Philistines, whose name survived in that of Palestine. Though later Semitized, their biblical names of Kaphtorim and Cherethim or Cretans, sufficiently recorded their Ægean origin.

An exploration of the cave of Psychro in the Lasithi district of Crete, made by Mr. D. G. Hogarth, confirmed the view that it was the Lyttian grotto connected with the story of the infancy of Zeus in the legend, the earliest version of which was preserved by Hesiod. The cave was double. A shallow grotto on the north had a rude altar in the center, surrounded by many strata of ashes, pottery, etc., among which many votive objects in bronze, terra cotta, iron, and bone were found, together with libation tables in stone, and an immense number of earthenware cups used for depositing offerings. The lowest part of the upper grotto was inclosed by a wall partly of rude Cyclopean character and partly rock cut. Within the Temenos the untouched strata of deposit ranged from the early Mycænæan age to the geometric period of the ninth century B. C., or thereabout. In the southern or lower grotto, in the vertical chinks of the lowest stalactite pillars, there were found toy double axes, knife blades, needles, and other objects in bronze, placed there by dedicators as in niches; and also statuettes and engraved gems. The frequent occurrence of the double axe, both in bronze and molded or painted in pottery, found in the caves indicated that its patron god was the Carian Zeus of *Labranda* or the Labyrinth.

Babylonia.—The work of the expedition of the University of Pennsylvania at Nippur, under the direction of Prof. H. V. Hilprecht, has resulted in the discovery, in the ruins of the great temple of that city, of the ancient library which had been lost on the destruction of the temple by the Elamites, 2280 B. C. It is a remarkable fact in connec-

tion with this discovery that Prof. Hilprecht had pointed out eleven years before, when Dr. Peters was at the head of the expedition, that the remains of the library would be found at this very spot. The discovery has proved to be more important than had been anticipated. In the course of three months more than 17,000 tablets bearing cuneiform writing were recovered. They comprise historical, philological, and literary documents, mythological writings, works in grammar, lexicography, science, and mathematics. There is reason to believe, Prof. Hilprecht observed in giving an account of his discovery to the London Daily News, that these tablets "will for the first time enable the world to form an adequate idea of life in Babylon such as could only be possible by the discovery of a national library recording the national progress in literature, science, and thought generally. No document is found in this collection of a later date than 2280 B. C. As this date marks the invasion of the Elamites, the fact adds confirmatory evidence that the library was destroyed during this invasion." The unexplored remains of this library are represented as being even more extensive than those already examined. The tablets are generally arranged with regularity on clay shelves around the rooms, and Prof. Hilprecht estimates that at the present rate of working five years more will be required for the excavation and examination of the contents, and it is calculated that the unexplored part will yield 150,000 tablets to be added to those already discovered. Prof. Hilprecht, writing from Nippur, May 9, to the *Lutherisches Kirchenblatt*, described the 16,000 tablets taken from the eastern wing of the temple as being of the very greatest importance, "because for the most part they consist of religious, astronomical, linguistic, and didactic cuneiform texts, besides letters and other historical documents. From other parts of the extensive ruins we have taken out 5,000 other inscriptions, mostly referring to business transactions, so that the entire find of valuable cuneiform tablets amounts to over 23,000. In addition to this, I have to a large extent uncovered and determined the eastern fortifications, which reach back to the fifth thousand year B. C., together with the northeast gate of Nippur. One of the most important discoveries was the southern façade, over 600 feet in length, of a palace deeply buried in the earth belonging to the fourth thousand year B. C., and the complete uncovering of a large government building with a colonnade, belonging to the first thousand year B. C." The writer further speaks of having devoted special attention to the reconstruction of the temple of Bel at Nippur—"the greatest national sanctuary in the whole of ancient Babylon"—and of a great number of articles of art obtained, "ornaments of gold and silver, and other antiquities." The works of excavation mentioned in this letter include the continuation of the systematic exploration of the temple and the completion of the examination of the southern and eastern lines of the walls of fortification of the ancient city. "These walls show clearly the different epochs in which they were constructed. There are, first, portions of which the builders were the pre-Sargonic rulers. These are followed by the works of Sargon (3800 B. C.) and of Narum-Sin, his son: then about a thousand years later are the fortifications of Ur-Gur, to be followed by the later Cassite kings, belonging to the comparatively modern period of from 1700 to 1100 B. C. The numerous weapons found along the whole line of fortification, especially in the lower strata, were welcome material for determining the methods employed by besieging armies in the earliest periods of Babylonian history." A palace be-

longing to the pre-Sargonic period was uncovered beneath an accumulation of 70 feet of rubbish on the northeastern side of the Shate-el-Nil. This building, which is mentioned in the letter as having a frontage of 600 feet, is believed to have been the palace of the early priest-kings of Nippur. The few rooms excavated have already given valuable results in the shape of pre-Sargonic tablets, seal cylinders of the earliest type, and clay figurines of early date. At a later period in the history it was used as a quarry for materials for other buildings. Some of the discoveries correct previous conclusions reached by the Philadelphia expeditions. A large building with a remarkable colonnade, having been completely excavated, proves to be of a date a thousand years later than Dr. Peters had estimated it to be, and is a work of the Persian period. A cruciform structure which had been supposed to be connected with the temple turns out to have been a fortification constructed some time during the last two centuries B. C.

A catalogue of the collection of Assyrian and Babylonian tablets in the British Museum, prepared under the direction of Prof. Carl Bezold, of Heidelberg, includes principally the list of the 23,000 tablets that formed part of the library collected by Esarhaddon and Assurbanipal, 681-625 B. C., which have been recovered from the Koyunjik mound, Nineveh. The library, as appears from the records associated with it, was a careful selection, made by the order of the two kings named, of the more important works from the libraries of southern Chaldea, as a means of supplying the lack of literary culture felt by the Assyrian conquerors of the Babylonian empire. Assyrian youth might, indeed, resort to the libraries and temple schools of Babylonia, among which those of Borsippa, Sippara, and Nippur were conspicuous; but the influence under which they were brought there was all Babylonian, and not favorable to the aspirations of the Assyrian monarchs. In order to counteract this condition, Esarhaddon determined to form a library and school at Nineveh; and this work, begun by him, was completed by Assurbanipal. The library was named after the great library of E-Zida in Borsippa, and was dedicated to Nebo, the god of learning, and his consort Tamitum, the hearer or pupil. Many of the tablets bear a colophon, reading, "These tablets I wrote, engraved, and, for the inspection of my people, placed in my palace," which is interpreted as meaning that the library was a public one. The scribes engaged in preparing the tablets were instructed to copy all works of educational or literary value in the colleges of the south; and the fidelity with which the transcription was done is indicated by the indorsement "Like its old copy" on most of the books, and by the occasional occurrence of the statement that the original was damaged. The collection includes educational works and handbooks, medical tablets, astronomical and astrological texts, and letters and dispatches, and were written in the different scripts current in the empire, and one that is unknown. Many of the tablets are furnished with a legend corresponding in character with the modern bookplate, in which the royal proprietorship is asserted and a warning is embodied against carrying the book off or converting it to another person's use.

Renewed Excavations at Susa.—Soon after retiring from the museum at Cairo M. de Morgan was commissioned to continue, under the permission of the Shah, the excavation at Susa, in Persia, which had been begun several years ago and carried on with considerable success by M. Dieulafoy. He adopted the method of proceeding there that had been used, with satisfactory results, by Mr.

Petrie in Egypt and by Dr. Peters in Mesopotamia, of driving tunnels in the mounds reaching from the base to the summit. Beneath the charred remains of the Shushan of Arab times the excavators came upon the Elamite palace which was destroyed by Sardanapalus, and beneath this, in successive strata downward, the bricks of royal buildings and the flint implements of remote times. Among the more important of the ancient objects found was a limestone monument bearing a sculptured portrait of a bearded king wearing a flowing robe and armed with a bow and shaft.

Egyptian.—Excavations were carried on in Egypt during the winter of 1899-1900 under the auspices of six institutions at seven principal sites. A party working in behalf of the museum of Gizeh at Sakkarah, near the pyramid of Horse, in search of burials of princes and princesses, came upon an unfinished burial of the Saitic period, the disposition of which casts light on the way in which the massive sarcophagi were erected. In a chamber reached by a narrow doorway from the bottom of a well 20 metres deep was a very large sarcophagus, not yet occupied, the lid of which was raised about 2 feet above its place by six little pillars of masonry. On the sides of the wall of the chamber were notes in demotic on the progress of the work, written in black ink by the overseer, and other examples of unfinished construction contributed to illustrate the method of proceeding.

The work of M. Gayet, representing the Musée Guimet at Shekh Aabadah, the ancient Antinoë, has as yet brought to light nothing more important than some Coptic embroideries.

Mr. Garstang, working for the Egyptian Research Account in some tombs near Abydos, came upon several undisturbed burials of the twelfth and eighteenth dynasties, and some which it is hoped may belong to the period between these two ages of which little is yet known.

The University of California had two parties in the field, one of which, under Mr. Reisner, made an unsuccessful search at Kufit for the cemetery of Coptos. The other party was that of Messrs. Grenfell and Hunt, prosecuting at Ummel Barakât, on the southern edge of the Fayum, the fourth season of their searching for papyri. The ruins of a large town, hitherto wholly unknown, were discovered, the name of which appears to have been Tebtunis. The remains found indicate that this place flourished from Ptolemaic times down to those of the Arabs. Many papyri were found, largely from the houses of the priests in the temple inclosure, which date from the first to the third century of the Christian era. A very large cemetery, the earliest monuments of which date from the twelfth dynasty, was discovered. About 60 of the mummies found in the Ptolemaic cemetery were in good preservation. They were furnished with papyrus cartonnage like those found by Prof. Petrie at Gurob. Thousands of mummified crocodiles were found, some of them wrapped up in papyrus sheets and stuffed in the head and stomach with papyrus rolls, many of which are large and fine, although hardly supposed to contain important literary remains. All of them are of a late Ptolemaic date. The general result of the work of Messrs. Grenfell and Hunt is nearly to double the quantity of Ptolemaic papyri extant.

The work of Prof. Petrie and Mr. Mace at Abydos in the interest of the Egypt Exploration Fund was very successful, and contributed important additions to our verified knowledge of the most ancient Egyptian history. Explorations had already been carried on at this site by M. Amélineau, who had discovered the tombs of a number of the earlier kings and recovered a number of objects

illustrating the arts of that remote period. But his work has been criticised as lacking in system. Prof. Petrie, going over the ground again, applied the scientific processes and methods of identification and registry which were described in the Annual Cyclopædia for 1899. While M. Amélineau's researches left the exact date of the relics he found in doubt, with room for wide differences of opinion, those of Prof. Petrie resulted in the settlement of this question and in the collection of large quantities of material identified as of the first dynasty. While this first dynasty, Prof. Petrie said in giving an account of his discoveries at University College, Gower Street, London, had generally been looked upon as more or less mythical, we were now able to handle the royal drinking bowls from the palaces, to compare the art and

the Usafais, Miebis, and Semempsis, had been identified. Other royal tombs of the same group were those of other kings of the first dynasty. This discovery had also, by the style of the work and the position of the objects of King Aha, led to this king's being certainly identified with Menes, the founder of the Egyptian monarchy. Thus the tablet found by De Morgan in the tomb of Aha proved to have been correctly interpreted by Borchardt. We were now in a position to form a correct appreciation of the whole of the first dynasty between 4000 and 5000 B. C. The art, which was rude and archaic under Menes, rose to its best point under the luxurious King Deu-setui, the fifth of the dynasty. His tomb was paved with red granite and richly furnished with cups of crystal and beautiful stones, bearing his name in

DISCOVERIES MADE BY
THE EGYPT EXPLORATION FUND
AT ABYDOS.

OBJECTS RECOVERED FROM TOMBS OF THE FIRST DYNASTY AT ABYDOS, EGYPT. 1. Box of pottery, with figures of gazelles, a boat, and fishes (on the end); prehistoric. 2. Box for eye paint, in the form of two half ducks linked at the tails; carved from a single piece of ivory; first dynasty (beginning). 3, 4, 5. Stone jars; beginning of the first dynasty. 6. Piece of pottery marked with accounts of workmen; tomb of Zet Ateth, third king of the first dynasty. 7. Palette of slate, King Merseit Ata; first dynasty. 8. Copper tweezers; first dynasty. 9. Copper harpoon; first dynasty. 10, 11. Pieces of painted Ægean pottery; tomb of King Mersekha-Semenptah; first dynasty. 12. Stele erected on the grave of two dwarfs (king's servants), and bearing figures of dwarfs. 13. Canopic jar; about 2,500 B. C.

the carvings of the period, to criticise the posthumous respect paid to each king, and "to feel much more familiar with the daily life of the age than we could with our own Saxon kings. All this had come about through the careful study of three or four insignificant-looking lumps of black mud." The royal wine jars, of which many remains were found, were sealed by the officials, and bore generally only the hawk name or Ka name which, not being recorded in the lists of kings, was not sufficient for historical identification. But one or two seals of each king bore both his names, and from these the actual tombs of the fifth, sixth, and seventh kings of the first dynasty, named by Mane-

large, finely cut hieroglyphs, while no fewer than 20 tablets of ivory and ebony carved with inscriptions were known of from his tomb. The tombs of the later kings were less sumptuous, but a more general habit of inscribing the objects of the palace and the tomb seems to have prevailed among them. Among the principal classes of antiquities obtained during the winter, Prof. Petrie names: (1) The great tombstones of the kings, one of Merneit, a king previously unknown, and one of Qa, the last king of the dynasty; (2) the private tombstones of the royal domestics, of which 50 were obtained, one in particular giving all the official titles of a major-domo of this age; (3) the fine stone drink-

ing bowls and platters, portions of several hundred dishes of fine stone, together with numerous alabaster and slate dishes, about sixty of which bore royal inscriptions; (4) the impressions of seals on the closing of the wine jars, of which 88 different inscriptions were now drawn; (5) the labels and tablets of ivory and ebony, of which parts of 30 had been found with inscriptions; and (6) the innumerable pieces of carving in slate, ebony, ivory, and stones. A collection of these objects was exhibited at University College, London, early in July. Among them a group of Ægean pottery, of forms hitherto unknown, from the tomb of King Mersekha-Sementpah, was considered very remarkable. It appeared evidently of the same family as the Mycenaean pottery of later times. Prof. Petrie speaks of it as dated by the tomb to about 4500 B. C., and as giving the earliest fixed point yet known in the history of Greek civilization. Besides the articles belonging to the kings of the first dynasty were some appertaining to two pre-Memite kings, the extreme beauty of some of which—especially a carved hand—“seems to indicate that they were the products of the zenith of a long artistic history.”

In a paper on the system of writing in ancient Egypt, read in the British Association, Mr. F. H. Griffith remarked that Egyptology was now reaching a position where it might contribute trustworthy information for the benefit of kindred researches. Egyptian writing consisted of ideographic and phonetic elements. The highest development shown was an alphabet, which, however, was never used independently of other signs. Apparently not acrophonic in origin, it represented consonants and semiconsonants only, vocalization not being recorded by Egyptian writing. Phonograms were derived from word signs. The end of the native system was brought about by the gradual adoption of the Greek character, beginning perhaps in the second century A. D. Although the Egyptian system of writing might not be actually a stage in the history of our alphabet, it threw a strong light on the development of the alphabetic system; and the survival of its pictorial form for decorative purposes enabled us to recognize the highly ramified connections between the forms and meanings of characters to an extent impossible at present in any other system, whether in Mesopotamia, China, or elsewhere. The results of recent Egyptian philology proved that Egyptian was originally a Semitic language, though its character changed early. The main lines of the grammar being at length established, the materials for a complete dictionary were now being collected and classified.

A papyrus assigned to the twelfth dynasty, which was discovered at Kaluen in 1898, contains data which are regarded by Prof. Borchard, of Cairo, as furnishing an important aid in fixing the date of that period, a point regarding which the extreme estimates differ to the extent of about twelve hundred years. The papyrus belongs apparently to a class of records of daily events kept by the priests in the temple. Among the items is a note respecting the first rising in the year of Sirius (or Sothis), at daybreak, as occurring on the 16th day of the eighth month of the seventh year of King Usertesen III, and embodying directions for the proper observance of the day. In another part of the papyrus is a record, dated on the 17th day of the month, the day following the festival, of the festival donations that were made “on the appearance of Sirius.” Applying an astronomical method advocated by Oppolzer, Dr. Brix has computed that the phenomenon mentioned took place about 1873-76 B. C. This would

bring the date of the twelfth dynasty down to about eight hundred years later than the date accepted by Prof. Petrie.

ARGENTINE REPUBLIC, a federal republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province and the federal district, and a House of Representatives, numbering 133, the ratio being fixed by the Constitution of 1898 at 1 to 33,000 inhabitants. Representatives are elected for four years, one half being renewed every second year; Senators for nine years, the provincial Legislatures and the electoral college of the capital electing every third year a third of the Senate. The President is chosen for a term of six years by an elective body chosen by the people. The President of the republic is Gen. Julio A. Roca, who entered upon his office on Oct. 12, 1898; the Vice-President is Dr. Norberto Quirno Costa. The Cabinet appointed by President Roca was composed as follows: Minister of the Interior, Dr. Felipe Yofre; Minister of Foreign Affairs and Worship, Dr. Amancio Alcorta; Minister of Finance, Dr. José M. Rosa; Minister of Justice, Dr. Oswaldo Magnasco; Minister of War, Gen. Luis Maria Campos; Minister of Marine, Commodore Martin Rivadavia; Minister of Agriculture, Dr. Martin Garcia Merou; Minister of Public Works, Dr. Emilio Civit.

Area and Population.—The area of the republic is 1,778,195 square miles. The population in 1899 was estimated at 4,569,000. Buenos Ayres, the chief city, had 779,872 inhabitants. The number of immigrants in 1898 was 95,190, of whom 39,135 were Italians, 18,716 Spaniards, 2,449 French, 1,503 Turks, 779 Germans, 632 British, and 31,976 from other countries.

Finances.—The revenue in 1898 was \$33,878,263 in gold and \$49,744,214 in paper; expenditure, \$20,931,551 in gold and \$93,072,745 in paper. The revenue for 1899 was estimated at \$41,870,867 in gold and \$69,822,000 in paper, and the expenditure at \$26,453,272 in gold and \$101,170,399 in paper. The budget estimate of revenue for 1900 was \$45,981,735 in gold, of which \$37,500,000 came from import and \$2,500,000 from export duties, and \$67,122,000 in paper, of which the spirit tax produces \$16,000,000; the tobacco tax, \$9,000,000; wine, sugar, and matches, \$7,800,000; beer and other taxes, \$2,681,000; sanitary works, \$5,100,000; land tax, \$2,900,000; stamps and licenses, \$9,310,000; posts and telegraphs, \$4,550,000; land sales and leases, \$4,000,000; railroads, \$3,209,000; national bank, \$2,000,000; various sources, \$572,000. The gold expenditure for 1900 was estimated at \$32,946,813, of which \$23,147,962 represent the service of the debt and \$9,515,250 extraordinary expenditure. The estimated expenditure in paper was \$95,447,513, of which the Ministry of the Interior and Congress required \$16,666,656; the Ministry of Foreign Affairs, \$1,097,520; the Ministry of Finance, \$7,115,420; the public debt, \$11,695,218; the Ministry of Justice, Education, and Worship, \$16,605,678; the Ministry of War, \$16,011,057; the Ministry of Marine, \$11,955,680; the Ministry of Agriculture, \$1,911,620; the Ministry of Public Works, \$6,302,664; extraordinary expenditures, \$6,086,000. At the opening of Congress on May 1, 1900, the expenditure for 1899 was stated to have been \$7,000,000 below the estimate, excluding special expenditure amounting to \$13,500,000. The receipts were \$45,676,000 in gold and \$61,420,000 in currency.

The national foreign loans in July, 1899, amounted to £45,123,408, in addition to which there were provincial, municipal, and railroad

debts to the amount of £20,021,138 guaranteed by the Federal Government and prospective new issues of £5,938,760, besides £9,868,015 of cedulas of the national mortgage bank, making the total foreign debt £80,951,321. The amount of the internal debts was \$104,595,933 payable in paper and \$40,375,877 in gold. The foreign and domestic debts on April 30, 1900, amounted to £88,000,000, besides £3,500,000 of floating debt.

The Army and Navy.—The standing army numbers 1,463 officers and 12,867 men. The National Guard, the members of which receive two months of camp drill, had 467,572 men on the rolls in 1898.

The navy consists of 2 old ironclads for coast defense, 2 of newer construction, 5 armored cruisers built in Italy, 2 ram cruisers built in England, 5 other modern cruisers and gunboats, 4 destroyers, and 12 first-class and 10 second-class torpedo boats.

Commerce and Production.—The production of wheat in 1899 was about 2,500,000 tons; of flaxseed, 3,000,000 tons; of sugar, 90,000 tons. Indian corn is, next to wheat, the most important crop. The number of cattle slaughtered in 1899 was 310,700. The wool clip was 225,000 tons. The total value in gold of the merchandise imports in 1898 was \$107,429,000; of exports, \$133,829,000. The imports of animal products were valued at \$2,175,000; alimentary substances, \$13,557,096; beverages, \$8,298,612; textile fabrics and clothing, \$33,946,484; mineral oils, \$3,206,021; chemicals, \$3,101,784; lumber and wood manufactures, \$816,994; paper, \$3,016,689; leather and hides, \$960,031; iron and iron manufactures, \$17,785,792; other metals, \$3,504,811; pottery and glass, \$8,599,408; miscellaneous, \$2,113,030. The exports of animals and animal products were valued at \$87,381,625; agricultural produce, \$42,692,922; forest products, \$2,283,061; mineral products, \$205,559; products of the chase, \$449,549; miscellaneous, \$816,742. The export of wool was 221,286 tons; of sheep skins, 42,245 tons; of wheat, 648,161 tons; of maize, 717,105 tons; of beef and mutton, 89,914 tons. The imports of gold and silver coin and bullion were \$7,303,255; exports, \$1,574,946.

The import and export trade was divided among various countries in 1898 as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$39,012,600	\$19,205,928
France.....	10,596,726	29,081,056
Germany.....	12,571,116	20,286,338
Belgium.....	9,449,981	13,949,751
Italy.....	13,695,241	5,256,084
United States.....		
Brazil.....	5,012,115	7,916,801

The gold value of imports in 1899 was \$117,000,000; exports, \$185,000,000.

Navigation.—The number of vessels engaged in foreign commerce entered in 1898 was 10,193, of 6,555,128 tons, of which 6,866, of 5,928,765 tons, were steamers and 3,332, of 626,363 tons, were sailing vessels. The mercantile navy in 1898 numbered 86 steamers, of 31,976 tons, and 157 sailing vessels, of 39,695 tons.

Communications.—There were 9,885 miles of railroad in operation in 1898. The capital invested was \$510,643,296; receipts, \$33,063,653; expenses, \$19,117,118; number of passengers carried, 16,044,389; tons of freight, 9,001,559.

The telegraphs have a total length of 25,345 miles, with 59,060 miles of wire.

The number of letters received in the internal postal service in 1897 was 46,653,262; of other packets, 37,381,566; of letters dispatched, 47,802,283; of other packets, 35,737,266; of letters re-

ceived in the foreign service, 9,257,654; of other packets, 5,081,737; of letters dispatched, 6,444,378; of other packets, 2,088,718.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; 59,620 in 1890; and 122,212 in 1900. Capital, Phoenix.

Government.—The following were the Territorial officers in 1900: Governor, N. O. Murphy; Secretary, Charles H. Akers; Treasurer, T. W. Pemberton; Auditor, G. W. Vickers; Attorney-General, C. F. Ainsworth; Adjutant General, H. F. Robinson; Superintendent of Education, R. L. Long; Geologist, W. P. Blake; Chairman of the Live Stock Sanitary Board, A. C. McQueen; Chief Justice of the Supreme Court, Webster Street; Associate Justices, Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston—all Republicans.

Finances and Valuations.—The bonded Territorial debt, as by the last biennial report, was \$1,045,972.43; the city and county funded indebtedness was \$1,634,027.57. The valuation of taxable property was \$31,473,540. In August of this year the valuation after equalization amounted to \$33,782,466.

A decision lately rendered in the United States Supreme Court affirms the validity of railroad subsidy bonds given by Yavapai County years ago, but lately sought to be repudiated as illegal. The road brought a suit, not yet decided, but the validity of the bonds was in question in the suit between two counties, decided as above.

Education.—The new normal school at Flagstaff was dedicated May 11. Forty-one students were in attendance during the year.

The Territorial University has about 130 in the regular classes.

The Indian school at Phoenix has about 600 resident pupils and about 100 day scholars who are employed in families in the town. The Fort Yuma Indian school has about 150. A new building, to cost \$10,000, is in progress.

Railroads.—The total valuation of the railroads in the Territory that are subject to taxation, as reported by the Board of Equalization, is \$4,363,624. The Attorney-General advised the board that the Santa Fé, Prescott and Phoenix could not be placed upon the assessment roll, exemption having been made by the Legislature in consideration of the fulfillment of certain conditions. Most of the lines had extensions in progress this year, opening new mining territory.

Banks.—The abstract of the condition of the national banks of the Territory at the close of 1899 gave: Loans and discounts, \$1,364,118; stocks and securities, \$174,879; due from national banks not reserve agents, \$240,002; due from State banks and bankers, \$113,761; due from reserve agents, \$469,221; gold coin, \$134,720; total specie, \$158,158; lawful money reserve, \$232,415; due to other national banks, \$11,133; due to State banks and bankers, \$47,829; individual deposits, \$2,138,619.

The New Capitol.—This building was finished in August. It has cost \$130,000. Its length is 184 feet and its depth is 84 feet. The height of the top of the dome from the ground is 76 feet. The dome is 44 feet in diameter. The building is constructed as nearly as possible of Arizona material. The foundation is made of malpais, the walls of the first story of granite, and the rest of the walls of tufa. The structure is as nearly fireproof as it was possible to make it.

Cities.—The census returns credit the capital city with 5,544 inhabitants. The assessed valua-

tion is \$4,276,000. A very successful Indian and Cowboy Carnival was held last winter, with the design of attracting travelers to the Salt River valley and prolonging the winter tourist season.

The population of Tucson is somewhat more than 7,000 and the valuation between \$2,000,000 and \$3,000,000.

Globe was incorporated this year, and has in progress a gravity system of waterworks with a catchment reservoir 3 miles to the south.

Prescott suffered great loss by fire, July 13. A large part of its business portion was burned away, with the loss of one life and destruction of property amounting to more than \$1,000,000. There was slight protection against fire, the waterworks not having been finished; consequently, rates of insurance were high and not a large amount was carried. Offers of aid were sent from other places but were declined, and rebuilding was at once begun. An election was held Aug. 28 on a proposition to bond the town for \$100,000 for water and sewerage. Of 340 votes cast, 19 were opposed.

Products.—Newspaper reports indicate constantly increasing activity in mining, fresh discoveries, new strikes in old fields, more capital, improved machinery. The gold product for 1899 was estimated in Wells, Fargo & Co.'s report at \$3,000,000 and the silver at \$739,113; ores and base bullion were estimated at \$16,659,148. These figures are regarded by mining men as too low.

From a description that accompanied the exhibits of three Arizona companies at the Paris Exposition are taken the following general statistics: The present annual production of the Copper Queen mines is approximately 40,000,000 pounds of copper; of the Detroit mine, 16,000,000 pounds; of the United Globe mines, 6,000,000 pounds. The number of employees of the three groups of mines is 2,500. The coal consumed in generating power is 25,000 tons, and the coke used in the furnaces 60,000 tons. Both coal and coke come from the Colorado Fuel and Iron Company. The Copper Queen and Detroit companies have mercantile departments and stores at their mines. All three companies support free libraries and reading rooms for their employees. A medical staff and well-equipped hospitals exist at all the establishments, the men contributing monthly from their wages for medical and hospital services.

The discovery of oil fields near Yuma, near Phoenix, and between Prescott and Jerome is reported.

Onyx is quarried at Big Bug, 20 miles south of Prescott, and in the Cave Creek hills north of Phoenix. New discoveries have been made of deposits near Mayer. The finishing and polishing opens a field for Indian labor.

The Live Stock Inspection Law.—This law was in March practically declared invalid in the district court, as one of its main provisions was declared contrary to the organic act as restricting the business of the plaintiff in the suit.

Forest Protection.—An organization has been formed with a view to saving the forest reserves. After a careful investigation of the effect of stock, and particularly of sheep, upon the forest reserves, the commissioner of the General Land Office issued an order for the protection of the forests, excluding all stock from the reserves. Ever since then the large sheep owners in the northern part of the Territory have been endeavoring to have the order rescinded. Recently a bill was introduced "for the protection of the stock interests in the country," and this was the occasion of the action noted above.

Political.—The Republican Territorial Convention, Sept. 24, nominated Gov. N. O. Murphy as Delegate to Congress. There were two Democratic

candidates—J. F. Wilson and Marcus A. Smith—but Mr. Wilson withdrew about a month after the date of the convention.

In the contest for Delegate to Congress the total vote of the Territory was 16,620, compared with a total vote of 14,050 in 1896. Of this, Smith, the Democratic candidate, received 8,664; Murphy, Republican, 7,664; and Danielson, Prohibitionist, 292.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; 1,128,179 in 1890; and 1,311,564 in 1900. Capital, Little Rock.

Government.—The following were the State officers in 1900: Governor, Daniel W. Jones; Secretary of State, Alexander C. Hull; Treasurer, Thomas E. Little; Auditor, Clay Sloan; Attorney-General, Jefferson Davis; Superintendent of Education, J. J. Doyne; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Railroad Commissioners, J. G. Wallace, Felix M. Hanley, and Henry W. Wells; Mine Inspector, Robert Boyd, succeeded in September by W. H. Hill; Land Commissioner, J. W. Colquitt; Inspector of Wines, Carl A. Starck; Board of Charities, S. H. Davidson, T. H. Matthews, J. J. Thomas, J. W. Meeks, G. L. Basham, W. A. Jeffers; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, C. D. Wood, Burrill B. Battle, James E. Riddick; Clerk, P. D. English—all Democrats.

Population.—The census returns by counties for 1900 and for 1890 are as follow:

COUNTIES.	1900.	1890.	COUNTIES.	1900.	1890.
Arkansas	12,973	11,432	Lee	19,409	18,686
Ashley	19,734	13,295	Lincoln	13,389	10,225
Baxter	9,298	8,627	Little River	13,731	8,903
Benton	31,611	27,716	Logan	20,562	20,774
Boone	16,390	15,816	Lonoke	22,544	19,263
Bradley	9,651	7,972	Madison	19,864	17,402
Calhoun	8,539	7,267	Marion	11,577	10,390
Carroll	18,848	17,286	Miller	17,558	14,714
Chicot	14,528	11,419	Mississippi	16,384	11,625
Clark	21,289	20,967	Monroe	16,816	15,396
Clay	15,286	12,200	Montgomery	9,444	7,923

Izard	13,504	13,038	Van Buren	11,220	8,567
Jackson	18,383	15,179	Washington	34,256	32,024
Jefferson	40,972	40,681	White	24,864	22,946
Johnson	17,448	16,758	Woodruff	16,304	14,009
Lafayette	10,594	7,700	Yell	22,750	18,015
Lawrence	16,491	12,984			

There are 184 incorporated towns, cities, and villages in the State. Little Rock has a population of 38,307. Among the other larger places are the following: Fort Smith, 11,587; Pine Bluff, 11,496; Hot Springs, 9,973; Helena, 5,550; Texarkana, 4,914; Jonesboro, 4,508; Fayetteville, 4,061; Eureka Springs, 3,572; Mena, 3,432; Paragould, 3,322; Newport, 2,866; Camden, 2,830; Arkadelphia, 2,739; Van Buren, 2,573; Batesville,

2,327; Rogers, 2,158; Prescott, 2,005; Conway, 2,003.

Most of the larger cities are disappointed over the returns and sure something is wrong, as estimates based on the school census give larger figures. The Governor is reported as saying: "These figures can not be otherwise than erroneous. Through these imperfect census returns Arkansas will get only one extra congressman, when we should have had two."

Finances.—The receipts and expenditures of the State for the two years ending Sept. 30, 1900, and the balances due each fund on Oct. 1, 1900, are shown in the following statement from the biennial report of the Auditor:

General revenue—amount received, \$1,161,724; warrants redeemed, \$1,143,068.43; balance on hand, \$32,908.67. Sinking fund—amount received, \$224,443.25; warrants redeemed, \$237,057.53; balance on hand, \$7,305.99. Common school fund—amount received, \$927,841.23; warrants redeemed, \$924,960.32; balance on hand, \$57,213.77. Permanent school fund—amount received, \$2,967,423.13; warrants redeemed, \$1,137,179.32; balance on hand, \$2,120,799.25. Sixteenth section fund (transferred to permanent school fund)—amount received, \$221,791.89; warrants redeemed, \$575,315.68. Confederate pension fund—amount received, \$100,052.07; warrants redeemed, \$101,648.52; balance on hand, \$17,646.45. Direct tax—balance on hand, \$15,315.73. Swamp land fund—amount received, \$47,830.91; warrants redeemed, \$1,974.58; balance on hand, \$49,070.23. Internal improvement fund—amount received, \$59,839.10; balance on hand, \$61,316.80. State Capitol fund—amount received, \$48,029.64; warrants redeemed, \$36,663.44; balance on hand, \$11,366.20. Penitentiary deposit fund—amount received, \$230,359.61; warrants redeemed, \$230,359.61. Tax due counties—amount received, \$53,207.57; warrants redeemed, \$49,360.99; balance on hand, \$13,378.08. Tax due cities—amount received, \$322.65; warrants redeemed, \$114.04; balance on hand, \$642.13.

Valuations.—The value of real estate, as shown by the tax books, is \$127,062,908. The value of personal property as assessed is \$62,936,142.

In a suit to determine the liability of Garland County for a part of the indebtedness of Hot Spring County, from which it was set off in 1873, the court adjudged that Garland should pay Hot Spring \$18,880 as its share of the debt at the time of separation.

Education.—The school population is 472,508. The enrollment in 1899 was 296,785, of whom 76,049 were colored. In private and denominational schools there were 5,835.

Twenty-one young men and women were graduated at the State University in June.

Charities.—The report of the State Board of Charitable Institutions, published in May, gives the following data:

The current expenses of the lunatic asylum from April 1, 1897, to March 31, 1898, were \$56,956.73; from April 1, 1899, to March 31, 1900, \$59,449.88, an increase of \$2,493.15 for the year just closed. The record shows that on April 1, 1897, there were 507 patients on hand in the asylum, and on April 1, 1899, there were 605, an increase of 98 patients.

The current expenses of the deaf-mute institute from April 1, 1897, to March 31, 1898, were \$19,076.62; from April 1, 1899, to March 31, 1900, \$19,352.86, an increase of \$276.24 for the year just closed. The record shows that on April 1, 1897, there were 208 pupils in attendance, and on April 1, 1899, there were 250, an increase of 42.

The current expenses of the school for the blind

from April 1, 1897, to March 31, 1898, were \$13,723.85, and from April 1, 1898, to March 31, 1900, \$14,714.23, an increase for the year just closed of \$990.38. The record shows that on April 1, 1897, there were 167 pupils in attendance at the school for the blind, and on April 1, 1899, 192, an increase of 25 pupils.

The last Legislature increased the current expense appropriation of the lunatic asylum \$10,000, the deaf-mute institute \$4,000, and the school for the blind, \$11,000.

Railroads.—Among the States having new railroad mileage built in 1899, Arkansas stood third, with 282 miles. During the first half of 1900 62 miles were constructed in the State. The net incomes of the several roads for the year ending June 30, 1899, as reported to the railroad commission, were: St. Louis, Iron Mountain and Southern, \$1,065,026.71; St. Louis and Southwestern, \$497,830.09; Choctaw and Memphis, \$32,834.08; Paragould and Southeastern, \$12,214.59; Arkansas Midland, \$8,765.02; Eureka Springs, deficit, \$6,756.07; Hoxie, Pocahontas and Northern, \$2,844.67; Dardanelle and Russellville, \$19,607.83; White and Black River Valley, \$27,693.61; Stuttgart and Arkansas River, deficit, \$3,366.69; Des Arc and Northern, \$2,916.43; Louisiana and Arkansas, \$29,164.04.

The report of the Kansas City, Fort Scott and Memphis for the year ending June 30, 1900, shows an increase of \$981,830, or 21½ per cent., in earnings; of \$636,493, or 21½ per cent., in expenses; and of \$345,337, or 25½ per cent., in net earnings. In addition \$100,000 was appropriated for improvements and transferred to the general improvement fund, \$100,000 having also been deducted from the year's miscellaneous earnings for the same purpose. The surplus balance for the year, after all deductions, was \$28,406.

The Kansas City, Memphis and Birmingham road, operated in the same interest, shows for the fiscal year an increase of \$270,139, or 19 per cent., in gross earnings and of \$157,057, or 42 per cent., in net receipts.

Charters have been granted to the Arkansas and Missouri and the Arkansas Western. The former is to run from Little Rock to a point on the State line in Boone County, and the latter from Howe, Indian Territory, to Waldron, Ark., about 36 miles.

The Stuttgart and Arkansas River was sold in April to the Des Arc and Searcy. The White and Black River Valley was leased in June to the Choctaw, Oklahoma and Gulf.

The commission gave an opinion in a case involving their right to regulate rates, holding that the transportation of freight between two points in the State, though the line of railroad may pass outside the borders of the State for a few miles, is intrastate or domestic commerce and subject to regulation by the commission.

Business and Products.—Figures published in August show the capitalization of corporations registered with the Secretary of State from Jan. 1, 1899, as follow: Manufacturing associations, \$23,868,575; railroad companies, \$82,130,000; bank companies, \$585,000; building associations, \$7,000,000; loan and investment companies, \$135,000; telegraph and telephone companies, \$109,200; total, \$113,827,775.

The cotton acreage this year was 1,718,901; the estimated crop, 809,000 bales; the consumption in mills of the State, 2,380 bales.

From a review of the lumber trade for July it appears that of 135 mills reporting, which are in 6 States and 1 Territory, 41 were in Arkansas and Indian Territory; that they cut 40,962,812 feet

and shipped 51,156,821, and had on hand 71,302,475.

A first prize was awarded at the Paris Exposition to an exhibit of apples from the State experiment station, prepared by the pomologist at the university.

State Laws.—From the report of the Attorney-General's office is learned that under the anti-trust law passed by the last Legislature 225 suits were brought against the 63 fire insurance companies doing business in this State, to subject them to the penalty of the act. Proceedings were instituted also against the express companies, Waters-Pierce Oil Company, American Tobacco Company, Continental Tobacco Company, and the various cotton-seed oil companies operating in this State.

The construction of the act was tested in the Supreme Court under the style of State *vs.* Ætna Fire Insurance Company and The State *vs.* Lancashire Fire Insurance Company, one series of which was affirmed, the other, carrying the constitutionality of the act, was reversed. The court having decided adversely to the opinion of the Attorney-General, the other cases were dismissed.

Lawlessness.—A negro prisoner who had confessed to the murder of an Italian fruit vender was taken from a guard and hanged by a mob near Helena, April 16. A negro school-teacher, suspected of having broken into a store, was shot and killed by a party of men, who took him and another suspected negro to a lonely place to frighten them into confession. It was declared that the killing was not intentional, and that only "white-capping" was intended.

Labor.—A decision was handed down in the United States District Court at Fort Smith, in January, making permanent the temporary injunction issued previously, restraining the striking coal-miners of western Arkansas from interfering with nonunion men who took places in the mines.

Before the State election the labor unions were asking of candidates for the Legislature pledges as to proposed legislation in which they were interested. A set of questions used in Sebastian County is as follow:

1. Will you favor a bill making eight hours a legal day's work, with a penalty for the violation of the same?

2. Are you in favor of a law establishing semi-monthly or weekly pay day?

3. Are you in favor of the abolition of the scrip system now in use by corporations?

4. Will you favor a law compelling all corporations doing business in the State of Arkansas to be incorporated under the State laws and chartered by the State?

5. Are you in favor of a law establishing a uniform system of text-books to be published by the State and furnished at cost to all patrons of the public schools of the State?

Political.—Senator Berry and Gov. Jones were candidates before the primaries for the office of United States Senator, but the Governor withdrew from the contest, March 23.

The election for State officers was held Sept. 3. There were three candidates for Governor, but only the Democrats put out a full State ticket. The Republicans and the Populists made nominations for Governor only. The Republican candidate was Herman L. Rimmel and the Populist nominee was A. W. Files. Following is the Democratic ticket: For Governor, Jeff Davis; Secretary of State, John W. Crockett; Attorney-General, George W. Murphy; State Auditor, T. C. Monroe; State Treasurer, Thomas E. Little; Commissioner

of Lands, J. W. Colquitt; State Superintendent of Public Instruction, J. J. Doyne; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Associate Justice of Supreme Court, Carroll D. Wood; Railroad Commissioners, F. M. Hanley, Abner Gaines, J. G. Wallace.

The platform of the Democratic convention, June 26, 27, approved the national platform of the party as adopted at Chicago in 1896; recognized the Monroe doctrine as a cardinal tenet of the party, and favored its strict observance; favored the building of the Nicaraguan Canal by the Government; opposed the donation of the public lands of the United States to private corporations. Trusts and all illegal combinations were denounced. The platform approved the action of the last Legislature in passing laws against them, and pledged the party to the passing of laws to prohibit their operation in Arkansas.

The set of resolutions at the Republican convention for nominating delegates to the national convention, March 20, favored expansion, opposed trusts, favored the Nicaraguan Canal to be owned and controlled by the Government, and approved the protective tariff policy. It denounced the Goebel act and the Nesbitt act and "all similar laws in Arkansas and elsewhere concocted to cheat the honest voter, and to enable a corrupt minority to govern."

The State Republican convention, July 7, declared in favor of a reform school, completion of the Statehouse, compulsory arbitration in labor troubles, and nonpartisan educational and charitable boards, and opposed competition of convict with free labor, and all forms of trusts.

The Prohibitionists nominated a presidential elector at large, and declared: "The Democratic and Republican parties are equally corrupt and in sympathy with the liquor power of this nation, and therefore unworthy the support of any Christian or philanthropist."

The vote for Governor stood: Davis, Democrat, 88,637; Rimmel, Republican, 40,701; Files, Populist, 3,641. The State Senate will be entirely Democratic; the House will have 1 Independent, 2 Republicans, and 97 Democrats.

The total vote for presidential electors was 127,839, compared with 149,347 in 1896. The Democratic candidates received 81,142 votes; the Republican, 44,800; and the Prohibitionist, 584—a Democratic majority of 35,758.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and island colonies of Great Britain, with interjacent islands. With the exception of the Dutch and German portions of New Guinea, the German protectorate of Bismarck Archipelago and that of the northern Solomon Islands, now diminished by the cession of the Howe group, the French colony of New Caledonia, and the New Hebrides and smaller islands under native rule, all the islands of Australasia are British colonies and dependencies. The five colonies of Australia and the colonies of Tasmania and New Zealand are self-governing, having each its representative Legislature, with a responsible ministry, disposing of its own revenues, and making its own laws under a charter granted by the British Parliament, subject to a certain reserved veto power of the Imperial Government. The British Crown is represented in each colony by a governor, who as the executive head of the colonial Government acts on the advice of the responsible ministers selected from the party or coalition that forms the majority in the Legislative Assembly. The Crown colony of Fiji is administered in accordance with native laws and customs, and its Gov-

ernor is High Commissioner for the Western Pacific, intrusted with the supervision of British interests in the islands under native rule.

Area and Population.—The area in square miles of the British Australasian colonies, according to the latest surveys, and their estimated population on Dec. 31, 1898, or June 30, 1899, are given in the following table:

COLONIES.	Area.	Population.
New South Wales.....	810,700	1,357,060
Victoria.....	87,884	1,176,854
Queensland.....	668,497	498,523
South Australia.....	908,090	362,997
Western Australia.....	975,920	168,490
Tasmania.....	26,885	198,700
New Zealand.....	104,471	796,359
Fiji and Rotumah.....	8,045	121,736
Total.....	3,065,592	4,690,631

An estimate made for the purpose of apportioning representation under the federation scheme gives New South Wales 1,348,400; Victoria, 1,162,900; Queensland, 482,400; South Australia, 370,700, and Tasmania, 182,300 inhabitants.

The population of New South Wales on June 30, 1899, was composed of 725,900 males and 631,150 females. At the end of 1899 it was estimated at 729,005 males and 627,645 females; total, 1,356,650, including 8,250 aborigines. The population of Sydney, the capital, was estimated in 1898 at 426,950, including suburbs.

In Victoria it was estimated in 1899 that 660,110 of the total population lived in towns. Melbourne, the capital, in 1897 contained 469,880 inhabitants, nearly two fifths of the population of the colony, while in Ballarat there were 44,848, in Bendigo, or Sandhurst, 42,902, and in Geelong 23,334. The emigration from the colony has for five years past exceeded the immigration, chiefly owing to the exodus to the gold fields of Western Australia.

Brisbane, the capital of Queensland, contained at the end of 1898 a population of 107,840 souls, its environs included. The Chinese immigrants into Queensland in 1898 numbered 742, and the emigrants 478; the Polynesian immigrants numbered 1,182, and the emigrants 731.

The population estimated for South Australia on Dec. 31, 1898, consisted of 187,251 males and 175,646 females. In the northern territory there were 4,903 inhabitants, of whom only 409 were females, the bulk being Chinese coolies. Adelaide, the colonial capital, had a population of 147,616.

The population of Western Australia comprised 111,354 males and 57,126 females. In 1891 there were 49,782 persons in the colony, and then the increase had been 68 per cent. in ten years. Perth, the capital, had an estimated population of 39,600 in the beginning of 1899.

The white population of New Zealand at the census of April 12, 1896, was 703,360, consisting of 371,415 males and 331,945 females. Of this total 690,003 were British-born, and of these 441,661 were born in New Zealand and 215,161 were born in the United Kingdom, 116,541 of the latter in England, 2,148 in Wales, 50,435 in Scotland, and 46,037 in Ireland. Of the total population, 15.13 per cent. were agricultural, pastoral, mineral, or other primary producers, 7.18 per cent. were employed in commerce, 4.11 per cent. were domestics, 2.74 per cent. were engaged in the professions, 8.03 per cent. were of undefined occupations, and 58.25 per cent. were dependents. The population as estimated at the end of 1899 includes 39,854 Maoris and 3,711 Chinese. Of the Maoris, the number including 3,503 half-castes

and 229 Maori wives of white men, 21,673 were males and 18,181 females. The capital of New Zealand is Wellington, which had at the last census 41,758 inhabitants, with its suburbs, while Auckland had 57,616, Christchurch 51,330, and Dunedin 47,280. Of the total population of the colony, 307,294 lived in boroughs, 391,735 in the rural districts, 950 on adjacent islands, and 3,381 on ships.

The population of Fiji, as estimated for Dec. 31, 1898, comprised 67,245 males and 54,493 females. The European population was 3,927, of whom 2,444 were males and 1,483 females; Indians numbered 12,320, of whom 8,293 were males and 4,027 females; Fijians, 98,954, comprising 52,656 males and 46,298 females; Polynesians, Rotumans, half-castes, and others, 6,537, comprising 3,852 males and 2,685 females. Among the natives in 1898 there were 4,300 deaths to 3,481 births.

The movement of population in the several colonies for 1898 was as follows:

COLONIES.	Marriages.	Births.	Deaths.	Excess of births.	Net immigration.
New South Wales.....	8,888	36,222	16,061	19,561	5,345

Finances.—The revenue and expenditure of the several colonies for 1898 and the state of their debts at the end of the fiscal year ending June 30, 1899, in New South Wales, Victoria, Queensland, South Australia, and Western Australia, on March 31, 1899, in New Zealand; on March 31, 1898, in Tasmania; and on Dec. 31, 1898, in Fiji, are shown in the following table:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales.....	£9,304,253	£9,219,940	£63,761,666
Victoria.....	6,887,463	6,821,444	48,264,277
Queensland.....	4,174,089	4,024,170	33,598,414
South Australia.....	2,665,477	2,632,540	24,451,790
Western Australia.....	2,604,945	2,090,495	10,488,363
Tasmania.....	906,223	880,168	8,412,304
New Zealand.....	4,980,129	4,653,511	46,998,006
Fiji.....	94,165	57,594	200,216

Of the revenue of New South Wales, £2,511,298 came from taxation, £1,976,816 from lands, £4,610,546 from services, and £205,593 from miscellaneous sources. The net revenue for the year ending June 30, 1899, was £9,572,912. The revenue from services consists chiefly of the net receipts from railways, tramways, posts, and telegraphs. The revenue from taxation in 1899 amounted to £2,558,958, of which £1,021,062 came from import and excise duties and the remaining £937,896 from stamps, land tax, income tax, and licenses. The net expenditure for 1899 was £9,553,144. Of the expenditure of 1898 railways and tramways took £1,812,039, posts and telegraphs £694,862, interest on the public debt £2,548,794, immigration £186, instruction £747,468, and other public works and services £3,754,019. Of the public debt, 80 per cent. was expended for railways, tramways, telegraphs, water supply, and sewerage, and these public services paid a net return of 3.46 per cent. on the total amount expended, which, exclusive of redemptions, up to June 30, 1899, amounted to £62,154,540, the expenditure from loans on railways

and tramways having been £41,226,478, on telegraphs and telephones £1,013,484, on water supply and sewerage £8,999,531, and on other works and services £10,915,047. The estimated wealth of the colony at the end of 1898 was £547,821,500, of which £169,705,500 was public and £378,116,000 private wealth.

Of the revenue of Victoria, taxation produced £2,910,237, of which £1,840,404 came from customs and other duties, £301,318 from excise, £115,451 from the land tax, £238,780 from duties on estates of deceased persons, £18,844 from the duty on bank notes, £172,400 from the stamp duty, £36,815 from tonnage dues, etc., and £186,225 from the income tax. The income from railroads was £2,602,547; from posts and telegraphs, £526,399; from public lands, £335,518; from other sources, £462,762. The expenditure for debt charges was £1,852,056; for railways, £1,559,379; for public instruction, £571,590; for posts and telegraphs, £508,851; for pensions, £336,836; for police and jails, £300,723; for charitable institutions, £279,043; for various public works, £242,294; for general expenses, £220,362; for defenses, £184,677; for law courts, £157,457; for mining and agricultural, £142,780; for public lands, £74,508; for other purposes, £156,495. The revenue for the financial year 1900 was estimated at £7,156,225; expenditure, £7,136,755.

In Queensland, customs produced £1,367,426 of the total revenue; excise and export duties, £143,905; stamps, £120,814; licenses, £57,279; dividend duty, £60,487; rent from pastoral leases, £334,960; other rents and sales of land, £240,145; railroads, £1,322,606; posts and telegraphs, £284,179. The principal expenditures were £1,326,963 for interest on the public debt, £79,785 for municipal and divisional endowments, £275,715 for public instruction, £181,470 for the Colonial Treasurer's department, £70,980 for the Department of Public Lands, £50,401 for the Department of Agriculture, £783,311 for the expenses of the railroads, £328,463 for the Department of Posts and Telegraphs. The expenditure from loans amounted for the year to £1,054,787, mostly for public works, including £628,812 on railroads. The revenue for 1900 was estimated at £4,388,445 and expenditure at £4,364,420.

In South Australia the revenue is derived from customs duties, excise, posts and telegraphs, railways, and lands, and it is expended on railroads and public works and services and interest on the debt. Three quarters of the debt was contracted to build railroads, waterworks, and telegraphs. The railroads earn 3½ per cent. a year. The customs receipts for 1900 were estimated at £603,321, the total receipts at £2,711,335; estimated expenditure, £2,711,140.

The revenue of Western Australia is obtained from customs, railroads, and public lands. The public debt on June 30, 1898, was £8,947,954.

The expenditure of Tasmania for 1898 includes a sum derived from territorial revenues that was applied to the redemption of loans. For 1899 the revenue of Tasmania was estimated at £946,780 and expenditure at £866,000.

Of New Zealand's revenue for 1899, customs supplied £1,965,018; stamps, posts, and telegraphs, £779,399; railways, £1,465,507; land tax, £296,063; income tax, £115,480; sales of land, £92,578. The chief expenditures were: £1,767,468 for public debt charges, £968,917 for railroads, £475,218 for education, £388,546 for posts and telegraphs, and £234,344 for constabulary and defense. The total expenditure on public works, including the expenses of raising loans,

from 1870 to March 31, 1899, was £31,985,750. The debt amounted to £61 14s. per capita.

Fiji derives its revenue mainly from customs, which produced £45,300 in 1898, and a tax on the natives, which produced £18,923. This tax is paid in produce, which they deliver to the Government, to be sold on their account. The expenditure on salaries in 1898 was £37,946; for other purposes, £49,648.

Commerce and Production.—The value of the foreign trade of the several colonies for 1898 is given in the following table:

COLONIES.	Imports.	Exports.
New South Wales.....	£24,458,560	£27,648,117
Victoria.....	16,768,904	15,872,246
Queensland.....	6,007,266	10,856,127
South Australia.....	6,184,805	6,795,774
Western Australia.....	5,241,965	4,960,006
Tasmania.....	1,650,018	1,808,369
New Zealand.....	8,230,600	10,517,465
Fiji.....	234,860	584,105

Of the total imports into New South Wales in 1898, the Australasian colonies furnished the value of £12,467,059, while of the exports £8,675,199 went to other colonies. The overland trade was £5,678,201 for imports and £4,121,784 for exports. The imports from the United Kingdom were £7,744,418; from British possessions besides Australasia, £864,420; from the United States, £1,602,954; from other countries, £1,774,709; exports to the United Kingdom, £7,734,890; to other British possessions, £725,383; to the United States, £5,951,287; to other countries, £4,561,368. The total exports of home produce in 1898 were £17,727,067 in value; exports of foreign produce, £9,921,050. The quantity of wool exported was 280,948,406 pounds, valued at £9,457,535. The export of tallow was £495,918 in value; coal, £962,668; hides and skins, £840,533; leather, £340,400; preserved and frozen meat, £721,457. The export of gold coin was £6,529,060. The value of the gold obtained from the mines of New South Wales in 1898 was £1,244,330, and in 1899 it was £1,936,885. The value of silver produced in 1898 was £59,278; of silver lead ore and metal, £1,644,777; of copper, £272,686; of coal, £1,271,832. The tin mines from their opening in 1872 to the end of 1898 produced the total value of £6,292,056. The production of sugar in 1899 was 282,206 tons; of wheat, 9,286,216 bushels; of oranges, 7,839,216 dozen. On Dec. 31, 1898, the colony possessed 41,241,004 sheep, 2,029,516 cattle, 491,553 horses, and 247,061 hogs. The duty on imports in New South Wales averages 5.15 per cent., taking free and dutiable goods together. In Victoria there is a protective tariff, and the duties collected amount to 12 per cent. of the total value of the imports. Wool, skins, and tallow, large quantities of which are imported from other countries to be re-exported or manufactured, are free of duty. The value of wool imported into Victoria in 1898 was £1,808,492; of hides and skins, £262,638; of cotton goods, £1,140,393; of woollen goods, £602,255; of sugar and molasses, £663,014; of live stock, £732,001; of iron and steel, £644,890; of timber, £344,024; of coal, £257,688; of silks, £345,633; of tea, £300,040; of oils, £239,593; of all other goods, £9,425,343. The exports of gold coin and bullion from Victoria in 1898 were £5,947,195; of wool, 131,850,560 pounds, valued at £4,036,968; of live stock, £255,064; of leather and harness, £318,868; of cereals and flour, £638,047; re-export of tea, £160,873; exports of sugar and molasses, £150,431; of clothing, £136,776; of tallow, £94,508; of hides and skins, £373,054; of butter, £730,325;

of frozen meat, £177,348; of all other articles, £2,746,189. Of the total imports in 1898 the United Kingdom furnished £6,195,134; Australasian colonies, £7,670,126; India, £287,829; Ceylon, £149,397; Canada, £33,745; other British possessions, £265,379; the United States, £883,472; Germany, £578,298; France, £199,849; Belgium, £122,236; Sweden and Norway, £107,833; Java and the Philippine Islands, £59,116; China, £56,844; other foreign countries, £159,646. Of the total exports, the United Kingdom received £6,740,420; Australasian colonies, £6,042,230; India, £509,332; Ceylon, £15,484; Canada, £651; other British possessions, £220,731; the United States, £67,561; France, £806,470; Germany, £544,041; Belgium, £225,402; Java and the Philippine Islands, £14,523; other foreign countries, £85,401. The value of the gold raised in Victoria in 1899 was £3,449,644, against £3,349,032 in 1898. The factories of the colony, having a total valuation of £12,000,000, produce many of the articles used by the colonists. Agriculture is developed further than in other parts of Australia. The yield of wheat in 1899 was 19,581,000 bushels.

Of the imports into Queensland in 1898, the value of £2,757,981 came from Australasian colonies, £2,559,244 from the United Kingdom, £155,299 from other British possessions, £278,837 from the United States, and £255,905 from other foreign countries. Of the exports, £6,269,090 went to Australasian colonies, £4,352,067 to the United Kingdom, £100,974 to other British possessions, and £133,996 to foreign countries. The chief exports were gold of the value of £2,855,781; wool, £3,018,098; sugar, £1,329,876; hides and skins, £466,265; tin, £31,871; silver, £49,825; copper, £6,430; peas, shelled, £109,588; frozen meat, £676,698; preserved and salted meat, £265,872; meat extract, £216,640; fruit, £96,313. The gold output of 1898 was 920,048 ounces, and in 1899 it was increased to 947,626 ounces. The value of the coal raised in 1898 was £150,493; of tin, £36,502; of silver, £10,585. There were 17,552,608 sheep, 5,571,292 cattle, 480,460 horses, and 127,081 hogs in the colony in 1898.

Of the commerce of South Australia for 1898 the share of the other Australasian colonies was £3,348,622 of the imports and £3,332,286 of the exports; the share of the United Kingdom, £1,974,818 of the imports and £2,306,202 of the exports; that of British possessions not in Australasia, £193,829 of the imports and £565,467 of the exports; that of the United States, £310,886 of the imports and £915 of the exports; that of all other foreign countries, £356,650 of the imports and £590,904 of the exports. The export of wool was £945,589 in value; wheat, £15,911; flour, £235,752; copper, £244,865. The wheat crop was 8,778,900 bushels. The value of the mineral exports was £350,372. There were 161,774 horses, 260,343 cattle, and 5,012,620 sheep in 1898. In 1899 there were made 1,080,772 gallons of wine, of which 504,065 gallons were exported.

Of the imports of Western Australia, £2,051,872 in value came from, and of the exports £2,293,652 went to, the United Kingdom. The export of gold was £3,990,698; of pearls, about £20,000; of pearl shell, £49,480; sandalwood, £31,812; of timber, £326,195; of wool, £287,731; of skins, £44,545. The trade with other Australasian colonies was £2,743,761 of imports and £2,462,961 of exports; with other British possessions, £165,123 of imports and £138,692 of exports; with the United States, £91,268 of imports; with other countries, £189,941 of imports and £64,701 of exports. The value of gold exported has increased

from £879,748 in 1895. There were 3,069 leases of gold mines in 1898, and 16,468 men were employed in the mines, the output of gold being 1,050,184 ounces. In 1900 the export of gold was £6,431,063 in value, bringing the total production up to £20,000,000. For mining copper 27 leases have been issued; for tin mines, 2; for lead mines, 41; for coal mines, 63. The live stock at the close of 1898 consisted of 62,442 horses, 245,907 cattle, and 2,244,888 sheep.

In Tasmania, the wheat crop in 1899 was 2,303,512 bushels. Oats, potatoes, and hay are important crops, and fruit-growing is a great industry, large quantities of apples and other fruits being exported to the other colonies and to England. The live stock in 1899 consisted of 29,797 horses, 148,558 cattle, 1,493,638 sheep, and 45,294 hogs. Iron, tin, galena, copper, gold, and coal mines are worked. The value of gold exported in 1898 was £188,478; of silver, £167,618; of copper ore, £378,565; of tin, £141,162. The export of wool was £254,960 in value; of timber and bark, £60,012; of hops, £22,012; of fruit and jam, £183,345. Of the total imports, £465,544 came from the United Kingdom, £720,684 from Victoria, £273,227 from New South Wales, £140,158 from other British colonies, and £50,405 from foreign countries. Of the total exports, £431,518 went to the United Kingdom, £614,640 to Victoria, £635,110 to New South Wales, £99,948 to other British possessions, and £22,153 to foreign countries.

The exports of colonial produce from New Zealand in 1898 amounted to £10,324,988. The export of wool was 149,385,815 pounds, valued at £4,645,804; of gold, 280,175 ounces, valued at £1,080,691; of Kauri gum, 9,905 tons, valued at £586,767; of frozen meat, 1,551,773 hundredweight, valued at £1,698,750; of butter, 96,801 hundredweight, and of cheese, 68,711 hundredweight, valued together at £539,466; the value of grain, pulse, and flour, £142,066; of tallow, £302,141; of hides, skins, and leather, £427,256; of live stock, £19,708; of bacon and hams, £8,211; of preserved meats, £97,171; of grass seed, £78,519; of phormium, or New Zealand hemp, £74,556; of other colonial produce, £623,882; of British and foreign produce, £124,850; of specie, £68,117, against £19,191 of imports. The gold mines of New Zealand are mostly situated on Government lands. The production of gold since they were first opened in 1857 has been £54,453,325. The production of silver in 1898 was 293,851 ounces, value £33,107; of coal, 907,033 tons, value £453,517; of Kauri gum, 9,905 tons, value £586,767. The production of gold for 1899 was 470,585 ounces, value £1,513,242. The wheat crop for 1898 was 13,073,000 bushels, nearly 33 bushels to the acre; the oat crop, 16,511,000 bushels; the barley crop, 1,678,000 bushels. The live stock in 1899 consisted of 258,115 horses, 1,203,024 cattle, 19,673,725 sheep, and 193,512 hogs. The total value of imports in 1899 was £8,739,633; of exports, £11,938,335. The exports of dairy products were valued at £701,742; gold export, £1,513,173.

In Fiji the European settlers had 22,078 acres in 1898 planted to sugar cane, 21,544 acres planted to cocoanut palms, and 1,537 acres planted to bananas. The export of sugar was 34,156 tons, valued at £409,884; of rum, 111,088 gallons, valued at £13,886; of copra, 6,474 tons, valued at £63,140; value of bananas, £25,478.

Navigation.—The number of vessels entered at the ports of New South Wales during 1898 was 3,316, of 3,464,867 tons, of which 2,985, of 3,005,748 tons, were British or colonial, and 331, of

459,119 tons, foreign. The total number cleared was 3,263, of 3,455,061 tons, of which 2,933, of 2,994,250 tons, were British or colonial, and 330, of 460,811 tons, were foreign. The merchant fleet of the colony consisted of 488 sailing vessels, of 52,948 tons, and 494 steamers, of 68,331 tons.

The number of vessels entered at Victorian ports was 2,008, of 2,472,745 tons, of which 378, of 895,384 tons, were British, and 1,498, of 1,274,958 tons, were colonial. The total number cleared was 2,043, of 2,483,992 tons, of which 832, of 900,703 tons, were British and 1,531, of 1,278,668 tons, were colonial. The merchant shipping of the colony comprised 250 sailing vessels, of 39,715 tons, and 149 steamers, of 61,967 tons.

In Queensland 615 vessels, of 602,006 tons, were entered, and 598, of 596,313 tons, were cleared, in 1898. The number entered from the United Kingdom was 58, of 95,702 tons; from Australasian ports, 420, of 400,741 tons. In the coasting trade 6,588 vessels, of 3,524,904 tons, were entered. The registered shipping of the colony in 1898 comprised 149 sailing vessels, of 10,075 tons, and 91 steamers, of 12,943 tons.

In South Australian ports 1,068 vessels, of 1,722,358 tons, were entered and 1,083, of 1,760,167 tons, were cleared during 1898. The shipping of the colony consisted of 107 sailing vessels, of 28,413 tons, and 222 steamers, of 22,573 tons.

In the ports of Western Australia during 1898 there were 633 vessels, of 1,199,894 tons, entered and 631, of 1,189,732 tons, cleared. The shipping of the colony consisted of 133 sailing vessels, of 5,799 tons, and 28 steamers, of 5,551 tons.

In New Zealand 233 vessels, of 293,873 tons, were entered and 210, of 218,990 tons, cleared at Auckland in 1898, and at Wellington, the other principal port, 153, of 263,774 tons, were entered and 138, of 268,312 tons, cleared.

Railroads, Posts, and Telegraphs.—In the Australian colonies the railroads and telegraphs are public property, as well as the wharves and docks, the tramways in cities, the waterworks and irrigation works, and the land also, excepting the relatively small areas that have been sold to agricultural settlers. The railroads of New South Wales, on June 30, 1899, had a total length of 2,707 miles. The capital expenditure was £37,992,276; gross earnings for 1899, £3,145,273; working expenses, £1,690,442.

The railroads in operation in Victoria at the end of 1898 had a total length of 3,123 miles, built at a cost of £38,602,304. The receipts for the fiscal year were £2,608,896, and expenses £1,646,054. The net profits were 2.49 per cent. on the cost and 2.71 per cent. on the borrowed capital, while the average rate of interest paid by the Government is 3.90 per cent. About £9,000,000 has been paid out of the revenue in the course of a series of years to meet deficits in the railroad accounts. There were 43,090,749 passengers and 2,408,665 tons of freight carried in 1898.

In Queensland there 2,742 miles of railroads in operation in 1898, which had cost the Government £18,545,631 to build. The receipts for 1898 were £1,263,153; expenses, £728,161. Including the expenses of raising loans, etc., the total expenditure, including that on 58 miles not yet opened, was £20,215,894.

South Australia had 1,870 miles of railroad open to traffic at the close of 1898.

In Western Australia there were 1,850 miles of railroad in operation on June 30, 1899, including 495 miles of private line.

The railroads of New Zealand had a length of 2,257 miles on March 31, 1899, including 167 miles of private lines. The receipts of the Government

railroad were £1,469,665 and the expenses £929,737. There were 4,955,553 passengers and 2,744,441 tons of freight carried. The total capital expenditure up to that date had been £17,190,967.

The number of letters carried in the mails of New South Wales during the year ending June 30, 1898, was 75,650,065; postal cards, 1,331,630; newspapers, 42,570,850; packets, 16,497,334; money orders, 410,772, for £1,432,373; postal notes, £420,113.

The post office in Victoria showed for 1898 receipts amounting to £531,367, including telegraph and telephone receipts, and £498,192 of expenditure.

The Queensland post office in 1898 carried 19,723,905 letters, 11,647,822 newspapers, 5,130,733 packets, and 238,240 parcels; receipts, £182,207.

In South Australia the postal traffic for 1898 was 19,391,816 letters, 1,501,802 packets, and 8,803,194 newspapers.

The post office of Western Australia carried 13,132,988 letters, 296,712 postal cards, 7,390,294 newspapers, and 3,261,436 packets in 1898.

The New Zealand post office in 1898 forwarded 34,737,316 letters, 917,631 letter cards, 1,479,964 postal cards, 16,822,704 books and parcels, and 15,095,487 newspapers, and issued 318,370 and paid 229,720 money orders. The receipts of the postal and telegraph department for the year ending March 31, 1899, were £445,770, and expenses £390,197.

New South Wales had 13,242 miles of telegraph lines, with 35,630 miles of wire, at the beginning of 1899. The capital cost was £989,423. The number of telegrams dispatched in 1898 was 2,866,570; receipts, £428,995; net revenue, £158,062.

The telegraph lines of Victoria had a length of 6,590 miles, with 14,729 miles of wire, in 1898. The number of messages sent in that year was 1,806,184. The receipts were £97,565.

Queensland had 10,088 miles of telegraph lines, with 18,565 miles of wire. The number of private messages was 1,061,068, besides 151,967 foreign messages received. The receipts were £88,727.

The telegraphs of South Australia had a length of 5,874 miles, including telephone lines; the length of wire was 14,858 miles.

The length of telegraph lines in Western Australia at the end of 1898 was 5,886 miles, with 8,650 miles of wire. The number of dispatches sent during the year was 1,178,928; revenue, £79,754. A cable is to be laid from Fremantle to Cape Colony.

The telegraph lines of New Zealand on March 31, 1899, had a total length of 6,736 miles, with 18,746 miles of wire. The number of messages for the year was 2,960,738. The telephones as well as the telegraphs belong to the Government, and the receipts from both were £145,295.

Australian Federation.—When Australia was first settled the seat of government was in the original colony of New South Wales, established in 1788, until Van Dieman's Land, now Tasmania, set up an independent administration in 1825. This example was followed successively by Western Australia, South Australia, Victoria, and lastly Queensland. Before the Victorian Government was founded in the Port Philip Settlement, which took place in 1850, Earl Grey said that a central authority to decide questions of interest to Australia collectively was necessary, and in 1856 he introduced proposals for constituting such a central authority; but at that time they met with no general support. From the time of the establishment of the Dominion of Canada, in 1867, Sir Henry Parkes labored to bring about a

union of the Australasian colonies, but the activity of Germany and France in the Pacific in 1883 first impressed the idea on the Australians and led to the establishment of the Federal Council as an experimental step. This was simply an advisory body, with neither legislative nor executive authority. New South Wales refused to join in its deliberations from the first, and South Australia subsequently withdrew. The Russian scare in 1890 gave a fresh impetus to the movement for federation. A conference was held in Melbourne, followed by a convention in Sydney in 1891, at which the first commonwealth bill was drafted. This was submitted to the colonial Parliaments, but the popular demand for federation was not strong enough to secure its adoption. The Federal League was then founded to enlighten the Australian people regarding the benefits of federation, and so successful was this educational movement that in 1895 the Premiers in a conference agreed to bring forward enabling bills in their several Parliaments for providing a convention of delegates which should be instructed and empowered to frame a constitution. This constitution was to be submitted to the separate Parliaments sitting in grand committee; the amendments made by the several Parliaments were then to be referred back to the convention, and after they had been considered a final draft was to be made and submitted to the people of the several colonies to be voted on in a general referendum. The convention was held at Adelaide in March, 1897. Queensland was not represented, its Government having refused to pass an enabling bill. The constitution drafted at that meeting was based on the one drawn up in 1891, of which Sir Samuel Griffith and Edmund Barton were the principal authors. The convention met again at Sydney before the close of 1897 to consider and digest the amendments made by the several Parliaments, adjourned to Melbourne in 1898, and the final draft was submitted to popular vote in the several colonies. Queensland, as well as Western Australia, abstained from voting on the bill. There were 219,000 votes cast for, and 108,000 against, the bill, but in New South Wales it failed to secure the 80,000 votes that had been fixed as the minimum majority required to secure its adoption. The Government of New South Wales then proposed amendments, which were substantially adopted. Another referendum was proposed and agreed to. The people of Queensland voted this time, and the results were 377,600 votes for the bill and 141,500 against. Western Australia did not take part in this decision, but pressed for further amendments, which the other colonies declined to consider, the Premiers deciding that it was too late to change the constitution to which the people of five colonies had given the seal of their approval. In this form it was then forwarded for the sanction of the Imperial Parliament, accompanied by a bill authorizing the federation of the colonies under this palladium.

The draft bill for the federation of the Australasian colonies embodying the Federal Constitution was presented to the British Government for the sanction of the Imperial Parliament before the beginning of the session of 1900. It was the result of many years' discussion, and had been ratified by a referendum in the colonies that were ready to enter the federation as original states, viz., New South Wales, Victoria, Tasmania, Queensland, and South Australia. Western Australia desired a postponement until its people could also decide by a referendum whether they would accept the Federal Constitution, but the other colonies were not willing to grant further delay.

New Zealand still held aloof. The conference of Premiers, held at Sydney in January, 1900, voted unanimously that the bill should be passed without alteration. The principal clauses of the Constitution which the statesmen and jurists of Australia had drawn up and the people had ratified by a large majority are given below.

The commonwealth bill as finally adopted provided that the legislative power shall be vested in a Federal Parliament, consisting of the Queen, a Senate, and a House of Representatives, the Queen's representative being a Governor General, appointed by the Crown and receiving a salary from the commonwealth of £10,000 until the Parliament should otherwise decide its amount. Parliament shall sit once at least in the course of a year. The Senate is to be composed of Senators for each state, directly chosen by the people of that state, and sitting for a term of six years. The method of election was left to be defined later. The House of Representatives is to contain twice the number of the Senate, and its members are to be elected by the people of the whole commonwealth, the number of members provided by each state to be in proportion to the number of the people in that state; but in each original state there shall be at least five members apart from this consideration. The bill provided that the Queen should proclaim the union of the colonies adopting the Constitution, within a year of the passing of the act by the British Parliament, in a federal commonwealth under the name of the Commonwealth of Australia. The commonwealth act and all laws made by the Parliament of the commonwealth under the Constitution shall be binding on the courts, judges, and people of every state and of every part of the commonwealth, notwithstanding anything in the laws of any state; and the laws of the commonwealth shall be in force on all British ships, except ships of war, whose first port of clearance and port of destination are in the commonwealth. States of the commonwealth are such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the commonwealth, and such colonies and territories as may be admitted into the commonwealth or established by the commonwealth as states. The Parliament shall, subject to the Constitution, have power to make laws for the peace, order, and good government of the commonwealth with respect to trade and commerce with other countries and among the states; taxation, so as not to discriminate between states or parts of states; bounties on the production or export of goods, so that such bounties shall be uniform throughout the commonwealth; borrowing money on the public credit of the commonwealth; postal, telegraphic, telephonic, and other like services; the naval and military defense of the commonwealth and of the several states, and the control of the forces to execute and maintain the laws of the commonwealth; lighthouses, light-ships, beacons, and buoys; astronomical and meteorological observations; quarantine; fisheries in Australian waters beyond territorial limits; census and statistics; currency, coinage, and legal tender; banking other than state banking, also state banking beyond the limits of the state concerned, the incorporation of banks, and the issue of paper money; insurance other than state insurance, also state insurance extending beyond the limits of the state concerned; weights and measures; bills of exchange and promissory notes; bankruptcy and insolvency; copyrights, patents of inventions and

designs, and trade-marks; naturalization and aliens; foreign corporations, and trading or financial corporations formed within the limits of the commonwealth; marriage; divorce and matrimonial causes, and in relation thereto parental rights and the custody and guardianship of infants; invalid and old-age pensions; the service and execution throughout the commonwealth of the civil and criminal process and judgments of the courts of the states; the recognition throughout the commonwealth of the laws, the public acts and records, and the judicial proceedings of the states; the people of any race, other than the original race in any state, for whom it is deemed necessary to make special laws; immigration and emigration; the influx of criminals; external affairs; the relations of the commonwealth with the islands of the Pacific; the acquisition of property on just terms from any state or person for any purpose in respect of which the Parliament has power to make laws; the control of railways with respect to transport for the naval and military purposes of the commonwealth; the acquisition, with the consent of a state, of any railways of the state on terms arranged between the commonwealth and the state; railway construction and extension in any state with the consent of that state; conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one state; matters in respect of which this Constitution makes provision until the Parliament otherwise provides; matters referred to the Parliament of the commonwealth by the Parliament or Parliaments of any state or states, but so that the law shall extend only to states by whose Parliaments the matter is referred, or which afterward adopt the law; the exercise within the commonwealth, at the request or with the concurrence of the Parliaments of all the states directly concerned, of any power which may at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia; matters incidental to the execution of any power vested by this constitution in the Parliament or either house thereof, or in the Government of the commonwealth, or in the Federal judicature, or in any department or officer of the commonwealth.

The executive powers transferred to the commonwealth comprise the departments of posts, telegraphs, and telephones; naval and military defense; lighthouses, light-ships, beacons, and buoys; and quarantine. These can be taken over at any date after the establishment of the commonwealth. The chief command of the naval and military forces is vested, however, in the Governor General.

The bill provided that the judicial power of the commonwealth should be vested in a Federal supreme court, to be called the High Court of Australia, and in such other Federal courts as the Parliament might create and such other courts as it might invest with Federal jurisdiction, the High Court to consist of a chief justice and so many other justices, not less than two, as the Parliament should prescribe. The justices of the High Court and the other courts to be created by the Parliament were to be appointed by the Governor General in Council, and not to be removed except by the Governor General in Council on an address from both houses of Parliament in the same session praying for their removal on the ground of proved misbehavior or incapacity. They should receive such remuneration as the Parliament fixed, but it was not to be changed during their continuance in office. The High

Court should have jurisdiction, subject to such exceptions and regulations as the Parliament prescribed, to hear and determine appeals from judgments, decrees, orders, and sentences of any justice or justices exercising the original jurisdiction of the High Court, of any other Federal court or court exercising Federal jurisdiction, or of the Supreme Court of any state or any other state court from which an appeal lies to the Queen in Council, or as to questions of law of the Interstate Commission. No exception or regulation of the Parliament should prevent the High Court from hearing and determining appeals from the Supreme Court of a state in any matter in which at the establishment of the commonwealth an appeal lies to the Queen in Council, and the same conditions and restrictions on appeals to the Queen in Council should be applicable to appeals to the High Court unless the Parliament otherwise provides. No appeal should be permitted to the Queen in Council in any matter involving the interpretation of the commonwealth Constitution or the constitution of a state unless the public interests of some other part of the imperial dominions are involved. The royal prerogative to grant appeal from the High Court to the Privy Council would not be impaired except so far as the provisions of the Constitution limit it, but the Parliament would have power to impose further limitations. In matters arising under any treaty, affecting consuls or other representatives of other countries, in which the commonwealth is a party, between states or residents of different states, or in mandamus or injunction proceedings against officers of the commonwealth, the High Court should have original jurisdiction, and the Parliament might confer original jurisdiction in any matter arising under the Constitution or involving its interpretation, arising under any laws made by the Parliament, of admiralty and maritime jurisdiction, relating to the same subject matter claimed under the laws of different states. In admiralty and maritime jurisdiction or to conflicts in the laws of different states as to the same subject matter the Parliament could make laws defining the jurisdiction of any other Federal court than the High Court and defining the extent to which such jurisdiction should be exclusive of that which belongs to or is vested in the state courts, also investing any state court with Federal jurisdiction. Parliament may make laws conferring rights to proceed against the commonwealth or a state. The Federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes. Trial of any offense against any law of the commonwealth shall be by jury, and every trial shall be held in the state where the offense was committed, but when it is not committed within a state the Parliament may prescribe the place of trial.

The Federal Constitution provides for a uniform postal and telegraph service, and at some time in the future a single control over railroad communications. Everything connected with the external relations of the six federating colonies will be a matter for the commonwealth and not for the state governments. A common tariff will be established for all the colonies, and at the same time there will be intercolonial free trade. The national defenses will be under one control. The Constitution is modeled more closely after that of the United States than that of any other country. State rights have throughout been jealously preserved. Whereas in Canada everything not expressly given to the provinces went to the central Government, in Australia the central Government has power only in matters that are distinctly de-

fined in the Constitution. The Australian Senate consists of six members from each of the states, elected at the same election as the members of the lower house, but by all the electors of each state voting as one constituency except in Queensland, which is divided into two constituencies. The Representatives, elected in separate districts, will be kept down to double the numbers of the Senate. Members of both houses will be paid and will receive the same salary. Ministers in taking office do not vacate their seats, as in England. A measure that the House of Representatives has passed may be rejected by the Senate, and if brought before it in the succeeding session may be rejected again, after which the Government may dissolve both houses and order new elections. If the newly elected House of Representatives passes the same measure and the Senate again rejects it, then there is to be a joint session of both houses, in which the decision is made by a simple majority vote.

A constitutional amendment must first be passed by an absolute majority of both houses of Parliament, and then in not less than two or not more than six months be submitted in each state to the electors qualified to vote for members of the House of Representatives. If one of the houses of Parliament fails to pass the proposed amendment or makes an amendment to it to which the other will not agree, and if it is again passed by the former after three months in the same or the next session and it is again rejected by the other, the Governor General may submit it to the popular vote either with or without any amendments subsequently agreed to by both houses. The people shall vote in such manner as the Parliament prescribes; but until the qualification of electors becomes uniform throughout the commonwealth only half the votes shall be counted in states in which adult suffrage prevails. If in a majority of the states a majority of the electors approve of the proposed law, and if a majority of all the electors voting also approve, the proposed law shall be presented to the Governor General for the Queen's assent. No alteration diminishing the proportionate representation of any state in either house of the Parliament, or the minimum number of representatives of a state in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the state, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that state approve the proposed law.

Western Australia held out when the other colonies voted to join the federation, in the hope of securing special amendments in view of its undeveloped condition, such as differential railroad rates in favor of Western Australian coal and protective duties against the other colonies. After agreeing to railroad connection with South Australia without differential freight rates, the Western Australian Government still asked for the right to impose tariff duties, not to exceed the existing duties. The bill provided that the colony might tax imports from other colonies temporarily, the duties to be reduced by 20 per cent. a year until in five years they would disappear. Sir John Forrest, the Premier of Western Australia, asked for fiscal freedom for the five years, the other colonies to be equally free to tax Western Australian goods. To this the other Premiers would not agree, fearing that it might open the door for other amendments. The British Government, through which the request was presented to the Premiers, urged Western Australia to reconsider its attitude and take steps to enter the

federation as an original state. This Western Australia decided to do, and made arrangements to have a referendum taken previous to the proclamation of the commonwealth. The Parliament, summoned to a special session on May 17, decided to submit the bill as amended by the conference of Premiers to the people of Western Australia. The bill was passed on June 7, and the date of the referendum was fixed for Aug. 7. There were 44,704 affirmative and 19,691 negative votes. New Zealand sent a delegate to London to seek through the Imperial Government amendments to the bill providing for immediate action in organizing the common defense, giving New Zealand the right to take part at once in the Federal High Court, and reserving the right to join the commonwealth as an original state at any time within seven years. To these propositions the Premiers could not agree, replying to the inquiries of the Colonial Office that they had no authority to consent to amendments.

The British Colonial Secretary, Joseph Chamberlain, requested the several colonies to send delegates to explain and give assistance when the commonwealth bill should come before the Imperial Parliament. The Premiers agreed in conference that each colony should appoint a delegate, and that such delegates when appointed should represent all the federating colonies in unitedly urging the passage of the bill without amendment and in explaining any legal and constitutional questions that might arise. When the delegates arrived in London Mr. Chamberlain suggested several amendments to the draft constitution, in answer to which they signed a memorandum reciting their instructions to advocate the passage of the bill without amendment. Mr. Chamberlain, in dispatches to the several Australian governments, requested that the instructions be enlarged to enable the delegates to consider with the Colonial Secretary the form in which amendments might be made so as to render them acceptable to the Australian people. The Premiers declined to accept amendments, urging that the bill as it was embodied the Constitution desired by the Australian people, having been prepared by an elected convention and ratified by a referendum. The Secretary of State for the Colonies objected to the clause making the Federal High Court, instead of the Privy Council, the final court of appeal. He considered that an important link of empire would be impaired and divergency would spring up where in the general interests unity is most desirable. In interpreting the constitution and fixing the boundary between the powers of commonwealth and states the final decision, in his opinion, should lie with the highest tribunal of the empire, beyond suspicion of local bias or predilection. The Imperial Parliament could scarcely allow the Australian High Court to decide whether commonwealth laws, those affecting British shipping or laws on the fisheries, for instance, are *ultra vires*. Banking houses and commercial institutions that had investments in Australia had a strong feeling against the limitation to the right to appeal to the Privy Council. The objections to the existing imperial court of appeal would not hold against the new court which the Government proposed to create by amalgamating the judicial committee of the Privy Council with the House of Lords and providing for the adequate representation of the great colonies in the new court by calling into the House of Peers a number of colonial jurists. Another amendment upon which Mr. Chamberlain insisted was an express statement that the colonial laws validity act of 1865 will apply to laws of the commonwealth.

The question of the right of appeal from the Australian High Court to the Privy Council has been under discussion since the scheme of federation was discussed at the first meeting of the convention at Adelaide. When the Premiers visited England, on the occasion of the Queen's Jubilee in 1897, Mr. Chamberlain urged reconsideration. It was accordingly reconsidered at Melbourne, and finally the compromise contained in the bill was adopted. The Australians were unwilling to resign the right of having their Constitution interpreted by their own tribunal, and believed that by excepting cases in which the public interests of the United Kingdom or of other colonies were involved they conceded all that was necessary and right. But the term "public interests" seemed to the Colonial Secretary vague and indefinite. In the course of further discussion between the delegates and the Colonial Secretary, James R. Dickson, the Queensland delegate, separated himself from his colleagues and expressed himself in favor of accepting the proposed amendments in order to get the commonwealth bill passed as early as possible. Sir Julian Salomons, serving provisionally as delegate from New South Wales, approved the amendments for similar reasons. The Australian governments, however, contended that the right of deciding Australian constitutional questions should reside in the tribunals of Australia. After further conference Mr. Chamberlain arranged a compromise with the delegates, allowing the Executive Government to determine whether an appeal from the High Court to the Privy Council should be allowed. This proposal to confound executive and judicial powers was universally condemned in Australia. The Victorian delegate was superseded. The Government of Queensland asserted the right to leave to Parliament and people the decision whether they would accept a constitution into which such a principle was introduced. Further conferences between the delegates and the Secretary of State resulted in a new compromise, according to which interstate and constitutional questions shall be finally settled by the Federal High Court unless that tribunal rules that the question is one which ought to be settled by the Privy Council. Private litigants may carry their cases from the state Supreme Court either to the Federal High Court or to the Privy Council. If they desire to appeal from the decision of the High Court to the Privy Council they must obtain permission from the Privy Council. This amendment proved acceptable in Australia and was adopted by the British Parliament, though New South Wales, Victoria, Tasmania, and South Australia would have preferred the clause in the original draft, while Queensland and Western Australia objected to any restriction of the right to appeal to the imperial court, and New Zealand also desired the plenary right to appeal. The new clause runs as follows: No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question howsoever arising as to the limits *inter se* of the constitutional powers of the commonwealth and those of any state or states or as to the limits *inter se* of the constitutional powers of any two or more states, unless the High Court shall certify that the question is one which ought to be determined by her Majesty in Council.

The position taken by Mr. Dickson was approved by his Government, which had opposed from the beginning the restricting of the right of appeal to the Privy Council. Newspapers and commercial bodies in the other colonies sustained the view of the Imperial Government, and so did

the chief justices of all seven Australasian colonies. The Government of New Zealand protested against the transfer of the appellate jurisdiction from the metropolitan to the Australian authorities. The Premiers of New South Wales, Victoria, South Australia, and Tasmania, while pleading for the passage of the bill as it stood, did not question the constitutional right of the British Parliament to alter its provisions.

The bill was introduced in the British House of Commons by Mr. Chamberlain on May 15, with the amendments on which the Imperial Government insisted. The only alteration in the Constitution as drafted in Australia was the deletion of the entire clause restricting the right of appeal from the High Court to the Privy Council, and empowering the commonwealth Parliament to make further restrictions. The bill was altered so as to allow Western Australia to come into the federation as an original state, and an amendment was added which provides that, notwithstanding anything in the Constitution, the Queen's prerogative to grant special leave to appeal to the Privy Council may be exercised with respect to any judgment or order of the High Court of the commonwealth or the Supreme Court of any state.

The Earl of Hopetoun, born Sept. 20, 1860, who was Governor of Australia from 1880 to 1895 and since Lord Chamberlain, was appointed to be the first Governor General of the Commonwealth of Australia, and Jan. 1, 1901, was fixed for its proclamation, its inauguration to take place at Sydney, but the future capital to be determined by the Federal Parliament. The Federal Parliament, as is provided in the Constitution, will sit at Melbourne until the new seat of Government is fixed. It is to be placed within territory granted to or acquired by the commonwealth and vested in it, of not less than 100 square miles in area, situated in the state of New South Wales, but distant not less than 100 miles from Sydney. The representation in the Federal House of Representatives, as calculated for the five colonies that applied for federation, is as follows: New South Wales, 23 members; Victoria, 20; Queensland, 8; South Australia, 6; Tasmania, 5; total, 62 members.

New South Wales.—The Legislative Council contains 69 members, who are nominated for life by the Governor. The Legislative Assembly has 125 members, elected in separate districts by all males of full age who are qualified by a residence of twelve months in the colony. At the election of July 27, 1898, the number of electors registered was 324,338, which was 24.28 per cent. of the population; the number who voted was 178,717, which was 56.41 per cent. of the number registered in contested districts. The Governor, appointed in January, 1899, is Earl Beauchamp. The ministry at the beginning of 1900 was composed as follows: Premier and Colonial Treasurer, Sir William John Lyne; Chief Secretary, John See; Attorney-General, Bernhard Ringrose Wise; Secretary for Lands, Thomas Henry Hassall; Secretary for Public Works, Edward William O'Sullivan; Minister of Public Instruction and of Industry and Labor, John Perry; Minister of Justice, William Herbert Wood; Postmaster-General, William Patrick Crick; Secretary for Mines and Agriculture, John Lionel Fegan; Vice-President of the Executive Council, James Alexander Kenneth Mackay.

The new Cabinet has endeavored to show that the surpluses shown in G. H. Reid's budgets were fictitious, and that he left behind him an accumulated deficit of a million sterling. The expenditures are still increasing faster than the revenue,

and no surplus is anticipated until the new Federal tariff comes into force. In order that this shall be ample not only for revenue but for protection the New South Wales Protectionists are agitating for the adoption of the Victorian tariff, which is vaunted as a scientific one. The Parliament met on June 12. When the bubonic plague appeared at Sydney the city corporation showed itself incompetent to deal with the difficulty. Inspectors appointed by aldermen would not apply the sanitary laws when dealing with the premises of these aldermen or their supporters. Very soon the Government saw the necessity of taking the matter into its own hands, and its thorough work in sanitation led to the opinion that the public health should be taken from the corporation and placed in charge of a responsible Government department. The Government pulled down buildings and did other things that were illegal but effective as preventive measures. For these it obtained a bill of indemnity. The wharves and foreshore of the harbor, where the disease first appeared, were resumed by the state. A more thorough public health act was carried through Parliament. Another provided for the better government of Sydney. A bill dividing the country into the proper number of electorates was based on the report of a commission. A harbor trust was established. To replace guns sent to South Africa the Government purchased in England 4 4.7-inch naval guns fitted with carriages for field service, and several Vickers-Maxim guns. A bill was carried putting the volunteer force on a better footing. Various Government measures showed that the Labor party held the balance of power and was inclined and able to dictate to this Cabinet as effectually as it did to Mr. Reid's Cabinet. A bill was introduced giving municipalities power to raise their revenues by taxing the unimproved value of land. Another provides for the safe working of metalliferous mines, and establishes a fund for the relief of workers in case of death or accident. Eight hours is made the maximum day's labor. The Government also brought forward a measure establishing compulsory arbitration in labor disputes and one dealing with old-age pensions. A far-reaching measure provides for the purchase of large estates by the state in order to divide them up for the purpose of closer settlement. An early closing act passed in the preceding session was found to work badly, giving opportunities to some for evasion, while small suburban shops that have been accustomed to do most of their business after working hours suffered unduly. Changes in this law were proposed, and numerous subjects of minor importance were introduced for legislation, more than there was time to discuss. The advancement of public works was approved, especially light railroads, water conservation, and artesian wells.

Victoria.—The members of the Legislative Council, 48 in number, are elected for six years by citizens owning property worth £10 per annum or leasing property rated at £25 per annum. The members of the Legislative Assembly, 95 in number, are elected for three years by universal manhood suffrage. The number of electors for the Assembly enrolled in 1898 was 252,560. The Governor is Lord Brassey. The ministers in office at the opening of 1900 were the following: Premier and Chief Secretary, Allan McLean; Treasurer, W. Shields; Attorney-General, W. H. Irvine; Minister of Mines, Railways, and Water Supply, A. R. Outtrim; Minister of Public Works and Agriculture, G. Graham; Postmaster-General, W. A. Watt; Minister of Education and Customs, Carly Salmon; Minister of Lands, J. H. McColl;

Solicitor-General, J. M. Davies; Minister of Defense, D. Melville.

The Parliament was opened on June 27. Projected legislation included female franchise, old-age pensions, the state purchase of land for closer settlement, the establishment of a department of labor, and the prevention of the adulteration of wine. The expenditure for the year exceeded the estimate, but revenue increased in a greater ratio, leaving a surplus of £132,000. For the war in Africa £63,000 had been spent, and £20,000 of the surplus was required to send a naval contingent to China. Revenue for 1901 was estimated at £7,482,000 and expenditure just under that amount. For increased educational expenditure £19,000 would be required; for additional military expenses, £18,000; for old-age pensions, £25,000. The women in Victoria who are opposed to female suffrage started a movement on the lines of the American women's antisuffrage movement, and when the woman's suffrage bill was under discussion in Parliament they obtained many thousand signatures to a petition against the measure. The Government borrowed £500,000 for railroad purposes, obtaining the money in Melbourne at the price of 96½ for 3 per cent. debentures.

Queensland.—The Legislative Council contains 38 members, nominated by the Crown; the Legislative Assembly of 72 members is elected for three years by the ballots of male residents of six months' standing. The Governor is Lord Lamington. The ministry was composed of the following members at the beginning of 1900: Treasurer and Secretary for Mines, Robert Philp; Chief Secretary, James Robert Dickson; Secretary for Agriculture, J. V. Chetaway; Home Secretary, J. F. C. Foxton; Postmaster-General and Secretary for Public Instruction, George Drake; Secretary for Public Lands, W. O'Connell; Secretary for Railways and Secretary for Public Works, John Murray; Attorney-General, A. Rutledge; without portfolio, George Wilkie Gray and D. Dalrymple.

South Australia.—There is an elective Legislative Council of 24 members, one third of whom are replaced every third year. The House of Assembly has 54 members, elected for three years by the vote of adult citizens of both sexes whose names have been registered six months previous to the election. There were 151,143 qualified electors in 1898. The Governor is Lord Tennyson. The Cabinet at the beginning of 1900 was composed as follows: Treasurer and Premier, F. W. Holder; Chief Secretary, J. G. Jenkins; Attorney-General, J. H. Gordon; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, R. W. Foster; Minister of Education and Agriculture, E. L. Batchelor.

The Parliament was opened on June 14. Household franchise, early closing, the assessment of land values, local government, land consolidation and repurchase, factories, a graving dock for Port Adelaide, railroads, a company law, aborigines, and other subjects were brought forward by the Government for legislation. The proposal to give all householders votes for members of the Legislative Council did not obtain the consent of the Council, although an extension of suffrage was agreed to. Both houses passed an act disqualifying members of the Federal Parliament from sitting in the South Australian Parliament, and compelling members of the local Parliament to resign on taking seats in the Federal Parliament. A royal commission examined into the condition and prospects of village settlements started some time ago in South Australia, and reported that

the attempt to apply communistic principles in the management of these settlements has resulted in total failure. The settlers received Government advances amounting to £85,000, of which they have paid back only £9,465.

Western Australia.—The Legislative Council contains 24 members, who are elected for six years by householders and occupants of property; the Legislative Assembly of 44 members, who are elected by adult males who have resided six months in the district or who own or rent property. The Governor is Col. Sir Gerard Smith, who was appointed in 1895. The Cabinet at the beginning of 1900 was composed as follows: Premier and Colonial Treasurer, Sir John Forrest; Commissioner for Railways and Director of Public Works, F. H. Piessé; Commissioner of Lands, George Throssell; Minister of Mines, H. B. Le-froy; Attorney-General, Richard William Pennefather; Colonial Secretary, George Randell.

The people of the gold fields started an agitation in the beginning of 1900 for separation from the older part of the colony. They declared that they had been viewed with suspicion by the earlier settlers from the time when they began to come in upon the discovery of gold in 1892; and that, although they had converted what was looked upon as a worthless desert into the largest gold fields in the world, in which over £100,000,000 of English capital was invested, the older colonists persistently used the powers granted them under responsible government to the detriment of the people who had created this industry and settled and improved a country four times the size of Great Britain. At a conference of representatives from all the settlements east of 119° of latitude and south of 24° of longitude a demand for separation was carried almost unanimously, and a monster petition was sent to the Imperial Government, setting forth that although numbering over 80,000 persons, nearly half the population of the colony, they had only 3 members in the Legislative Council and 6 in the Assembly. This proportion would be changed, but in a very inadequate degree, by the redistribution act recently passed, increasing the Legislative Council to 30 and the Assembly to 50 members. Under the new law the gold fields have only 6 members in the Council and 10 in the Assembly. The Government in the last four years had spent, it was asserted, over six times as much on the coast districts as on the eastern part of the colony, had spent, in fact, all the money raised by loans, all the revenue of the coast district, and in addition half a million of the revenue collected from the gold fields. This statement was controverted by the delegate from Western Australia, who said that nearly all the revenue drawn from the gold fields had been expended there and some of the loan money as well. The residents of the eastern districts found fault also with the tariff by which food, clothing, and other necessities must pay duties for the benefit of the farmers and manufacturers of the coast. Differential railroad rates are paid on all that is brought to the gold mines and a progressive tax is levied on the value of ore sent away. Recently a dividend tax had been imposed. The people of the mining districts were denied their natural harbor of Esperance and a railroad line to the south coast. A petition for a referendum on the question of federation, in favor of which the gold fields were unanimous, had been rejected by the Legislative Council by a majority of 13 to 4, although the signatures of 18,000 voters of the eastern district had been re-enforced by 5,000 names from the coast. The petition to the Queen was signed by 26,000 persons. Mr. Chamberlain sug-

gested that under federation their complaints could be dealt with in Australia. The representatives of the Western Australian Gold Fields Reform League in London pointed out that the division of Western Australia into two colonies, which was the condition on which the British Parliament had granted self-government in 1890, could no longer be dealt with by the Imperial Government if federation became a fact. Mr. Chamberlain nevertheless declined to receive the deputation. A congress of workmen sitting at Perth called for the total exclusion of colored and other undesirable aliens from the future commonwealth. The Western Australian ministry induced the governments of the eastern colonies to consent to having the mail steamers call at Fremantle, although this lengthens the voyage a full day. Although the revenue of the colony for 1900 was only £1,875,395, a decline of nearly a third, the previous deficit was wiped out and a surplus was expected. The regular session of Parliament began on Aug. 15, a special session having been held to enable Parliament to authorize a referendum on the commonwealth bill. Federation having been approved, the Government petitioned to have Western Australia admitted into the commonwealth as an original state, and the Imperial Government took the necessary steps to have this colony included. The session was a short one because it was necessary to dissolve the Legislative Assembly in order that members might be elected under the extended franchise. Bills were discussed concerning municipalities, the public service, and conciliation and arbitration in industrial disputes. The Government desired to encourage immigration and the settlement of land. The farming population is so small that the colony is a large importer instead of an exporter of agricultural produce. The railroad company to which large strips of land had been granted retarded settlement by leaving the land unimproved. Nevertheless, under the liberal laws of the colony, land settlement is making progress. The tin and coal mines are being rapidly developed. The export of timber shows signs of improvement. Western Australian timber suitable for street pavements is in growing request in Europe. Railroad business has been very satisfactory, and the railroads in the gold fields are being duplicated. The Government did not ask Parliament to sanction public works of magnitude on account of the impending dissolution. The Coolgardie water scheme is nearing completion.

Tasmania.—The Legislative Council consists of 19 members, elected under a property qualification for six years; the House of Assembly of 38 members, elected for three years, also by a qualified franchise. The electors for the Council in 1899 numbered 9,466; for the House of Assembly, 34,528. The Governor since 1893 has been Viscount Gormanstown. The Cabinet was composed as follows at the beginning of 1900: Premier and Attorney-General, N. E. Lewis; Chief Secretary, G. T. Collins; Treasurer, B. S. Bird; Minister of Lands and Works, E. Mulcahy; without portfolio, F. W. Piessé. In Tasmania the imports in 1899 were £119,000 in excess of those of 1898, and the exports showed an increase of £774,000, the exports of minerals in particular having increased £590,000 in value. Deposits in savings and other banks and investments in Government bonds attest the growing wealth of the people. The Government closed its accounts for 1899 with a surplus of £72,500, the revenue having been £38,000 in excess of that of 1898. In 1900 a revenue of £1,040,000 was anticipated, and the expenditure was expected to amount to

£926,000. The deficiency in the public revenue, which six years ago amounted to £455,000, will probably be extinguished by 1901.

New Zealand.—The Legislative Council has 48 members, appointed formerly for life but since 1891 for seven years. The House of Representatives consists of 74 members, of whom 4 are Maoris, elected for three years by the suffrage of adult persons of both sexes who have resided a year in the colony. There were 339,230 registered electors in 1896, of whom 196,925 were men and 142,305 women. The Governor is the Earl of Ranfurly. The ministry was composed at the beginning of 1900 of the following members: Premier, Colonial Treasurer, Commissioner of Trade and Customs, Minister of Labor, and Minister of Defense, R. J. Seldon; Minister of Lands, Commissioner of Forests, and Minister in Charge of the Advances to Settlers Office, J. Mackenzie; Commissioner of Stamp Duties and Minister of Native Affairs, J. Carroll; Minister of Immigration, Minister of Education, and Minister in Charge of Hospitals and Charitable Aid, W. C. Walker; Minister of Public Works, Minister of Marine, and Minister in Charge of Printing Office, W. Hall-Jones; Minister of Justice, J. Thompson; Minister of Mines, A. J. Cadman; Colonial Secretary, Postmaster-General, Telegraph Commissioner, Minister of Railways, and Minister of Industries and Commerce, J. G. Ward. On Jan. 25 Mr. Thompson and Mr. Cadman retired and James McGovern took both their portfolios.

The session of Parliament began on June 22. The general prosperity of the colony and the increasing volume of its exports are attributed to the policy of securing the acquisition of lands for close settlement more than to any other cause. The colonies of Australia are adopting the same policy. The granting of pensions to deserving aged persons is pronounced by the Government so great a boon to old colonists requiring assistance that there is no intention of repealing the law. The buoyancy of trade has added largely to the revenue raised by indirect taxation, but the ministers deem it advisable to reduce the customs duties levied on necessaries of life. With increased revenues New Zealand is able to undertake military expenditure on an unprecedented scale. By such activity it is sought to impress the mother country with its ability to aid in extending the British flag over the unclaimed islands in the Pacific, and perhaps to take some of them into its own jurisdiction. The New Zealand contingent was the first of the colonial forces to arrive in South Africa. Four other bodies of troops were sent, making in all the largest contribution in proportion to population of any of the British colonies. To meet the cost of these contingents and of others measures designed to place the defenses on a safer and more satisfactory footing a large increase in the vote for defense was necessary. The establishment of a fully equipped reserve force for imperial and colonial purposes was proposed to the Imperial Government. Mining in New Zealand is more active than it has been for a long time. The largest yield of gold in a quarter of a century was obtained in 1899. The output of the coal mines is also increasing. The improvement in machinery for alluvial mining has been the means of giving employment to a large number of men. On July 3 J. Mackenzie resigned the Ministry of Lands and Agriculture. He was succeeded by Thomas Duncan. The Premier and Colonial Treasurer announced a surplus for 1900 of £605,000, exceeding all previous records. The revenue amounted to £5,700,000, not including a balance of £45,000

from the previous year, and expenditure was £5,140,000. Customs exceeded the estimate by £127,000, railroads by £146,000, stamps by £61,200, and territorial revenue by £24,200. Large areas of land were acquired for settlement during the year at a cost of £370,000, and £100,000 had been loaned to public bodies. The land tax produced £294,000 and the income tax £128,000. The public debt increased £900,000 during the year, but two thirds of this yields interest, making it no burden on the taxpayers. The expenditures for 1901 were estimated at £5,441,000. Of the excess of £301,000 over expenditures for the preceding year £95,000 were required to pay for the troops in South Africa. The cost of equipping the defense forces and volunteers also largely increased the expenditure. To extend the public schools into outlying districts and to establish a system of technical education it was necessary to augment the vote for educational purposes, which would be £462,000. The sum of £140,000 was required for surveys in connection with the close settlement of lands. Notwithstanding the large expenditures it was decided to reduce the customs duties by making mining, agricultural, dairy, and dredging machinery, engines, and boilers free, involving the sacrifice of £157,000. Penny postage within and without the colony was voted, to begin on Jan. 1, 1901, entailing a loss of £80,000 in revenue. Concessions in freight and passenger rates on the railroads cost £70,000 more.

Fiji.—The Fiji Islands, which have been a British possession since 1874, are administered by a Governor, who is also High Commissioner and Consul General for the Western Pacific. Sir G. T. M. O'Brien holds the office at present. The Legislative Council is composed of the 6 principal officials and 6 other members appointed by the Crown. Five of the provinces into which the colony is divided have European commissioners and 12 others are left in charge of the native chiefs.

British New Guinea.—The southeastern part of the island of New Guinea, with the D'Entrecasteaux and Louisiade groups, was proclaimed a British possession after the Germans had occupied the northeastern part. Queensland guaranteed £15,000 a year to pay the cost of administration, and subsequently New South Wales and Victoria agreed to share the expense. The Lieutenant Governor, who administers the Government, is George Ruthven Le Hunte. The revenue, derived mostly from customs, was £10,300 in 1898. For 1900 the revenue was estimated at £12,500 and expenditure at £27,000. The area under British rule is about 90,540 square miles, with 350,000 inhabitants. There are 250 European traders and missionaries, besides 300 or more gold miners, on the Louisiade Islands, Woodlark island, and the mainland. The value of the imports in 1898 was £46,971. They consist of food and tobacco, cloth, and hardware. Copra gathered by the natives from natural cocoanut groves, trepang, pearls, pearl shells, sandalwood, and gold are exported. The total value of the exports in 1898 was £49,859. Gums, rattan, ebony, and other cabinet woods and the cocoanut and sago palms are abundant. The acquisition of land by whites was not permitted until in September, 1899, the British Government made arrangements to grant large tracts to a syndicate, which proposed to sell to settlers at 2s. 6d. an acre for agricultural, and 1s. for pastoral, land. The colonial governments objected strongly to this grant, and the arrangement was consequently made conditional on their approval.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, inseparable constitutional monarchies, hereditary in the male line of the dynasty of Hapsburg-Lorraine or, in the event of the extinction of the male line, in the female line. The legislative power for affairs common to both monarchies—viz., foreign relations, military and naval affairs, with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coinage, and the administration of the occupied provinces of Bosnia and Herzegovina—is exercised by committees of the legislative bodies of both monarchies. These committees, which are called the Delegations, meet alternately in Vienna and Buda-Pesth, the two capitals. They are composed of 20 members elected annually by each of the two upper houses and 40 from each of the lower houses. The Austrian and Hungarian Delegations meet and vote separately, and in case of disagreement they decide the question by a joint vote. The common ministers are responsible to the Delegations, and may be impeached for any dereliction of duty.

The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle Ferdinand I abdicated in consequence of a revolutionary uprising, and he was crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of that monarchy were restored. The heir apparent is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Annunciata, daughter of the former King of Naples.

The ministers for the whole monarchy at the beginning of 1900 were as follow: Minister of Foreign Affairs and of the Imperial House, Graf Agenor Maria Adam Goluchowski; Common Minister of War, Gen. Edmund, Freiherr von Krieghammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The cost of the administration of common affairs is borne by the two halves of the monarchy in proportions settled by an agreement between the Austrian Reichsrath and the Hungarian Parliament. The ten years' *Ausgleich*, as the agreement is called, was not renewed when the last period expired in 1897, and pending negotiations for a new one the provisions of the last *Ausgleich* were continued as a *modus vivendi*. A compromise was reached in November, 1899, in accordance with which Hungary will pay 34.4 per cent. of the common expenditure and Austria 65.6 per cent. The Hungarian quota is 3 per cent. more than under the old *Ausgleich*, and the duties paid by Hungary are reduced in the new commercial treaty so that the burden is about the same in proportion as before. The compromise will run till Jan. 1, 1910, or three years longer than the treaty. Hungary pays her share of the interest and sinking fund of the debt of the empire contracted prior to 1868. Since then no common debt has been contracted except the paper currency, which is guaranteed jointly. The common expenditure in 1897 was 171,285,000 florins, of which 62,267,000 florins were receipts from customs and the contributions of Austria and Hungary were 74,786,000 and 34,232,000 florins respectively. The preliminary accounts for 1898 make the total revenue and expenditure 180,541,000 florins, of which 71,147,000 florins came from customs and the two monarchies contributed respectively 75,044,000 and 34,350,000 florins. According to the

sanctioned estimates for 1899, the total was 156,857,000 florins, 57,139,000 florins being derived from customs, 75,952,000 florins from the Austrian and 34,766,000 florins from the Hungarian contribution. The budget estimate for 1900 was 172,324,750 florins, customs yielding 62,475,045 florins; receipts of the Ministry of Foreign Affairs, 181,047 florins; Ministry of War and Marine, 4,450,389 florins; Ministry of Finance, 40,556 florins; Board of Control, 6,367 florins; contributions of the two halves of the monarchy, 105,171,352 florins. The expenditure of the Ministry of Foreign Affairs is 5,059,618 florins, 4,958,471 florins for ordinary and 101,147 florins for extraordinary purposes; for the army, 145,280,352 florins, 134,593,088 florins for ordinary and 10,687,264 florins for extraordinary purposes; for the navy, 19,733,250 florins, 12,778,025 florins for ordinary and 6,955,225 florins for extraordinary purposes; Ministry of Finance, 2,102,300 florins; Board of Control, 149,230 florins.

Of the general debt, contracted before Dec. 24, 1867, the amount outstanding in July, 1899, was 2,722,549,875 florins. The annual payments for interest and amortization amounted to 126,274,590 florins, of which 95,963,877 florins fell to the share of Austria and 30,310,713 florins to the share of Hungary. The floating debt amounted to 162,163,201 florins, of which 112,680,650 florins represent paper money guaranteed by both monarchies, 14,480,951 florins Austrian paper money, and 35,001,600 florins Austrian salt mine obligations.

The revenue of Bosnia and Herzegovina for 1900 was estimated at 20,827,440 florins, and expenditure at 20,763,184 florins.

The Army.—The common army is organized in 15 army corps of 2 divisions, or 4 brigades, of infantry, 1 brigade of cavalry, 1 brigade of artillery, and 1 section of train. The common army has a supplementary reserve, to which young men not drawn for three years' active service are transferred. The Austrian Landwehr and the Hungarian Honved, constituting the special national armies of the two monarchies, have also their supplementary or Ersatz troops, which are drafted into the respective armies in case of war. Young men who have received a gymnasium education are required to serve only one year in any of the armies. The annual recruit for the common army is 103,100 men, of which number Austria supplies 59,211 and Hungary 43,899. For the Austrian Landwehr the yearly contingent is 10,000; for the Honved, 12,500. The total peace strength of the military forces in 1899 was 26,454 officers and 335,239 men, of whom 3,597 officers and 2,736 men were attached to the general staff, 1,697 officers and 7,153 men were serving in military establishments, 10,447 officers and 178,138 men belonged to the infantry of the common army, 1,890 officers and 45,906 men to the cavalry, 1,647 officers and 25,586 men to the field artillery, 422 officers and 7,786 men to the fortress artillery, 584 officers and 9,935 men to the pioneers, 79 officers and 2,964 men to the sanitary troops, 417 officers and 3,309 men to the train, 2,415 officers and 22,949 men to the Landwehr infantry, 246 officers and 2,119 men to the cavalry of the Landwehr, 2,587 officers and 22,312 men to the Honved infantry, and 426 officers and 4,346 men to the Honved cavalry; total, 361,693 officers and men, with 63,382 horses and 1,048 guns.

The war strength of the Austro-Hungarian army is 45,238 officers and 1,826,940 men, with 281,886 horses and 1,864 field guns. The general levy or Landsturm is estimated at 4,000,000 men. Military service in the national armies, as well as in the common army, begins at the age of twenty-one, and in the common army lasts ten years, viz.,

three years in the line and seven years in the reserve; in the Landwehr or Honved the period is twelve years. All who are not in the common army or the special armies or their reserves are liable to be called out for service in the Landsturm from the age of nineteen to that of forty-one, but only by command of the Emperor, and not to serve outside the national border except by parliamentary sanction.

The Navy.—The Austro-Hungarian navy, which is kept in a high state of efficiency for defensive purposes, will consist when completed of 15 armor clads of 6,000 to 9,000 tons, 7 cruisers of 4,000 to 7,000 tons, 7 third-class cruisers of 1,500 to 2,500 tons, 15 torpedo gunboats, and 90 torpedo craft of various sizes, exclusive of the monitors and torpedo boats kept in the Danube. The ships already built include 8 armor clads, 2 armored cruisers, 3 second-class and 8 third-class cruisers, 19 coast-defense vessels, and 32 first-class, 31 second-class, and 8 third-class torpedo boats. There were building on Jan. 1, 1900, 2 first-class battle ships of 8,300 tons and 2 second-class cruisers. The most powerful vessels previously constructed are the *Monarch*, *Wien*, and *Budapest*, of 5,600 tons, with Harveyized steel side armor 10.6 inches thick and gun protection, the armament consisting of 4 9.4-inch guns, 6 quick-firing 5.9-inch guns, and 14 small quick firers. The armored cruiser *Karl VI*, of 6,100 tons, has armor of the same thickness and carries 2 9.4-inch guns, 8 quick-firing 5.9-inch guns, and 18 small quick firers, and is capable of steaming 20 knots, while the new battle ships can make 17 knots.

Navigation.—The number of vessels entered at the ports of Austria during 1897 was 105,146, of 12,134,468 tons; cleared, 104,062, of 12,123,554 tons. Of the vessels, 88 per cent. were Austrian; of the tonnage, 90 per cent. was Austrian. At Hungarian ports, 19,190 vessels, of 2,016,484 tons, were entered and 19,174, of 2,012,945 tons, cleared during 1898. Of the vessels 83 per cent. and of the tonnage 63 per cent. were Hungarian.

The Austrian shipping on Jan. 1, 1898, comprised 189 merchant vessels engaged in ocean commerce, of 168,038 tons; 1,452 coasting vessels, of 21,085 tons; and 10,033 fishing and other vessels, of 21,423 tons; total, 11,674 vessels, of 210,546 tons, of which 175, of 142,310 tons, were steamers. The Hungarian merchant navy on Jan. 1, 1899, numbered 66 ocean-going vessels, of 56,889 tons; 158 coasting vessels, of 5,456 tons; and 277 fishing craft, of 432 tons; total, 501 vessels, of 62,777 tons, of which 69 were steamers, of 43,869 tons.

Commerce and Production.—The total value of the special imports into the Austro-Hungarian customs territory, in which Bosnia and Herzegovina are included, amounted in 1899 to 790,300,000 florins, and the total value of exports was 928,400,000 florins. In 1898 the total for imports was 819,800,000 florins; exports, 928,400,000 florins. The chief imports in 1898 were cotton, of the value of 52,814,000 florins; coal, 40,552,000 florins; wool, 39,400,000 florins; maize, 30,178,000 florins; tobacco, 25,556,000 florins; coffee, 22,408,000 florins; silk, raw and manufactured, 21,682,000 florins; wheat, 19,840,000 florins; wine in casks, 17,406,000 florins; flax and jute, 16,991,000 florins; rye, 15,501,000 florins; eggs, 14,153,000 florins; books and prints, 13,212,000 florins; copper, 11,765,000 florins; machinery, 9,132,000 florins; tallow, 8,263,000 florins; hides and skins, 7,693,000 florins; hogs, 6,464,000 florins. The chief exports were lumber and wood manufactures, of the value of 76,754,000 florins; sugar, 67,056,000 florins; eggs, 39,998,000 florins; barley, 30,204,000 florins; lignite, 29,373,000 florins; malt, 24,288,000 florins;

leather gloves and shoes, 24,178,000 florins; cattle, 18,506,000 florins; horses, 17,407,000 florins; colored glassware, 11,006,000 florins; bed feathers, 9,293,000 florins; woolens, 8,801,000 florins; cask staves, 8,671,000 florins; hops, 7,870,000 florins; beans, 7,301,000 florins; beer in casks, 6,997,000 florins; fowls, 6,990,000 florins; coal, 6,719,000 florins.

The distribution of the special commerce in 1898 is shown in the following table, giving the imports from and the exports of domestic merchandise to the principal countries, in Austrian florins:

COUNTRIES.	Imports.	Exports.
Germany.....	292,491,000	420,452,000
Great Britain.....	69,269,000	78,195,000
Italy.....	59,241,000	57,331,000
Russia.....	68,813,000	32,181,000
United States.....	67,139,000	14,454,000
Roumania.....	38,359,000	32,855,000
British India.....	42,164,000	16,432,000
Switzerland.....	25,069,000	32,038,000
France.....	24,441,000	27,170,000
Turkey.....	17,158,000	31,050,000
Serbia.....	17,159,000	11,022,000
Belgium.....	15,408,000	5,781,000
Brazil.....	18,200,000	1,806,000
Netherlands.....	8,744,000	10,164,000
Egypt.....	7,430,000	11,013,000
South America.....	11,528,000	2,082,000
Greece.....	7,999,000	5,572,000
Dutch India.....	11,651,000	133,000

The imports of precious metals in 1898 were 23,409,000 florins; exports, 60,956,000 florins.

In Austria about half the people are engaged in agriculture. Rye, barley, oats, potatoes, beets, pulse, maize, and buckwheat are the principal crops. The vineyards produced 4,224,000 hectolitres of wine in 1898. The production of coal in 1898 was 41,142,000 florins in value; of lignite, 43,493,000 florins; of pig iron, 34,303,000 florins; of lead, 1,790,000 florins; of quicksilver, 1,149,000 florins; of zinc, 1,759,000 florins; of silver, 1,835,000 florins; of copper, 628,000 florins. The total value of minerals raised was 94,870,874 florins; of metals extracted, 42,453,595 florins. There were 9,827,503 hectares under forest, of which 6,828,415 hectares are pine. The breweries produced 9,060,498 hectolitres of beer in 1897, the distilleries 1,373,831 hectolitres of alcohol.

Of the Hungarian people, 62 per cent. are employed in the cultivation of the soil. Wheat, maize, rye, barley, pulse, and potatoes are the principal crops. The forest area is 7,515,400 hectares, of which 3,714,590 hectares are beech woods, 2,082,834 hectares oak, and 1,718,066 hectares pine. The value of the mineral products in 1898 was 26,027,981 florins, of which 14,022,406 florins represent lignite, 6,560,194 florins coal, and 4,327,387 florins iron ore. The smelted metals were valued at 26,027,981 florins, 18,676,019 florins representing pig iron, 4,538,524 florins gold, which is found associated with silver, lead, and copper, and 1,104,513 florins silver. The special commerce of Hungary for 1898 amounted to 597,169,000 florins for imports and 551,895,000 florins for exports. The chief imports are cottons, woolens, clothing, silks, wine, sugar, and coffee. The grain exported was valued at 97,470,000 florins; flour, 82,925,000 florins; live animals, 69,965,000 florins; timber and forest products, 39,057,777 florins; wine, 15,177,000 florins; eggs, 11,278,000 florins; wool, 7,750,000 florins; cask staves, 6,804,000 florins. Of the total imports, raw materials constituted 26 per cent., and of the exports, 58 per cent. From Austria came 75 per cent. of the imports, and 74 per cent. of the exports were shipped to Austria.

Railroads, Posts, and Telegraphs.—The state railroads of Austria had in 1898 a total

length of 4,700 miles; lines belonging to companies and operated by the Government, 1,260 miles; lines owned and operated by companies, 4,862 miles; total length, 10,822 miles. The total capital expenditure was £231,522,000 sterling. The number of passengers carried in 1897 was 118,638,000; tons of freight, 103,271,000; receipts, 278,053,000 florins; expenses, 172,434,000 florins.

The state railroad lines in Hungary had on Jan. 1, 1899, a length of 4,876 miles; companies' lines operated by the Government, 3,439 miles; lines owned and worked by companies, 1,822 miles; total length, 10,137 miles. The total capital expenditure was £107,306,000 sterling; number of passengers carried in 1898, 60,312,000; tons of freight, 38,624,000; receipts, £10,576,000 sterling; expenses, £5,730,000 sterling.

The Austrian post office in 1898 carried 876,556,080 letters and postal cards, 122,886,840 samples and books, and 97,400,800 newspapers.

The Hungarian postal traffic in 1898 was 250,802,000 letters and postal cards, 41,096,000 samples and book packets, 18,964,000 money and postal orders of the aggregate amount of £43,382,000 sterling, 18,155,000 parcels and money letters, and 108,752,000 newspapers.

The telegraph lines of the Austrian Government had in 1898 a total length of 32,363 miles, with 96,580 miles of wire. The number of messages sent during 1898 was 14,158,226. The length of telephone wires was 64,380 miles. The postal and telegraph receipts amounted to £44,650,851 sterling; expenses, 40,705,717 florins.

The Hungarian Government lines had a total length of 13,675 miles, with 66,689 miles of wire; number of messages, 13,583,618. The length of telephone wires was 20,361 miles. The postal and telegraph receipts in 1898 were £1,700,300 sterling; expenses, £1,274,700.

Austria.—The legislative authority for the empire is vested in the Reichsrath, but each province possesses a large measure of autonomy and has a Landtag, or Diet, to legislate on all matters not reserved by the Constitution for the Reichsrath. The upper house of the Reichsrath is the Herrenhaus, composed of 19 archdukes, 67 hereditary territorial nobles, 10 archbishops, 8 prince bishops, and 136 life members nominated by the Emperor for distinguished services or eminence in the arts or sciences. The lower house is the Abgeordnetenhaus, containing 85 representatives of the landed proprietors, 118 representatives of boroughs and cities, 21 representatives of chambers of commerce and industry, 129 representatives of rural districts elected indirectly by the peasants and small proprietors, and 72 members elected directly by the people; total, 425 members. All males over twenty-four years of age who pay 4 florins in direct taxes or possess educational or other qualifications are entitled to vote directly for Deputies in the towns and in the rural constituencies for electors who choose the Deputies, each elector representing 500 individual voters. The Austrian Ministry in the beginning of 1900, constituted Oct. 2, 1899, consisted of the following members: President of the Council and Minister of Agriculture, Graf Clary und Aldringen; Minister of National Defense, Graf Zeno Welsch von Welsersheimb; Minister of Railroads, Ritter von Wittek; Minister of the Interior, Dr. E. von Körber; Minister of Justice, Eduard Ritter von Kindinger; Minister of Worship and Education, Dr. W. Ritter von Hartel; Minister of Finance, Dr. S. Kniazolucki; Minister of Commerce, Dr. Friedrich Stibral; without portfolio, Dr. C. Ritter von Chiedowski.

Area and Population.—The area of Austria is 115,903 square miles. The population at the cen-

sus of Dec. 31, 1890, was 23,895,413. The number of marriages in 1898 was 199,723; of births, 949,398; of deaths, 635,341. The number of emigrants from both Austria and Hungary in 1897 was 37,224, of whom 32,033 were destined for North America, 3,166 for Brazil, and 1,485 for the Argentine Republic. In 1898 the Austrian immigration into the United States was 23,138; in 1899 it was 41,571. Vienna, the capital, contained 1,364,548 inhabitants at the last census.

Finances.—The revenue of the Austrian Government in 1897 was 908,397,000 florins and the expenditure 868,214,000 florins. For 1899 the revenue was estimated at 1,521,509,668 crowns, or half florins, and the expenditure at 1,520,573,586 crowns. For 1900 the estimate of revenue was 1,585,811,822 crowns, credited to the following sources: Reichsrath and Council of Ministers, 1,523,200 crowns; Ministry of the Interior, 2,866,042 crowns; Ministry of Defense, 852,812 crowns; Ministry of Worship and Education, 13,964,066 crowns; Ministry of Finance, 1,140,780,938 crowns; Ministry of Commerce, 111,489,840 crowns; Ministry of Railroads, 272,528,500 crowns; Ministry of Agriculture, 31,708,654 crowns; Ministry of Justice, 2,211,538 crowns; pensions, 2,824,880 crowns; subventions and dotations, 667,600 crowns; imperial debt, 2,417,180 crowns; debt administration, 19,600 crowns; sales of state property, 311,000 crowns; payment by Lombard railroads, 1,646,000 crowns. The estimated expenditures for 1900 were 1,586,403,933 crowns in the aggregate, distributed under various heads as follows: Imperial household, 9,300,000 crowns; imperial chancery, 160,183 crowns; Reichsrath, 2,601,602 crowns; Supreme Court, 48,884 crowns; Council of Ministers, 2,748,222 crowns; Austria's contribution to common expenditure, 260,831,992 crowns; Ministry of the Interior, 60,618,070 crowns; Ministry of Defense, 54,174,542 crowns; Ministry of Worship and Education, 75,275,182 crowns; Ministry of Finance, 258,705,876 crowns; Ministry of Commerce, 111,617,470 crowns; Ministry of Railroads, 228,399,460 crowns; Ministry of Agriculture, 40,167,435 crowns; Board of Control, 416,000 crowns; pensions, 53,243,556 crowns; subventions and dotations, 15,484,250 crowns; imperial debt, 344,030,004 crowns; debt administration, 1,557,040 crowns.

The extraordinary expenditure for permanent purposes in 1900 was estimated at 67,829,400 crowns, of which only 1,149,100 crowns were on hand, leaving 66,680,300 crowns to be raised by a loan at 3½ or 4 per cent. The Austrian imperial debt on June 30, 1899, amounted to 1,612,637,421 florins, not including a floating debt of 15,164,567 florins. The annual charge for interest and amortization was 74,796,806 florins.

Political Affairs.—The disturbances incident to the conflict between the Germans and the Czechs in the autumn of 1899 led to the retirement of the Thun ministry and the formation of a Ministry of Affairs under Graf Clary, who in turn resigned in order to let Dr. Wittek form a Cabinet with the special mission of carrying out by imperial decrees in virtue of the fourteenth article in the Constitution those measures of urgent state necessity that could not be got through the Reichsrath. The Emperor warned Dr. Stransky and other Czech leaders that popular agitation must cease and threatened to proclaim a state of siege. The Czechs demanded that their language be used in commanding Bohemian regiments, but the Emperor made it clear to them that the language of the army must remain German. Bohemian soldiers who answered the roll call in their native tongue were severely punished. On Jan. 19 a new ministry was formed

with the mission of seeking a working compromise between the conflicting nationalities. It was composed as follows: President of the Council and Minister of the Interior, Dr. Körber; Minister of Railroads, Dr. von Wittek; Minister of Finance, Dr. Böhm von Bawerk; Minister of National Defense, Field-Marshal Graf Zeno von Welsersheimb; Minister of Agriculture, Councilor Giovanelli; Minister of Justice, Baron Spreng von Booden; Minister of Commerce, Baron Call von Kulmbach-Rosenburg; Minister of Public Instruction and Worship, Dr. von Hartel; without portfolios, Dr. Rezek and Dr. Pietak. The parliamentary leaders of the Czech and German parties professed to be alike eager for an understanding, and as soon as the new Cabinet took office a conference of representatives of the two nationalities was summoned to discuss a project submitted by the Government as the basis of an agreement. The Reichsrath reassembled on Feb. 22 before the nationality conference had led to any definite result. The Young Czechs determined to continue their obstructionist tactics, reserving for themselves the proper moment for putting them into practice. The object in convoking the Reichsrath before the conference completed its work was to obtain the vote for the annual contingent of recruits. The German Clericals and the Poles declared against obstruction. The Prime Minister threatened to dissolve the Reichsrath if it proved still unmanageable. The programme of the new Cabinet contained urgent and popular reform measures on which all nationalities were in agreement. Whether the conference reached a settlement of the language question or failed to reach one, the Government was determined to bring in a bill on the subject. In the economic field the Government proposed the construction of 6 railroads, costing 480,000,000 crowns, in the space of seven or eight years, also to extend the harbor at Trieste and to regulate the navigable rivers. Measures were promised for the promotion of industry and the export trade, and a series of reforms affecting the working classes as well as the industrial and commercial community. The question of the legislative regulation of the hours of labor and conditions of work in the mines would receive careful consideration, a commission having been appointed to examine into the subject. A coal strike going on in Bohemia and Moravia impelled the Social Democrats and some of the German factions to bring the subject forward, and the Government agreed to introduce the eight-hour day in some of the state mines. The Reichsrath voted for the annual contingent of recruits and elected the Austrian Delegation without a hitch. The language conference, which closed its labors on March 22, achieved a temporary truce between the nationalities sufficient to insure the resumption of its normal activity by the Reichsrath. The military authorities decided to lighten the burden of military service for citizens residing abroad and engaged in advancing the export trade of the monarchy. The promotion of manufactures and exports is a subject that has engaged the attention of Austrian statesmen in recent years, and proposals for sending colonists as well as commercial agents to Turkish dominions and to Africa, and even of seeking spheres of influence in China and elsewhere, have been put forward. While excelling Germany and England and rivaling France in some classes of fine handiwork of artistic quality, Austria has been far outstripped by Germany in wholesale production by machinery, although possessing all the natural resources and mechanical aptitude. No actual settlement of the language question was brought about through the conference, and after it separated the extreme partisans on both sides

assumed a more irreconcilable attitude than ever. The Czechs, who numbered 60 in the Reichsrath and had as allies the Slovenes, the feudal nobility of Bohemia, and other factions counting 30 to 40 votes, renewed their threat of obstruction. The Young Czechs were a small minority when the Old Czechs came to an understanding with the Taaffe ministry and accepted the proffered compromise on the language question, but this minority repudiated the agreement, and in the next elections they routed the moderate party and reduced the compromise to a dead letter. With the 4-gulden franchise in force, the ministry of Dr. Körber had to face the contingency, in the event of a dissolution, of seeing not only the Radical Czechs, but the Radical Germans coming into the new Reichstag in greater strength and more violent and uncompromising than before, which would compel a new dissolution and probably the restriction of the franchise by executive decree. Some of the differences of minor importance were disposed of in the conference of the nationalities, but in essential matters the two parties were as far apart as ever. When the Reichsrath met on May 8, after the recess, Dr. Körber introduced two language bills, one for Bohemia and one for Moravia, which met with an indifferent approval from the Germans, but were rejected without hesitation by the Czechs. The Prime Minister called attention to the financial difficulties of the country. The surpluses which former ministers obtained by means of fresh taxes had fallen off, while the cost of administration had risen, and the expenditure for common affairs, particularly for the army, had largely increased. The stagnation of the empire at a period when other states were progressing in prosperity and power was attributable to the struggle of the nationalities during the past three years, which had produced a situation that was deplored by all Austrians and friends of Austria and was gratifying only to the enemies of Austria. Dr. Pacak, one of the Czech leaders, announced the intention of his party to resort to obstruction to prevent the passage of the bills, the Czechs believing it to be outside of the constitutional powers of the Reichsrath to impose such measures on the provinces. He then put forward a formal motion for a roll call, which was followed by others till the house adjourned for lack of a quorum. The Czech representatives were driven to take the course they did by their party, and they received no encouragement from Russian Pan Slavists nor support from the Poles or the German Clericals who have at other times been their allies. When the Reichsrath reassembled, after a recess on June 6, the obstruction was resumed. The ministers, not being party men or members of Parliament, had no strong support in their effort to break the deadlock. The Germans, who themselves resorted to obstruction in dealing with the Badeni Cabinet and wish to preserve the weapon for their future use when they think such parliamentary tactics opportune, were reluctant to take a decided stand against its use by their adversaries. The Emperor demanded in authoritative tones that Parliament should work, but the Czechs disregarded his intimation. The whole time of the sittings was taken up with dilatory motions and petitions. On June 8 the Czechs resorted to more violent obstruction to prevent an amendment of the rules of procedure. Such a din was raised with trumpets, cymbals, whistles, and even saucepans and trays brought from the restaurant that discussion was impossible. Detachments of 15 members relieved each other in keeping up the intolerable noise far into the night. The ministers held a council and consulted the sovereign, with

the result that the Prime Minister announced the close of the session. With its ending the parliamentary immunity of members for any excess of language in political manifestations was suspended. The most influential of the Young Czech leaders disclaimed any ambition to make Bohemia a completely autonomous state, but insisted that the Czech nationality should be preserved not alone in the interests of justice, but in that also of the preservation of Austria; for if the empire were to become a German state its absorption by Germany would eventually become inevitable; on the other hand, the oppression of German Austrians would lead to a conflict with the powerful German Empire. A restricted autonomy was therefore desirable, by which each nationality would be able to promote the material strength of the empire by its own free national and economic development, and such a solution should be the result of a compromise between the two nationalities. In the Austrian Delegation the Czech representatives vehemently assailed the foreign policy of Graf Goluchowski in an unprecedented manner, and called in question the strength and durability of the triple alliance and its value to Austria, as they had done before. The ministers assured them that the alliance, which was purely for peace and defense, is as substantial as it was twenty years ago; that Italy was not tired of it or ruined by it; and that a story of Austria having proposed to annex Bosnia and Herzegovina definitely and of Italy's having threatened in that event to occupy Albania was void of foundation.

Hungary.—The Hungarian Parliament legislates for Hungary, and in matters of common concern for Croatia and Slavonia also, but for provincial affairs they have their separate Diet of 90 members elected for five years. The Hungarian Parliament consists of two chambers—the House of Magnates and the House of Representatives. The upper house is made up of 18 archdukes, 44 archbishops, bishops, and other Roman Catholic and Greek Catholic dignitaries, 12 ecclesiastical and lay representatives of the Calvinistic and Lutheran confessions, 226 Hungarian princes, counts, and barons who pay a minimum land tax of 3,000 florins, 17 judges and other official members, 77 life peers nominated by the King or elected by the House of Magnates, and 3 delegates of Croatia-Slavonia. To entitle a citizen to vote for members of the lower house a low tax qualification is necessary, excepting for the professional and learned classes. One out of every 18 persons has a vote. The House of Representatives contains 453 members, including 40 delegates of Croatia and Slavonia.

The Cabinet of Ministers in the beginning of 1900, constituted Feb. 26, 1899, was composed of the following members: President of the Council, Coloman de Szell; Minister of Finance, Dr. Ladislaus de Lukacs; Minister of National Defense, Baron Geza Fejervary; Minister near the King, Count Emanuel Szecheny; Minister of the Interior *ad interim*, Coloman de Szell; Minister of Education and Worship, Dr. Julius de Wlassics; Minister of Justice, Dr. Alexander Ploss; Minister of Industry and Commerce, Alexander de Hegedus; Minister of Agriculture, Dr. Ignatius de Daranyi; Minister for Croatia and Slavonia, Ervin de Cseh.

Area and Population.—The area of Hungary, including Croatia and Slavonia, is 125,039 square

miles, with a population at the census of Dec. 31, 1890, of 17,463,791. The estimated population on Dec. 31, 1898, was 18,953,000. The number of marriages in 1898 was 156,208; of births, 738,467; of deaths, 540,207; excess of births, 198,260. Buda-Pesth, the capital, had 505,763 inhabitants in 1890. The immigration of Hungarians into the United States in 1898 was 16,662, and in 1899 it was 20,920.

Finances.—The revenue of the Kingdom of Hungary in 1898 was 526,498,000 florins, of which sum 509,185,000 florins represent the ordinary revenue and 17,313,000 florins transitory and extraordinary receipts. The total expenditure was 524,442,000 florins, of which 452,370,000 florins were the ordinary expenditures of the Government, 15,828,000 florins an extraordinary contribution to common expenditure, 11,825,000 florins transitory expenditures, and 44,419,000 florins permanent investments. The budget estimate of revenue for 1900 was 527,256,702 florins, including 31,394,381 florins of extraordinary receipts. The ordinary revenue was estimated at 495,862,321 florins, derived from the following sources: State debts, 1,413,918 florins; Ministry *ad latus*, 1,000 florins; Ministry of the Interior, 3,869,699 florins; Ministry of Finance, 338,277,023 florins; Ministry of Commerce, 129,787,018 florins; Ministry of Agriculture, 18,912,346 florins; Ministry of Education and Worship, 2,305,498 florins; Ministry of Justice, 922,331 florins; Ministry of Defense, 373,488 florins. The ordinary expenditure for 1900 was estimated to amount to 474,468,628 florins; transitory expenditure, 24,381,304 florins; investments, 27,490,978 florins; total expenditure, 526,340,910 florins. Of the ordinary expenditure, 4,650,000 florins were the civil list; the Cabinet chancery required 80,091 florins; Parliament, 1,765,876 florins; Hungarian quota of common expenditure, 28,318,076 florins; common pensions, 22,135 florins; Hungarian pensions, 9,520,475 florins; national debt, 129,226,866 florins; debts of guaranteed railroads expropriated by the Government, 13,682,955 florins; guaranteed railroad interest, 201,502 florins; loans of separate ministries, 4,085,900 florins; administration of Croatia-Slavonia, 8,478,071 florins; Accountant General's office, 164,185 florins; administration of courts, 277,218 florins; Minister-Presidency, 492,390 florins; Ministry *ad latus*, 68,951 florins; Ministry for Croatia, 45,430 florins; Ministry of the Interior, 20,430,357 florins; Ministry of Finance, 91,373,655 florins; Ministry of Commerce, 90,392,059 florins; Ministry of Agriculture, 21,235,030 florins; Ministry of Instruction and Worship, 14,705,026 florins; Ministry of Justice, 17,991,727 florins; Ministry of National Defense, 17,260,653 florins.

The public debt of Hungary in 1898 amounted to 2,444,838,000 florins, of which 1,089,033,000 florins were consolidated debt, 1,054,098,000 florins the capitalized value of annuities, 12,734,000 florins treasury bonds, 69,880,000 florins debts of separate ministries, and 219,093,000 florins arrears unpaid.

Political Affairs.—The Liberal party in the Hungarian Parliament was re-enforced in 1900 by a coalition with the National party, reducing the Opposition almost to insignificance. Baron Banffy, the former Prime Minister, tried to create a separate group of his own within the Liberal party, but without success.

B

BAPTISTS. The American Baptist Yearbook for 1900 gives returns of 1,655 associations in the United States, including 43,427 churches, 29,473 ordained ministers, 4,181,686 members, with 184,845 baptisms, so far as reported, during the year. The aggregate year's contributions of the churches for all purposes were \$12,348,527. The value of the church property was estimated as \$86,648,982.

The educational institutions included 7 theological seminaries, with 68 teachers, 1,012 students, property having an estimated value of \$2,444,051, and endowment funds aggregating \$2,586,065; 104 universities and colleges, with 1,754 teachers, 26,126 students, \$15,249,058 of property, and \$14,442,807 of endowments; and 84 academies and institutes, with 634 teachers, 10,882 pupils, \$3,497,938 of property, and \$1,414,473 of endowments.

The list of Baptist periodicals includes 124 publications. A list of 36 Baptist charitable institutions is given.

The Yearbook gives the number of Baptists in the world as follows: In North America, 44,603 churches, 30,244 ministers, and 4,323,317 members; in South America (Argentine Republic, Brazil, and Patagonia), 28 churches, 15 ministers, 1,639 members; in Europe (Austria-Hungary, Denmark, Finland, France, Germany, Great Britain, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, Switzerland), 3,802 churches, 3,065 ministers, 487,363 members; in Asia (Ceylon, China, India, Assam, Burmah, Japan, Palestine), 1,482 churches, 795 ministers, 116,508 members; in Africa (Central and Congo, South Africa, West Africa, St. Helena, and Cape Verde), 110 churches, 90 ministers, 7,271 members; in Australasia, 238 churches, 166 ministers, 18,682 members; making the aggregate numbers 50,263 churches, 34,375 ministers, and 4,954,780 members; while the whole number of baptisms during the year was 223,839.

The American Baptist Education Society meets alternately with the conventions of Northern Baptist societies and the Southern Baptist Convention. The meeting for 1900 was held at Hot Springs, Ark., May 10. President A. D. Montague, of Furman University, South Carolina, presided. The annual report represented that since its beginning this society had made 66 grants to 41 institutions in 29 States and the maritime provinces of Canada, to the total amount of \$1,273,100. During the past year, 13 grants, to the amount of \$134,000, had been made to 12 institutions, conditioned on their also raising certain amounts, the aggregate of which would be \$520,000. Two of these grants, amounting to \$165,000, were made after the report was prepared. Twenty-three institutions reported the addition of \$425,000 to their endowment funds. The total receipts for all purposes during the year had been \$1,071,000, besides the large contributions, amounting to \$2,000,000, for the University of Chicago, made by Mr. J. D. Rockefeller to meet the offer of like sums, making the total of gifts to that institution for the year \$4,000,000. Addresses were made at the meeting on Denominational Schools as Factors in Denominational Development during the Century, by Dr. J. W. Armstrong, editor of the Central Baptist, and on The Functions of the Intellect in Religion, by President D. B. Purinton, of Denison University, Ohio.

Publication Society.—The seventy-sixth annual meeting of the American Baptist Publication

Society was held in Detroit, Mich., May 25 and 26. The report showed that in the publication department the aggregate of sales for the year had been \$672,617, an increase of \$29,211 over the sales of the preceding year. In the missionary department, the receipts from invested funds, Children's Day, contributions from churches and individuals, bequests, etc., had been \$103,418, or \$8,343 more than in the previous year. The receipts in the Bible department had been \$17,918. The total amount of receipts in all departments on special accounts, from rents, etc., had been \$867,006. A deficit in the missionary department had increased from \$3,114 at the beginning of the year to \$11,910 at its close. Fifty-three publications had been issued, of which 546,350 copies had been printed, while the whole number of copies of new and old publications was 44,870,054. The missionary work had been vigorously pushed. In view of the complexity of the work of evangelization among the various populations of the United States, making desirable conference, counsel, and co-operation of all true disciples of Christ respecting the obligation which devolves upon them, a resolution was unanimously passed requesting the American Baptist Home Mission Society to unite with this society in the appointment of a joint committee (not to be composed wholly of members of their respective boards), whose duty it shall be to seek from similar boards of all the evangelical societies in the United States engaged in home mission work the appointment of like committees. The purpose of this step was to secure the calling of a national interdenominational conference of the representatives of all such bodies at the earliest practicable day for deliberation, discussion, and action as to the more intelligent, systematic, economical, and effective execution of their one great work—the speedy and complete evangelization of the United States.

Home Mission Society.—The sixty-eighth annual meeting of the American Baptist Home Mission Society was held in Detroit, Mich., May 23 and 24. The annual report showed that the total receipts for the year had been \$580,891, and the expenditures \$458,710, besides which \$184,663 had been added to the permanent funds. Eleven hundred and eighty missionaries had been employed in the United States, Mexico, Alaska, Cuba, and Porto Rico; French missionaries in 6 States; Scandinavian missionaries in 25 States; German missionaries in 21 States and Canada; and colored missionaries in 22 States and Territories; among foreign populations, 275 missionaries and 10 teachers; among the colored people, 63 missionaries and 201 teachers; among the Indians, 23 missionaries and 27 teachers; among Mexicans, 13 missionaries and 9 teachers; and 4 teachers among the Mormons. The society had aided in the maintenance of 31 schools established for colored people, Indians, and Mexicans, 3 day schools for the Chinese, 1 day school in Utah, and 1 in New Mexico. In the church edifice department, the principal of the Loan fund amounted to \$156,373. From this fund loans are made in small amounts at a uniform rate of 6 per cent. interest, with the stipulation that the sum loaned shall constitute the last payment required to complete the house, and shall be secured by a first mortgage on the property. The Benevolent fund, the income of which is available for gifts to churches, amounted to \$163,453. Seventy-two churches had been aided

during the year by loan or gift. The report contained a summary of financial facts for the past ten years, in which it was shown that the amount of educational endowments had grown from \$132,258 in 1890 to \$274,352 in 1900, and the permanent trust funds from \$138,928 to \$244,904. The whole amount received from legacies during this period had been \$1,065,517, of which \$109,120 had been received during the past year. A resolution was unanimously passed at the meeting of the society requesting the sister Baptist societies to join with it in appointing a commission to consider the relative amounts which the denomination should be asked to furnish for its different benevolent enterprises, and to make such other recommendations as they may deem wise; this commission to be composed of three representatives each from the Missionary Union, Home Mission Society, and Publication Society, and two representatives from each of the three women's societies; and to be requested to make its report at the anniversaries in 1901. A committee of seven persons was appointed to act with like committees from the other Baptist national societies as a joint committee to devise and formulate a method whereby the Baptist people of the United States may most suitably commemorate the beginning of the new century of the Christian era, with the understanding that it publish the conclusions that may be agreed upon not later than December, 1900. A resolution was passed approving the decision of the Government to withdraw support from denominational schools among the Indians, and to provide an unsectarian education for those people, and urging that there be no backward step in the matter and that the principle of separation of Church and state be the rule of American policy permanently and universally.

Missionary Union.—The eighty-sixth annual meeting of the American Baptist Missionary Union was held in Detroit, Mich., May 28 and 29. The Executive Committee reported that the receipts from living givers had increased during the year from \$313,935 to \$350,609. A large decrease in legacies was mentioned, the amount received therefrom being \$36,398, and the debt had nearly doubled, being now \$111,041. The total appropriations for the year had been \$599,706. The permanent fund had been increased by \$114,795. The report suggested that the form in which specific gifts to missions are made be modified, so that instead of a church or person supporting an individual missionary, it assume the responsibility for a station or some part of the work of one. Of the contributions to the treasury of the society, \$111,169 had come through the four women's societies of the East, of the West, of California, and of Oregon. An amendment was proposed to the constitution, which has to lie over for a year before it can be finally acted upon, the purpose of which is to eliminate from the terms of membership in the union all qualifications based on the contribution of money, and to make eligible any Baptist in good and regular standing who at the last meeting of his State association has been duly elected as a delegate to the meetings of the Missionary Union. Among the resolutions adopted was one deprecating the diversion of gifts from the general fund to specific objects except such as may be approved by the board. Provision was made for suitable observance of the coming in of the twentieth century.

From the missions to the heathen (in Burmah, Assam, south India (Telugus), China, Japan, Africa, and the Philippine Islands) were returned 94 stations, 474 missionaries, 3,432 native helpers, 928 organized churches, 506 of which were self-

supporting, 1,090 churches and chapels, 1,510 out stations where regular meetings were held, 105,216 church members, 843 Sunday schools with 34,867 members, 1,445 schools (including 8 theological and 71 boarding and high schools), 433 of which were self-supporting, 37,297 pupils of all grades, 722 accessions during the year, and \$87,977 of native contributions. The European missions (in Sweden, Germany, Russia, Finland, Denmark, Norway, France, and Spain) returned 1,213 preachers, 985 churches, 101,534 church members, 77,801 pupils in Sunday schools, and \$402,500 of contributions.

Meetings of the American Baptist Historical Society and of the Commission on Systematic Benevolence were held in connection with the anniversary meetings of the missionary societies. At the former meeting progress was reported in the effort to replace the collection of books which had been destroyed by the burning of the building of the American Baptist Publication Society a few years before. The Commission on Systematic Benevolence presented an account of what it had done to promote the organization of members and churches for regularity and method in contribution.

Women's Societies.—The Woman's American Baptist Home Mission Society (Boston) returned its receipts for the year as having been \$33,369, and its expenditures \$32,274. At its annual meeting in Boston, May 2, the "Paper Mission" requested a supply of "Anti-Mormon" and "Anti-Christian Scientist" literature, and a number of "State workers" described features of their labors in various fields in the United States, etc.

The twenty-third annual meeting of the Women's Baptist Home Mission Society was held at Detroit, Mich., May 21. The total cash receipts of the society for the year had been \$74,040, and the disbursements \$73,036, besides which goods having an estimated value of \$9,583 had been sent to missionaries. A debt of \$5,000 had been extinguished. One hundred and forty-nine missionaries, 24 of whom were colored, had been employed at 101 stations in 57 States and Territories, who recorded among their labors the organization of 21 Sunday schools, besides visitations, conducting and attending meetings, and holding conversations. Missionary training schools were sustained at Chicago, Ill., Raleigh, N. C., and Dallas, Texas, from the former two of which 19 students had been graduated.

Southern Baptist Convention.—The forty-fifth meeting of the Southern Baptist Convention was held at Hot Springs, Ark., beginning May 11. The Hon. W. J. Northen, ex-Governor of Georgia, was chosen president. The Home Mission Board reported that its total receipts for the year, including a special annuity gift of \$4,000, had been \$79,366. All the States except one had shown an increase in cash contributions. Six hundred and seventy-one missionaries had been employed, serving 2,168 churches and stations, who returned 5,696 baptisms, 11,951 additions in all, 195 churches constituted, 71 houses of worship built and 63 improved, with an expenditure of \$68,223, and 639 Sunday schools organized, with 24,675 teachers and pupils. The State boards of Alabama, Arkansas, Florida, Georgia, Indian Territory, Kentucky, Louisiana, Maryland, Missouri, Mississippi, North Carolina, Oklahoma Territory, Tennessee, Texas, and Virginia were in co-operation with the board in part or the whole of their work. The report designated as frontier work to which it was giving much attention the effort to provide churches and preaching for the population which was pouring rapidly into a strip of terri-

tory about 1,000 miles in length and 500 miles broad stretching through Indian and Oklahoma Territories and Texas. The increase of the foreign population in the larger cities made co-operation with the State boards a matter of growing importance. Special attention was invited to the problem of work among the negroes. It was believed that the feeling of these people toward the whites was changing, so that they were becoming more inclined to rely upon those of the South, and that the conditions which had rendered it impossible for Southern Baptists to help the negro in the past were passing away. The need for schools in the mountain region was another matter demanding serious consideration. It had been the policy of the board in the past to aid in the building of churches at important points so far as the funds contributed would allow, and it was of the opinion that the time had now come for the establishment of a permanent fund for that purpose. Offers of considerable gifts had already been made toward the constitution of such a fund. A gift of \$4,000, on which an annuity of 3½ per cent. was paid, had been received through the agency of the Woman's Missionary Union, and was available for church extension purposes. The Sunday School Board had received \$71,002, the same being its largest receipt in a single year. The reserve fund had been advanced from \$19,000 to \$30,000, and was kept loaned out under safe securities. The board was free from debt, and had a cash balance of \$1,630. It had received through the Woman's Missionary Union an annuity gift of \$1,000. The appropriations aggregated \$19,479, including gifts of \$200 in cash to the Chinese Baptist Publication Society, Canton, and of \$100 in books to the library of the seminary. The receipts of the Board of Foreign Missions had been \$140,102, a considerable increase over those of the previous year. A balance of \$8,459 remained over the expenditures. Sixteen new missionaries had been sent out. From the mission stations were returned 113 churches, 155 outstations, 41 men and 53 women American missionaries, 25 ordained and 104 unordained native missionaries, 6,537 members, 2,408 pupils in Sunday schools, 57 houses of worship, 45 day schools with 1,278 pupils, and 134 baptisms during the year, while the contributions of the mission churches amounted to \$7,095. The missions were in China, Japan, West Africa, Italy, Brazil, and Mexico. A committee was appointed to confer with a deputation of 100 members appointed by the Arkansas convention of colored Baptists, with reference to the framing of a plan of co-operation. The committee on the celebration of the new century presented a report, which was adopted, recommending that the convention devote itself for the next few years to the special object of eliciting and combining all the energies of the whole denomination to the sacred effort for the propagation of the Gospel. As the best method of accomplishing the end sought, a joint committee of co-operation was, by the advice of the committee, constituted, to consist of three members appointed by each of the three boards of the convention, the special work of which should be "to labor systematically and persistently to secure the active co-operation of every church within our bounds in the work of each of our boards, and, as far as possible, personal contributions from every member of every church; that in thus laboring this committee of co-operation shall represent impartially all the boards of the convention." The recommendations of the committee further contemplated the appointment of a committee of three by each State convention to co-operate with the

general committee within the State. Resolutions were adopted on temperance declaring truceless hostility to the liquor traffic in all its forms, favoring prohibition for the nation and the State and total abstinence for the individual, and condemning the permission by the Government of the canteen in the army and the establishment of the liquor traffic in certain places under military occupation.

Colored Baptists.—The colored Baptists in the United States are represented in the National Baptist Convention, which has affiliated with it a Foreign Mission Board, a Home Mission Board, an Educational Board, and a Young People's Union. The twentieth annual meeting of this body was held in Richmond, Va., beginning Sept. 12. Another colored Baptist organization of more recent origin is the Lott Carey Baptist Foreign Mission Convention, which was formed in 1897 in response to a call from the colored Baptists of North Carolina. At the general convention of organization, held in Washington in December, 1897, delegates were present from North Carolina, Virginia, the District of Columbia, Maryland, Pennsylvania, New Jersey, New York, and New England. The constitution adopted then sets forth as the object of the society "the fostering of the kingdom of God, especially in foreign lands," in order to accomplish which object co-operation would be sought with any and all existing Baptist organizations, as occasion might require, from time to time. At the second anniversary of this society, held in Baltimore, Md., in August, 1899, receipts of \$401 and the appointment of missionaries at Brewerville, Liberia, and Cape Town, South Africa, were reported. The next meeting was appointed to be held at Alexandria, Va., in August, 1900. The whole number of colored Baptists is estimated at 1,576,792.

Constitution and Rights of Baptist Conventions.—At the meeting of the Baptist State Convention of Texas, in 1899, the Rev. Dr. S. A. Hayden was excluded on grounds satisfactory to the convention. For this he brought suit against the Rev. Dr. J. B. Gambrell, the Rev. Dr. B. H. Carrol, the Rev. J. B. Cranfill, and other Baptists of Texas, charging a malicious conspiracy, with attempts to ruin his character and business, and laying claim for damages of \$50,000. A verdict for the plaintiff, awarding him \$30,000, was found in the lower court, and the case was carried on appeal to the Supreme Court. This tribunal rendered a decision in March reversing the rulings of the lower court and in all points in favor of the defendants in the original suit. It upheld the authority of the State convention to decide upon the qualifications of its members, declaring that by accepting credentials and applying for admission as a member, Dr. Hayden, the original plaintiff, "must be held to have assented and submitted himself to the exercise of all the lawful authority which pertained to that body in relation to the qualifications of its own membership." From an examination of the portions of the constitution of the State convention which provide for messengers from the churches and disclaim any power or authority over any church, the court argued that it did not appear that the convention was a body exercising delegated powers. "While its membership is made up of persons selected by churches, associations of churches, and missionary societies, co-operating with the convention as an institution, it nowhere appears that such messengers are to perform delegated duties, are in any way bound to conform to instructions of the bodies naming them as messengers, or have any right to bind such bodies. . . . We must, then,

understand the annual convention to be a deliberative body, composed of individuals voluntarily named by the several churches, associations of churches, and missionary societies, which co-operate in work, without authority extending beyond its membership. It has no body superior to it to control its deliberations and proceedings, or subordinate to it to be bound thereby. If, then, it has no supervisory power over it, exercises no delegated powers, and is not representative, it must be an independent sovereign body, under the limits of its own organic law." Concerning the question of jurisdiction over members, the court recognized the right of selection by the bodies named, but held that the presumption is that the members shall be good men, and in harmony with the purposes of the organization. The method of selection had as its purpose to fix membership in proper limits, secure general co-operation, and obtain the best representatives of the denomination. With nothing in the constitution renouncing the right of the convention to control its membership, the court decided that it clearly had that right. "The collective wisdom, judgment, and integrity of such assemblies generally is the only safeguard against the abusive exercise of such power. Such bodies must be regarded as possessing the inherent right and authority to protect themselves in the matter of their membership, and in the exercise of that right and authority they are answerable alone to their own consciences and to general public opinion. They are not limited to the power to investigate and determine the validity of the election and the regularity of the credentials of one claiming membership, as is contended by the appellee, but they have the power to refuse him membership upon any grounds which may seem good and sufficient to the body itself." The transaction was regarded by the court as coming under the head of "privileged communications." The right of the convention to control its own membership, and the submission to its authority in that respect by a member when he accepts credentials and applies for admission, were regarded as first principles of such privileged communications. Another condition of them is that the action taken shall be under a sense of duty to the body and its work, and should have reasonable grounds as its basis. Mere dislike for the person expelled, because of his actions and their effect upon the common work, were regarded as not constituting the malice necessary to make a case of libel. The decision was regarded by the parties supporting the action of the convention as constituting a legal vindication of the Baptist principles of the freedom and independence of the churches.

The Baptist Congress.—The eighteenth annual Baptist Congress was held in Richmond, Va., Nov. 20 to 22. The Rev. A. P. Montague, D. D., president of Furman University, presided. The subjects of The Ritschlian Theology: its Meaning and Value, Is the Trust Beneficial or Injurious to Society? Where lies the Efficiency of Jesus's Work in the Reconciliation? Romanist Survivals in Protestantism, Weak Points in the Baptist Position, and Child Nurture in Baptist Polity were discussed, each by two designated writers, two designated speakers, and volunteer speakers, representation of the different sides of the several questions being sought in the selection of the writers and speakers. The congress is a voluntary body, "not representative, deliberative, legislative, or missionary," but a free arena for the expression of opinion, and no one but the individual speakers is committed by the declarations and expressions made in it.

Baptists in Canada.—The 18 Baptist associations in Ontario and Quebec return 464 churches, with 43,345 members, and 2,160 baptisms during the year, 5,000 teachers and 37,000 pupils in Sunday schools, and an average attendance there of 24,144.

The twelfth annual convention of these churches met at Woodstock, Ontario, Oct. 15 to 19. The address of the president, Mr. John Stark, on Conditions of Baptist Success, Past and Present, bore upon the denominational history, and papers were read in the convention dealing with the history of the Baptist churches of the two provinces with their mission and educational work, and their growth during the nineteenth century. The Rev. S. S. Bates was chosen president of the convention for the ensuing year. The Church Edifice Society, founded in 1868, had received \$1,729 and expended \$1,164 during the year, and was now aiding 28 churches. Eighty-four churches in all had been aided; and though the permanent fund had never exceeded \$8,500, the loans granted had aggregated more than \$40,000. The home mission work of the denomination began in 1836 with the organization of the Canada Baptist Missionary Society at Montreal; but the present Home Mission Society sprung from the Regular Baptist Missionary Society of Canada, which was formed at Brantford in 1851. Its present work was carried on in a region extending 1,600 miles from east to west, and 400 miles from Lake Erie northward. During the year 9 churches had been organized, 5 chapels built, 3 buildings enlarged, 6 parsonages erected, and 1,052 persons baptized. During the past twenty years \$343,111 had been contributed to the home mission work, 172 chapels built, 153 churches organized, 64 churches become self-sustaining, and 12,653 persons baptized. Fifty-five thousand dollars had been contributed during the year for foreign missions, and all the expenses of the work had been met. The mission fields among the Telugus in India and in Bolivia returned 33 churches, 491 baptisms during the year, 4,000 members, 10 ordained and 63 unordained native helpers, 81 teachers, 7 colporteurs, 15 Bible women, 136 Sunday schools, with 3,387 pupils; 70 day schools, with 961 scholars; 7 boarding schools, with 182 students; and \$1,380 contributed by the native churches. Seven missionaries had been appointed to Bolivia, 3 of whom were already on the field, and 4 missionaries had been secured for India. The present capital of the Superannuation fund was \$20,737, and the income for the past year had been sufficient for the payment of all claims in full. The accounts of the book room, presented by the Board of Publication, showed a loss of \$604 on six months' business. Reports were made of English, German, and Galician work in Manitoba and the Northwest. The convention of Manitoba included 69 churches, with 3,692 members in 58 of them, while services were maintained in 175 places, in 40 of which there were none but Baptist meetings. In British Columbia regular meetings were held in 9 districts. Two churches in Victoria were maintaining Japanese work. The educational report showed a surplus of funds, for the first time since 1892. The French Baptist churches had raised more than \$2,000 for their own support. Report was made of work in connection with the Grande Ligne Mission at Feller Institute, where 3,500 young people had been taught since the beginning; of the mission in Montreal; the St. Roch Mission, Quebec; the Ottawa Valley, Nova Scotia, Manitoba, and five single stations.

The reports made to the Baptist Convention of the Maritime Provinces indicated considerable

gain in the contributions to denominational objects, including a few large individual contributions. The income for home missions in the Northwest had been \$5,356, and for Nova Scotia and Prince Edward Island \$8,117. Work had been done in 75 churches in the latter section. The Foreign Mission Board had received \$20,844 and had expended \$19,875. Of the receipts, \$1,000 more had come from the women's societies than from the ordinary gifts of churches and individuals. The 7 churches in the foreign field had 346 members, and returned 41 baptisms during the year. Acadia University had \$200,000 of trust funds, encumbered with \$66,000 of debts. Including the proportion conditionally contributed by Mr. J. D. Rockefeller, \$41,788 had been obtained on endowment pledges. A plan was considered for raising \$50,000 as a Century fund.

Baptists in Great Britain.—The Baptist Union of Great Britain and Ireland met in its spring session in London, April 23. The report of the council showed an increase of about 25,000 chapel seats during the year. The membership had apparently fallen from 355,218 to 353,258, but 46 churches, whose membership was included in the figures of the previous year had made no return. Estimating the number thus omitted, the membership would really be 360,475. The number of baptisms had increased from 16,805 to 16,899. During the year £66,743 had been spent on new chapels, £36,785 on improvements, new schools, etc., and £77,024 in payment of debts. The receipts of the union had been £39,083, including £22,226 for the Twentieth Century fund. The capital of the Annuity fund amounted to £167,364, but the number of ministers who had enrolled themselves under it had so largely increased that the free contributions of the churches had been insufficient to maintain the annuities at their full amount, and it had been necessary to make small reductions in them. The Committee of the Home Mission reported that there were now 107 churches in 20 associations on the list, 55 of which churches were formed into 25 groups of 2 or 3 each. There were in addition 27 mission stations, and over the total number of preaching places—134—72 mission pastors. These churches returned 5,054 communicants and average attendances of 6,411 in the morning and 10,733 in the evening, and had raised for various purposes £10,067. The campaign for the Twentieth Century fund was being pursued with great vigor and success. Eight hundred and ten out of the 1,180 churches connected with the union had adopted the scheme. The Irish Baptists were trying to raise £7,000 for it, the Welsh Baptist Union £50,000, and the Scotch Baptist Union £20,000. The whole amount received to date was £133,861. The Board of Introduction, which had been recently constituted for such purposes, had made recommendations of pastors to churches or of churches to pastors in more than 60 cases, and some settlements had resulted. The ministerial recognition committee reported upon the examination of ministers who sought recognition by the Baptist Union. Considerable progress had been made in the negotiations for the erection of a Baptist church house, with a chapel or hall, to serve as a headquarters for the denomination. A resolution of sympathy with the scheme of the Evangelical Free Church Council for a "simultaneous mission" was adopted, with a pledge of the co-operation of the Baptist churches for its success. The Rev. Alexander McLaren, D. D., was elected vice president of the union and president for 1901. The resolution adopted on temperance approved the proposal for the association of the

Free churches in a temperance crusade at the close of the nineteenth and the opening of the twentieth century, and advised the co-operation of the Baptist churches with it. Other resolutions protested against the scheme for a state-endowed Roman Catholic University in Ireland, and against certain provisions in the new educational code. The union also denounced certain incidents in the ritualistic controversy in the Established Church as constituting a grave public scandal, and expressed the belief that the true and only remedy for such conditions lay in disestablishment and disendowment. The Baptist Building fund had granted the applications of 42 churches for sums varying from £750 to £30, extending over periods of from five to ten years, amounting in all to £12,880. Practically the whole of the capital of about £53,000 was in use. The receipts from subscriptions and collections had decreased.

The autumnal session of the union was held at Leicester, beginning Oct. 2. The president, the Rev. William Cuff, in his opening address presented the Federation of Free Churches, the Twentieth Century Fund, and the Simultaneous Mission as the "three great movements" occupying the attention of evangelical Christians. A proposal for a union of the ministers and missionaries of all evangelical churches in a concert of prayer and special intercession in view of better service in the new century was commended to the earnest consideration of ministers. Pastors, superintendents, and teachers in Sunday schools were advised to warn the youth under their charge against the dangers of cigarette smoking. Resolutions were passed urging the importance of securing as representatives in Parliament men of pure lives, unselfish patriotism, and earnest and noble character; condemning resort to war; welcoming the definite constitution of the tribunal of arbitration at The Hague; warning the people against the growth of militarism, the revival of racial animosity, "the moral, not less than the physical, evils of war," and advising the cultivation in every possible way of the spirit of international brotherhood; mentioning the questions of licensing reform, the housing of the poor, the proper care for the aged poor, the increase of efficiency in state education for the children of the nation, the reform of the land laws, and the establishment of complete religious equality as lying at the root of the stability, prosperity, and usefulness of the nation; and renewing protests against support of sectarian schools from public funds, and demands for government by the people of all elementary schools supported by the people. The Annuity fund having reported an excess in expenditures of £2,921 over income, the subject of remedial measures was referred to the council of the union for consideration. The report of the Twentieth Century fund showed that £158,000 of the £250,000 which it was proposed to raise had been subscribed.

Baptist Missionary Society.—The financial statement of the Baptist Missionary Society, made at the annual meeting, April 19, showed that the year's receipts for the general work of the missions, exclusive of special funds, had been £66,593 and the expenditures £73,716. An increased expenditure of £1,210 was wholly accounted for by the large addition (40) to the staff of missionaries which had taken place since the centenary celebration. Including special funds and special gifts to the Indian Famine fund, the total receipts had been £77,642, an increase of £2,310 over the previous year. The reports from the mission fields indicated prosperous work. New stations had been opened in India, with a large in-

gathering of converts and a great improvement and advance in Christian elementary schools. Similar conditions prevailed in China. The new memorial station at Kibokolo had been opened on the Congo, and large additions had been made to the native churches. A considerable number of young men had offered themselves for missionary service who could not be sent out for want of means.

The Zenana Mission reported 60 missionaries, with about 200 native Bible women and school teachers laboring in India; 3,476 children in the schools, 310 of whom were in boarding schools; 1,500 pupils regularly taught in zenanas; and Bible lessons given in 3,283 houses. On account of its distance from other stations, the mission in Madras had been transferred to the Wesleyans. The financial reports showed an increased deficit on the year's working, the amount having reached £1,434.

The American Baptist Yearbook gives the numbers of the Baptists in the British Isles as 2,750 churches, 1,959 ministers, and 378,475 members, with 16,996 baptisms during the year.

Baptists in Germany.—The Baptist Union of Germany, which was formed in 1849, held its eighteenth triennial meeting in Hamburg, Aug. 20-23. The report upon the newly erected publishing house mentioned a gift of \$10,000 from Mr. J. D. Rockefeller to pay off a current debt on the property, which after some parleying with the authorities had been admitted free of income tax. The report upon the Orphan fund, the object of which is to aid in locating orphans in Baptist families, represented that no trouble was had in finding places for orphans, that the supply of good homes was larger than the demand, and that such an institution as an orphan asylum was not needed among the Baptists of Germany. The Chapel Building fund had a capital of about 77,000 marks. Mr. W. S. Oncken, son of the Rev. J. G. Oncken, founder of the Baptist Church in Germany, had begun a collection in England for a Jubilee Chapel Building fund in commemoration of the one hundredth anniversary of his father's birth. An effort was instituted to raise a jubilee endowment of 100,000 marks for the Widows' and Orphans' Invalid fund, toward which subscriptions of 26,000 marks were made during the meetings of the union.

The Baptists in Germany have 155 churches, with more than 700 additional preaching stations, and 28,898 members. Twenty-four churches had been built and 5,665 persons baptized since 1897. During the same period, 355,000 copies of 80 books had been issued from the publishing house at Cassell; and this establishment had realized profits amounting to \$20,000. Eleven colporteurs were employed.

Baptist Union of Jamaica.—The Baptist Union in Jamaica reached its fiftieth year in 1900. During the half century of its existence the number of churches had increased from 44 to 182, the number of ministers was twice what it was when the union was formed, and the membership had nearly doubled. The jubilee report referred to many public questions on which the voice of the union had been heard. Among them was that of the disestablishment of the Church of England in the island, for which it had sent repeated petitions to the local Legislature and the British House of Commons, eventually with success.

The Baptists in this island number 182 churches, 61 ministers, and 33,638 members, and return 1,069 baptisms during the year.

BELGIUM, a constitutional, representative, and hereditary monarchy in western Europe. The

legislative power is vested in the Senate and the Chamber of Representatives. The Senate consists of members who are elected by the direct suffrage of male citizens over thirty years of age for the term of eight years, and in addition 2, 3, or 4 members from each province elected indirectly for the same term. The members of the lower chamber are elected directly for four years by all male citizens over twenty-five years of age. An additional vote or two votes additional are allowed to those having certain legal qualifications, which are the possession of real property worth 48 francs a year, money in Belgian funds or savings banks yielding 100 francs interest, a profession, a public office past or present, a diploma from one of the higher educational institutions, or the status of a married man or widower thirty-five years old who has legitimate issue and pays a house tax of 5 francs or more. Any one who possesses three or more of these qualifications is entitled to cast three votes. The number of electors in 1898 was 1,418,480, possessing 2,175,957 votes.

The reigning sovereign is Leopold II, the second King of the Belgians, born April 9, 1835, who succeeded his father Dec. 10, 1865. His heir is his brother, Philippe, Count of Flanders, born March 24, 1837, who has one son, Prince Albert, born April 8, 1875. The Cabinet of Ministers in the beginning of 1900, constituted on Aug. 5, 1899, was composed of the following members: President of the Council, Minister of Finance, and Minister of Public Works, M. de Smet de Naeyer; Minister of the Interior and of Public Instruction, M. de Trooz; Minister of Foreign Affairs, M. de Favereau; Minister of Justice, M. van den Heuvel; Minister of Agriculture, Baron van den Bruggen; Minister of War, Major-Gen. A. Cousebant d'Alkemade; Minister of Railroads, Posts, and Telegraphs and Minister of Industry and Labor, M. Liebaert.

Area and Population.—The area of Belgium is 11,373 square miles. The population at the census of 1890 was 6,069,321. On Dec. 31, 1898, it was computed to be 6,669,732, comprising 3,326,190 males and 3,343,542 females. The number of births in 1898 was 190,108; of deaths, 114,736; excess of births, 75,372. The number of emigrants in 1898 was 22,860, and of immigrants 27,393, giving an excess of 4,533 immigrants. Brussels, the capital, had on Dec. 31, 1898, an estimated population of 561,130; Antwerp, 277,576; Liège, 169,202; Ghent, 162,652.

Finances.—The revenue of the Government in 1897 amounted to 499,613,000 francs, and expenditure to 511,398,000 francs. The budget voted for 1900 makes the total ordinary revenue 452,246,618 francs, of which 56,135,000 francs are the yield of direct taxes, 100,764,764 francs are derived from customs and excise duties, 14,633,000 francs from registration and other fees, 221,620,060 francs from railroads, tolls, etc., 14,776,800 francs from capital invested, and 4,316,974 francs from repayments. The total ordinary expenditure was estimated at 450,929,726 francs, of which 127,940,416 francs were for interest and sinking fund of the public debt, 5,044,157 francs for the civil list and dotations, 24,959,885 francs for the Ministry of Justice, 3,069,228 francs for the Ministry of Foreign Affairs, 29,245,259 francs for the Ministry of the Interior and Public Instruction, 11,801,470 francs for the Ministry of Agriculture, 4,582,520 francs for the Ministry of Industry and Labor, 147,122,930 francs for the Ministry of Railroads, Posts, Telegraphs, and Telephones, 53,520,911 francs for the Ministry of War, 34,747,385 francs for the Ministry of Finance and Public Works, 7,019,564 francs for the gendarmery, and 1,876,000 francs for repayments.

The national debt in 1899 amounted to 2,603,787,175 francs, including Belgium's share in the old Netherlands debt. This share amounts to 219,959,632 francs, on which 2½ per cent. interest is paid. The Belgian consolidated debt, amounting to 2,383,827,543 francs, all raised for railroads and other useful works, bears 3 per cent. interest, and is being paid off by means of a sinking fund.

The Army.—Belgium has only recently begun to train a national army and build a system of fortifications, having formerly relied on the treaty of London, by which Austria, Great Britain, Prussia, and Russia undertook to protect the neutrality and inviolability of Belgian territory. A system of conscription has been introduced, although the army is still partly recruited by enlistment. Every able-bodied man at the age of nineteen is liable to be drawn, but those who have the means can provide substitutes. The annual contingent is 13,300 men. The term of service is nominally eight years, the actual requirement not over a third of this period. The peace strength of the army in 1899 was 3,472 officers and 48,030 men, or 51,502 of all ranks. The infantry numbered 1,745 officers and 27,900 men; cavalry, 304 officers and 5,762 men; artillery, 544 officers and 8,225 men; engineers, 146 officers and 1,880 men; gendarmery, 65 officers and 2,839 men; general staff, military schools, train, administration, etc., 668 officers and 1,424 men. The regular army had 9,045 horses, the gendarmery 1,810 horses. There were 204 pieces of field artillery. The war strength of the army is 163,000 men of all ranks, with 25,823 horses, not including the civil guards, who in 1899 numbered 40,443 men.

Commerce and Production.—The value of the general imports in 1898 was 3,279,047,704 francs, and of the general exports 3,019,882,489 francs. Of the imports, the value of 1,714,379,111 francs entered by sea and 1,564,668,593 francs by river and rail, and of the exports, 1,256,226,730 francs in value were shipped by sea and 1,763,655,759 francs by river and rail. The imports for consumption were valued in 1899 at 2,044,700,000 francs, the exports of domestic products at 1,787,000,000 francs; the transit trade was 1,232,800,000 francs. The special imports of cereals in 1898 were 383,408,000 francs in value; textile materials, 191,743,000 francs; mineral substances, 127,657,000 francs; chemicals and drugs, 103,205,000 francs; gums and resins, 94,611,000 francs; lumber and wood manufactures, 91,802,000 francs; metals, 81,328,000 francs; oil seeds, 65,203,000 francs; hides and skins, 64,713,000 francs; cotton, wool, and silk fabrics, 60,275,000 francs; coffee, 46,342,000 francs; live animals, 44,262,000 francs; coal, 40,347,000 francs; animal products, 37,682,000 francs; dyes and colors, 34,812,000 francs; machinery, 28,004,000 francs; linen, wool, and cotton yarns, 26,475,000 francs; wines, 25,723,000 francs; tobacco, 14,965,000 francs; fertilizers, 14,631,000 francs; butter and margarine, 11,897,000 francs. The special exports of textile materials in 1898 were valued at 112,655,000 francs; cereals, 109,005,000 francs; coal, 107,386,000 francs; linen, wool, and cotton yarns, 97,873,000 francs; machinery and vehicles, 88,705,000 francs; glass, 80,600,000 francs; iron, 75,330,000 francs; chemicals and drugs, 70,616,000 francs; hides and leather, 67,889,000 francs; mineral substances, 67,053,000 francs; steel, 57,701,000 francs; zinc, 54,037,000 francs; textile fabrics, 52,651,000 francs; sugar, 45,220,000 francs; oil seeds, 37,571,000 francs; horses, 34,946,000 francs; fertilizers, 34,105,000 francs; animal products, 32,844,000 francs; resin and bitumen, 30,313,000 francs; dyes and colors, 28,504,000 francs; meat, 20,958,000 francs.

The special trade with the principal foreign

countries in 1898 is shown in the following table, giving the values of the special imports and exports in francs:

COUNTRIES.	Imports.	Exports.
Germany	245,318,000	451,231,000
France	311,331,000	331,963,000
Great Britain	283,805,000	306,514,000
Netherlands	164,980,000	208,153,000
United States	303,095,000	51,575,000
Russia	125,919,000	41,161,000
Argentine Republic	100,083,000	20,000,000
British India	92,166,000	18,055,000
Roumania	79,812,000	10,043,000
Sweden and Norway	52,469,000	20,791,000
Spain	37,362,000	23,164,000
Brazil	43,462,000	14,322,000
Italy	24,388,000	32,608,000
Switzerland	6,006,000	34,886,000
Australia	27,567,000	6,799,000
Chili	21,903,000	5,671,000
Egypt	874,000	18,137,000
Peru	1,237,000	704,000

When Belgium first became a kingdom in 1831 the total value of imports was only 98,000,000 francs, and of exports 108,000,000 francs. In 1898 Belgium was the seventh country in the world according to the value of its special commerce, the imports having increased in the year 10 per cent. and the exports 9 per cent. According to the value per capita Belgium leads all countries, this being 574 francs, while in Great Britain it is 480, in Germany 211, in France 207, in the United States 129, in Austria-Hungary 92, in Italy 83, and in Russia 40 francs per capita. Belgians have invested a great amount of capital in Russian industries, estimated at 1,100,000,000 francs, and the present value of the investments is 50 per cent. more. Half the foreign companies started in Russia during 1899 are Belgian. Belgians, too, have turned their attention to the industrial development of China, sending a commercial mission to that country and forming companies and syndicates to build railroads and to work mines.

The agricultural lands of Belgium were divided up in 1895 among 829,625 holders, of whom 544,041 had less than a hectare and only 3,584 more than 50 hectares. The area farmed by the proprietors was 593,333 hectares, while 1,320,358 hectares were cultivated by tenants. The wheat crop in 1897 was 6,681,568 hectolitres; barley, 1,264,914 hectolitres; rye, 6,520,380 hectolitres; oats, 10,596,398 hectolitres; potatoes, 29,037,626 quintals; sugar beets, 8,722,105 quintals; other roots, 11,776,950 quintals. The tobacco crop in 1895 was 5,166,000 kilogrammes. There were 271,527 horses, 1,420,976 cattle, 235,722 sheep, and 1,163,133 hogs in 1895. The forests, which cover 17.70 per cent. of the total area of the kingdom, belong in part to the state, some of them to communes and public institutions, and the rest to private individuals. The annual value of forest products is 22,000,000 francs. About 19 per cent. of the working population is engaged in agriculture and about the same percentage in mining and metal industries, while other industries employ a larger proportion. The number of persons employed in coal mines in 1897 was 122,846. The production of coal in 1898 was 22,088,000 tons, valued at 242,894,000 francs. The pig-iron product was 979,101 tons; manufactured iron, 509,160 tons; ingot steel, 653,130 tons; steel rails, 558,995 tons. The import of iron ore, chiefly from Luxembourg, was 2,544,403 tons, while the product of Belgian mines was 240,774 tons.

Navigation.—The number of vessels entered at Belgian ports during 1898 was 8,335, of 8,233,700 tons; cleared, 8,370, of 8,283,910 tons. Of the total number entered 4,010, of 3,993,180 tons, and of those cleared 4,035, of 4,054,203 tons, were British;

1,915, of 1,486,817 tons, of those entered and 1,916, of 1,486,084 tons, of those cleared were Belgian; 986, of 1,451,901 tons, of those entered and 975, of 1,417,665 tons, of those cleared were German; and afterward in order came the Norwegian, Danish, French, Dutch, Japanese, Swedish, and Russian flags.

Railroads, Posts, and Telegraphs.—The length of railroads in operation on Jan. 1, 1898, was 2,867 miles, of which 2,069 miles were operated by the Government and 798 miles by private companies. The number of passengers carried on the Government railroads during 1897 was 91,359,843, paying 57,160,275 francs; on the companies' railroads, 22,993,483 passengers, paying 12,028,506 francs. The gross receipts of the Government railroads were 170,412,728 francs, and expenses 102,081,540 francs; receipts on companies' lines were 42,333,896 francs, and expenses 20,202,378 francs. The capital cost of the Government lines was 1,461,434,198 francs.

The post office in 1898 forwarded 123,040,221 private and 23,455,925 official letters, 53,174,433 postal cards, 107,960,411 printed packets, and 122,451,701 newspapers. The receipts were 22,034,951 francs; expenses, 12,425,263 francs.

The Government telegraph lines in 1898 had a total length of 3,960 miles, with 45,944 miles of wire. The number of messages transmitted during the year was 10,505,200; receipts were 7,880,485 francs, and expenses 6,222,503 francs.

Political Affairs.—A new Chamber of Representatives was elected at the end of May. The result was as follows: Catholics, 85; Christian Democrats, 1; Liberals and Radicals, 33; Socialists, 33. Brussels elected 5 Socialists, 2 Progressives, 8 Catholics, and 3 Liberals to the Chamber. The provincial elections did not disturb the predominance of the Catholics, who obtained majorities in 6 provinces out of 9, although partial successes were won by Socialists and Liberals. The Socialist party immediately after the elections set on foot a new movement in favor of unrestricted suffrage, and during an extraordinary session of the Chamber held in July the Socialist Left had recourse to obstruction in order to force the Government to introduce a bill to establish universal and unrestricted suffrage, while political demonstrations in support of that object took place in the large towns.

Correspondence with the British Government took place in consequence of an attempt on the life of the Prince of Wales in a railroad car at Brussels committed on April 4 by a young tinsmith, who said that he wanted to kill the British heir apparent because he had caused thousands of men to be slaughtered in South Africa. The would-be assassin, who was only fifteen years old, was tried in July, and the court decided that he was demented, after the jury had found him guilty.

BOLIVIA, a republic in South America. The Congress consists of a Senate of 18 members, elected for six years, and a House of Representatives, containing 64 members, elected for four years by all adult male Bolivians who are able to read and write. The President is elected for four years by the vote of the nation, and is not eligible for the next succeeding term. The President, who assumed office on Aug. 15, 1896, was Severo Fernandez Alonso. Dr. Rafael Peña was elected first Vice-President and Dr. Genaro Sanjines second Vice-President. On Oct. 20, 1899, the Government was overthrown, and on Oct. 26 Gen. José Manuel Pando was declared President.

Area and Population.—The area of Bolivia is 567,430 square miles. The population is estimated

at 2,019,549, not including tribal Indians. About a fourth of the people are white, a fourth of mixed blood, and half are Indian.

Finances.—The revenue in 1899 was estimated in the budget at 7,973,190 bolivianos, and expenditure at 8,104,200 bolivianos. The foreign debt, secured on the customs collected at Arica, amounted in 1898 to 1,084,555 bolivianos, the internal debt to 3,707,541 bolivianos.

The Army.—The active army, consisting of 2 infantry battalions, 2 regiments of cavalry, 2 regiments of artillery, and 1 battalion of garrison in each department, numbers 2,975 men. In the National Guard about 64,000 men are enrolled.

Commerce and Production.—The production of silver in 1897 was 11,765,470 ounces, against 9,113,564 ounces in 1896. Other mineral products are tin, copper, lead, zinc, bismuth, antimony, and salt. Rubber, cinchona, coca, and coffee are exported, as well as wool and hides and skins. Provisions, hardware, cotton and woolen cloths, clothing, and wines and spirits are imported. The import trade is carried on mainly by German merchants.

BRAZIL, a federal republic in South America. The National Congress consists of a Senate of 63 members, 3 from each state and from the federal district, elected for nine years by direct suffrage, one third retiring every three years, and a House of Deputies, consisting of as many members from each state as there are multiples of 70,000 in its population, elected by universal suffrage, every adult male Brazilian having the right to vote unless he is a soldier in active service, a member of a monastic order, or a pauper or criminal. The President of the republic is elected by the direct suffrage of the nation.

The President elected for the term beginning Nov. 15, 1898, is Dr. Manoel Ferraz de Campos Salles. The Vice-President is Dr. Francisco Rosa e Silva. The Cabinet in the beginning of 1900, constituted in November, 1898, consisted of the following members: Minister of Foreign Affairs, Dr. Olyntho de Magalhaes; Minister of Finance, Dr. João Mustinho; Minister of War, Gen. João Nepomuk de Medeiros Mallet; Minister of Industry, Severino Vieiro; Minister of the Interior and Justice, E. Pessoa; Minister of Marine, Rear-Admiral J. Pinto da Luz.

Area and Population.—The area of Brazil is 3,209,878 square miles. The population at the census of 1890 was 14,333,915. The immigration in 1897 was 112,495. In 1898 the total number of immigrants was 53,822, of whom 33,272 were Italians, 11,662 Portuguese, 5,943 Spaniards, 609 Austro-Hungarians, 477 Germans, 247 French, 137 Russians, and 129 Swiss.

Finances.—The estimated revenue for 1898 was 328,594,914 milreis, and expenditure 329,398,845 milreis. For 1899 the estimated revenue was 346,164,000 milreis, and of expenditure 346,000,423 milreis. The budget estimate of revenue for 1900 was in paper 289,040,000 milreis, of which 162,033,000 milreis were expected from import duties, 35,000,000 milreis from railroads, 15,500,000 milreis from posts and telegraphs, 18,000,000 milreis from stamps, 27,770,000 milreis from excise duties, 13,152,000 milreis from various ordinary sources, and 17,585,000 milreis from extraordinary sources. The estimated revenue to be collected in gold was 44,948,000 milreis, of which 18,506,000 milreis were expected from import duties, 310,000 milreis from extraordinary sources, 505,000 milreis from various ordinary sources, and 25,627,000 milreis from the emission of paper currency. The estimated expenditure of gold was 36,974,000 milreis, of which

1,055,000 milreis were for foreign affairs, 13,450,000 milreis for agriculture, and 22,460,000 milreis for finance. The estimate of currency expenditure was 263,162,000 milreis, of which the Department of the Interior and Justice required 15,897,000 milreis, Foreign Affairs 527,000 milreis, the navy 23,077,000 milreis, the army 45,596,000 milreis, the Department of Agriculture 62,235,000 milreis, and the Department of Finance 115,830,000 milreis.

The national obligations on April 30, 1898, consisted of a foreign debt of £38,006,000 sterling, an internal debt of 637,425,600 milreis, 306,936 milreis of floating liabilities, 21,027,500 milreis of treasury bills, and 785,941,758 milreis of notes in circulation; total amount, 1,444,701,794 milreis. The deficit existing at the end of 1897 was extinguished by means of an internal 6-per-cent. currency loan of 60,000,000 milreis and a 5-per-cent. gold loan of £2,000,000 sterling. The interest on the foreign debt, by arrangement with the creditors, has been funded since July, 1898, and new 5-per-cent. bonds not exceeding £10,000,000 in amount have been issued to cover the defaulted interest and that of guaranteed railroads, which are £1,130,000 in arrears. The internal gold loans have been converted into currency loans.

The actual receipts for 1899 were approximately 206,000,000 milreis from customs, including 10 per cent. in gold reduced to currency and 111,000,000 milreis of internal revenue; total, 377,000,000 milreis. The ordinary expenditure was 250,000,000 milreis; currency destroyed, 45,000,000 milreis; balance of loan of 1897 paid, 33,000,000 milreis; total, 328,000,000 milreis. The bad financial situation that necessitated the funding loan has been remedied by curtailing expenditure and promoting an increase of revenue. A surplus has been accumulated to enable Government to resume the payment of interest on the external bonds in 1901 without resorting to fresh taxation. In 1900 the Government redeemed 71,000,000 milreis of paper currency, and in 1901 planned to redeem a larger amount. The surplus in the treasury at the end of the financial year was over 16,000,000 milreis in paper and 5,325,000 milreis in gold. The proportion of duties collected in gold, which had been increased from 10 to 15 per cent., was further raised to 25 per cent. in the budget for 1901. The external funded debt, when payment of interest is resumed on July 1, 1901, will consist of £3,292,000 of the loan of 1883, £5,298,600 of the loan of 1888, £18,388,200 of the loan of 1889, £7,331,600 of the loan of 1895, and £8,604,700 of the funding loan authorized in 1898; total, £42,915,100, requiring an annual payment of £1,921,324, in addition to which there is £169,405 of interest on the guaranteed loan of the Minas Geraes Railroad, £1,138,347 guaranteed to various railroad and other companies, £111,554 for the service of the gold bonds of 1879, and £20,328 of commissions, making the total annual gold payments £3,360,950. The internal funded debt on Jan. 1, 1900, was stated by the Finance Committee to be 634,933,100 milreis, not including 60,000,000 milreis authorized in 1897, but not issued. The floating debt is about 300,000,000 milreis. The inconvertible paper currency in circulation on June 30, 1900, was 705,000,000 milreis. The total internal indebtedness, not including floating liabilities, is 1,340,000,000 milreis, equivalent to £67,000,000 sterling at the exchange value of 1s. for the milreis, but if the milreis reached par the equivalent would be £150,750,000. Including the foreign debt and Minas Geraes Railroad loan and the floating debt, the total indebtedness of the Government is 1,969,077,000 milreis, the sterling equivalent of which at par is £236,231,160.

The fund accumulated in London for the redemption of interest payments was £675,760 on March 31, 1900, and by July 1, 1901, it will be increased from various sources to £5,628,046.

The estimates of ordinary revenue for 1901, as presented by the Minister of Finance, were 32,165,000 milreis in gold and 343,782,000 milreis in currency, to which are added 9,765,000 milreis in paper of extraordinary receipts, the fund of 25,820,000 milreis for withdrawal of currency, a currency guarantee fund of 8,026,667 milreis in gold, 12,678,074 milreis in gold from the emission of funding bonds, and 5,000,000 milreis in paper of balance of deposits, making a total of 58,869,741 milreis in gold and 284,367,000 milreis in paper. The estimates of expenditure were 15,784,415 milreis in paper for justice and interior, 965,500 milreis in gold and 526,920 milreis in paper for foreign affairs, 23,076,977 milreis in paper for marine, 45,518,523 milreis in paper for war, 12,857,814 milreis in gold and 60,569,986 milreis in paper for industry, and 21,976,470 milreis in gold and 95,048,540 milreis in paper for finance, making a total of 35,799,784 milreis in gold and 241,125,361 in paper, and leaving a balance of 23,069,957 milreis in gold and 43,241,639 milreis in paper.

The Army and Navy.—The strength of the active army in 1898 was 2,300 officers and 25,860 men. Military service is obligatory for three years with the colors and three years in the reserve. There is a National Guard, which has recently been reorganized and made more efficient. The number of gendarmes is 20,000. The army was reduced in 1899, and attention was given to training the nucleus of a new force.

The effective navy comprises 4 armor clads, 1 coast-defense gunboat, 5 monitors, 2 second-class cruisers, 2 third-class cruisers, 12 small cruisers and gunboats, and 8 first-class and 6 third-class torpedo boats. The torpedo cruisers Tamayo, Timbira, and Tupy, of 1,030 tons, built at Kiel, are the latest addition. The navy has been greatly improved, and by the end of 1901 the Government expects to have 23 ships ready for sea and 12 for river service.

Commerce and Production.—The Rio district produced 10,774,000 bags of coffee in 1898, 6,750,000 bags in 1899, and 7,250,000 bags in the season of 1900, each bag holding 60 kilogrammes. The sugar crop of Pernambuco in 1898 was 1,757,421 bags of 75 kilogrammes. The same state produced 167,198 bales of cotton, the bale weighing 75 kilogrammes. In Rio Grande do Sul the number of cattle slaughtered in 1898 was 340,000, and in 1899 only 270,000. The tanneries, breweries, and canneries of this state are important, and it has coal mines producing 18,300 tons in 1896. In Minas Geraes are gold mines, of which the output is 104,000 ounces. Here and in Bahia are the diamond mines of Brazil, the normal product of which has been 40,000 carats, but this has been increased since the sales from Cape Colony have been cut down. Gold, silver, lead, zinc, iron, manganese, copper, and quicksilver are found in Bahia, and iron ore in enormous quantities exists in Minas Geraes. The export of coffee from Rio de Janeiro in 1898 was 3,793,320 bags; from Santos, 5,745,210 bags; from Victoria, 379,911 bags; from Bahia, 329,725 bags; of sugar from Pernambuco, 1,757,421 bags; from Maceio, 630,584 bags; of cotton from Pernambuco, 167,198 bales; from Ceará, 8,000 bales; from Maceio, 7,375 bales; from Penedo, 40,000 bales; of rubber from Ceará, 1,008,317 kilogrammes; of hides from Bahia, 268,010; from Maceio, 5,807; from Pernambuco, 158,513; of tobacco from Bahia, 431,140 bales; of cacao from Bahia, 155,312 bags; of piassava from Bahia, 2,006,592 kilogrammes.

Navigation.—There were 1,218 vessels, of 2,060,161 tons, entered and 1,130, of 1,957,712 tons, cleared at the port of Rio de Janeiro in 1898; at Pernambuco, 887, of 1,100,556 tons, entered and 870, of 1,096,077 tons, cleared; at Ceará, 266, of 321,645 tons, entered and cleared; at Penedo, 182, of 34,998 tons, entered and 182, of 35,024 tons, cleared; at Parahyba, 192, of 183,587 tons, entered and 193, of 183,732 tons, cleared.

The mercantile navy of Brazil engaged in foreign commerce consisted in 1898 of 344 sailing vessels, of 88,000 tons, and 229 steamers, of 94,262 tons. There were 388 sailing vessels, of 26,037 tons, and 212 steamers, of 70,680 tons, engaged in 1897 in the coasting trade, which from the beginning of that year could only be carried on under the Brazilian flag.

Railroads, Posts, and Telegraphs.—The length of railroads open to traffic on Jan. 1, 1898, was 8,718 miles, besides which 4,989 miles were building, 4,670 miles more surveyed, and 8,440 miles projected. The Government guarantees 6 or 7 per cent. interest on most of the railroads.

The telegraph lines, which belong to the Federal Government, have a total length of 10,143 miles, with 21,936 miles of wire.

Political and Economic Conditions.—The abolition of slavery in 1887, the overthrow of the monarchy in 1889, the political turmoil that has prevailed most of the time since, the depression in the coffee trade, and recurring crises in the finances of the Government have tended to check the development of the resources of Brazil and weakened Brazilian credit at home and abroad. Only recently has a return to more settled conditions made possible a serious attempt in the direction of industrial expansion. During the last few years attention has been attracted to the mining industry. Brazilian diamonds, notwithstanding the purity of the stones, have not been systematically searched for during a quarter of a century until the increased demand for the gems while the output at Kimberley was interrupted reawakened interest in this branch of mining and enlisted foreign capital, which enables the work to be carried on with modern appliances. A French syndicate has begun operations on a large scale in the Diamantina district of the state of Minas Geraes, and intends utilizing the water power that is there available for hydraulic mining over an extensive area. Improved means of transport, a better supply of labor, and an abatement of local taxes on enterprise are conditions favorable to a commercial system of mining in this district where only superficial and desultory working has been the rule. Valuable finds of diamonds are also made from time to time in the state of Bahia, where the work is confined as yet to washing the river beds and no attempt has been made to work the diamantiferous ore systematically. Gold mining has been greatly neglected of recent years except by one or two well-established companies in Minas Geraes, although gold in paying quantities is found in many districts of Brazil. Plans for mining alluvial deposits hydraulically have been formed. The shipments of manganese ore have increased steadily for five years past. The supply is practically inexhaustible and the cost of mining it is less than in any other country. Iron ores, some of them exceptionally rich, are found in many sections, and coal is known to exist in considerable quantities; yet no attempt has been made to found an iron industry. The check on imports resulting from the scarcity of money and the heavy duties imposed in 1898 turned the balance of trade, which was \$22,000,000 against Brazil in 1897. This deficit has since been wiped out. This in combina-

tion with the redemption and incineration of large amounts of paper money by the Government has produced a marked rise in the exchange value of the paper milreis. The suspension of the payment of cash interest on the external national debt has helped to keep down foreign remittances and to keep the balance in favor of Brazil. This suspension of payments continues at least to July, 1901. From that date the payment of interest will be resumed if the agreement made with the bondholders in London in 1898 is kept. The rubber exports for the year ending June 30, 1900, were larger than in any former season, exceeding 26,000 tons. Although fears have often been expressed that the present wasteful method of collecting the gum is rapidly depleting the rubber forests of the Amazon, yet the supply has hitherto steadily increased, so vast are these forests and so rich in rubber-yielding trees. The amount of rubber collected for export is controlled only by the difficulty of obtaining laborers willing to brave the unhealthy climate and undergo the hardships incidental to this work, to which immigrants from Europe rapidly succumb. The larger export has been culled out by increased prices, but even still higher prices would fail to augment the yield except to a slight extent.

Brazil asked France and Italy to reduce their high duties on coffee by 30 per cent. France agreed to make a reduction of 10 per cent. and Italy one of 20 per cent. Congress was opened on May 3. The redemption of paper currency beyond the 78,000,000 milreis required by the funding loan contract was suspended in consequence of the rapid rise of exchange. In the summer the rate went up from 7d. to 14d. The price of coffee was almost double that of the preceding year. Congress voted a budget that authorized the Government to carry out any financial transactions except the emission of paper money. After the funding loan is terminated a gold credit is to be established to insure the punctual payment of the external debt charge.

The Anglo-Venezuelan boundary award made at Paris drew from the Brazilian Minister of Foreign Affairs a strong protest. When the arbitrators met the Brazilian Government made reservations as to the rights of Brazil which might be affected by the arguments of the contending parties; also that the silence of Brazil could not be invoked as an argument against the convictions held by the Brazilian Government with regard to its rights and its resolution to maintain them. Brazil was surprised when the tribunal issued its award fixing the boundary between Venezuela and British Guiana through territory in the upper reaches of the rivers Takuta and Cotinga, which the Government avers is Brazilian territory. Brazil has a treaty of delimitation with Venezuela dated May 5, 1859, by which it is stipulated that their common frontier shall follow the Pacaraima in such manner that the waters flowing toward the Rio Blanco shall belong to Brazil. The award of the international tribunal presumes that Venezuelan territory extends to the other side of the Cotinga and the Takuta, territory that is incontestably Brazilian, and also to the southern slopes of the Acaray chain, a district that is solely disputed against Brazil by France and is the subject of a controversy between these two countries that has been referred to the Swiss Federal Council for arbitration. Brazil agreed in March, 1899, to an arbitration of the boundary between its territory and British Guiana, and takes the position that the award of territory claimed by Brazil to British Guiana by the Venezuelan Boundary Commission can have no prejudicial effect in international law upon its claims.

BRITISH COLUMBIA, PROVINCE OF. Politics and Legislation.—The politics of the period in this province was exceedingly stormy. The Turner ministry, formed in 1895, had struggled along until 1898, when it was dismissed by Lieut.-Gov. McInnes and replaced by one under the nominal leadership of Mr. C. A. Semlin. The chief figure in the political conflicts of this time was the Hon. Joseph Martin. In Manitoba, from which he had migrated, he was the father of the famous measure abolishing separate schools, and he was the indirect cause of the defeat of the Dominion Conservative Government in 1896. As the year 1900 opened it found him an active member of the British Columbia Legislature and a bitter opponent of the Semlin Government, which then included Messrs. Alexander Henderson, R. E. McKechnie, F. Carter-Cotton, and J. Fred Hume.

On Jan. 5 the second session of the Eighth Legislature was opened by Lieut.-Gov. T. R. McInnes in a speech which dealt with the South African war, and promised in behalf of the Government various educational reforms; the substitution of a cash subsidy to the Central Pacific Railroad for the 2,500,000 acres of land previously granted in connection with the Columbia and Western extension; the grant of representation to the boundary district; and aid to various small railways. The session that followed was full of personalities and lacking in practical legislation on account of the Government's small majority and the fierce attacks of Mr. Martin. Finally the ministry was defeated, on Feb. 24, by 19 to 18 votes, and three days later were dismissed by the Lieutenant Governor. They had refused to resign, on the claim that a majority of the House was really with them, and they proved this during the ensuing period of turmoil by passing a resolution declaring: "That this House, being fully alive to the great loss, inconvenience, and expense to the country of any interruption to the business of the House at the present time, begs to express its regret that his Honor has seen fit to dismiss his advisers, as in the present crisis they have the efficient control of the House."

The Lieutenant Governor persisted in his policy, however, by calling in his friend, Mr. Joseph Martin, to form a ministry. For a month matters were in the most uncertain state. Martin could not get men of standing to join his ministry, and yet he held on to office and, at a later date, obtained a dissolution of the Legislature from the Governor. The House expressed its contempt of the latter by publicly insulting him when he attended its last meeting, on March 2, and by passing a unanimous resolution of want of confidence in Mr. Martin. Yet the new Premier went on with his work, and eventually made up a ministry composed of Messrs. Smith Curtis, J. Stewart Yates, and G. W. Beebe—all of whom were unknown to politics. In the elections that ensued his policy was announced in a manifesto, issued early in March, with the following platform:

"The abolition of the \$200 deposit for candidates for the Legislature.

"The bringing into force, as soon as arrangements can be completed, of the Torrens registry system.

"The redistribution of the constituencies on the basis of population, allowing to sparsely populated districts a proportionately larger representation than to populous districts and cities.

"The enactment of an accurate system of Government scaling of logs, and its rigid enforcement.

"The re-enactment of the disallowed labor regulation act of 1898, and also all the statutes of 1899 containing anti-Mongolian clauses, if disallowed as promised by the Dominion Government.

"To take a firm stand in every other possible way with a view of discouraging the spread of Oriental cheap labor in this province.

"To provide for official inspection of all buildings, machinery, and works, with a view to compelling the adoption of proper safeguards to life and health.

"The Government will continue to enforce the eight-hour law as it stands. An immediate inquiry will be made by the Minister of Mines into all grievances put forward in connection with its operation, with a view of bringing about an amicable settlement. If no settlement is reached, the principle of the referendum will be applied and a vote will be taken at the general election as to whether the law shall be repealed. If the law is sustained by the vote, it will be retained upon the statute book with its penalty clause. If modifications can be made, removing any of the friction brought about without impairing the principle of the law, they will be adopted. If the vote is against it, the law will be repealed.

"To re-establish the London agency of British Columbia, and to take every effective means of bringing before the British public the advantages of this province as a place for profitable investment of capital.

"The retaining of the resources of the province as an asset for the benefit of the people, and taking effective measures to prevent alienation of the public domain except to actual settlers or for *bona fide* business or industrial purposes, putting an end to the practice of speculating in connection with them.

"The taking of active measures for a systematic exploration of the province.

"To adopt a system of Government construction and operation of railways, and immediately to proceed with the construction of a railway on the south side of Fraser river, connecting the coast with the Kootenay District, with the understanding that unless the other railways now constructed in the province give fair connections and make equitable joint freight and passenger arrangements the province will continue this line to the eastern boundary of the province, proper connection with such Kootenay railway to be given to the Island of Vancouver. With respect to other parts of the province, to proceed to give to every portion of it railway connection at as early a date as possible, the railway, when constructed, to be operated by the Government through a commission.

"A railway bridge to be constructed in connection with the Kootenay railway across Fraser river, at or near New Westminster, and running powers given over it to any railway company applying for them under proper conditions.

"In case it is thought at any time advisable to give a bonus to any railway company, the same to be in cash, and not by way of a land grant; and no such bonus to be granted except upon the condition that a fair amount of the bonds or shares of the company be transferred to the province, and effective means taken to give the province control of the freight and passenger rates, and provision made against such railway having any liabilities against it except actual cost."

The unconstitutional nature of these proceedings was so glaring that it attracted the attention of the press all over Canada. An appeal was made to the Dominion Government to intervene, but Sir Wilfrid Laurier announced in Parliament that, though the matter was serious, the issue now lay in the hands of the people of the province, and he intimated that the Lieutenant Governor, as well as the Premier, would have to abide by the result. A little later he wrote to Mr. Martin that

he must expect no help from him in the contest at the polls, and thus practically withdrew the Liberal party from a fight in which Martin, as a life-long Liberal, might have expected a measure of party support. Meanwhile, although the Conservatives of British Columbia were in a greatly mixed-up condition and divided into supporters of Mr. J. H. Turner, Mr. C. A. Semlin, and Mr. F. Carter-Cotton, respectively and separately, they had proclaimed a platform for the province as follows:

"To revise the voters' lists.

"To aid actively in the construction of trails throughout the undeveloped portion of the province and the building of provincial trunk roads of public necessity.

"To provide for official inspection of elevators and hoisting gear.

"To improve the administration of justice and secure speedy disposition of legal disputes.

"To provide an effective system for settlement of disputes between capital and labor.

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the Government of the province control of rates over lines bonused, together with the option of purchase.

"To assume control and administration of the fisheries within the boundaries of the province.

"To assist actively by state aid in the development of the agricultural resources of the province.

"To make the London agency of British Columbia effective in proclaiming the natural wealth of the province and as a place for profitable investment of capital.

"In the interests of labor, the Conservative party sympathizes with and indorses the principle of an eight-hour law.

"To provide an improved system of education.

"To recognize and reform the system of provincial aid to medical men and hospitals in outlying parts of the province.

"To support actively the advancement of the mining interests of British Columbia.

"To aid in the immigration of female domestic servants."

For some months Mr. Martin fought hard to establish an organized party in support of his defined policy. But his personality was so peculiar, his abuse of opponents so violent, his energy so neutralized by mistakes, that in the elections, June 10, he was politically buried. Out of 38 members, only 7 Government supporters were returned, the rest being divided among the straight Conservative wing, the independent element, the Labor party, and those classed merely as oppositionists. Shortly afterward the Government resigned, and Lieut.-Gov. McInnes, in practical pursuance of the announced Dominion policy in the matter, received his dismissal from Ottawa. In the meantime he had called on Mr. James Dunsmuir, a millionaire mine owner, to form a ministry, and this was completed on June 21 as follows: Hon. James Dunsmuir, Premier and President of the Council; Hon. D. M. Eberts, Attorney-General; Hon. J. H. Turner, Minister of Finance; Hon. J. D. Prentice, Provincial Secretary; Hon. R. McBride, Commissioner of Lands and Public Works; Hon. A. C. Wells, Minister of Mines.

Three members of the Government were Liberals, 3 Conservatives, and with its formation and the retirement of Mr. McInnes came a period of comparative political peace. Sir Henri Joly de Lotbiniere, Minister of Inland Revenue at Ottawa,

was appointed Lieutenant Governor, and became immediately popular with all classes of the community. The dismissal of the Lieutenant Governor by the Dominion Government had been a serious action, and of course was much discussed. Important correspondence between Mr. McInnes and the Dominion authorities was made public, and on July 12 the Hon. David Mills, Minister of Justice, made a speech in the Senate, describing the constitutional mistakes and misdeeds for which the Lieutenant Governor had suffered.

On July 19 the first session of the Ninth Legislature was opened in state by Sir Henri Joly de Lotbiniere. Mr. J. P. Booth was elected Speaker, and the Lieutenant Governor then read his speech from the throne, which, after certain personal references and loyal expressions in connection with the South African war, continued as follows:

"The industries of the province are in a fairly prosperous condition, notwithstanding a temporary wave of depression. The metalliferous mining, which was more particularly affected, is resuming a more normal condition of activity, and I anticipate a largely increased output during the present year.

"Coal mining in East Kootenay and on Vancouver island is on a prosperous basis, the output for the past year exceeding that of any other year. The lumbering district is likewise in a prosperous condition, and the foreign demand continues to be active.

"Agriculture, including fruit growing, dairying, stock raising and kindred branches, is making steady progress, with prospects of ultimate great development.

"The fisheries last year were successfully prosecuted. It is too early in the season to indicate the results of the present year's operations.

"I observe that since the correspondence between the Government of British Columbia and the Federal and Imperial Governments, relative to Asiatic immigration, has been published a large influx of Japanese has taken place. The intention of my Government is to make strong representations to the authorities at Ottawa and Great Britain, with the view of protecting the interests of the laboring classes against consequences which threaten to come with an alarming increase in our Japanese population.

"The extensive requirements of the province with respect to public work for its development will involve the carrying out of a vigorous policy in road building, and my Government intends to provide for surveys and a report concerning the various sections requiring attention.

"I am impressed with the opportunities for the profitable carrying on of the manufacture of pulp in British Columbia, and note with pleasure that preparations are being made and sites arranged for extensive prosecution of this industry.

"My Government will ask for an appropriation for defraying the expenses of a commission to inquire into the working of the mining acts, with a view of introducing legislation for the purpose of amending them next session, and into the various conditions affecting the question of water rights. The intention of my Government is to impose a tonnage tax on the output of coal and coke in this province, and introduce other measures to be considered for the purpose of increasing the revenue.

"The intention of my Government is to provide in the estimates a sum to place the office of Agent General on a more satisfactory basis.

"Owing to the fact that the present extra session is for the purpose mainly of voting supplies, and that the regular session is to be held at an

early date, the measures to be submitted for your consideration, though important, will be few."

In the session that followed various important resolutions were passed. One of them urged the Dominion Government to settle the disputes regarding actual and ultimate ownership of Indian reserve lands in the province; another protested against the influx of Mongolian immigrants; another pressed for better payment of Dominion judges in the province; still another urged the establishment of a mint in British Columbia. A measure was also passed for helping the Kettle Valley Railway, which had been so bitterly opposed by the Canadian Pacific Railroad and refused incorporation by the Dominion Parliament. On Aug. 31 the House was prorogued with a speech from the Lieutenant Governor and his assent to the following, among other acts:

Respecting the closing of shops and the employment of children and young persons therein.

To incorporate the Vancouver and Westminster Railway Company.

To incorporate the Crow's Nest Pass Electric Light and Power Company, limited.

To incorporate the Western Telephone and Telegraph Company.

To incorporate the Pacific Northern and Omicron Railway Company.

To amend the investment and loan societies act.

To amend the Columbia and Western Railway subsidy act of 1896.

To amend the land registry act.

To amend the judgments act of 1899.

To amend the mechanics' lien act.

Relating to extra-provincial investment and loan societies.

To incorporate the Kamloops and Atlin Railway Company.

To amend the official administrators' act.

Respecting succession duties.

Relating to employment on works carried on under franchises granted by private acts.

To regulate immigration into British Columbia.

To permit the use of voting machines in British Columbia.

To amend the law relating to costs allowed to mortgagees.

To incorporate the Grand Forks and Kettle River Railway Company.

To amend the licenses act of 1899.

To levy a tax on coal and coke.

To amend the land act.

To amend the assessment act.

Finances.—On Aug. 16 Mr. J. H. Turner presented to the House his budget as Finance Minister. He pointed out that from 1893 to 1900 the provincial debt had increased about \$3,000,000, making it \$5,000,000 altogether. During this period \$4,500,000 had been expended on public works, the revenue had increased 90 per cent., and the expenditure only 40 per cent. The estimated revenue for 1900 was \$1,549,989; that for 1901 was \$1,757,239. The estimated expenditure for 1900 had been \$1,764,873, involving a deficit of over \$200,000; that for 1901 was \$2,220,388, involving a possible deficit of over \$460,000. Doubling the grant for public works was the chief cause of this increased expenditure.

The expenditures included \$372,000 on the public debt, \$341,000 on civil government and Department of Justice (salaries), \$67,000 on legislation, \$118,000 on maintenance of public institutions, \$70,000 on hospitals and charities, \$110,000 on the general administration of justice, \$326,000 on education, \$664,000 on public works, and the remainder on miscellaneous subjects.

The budget was received with general approval.

Labor Questions.—Matters connected with labor in a province where fishermen and miners are so large a part of the population naturally have a prominent place. Mr. Ralph Smith became this year the leader of the more staid labor element, as opposed to a rougher section under an agitator named McClain. Mr. Smith was elected President of the Canadian Trades and Labor Council at Ottawa, and in October resigned from the Legislature to contest a seat in the Dominion Liberal interest. There were several mining strikes, but the Fraser river strike was the most important labor event of the year. This arose nominally out of Japanese competition with white workmen. The white fishermen, numbering about 4,000, demanded 25 cents a fish, and the canners offered 20 cents, at which rate the Japanese, numbering 3,000 men, were willing to work. Much loss was incurred and bad feeling and violent action created before the issue was settled by a compromise, which was arrived at, in part, through the efforts of Mr. Bremner, the Labor Commissioner of the Dominion Government. Before that occurred, however, there were serious riots, and in July a large force of militia was sent to Steveston. Mr. Turner, the Finance Minister, in defending this action in the House, pointed out, that while the trouble might have been initiated by Japanese competition, yet it was greatly helped by the fact that 7,000 men were fishing where there was only room for half that number. Other factors were the competition of the Alaska and Oregon fisheries, the lowering in the price of salmon, and two bad years in succession for the canneries. After the strike was over a committee of the Assembly reported as follows concerning the situation and the necessity of sending militia into the disturbed district:

"In addition to the *bona fide* fishermen in Steveston there was a tough element from across the border which, aided by certain agitators, caused a state of excitement and unrest; that an organized effort was made to prevent any person from fishing until such time as the union fishermen should succeed in arriving at a price for fish satisfactory to them; that the justices of the peace were of opinion that had the militia not been called out there would have been serious disturbances of the peace in the event of the Japanese commencing to fish, with which disturbances, had they occurred, the provincial police admit they would have been unable to cope. On the other hand, there is conflict of evidence, some witnesses swearing that there was no reason to apprehend danger, while others swore that they believed there would be trouble in the event of the Japanese commencing to fish."

Mongolian Labor.—Intimately associated with the general labor situation, with political conditions, and even with imperial relations, was the question of Chinese and Japanese immigration. In the previous year measures prohibiting the entry of these people were passed, but were vetoed by the Dominion authorities at the request of Mr. Chamberlain, with the intimation that it was done on account of the exclusion applying to Japanese as well as Chinese. The provincial authorities refused to discriminate between the two races, and there was a practical deadlock at this point. On Aug. 28 the situation was explained from the British Columbian standpoint by the Legislature, in a resolution from which the following extract may be taken:

"That the wave of Mongolian immigration is increasing in volume at such an alarming rate that it threatens to overwhelm all the industries connected with the development of the natural re-

sources of the province, whether the fisheries, lumber, mineral, or agricultural; that during the first six months of the present year over 7,000 Japanese alone have landed on our shores, a number of whom, however, are said to have crossed to the United States; that out of a total population of say 200,000, or about 40,000 working white men, we have a probable Mongolian working population of 20,000. That the above proportion is continually being changed by a constant influx of these undesirable people and white immigration is deterred by dread of competition with them; and that the well-known low conditions of life under which the Mongolians live render it impossible for white men, with their higher standard of living, to compete successfully."

It was therefore proposed that the Dominion Government should legislate along lines similar to the Natal immigration act, which it was understood the imperial authorities did not consider hostile to Japan. Nothing, however, was done except in the appointment of a royal commission to investigate alleged grievances, composed of R. C. Clute, Q. C., of Toronto; Ralph Smith, M. P. P.; and Daniel J. Munn, of British Columbia. It was natural that in the ensuing Federal elections strong ground should be taken against the Dominion Government upon this point and upon the clause in a telegram from Sir Wilfrid Laurier in 1896, declaring that if he succeeded then, "the views of the Liberals in the west will prevail with me" regarding Chinese immigration.

The South African War.—Like all the provinces, British Columbia took an intense interest in this conflict. On Jan. 4 the speech from the throne, for which the Semlin Government was responsible, had declared with pride that the number of volunteers from the province in the various contingents had greatly exceeded those which imperial official arrangements made it possible to accept. The House had also passed a unanimous resolution offering a further contingent of mounted men, with expenses paid to Halifax. A large gathering in Victoria a few days later declared in favor of the Dominion Government's raising and equipping an armed force of 10,000 men for service whenever desired or needed by the Imperial Government. The latter proposition was approved by other Canadian cities. The legislative suggestion fell through, owing to the local political turmoil that almost immediately developed.

Mining.—On Aug. 28 the Hon. C. H. Mackintosh, chairman of the company, declared that there were 2,000,000 tons of gold ore in sight in the Le Roi mine alone. Despite labor troubles in the mining districts, the estimated production for British Columbia in 1900 was \$12,000,000, against \$4,000,000 in 1899. In the latter year the general mineral development had included a production of gold—placer and lode—to the value of \$4,202,473; silver, \$1,663,708; copper, \$1,351,453; lead, \$873,870; coal, \$3,862,396; coke, etc., \$376,655. Many drawbacks existed during 1899 and were continued into 1900. The labor deadlock in what was the most productive of the camps kept the rich deposits and immense fixed capital there unfruitful for the whole year. Another drawback felt by many of the camps was the handicap on home smelting. The Canadian and American tariffs worked together in favor of the American smelting industry, and American railway companies whose lines penetrate into southern British Columbia co-operated to give works across the line the preference. The development of the Atlin and Boundary districts was very marked in 1900, and one of the most important legislative enactments of the year was the removal, in February, of the

disabilities under which American miners had labored in those districts.

BULGARIA, a principality in eastern Europe under the suzerainty of Turkey, created an autonomous tributary principality by the Treaty of Berlin, signed July 13, 1878. Eastern Roumelia, which was created an autonomous province at the same time, in 1885 proclaimed its union with Bulgaria after expelling the Christian governor appointed by the Sultan, and has since been administered as a part of the principality, the Prince holding the title of Governor General by appointment of the Sultan of Turkey. The legislative body in Bulgaria is a single chamber called the Sobranje, containing 157 members, 1 to 20,000 of population, elected for five years by universal manhood suffrage.

The reigning Prince of Bulgaria is Ferdinand, Duke of Saxony, born Feb. 26, 1861, the youngest son of Prince August of Saxe-Coburg-Gotha and of Princess Clementine, a daughter of Louis Philippe, King of the French. The heir to the throne is Prince Boris, born Jan. 30, 1894. The Cabinet at the beginning of 1900 was composed of the following members: President of the Council and Minister of Foreign Affairs and Worship, T. Ivantchoff; Minister of Finance, M. Teneff; Minister of Justice, P. Pecheff; Minister of the Interior, Dr. V. Radoslavoff; Minister of Public Instruction, Dr. Vachoff; Minister of War, Col. S. Pafrikoff; Minister of Communications, T. Tonecheff; Minister of Commerce and Agriculture, G. D. Nachovich.

Area and Population.—The area of Bulgaria proper is 24,380 square miles, and that of Eastern Roumelia, or South Bulgaria, is 13,700 square miles. The population of the entire principality in 1893 was 3,310,713, divided into 1,690,626 males and 1,620,087 females. Of the total number, 2,606,786 were Greek Orthodox, 643,258 Mohammedans, 28,307 Israelites, 22,617 Roman Catholics, 6,643 Armenians, 2,384 Protestants, and 718 undefined. The number of marriages in 1897 was 29,227, against 29,199 in 1896; of births, 149,631, against 143,255; of deaths, 90,134, against 84,076; excess of births, 59,497, against 59,179. Sofia, the capital, had 46,593 inhabitants at the census of 1893; Philippopolis, capital of Eastern Roumelia, 41,068.

Finances.—The revenue for 1899 was estimated in the budget at 84,097,195 francs, and expenditure at 84,035,514 francs. Of the revenue, 33,941,000 francs were derived from direct taxes and 31,951,000 francs from indirect taxes. Of the expenditure, 20,931,146 francs were required for interest and sinking fund of the debt, 22,623,224 francs for the army, 7,860,501 francs for the interior, 7,548,555 francs for public instruction, and 6,731,693 francs for public works.

The public debt in 1899 consisted of 40,071,000 francs outstanding of the railroad loan of 1888, 25,970,000 francs of the 6-per-cent. loan of 1889, 125,857,000 francs of the loan of 1892, and 9,700,000 francs unpaid of the Russian occupation debt; total, 201,658,000 francs, not including the Eastern Roumelian tribute, which is 2,951,000 francs a year, nor the Bulgarian tribute and share of the Turkish debt, which have never been demanded or determined according to the provision in the Berlin Treaty. In June, 1899, the Sobranje authorized the Government to convert and consolidate the entire national debt and to issue a new loan of 260,000,000 francs bearing 5 per cent. interest for this purpose.

The Army and Navy.—The Bulgarian army consists of 24 regiments of infantry of 2 battalions each and 12 reserve battalions; 3 regiments of

cavalry of 4 squadrons and 2 regiments of 5 squadrons; 6 regiments of artillery of 9 batteries of 4 guns each, and 9 mountain batteries; and 3 battalions of engineers, each of 4 companies, and 3 additional companies for railroad and telegraph service. In case of war the strength of the infantry battalion is brought up to 1,050 officers and men, and the number of battalions in the line and reserve is doubled, and each field battery has 6 guns, while the cavalry and the engineer corps have the same strength in peace or war. Every Bulgarian is liable for service from the age of twenty, and the term with the colors is two years in the infantry and in other arms three years. About 18,000 men are drawn annually out of 40,000 who are liable. The legal peace effective in 1898 was 2,500 officers and 40,555 men, with 7,400 horses. The theoretical war effective was 208,966 officers and men, with 38,788 horses and oxen and 432 guns. The infantry is armed with the Mannlicher magazine rifle.

Bulgaria has a naval force consisting of a steam yacht of 650 tons, a steamer of 800 tons, one of 600 tons, and one of 400 tons, a torpedo gunboat of 715 tons, and 2 armored gunboats for the Danube.

Railroads, Posts, and Telegraphs.—There were 835 miles of railroad in operation in Bulgaria and Eastern Roumelia in 1899, and 130 miles were under construction. The Government telegraphs had a total length of 3,259 miles, with 6,728 miles of wire. The telephone lines had a length of 915 miles. The number of telegraph messages sent in 1898 was 1,342,807. The post office carried 24,235,165 pieces of mail matter. The postal and telegraph receipts were 2,921,831 francs; expenses, 3,127,723 francs.

Commerce and Production.—The cultivators in Bulgaria pay a tenth of the produce in money or in kind to the Government. Of the whole surface of the country 48 per cent. is pasture land, 25½ per cent. under tillage, 17½ per cent. forest and heath, 3 per cent. meadow, 1 per cent. vineyards, and 5 per cent. roads, building land, and water. Over 70 per cent. of the people are engaged in farming, and most of the farmers own their holdings, from an acre to 6 acres. They raise wheat for export. Wine, tobacco, and silk are produced also, and the attar of roses made in Bulgaria goes all over the world. The country is well stocked with horses, cattle, sheep, goats, hogs, asses, and mules. The minerals belong to the Government, but the coal mines of Pernik, yielding 125,000 tons annually, the salt springs at Burgas, yielding 12,000 tons, and the stone quarries are the most valuable of the mineral industries, although iron ore is abundant and gold, silver, lead, manganese, and copper are found. Woolen and cotton cloth, linen, filigree, cigarettes, leather, and spirits are manufactured. The total value of imports in 1898 was 72,730,250 francs, and of exports 66,537,007 francs. The imports of textile goods were 21,955,629 francs in value; groceries, 5,354,898 francs; metals and metal manufactures, 10,722,336 francs; timber and wood manufactures, 4,131,573 francs; machinery and implements, 5,099,438 francs; hides, skins, and leather, 3,953,205 francs. The exports of cereals were 48,491,343 francs; textiles and textile materials, including cocoons, 3,018,152 francs; live stock, 3,515,598 francs; animal food products, 3,377,468 francs; hides and skins, 2,687,657 francs; attar of roses, 2,591,754 francs. Other exports are cheese, eggs, tobacco, timber. The commercial class is made up of Jews, Roumanians, Greeks, and Austrians. Wheat is exported to Great Britain, Belgium, Turkey, Germany, Austria, and France. The total commerce

of 1898 was divided among different countries as shown in the following table, giving values in francs:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	20,454,821	9,684,305
Great Britain	17,383,630	10,341,708
Turkey	7,444,885	16,614,057
Germany	9,890,544	7,181,431
Belgium	3,716,259	8,063,768
France	4,810,686	7,149,360
Italy	2,707,315	2,236,648
Russia	3,166,416	121,982
Roumania	1,532,886	597,920
Greece	530,088	1,890,891
Serbia	814,491	674,861
Netherlands	122,116	789,503
United States	897,009	806,530
Switzerland	566,191	9,480
Sweden and Norway	51,476
Other countries	162,037	818,623
Total	72,730,250	66,537,007

Navigation.—The number of vessels entered at Bulgarian ports during 1898 was 9,926, of 2,780,545 tons; cleared, 9,873, of 2,771,331 tons.

Crimes against Roumanians.—The Roumanian Government and people, by taking an interest in the Koutzo-Wallachs of Macedonia and promoting their education in their own language, introduced a new factor into the Macedonian question, and one not calculated to smooth the way for the Macedonian Revolutionary Committee at Sofia, which aims at uniting the Macedonian provinces to the Bulgarian principality. Among the Bulgars, Greeks, Serbs, and Albanians who inhabit European Turkey the Wallachs form a comparatively small element. It is the view of their representative men that a peaceful development of the country under Turkish rule, subject to European supervision, is better for them than absorption in a great Bulgaria would be, in which case their separate nationality would soon be extinguished and the political and economic conditions in no wise improved. This view is shared and has been encouraged by the Roumanian Government, which is not only interested from racial sympathy in the fate of the Wallachs of Turkey, but has an equal interest with Serbia and Greece in holding Bulgarian aspirations in check. These aspirations, although the Government and the dynasty in Bulgaria have given them free rein, not wishing to incur unpopularity by repressing the Revolutionary Committee, which represents the national ideal, are no longer encouraged by the Pan Slavists of Russia, and the money which the agitators once drew from that source has been cut off. In the spring of 1900 the Roumanian Government complained to the Government at Sofia that Roumanians resident in Bulgaria were threatened and blackmailed by officers and members of the Revolutionary Committee. Outrages were committed against some of the leading Roumanians who make the capital of Bulgaria their home, yet nothing was done by the authorities to bring the perpetrators to justice. The terrorists even extended their operations to the Roumanian capital, where two persons marked out for vengeance were assassinated. Both of these were Bulgarians by birth. The first note from the Roumanian Government received scant attention from the Government of Prince Ferdinand, which sent a very unsatisfactory reply. Shortly afterward a more serious crime than any that had preceded it was committed. Prof. Mihaileano, the occupant of an official position under the Roumanian Government, was murdered in Bucharest. The crime was clearly one of political revenge, for no one had done more than its victim to antagonize the secret society at Sofia

that the Bulgarian Government seemed disposed to screen. Political assassination has been practiced in every stage of Bulgarian history, but never with such frequency and impunity as under the rule of Prince Ferdinand. Prof. Mihaileano was a Macedonian by birth, the son of Roumanian parents. He had taken a prominent part in the press discussion of the future of Macedonia, boldly controverting the Bulgarian claim to ascendancy and counseling the Wallachs to make the best of Ottoman rule. After his murder the Roumanian Government sent a second note, accompanied by a threat to appeal to Turkey as the suzerain power over the principality to put an end to the intolerable reign of lawlessness by suppressing the Revolutionary Committee. This extorted a more conciliatory reply from Sofia. The Bulgarian Government, however, demanded proofs before proceeding against any of the persons suspected of the crime. The judicial investigation at Bucharest brought out facts tending to show that Dimitroff, the assassin, had 7 accomplices, one of whom was Saratoff, the president of the secret committee in Sofia. Most of the accused were in Bulgaria or elsewhere, safe over the border. Nevertheless, their trial was ordered to take place in Bucharest. One was a Roumanian by birth, although of Bulgarian race, and his extradition was requested. The Roumanian Government collected evidence also concerning acts of extortion and incitements to murder which it connected with the Macedonian Revolutionary Committee, and this evidence, together with the correspondence that had passed between the two Cabinets, was submitted to all the great powers. It was ascertained that in the previous winter a loan had been raised by the Macedonian committee to which Bulgarians residing in Bucharest were subscribers, and that not only Saratoff and other officers of the committee were concerned in this, but probably Gen. Nikolaieff, Prince Ferdinand's aid-de-camp. Threatening letters were received from Bulgaria predicting the assassination of the judge conducting the inquiry in Bucharest, the Roumanian Minister of Foreign Affairs, and even of King Carol. The Austrian, German, and Italian Cabinets, in response to the Roumanian request, addressed representations to the Bulgarian Government, and the Russian Government probably gave similar advice, in accordance with which the Bulgarian Cabinet, while complaining of the sharp tone of the Roumanian notes, promised to investigate the charges of blackmail and intimidation. The murder of a Roumanian named Karadjoff in Sofia the Bulgarian Government ascribed to private revenge, and not to political motives. This explanation the Roumanian Government refused to accept. Before the incident was closed by the commencement of judicial proceedings military preparations were begun in Bulgaria and mobilization of the Roumanian forces was threatened. On the border of Macedonia revolutionary bands were drilled by Bulgarian officers. Still no fear was felt in Europe of a Macedonian rising so long as the Ottoman Government maintained a strong and alert garrison in Macedonia. Following the example of Roumania, Servia placed before the powers a list of crimes attributed to the Macedonian Revolutionary Committee of which Servians were the victims.

In the beginning of May the authorities had difficulty in quelling a riot which broke out among the peasantry in the vicinity of Rustchuk, the cause of which was the oppressive action of the police. The first soldiers who were sent to the scene were disarmed by the rioters, as the police had been before them, and a concourse of two or three thousand peasants had gathered to march

upon Rustchuk, when they were dispersed by several battalions of soldiers.

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; 1,208,130 in 1890; and 1,485,053 in 1900. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, Henry T. Gage; Lieutenant Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, Tiley L. Ford; Surveyor General, Martin J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of Printing, Alfred J. Johnston; Adjutant General, W. H. Seaman; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edson, C. S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, Lewis H. Brown; Commissioners of the Supreme Court, Wheaton A. Gray, James A. Cooper, E. W. Britt, who resigned in April; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, B. D. Murphy; Chief Justice of the Supreme Court, W. H. Beatty; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple; Clerk, George W. Root. The officers elected in 1898 were candidates on the Republican ticket except T. O. Toland and W. Van Dyke, who were candidates of the Fusionists. Justice Temple is a Democrat.

Population.—The population of the State has increased since 1890 by 276,923, or 22.9 per cent. A small portion of this increase is due to the fact that there were 5,107 Indians and 161 other persons, on Indian reservations, etc., in California, who were specially enumerated in 1890 under the provisions of the census act, but were not included in the general population of the State.

Of the 57 counties, all but 11 have increased during the decade. The population by counties is as follows:

There are 116 incorporated towns and cities in California, for which the population in 1900 is separately returned. Of these 46 have a popula-

tion in 1900 of more than 2,000, 10 over 5,000, 10 over 10,000, and 4 over 25,000, namely, San Francisco with 342,782, Los Angeles with 102,479, Oakland with 66,960, and Sacramento with 29,282 inhabitants. The population of San Francisco, beginning with 56,802 in 1860, increased to 149,473 in 1870, or 163.1 per cent. For the three succeeding decades there has been a normal increase, and the present population is more than six times what it was in 1860. The population of Sacramento has increased from 6,820 in 1850 to 13,785 in 1860, or 102.1 per cent., and at present is more than four times as great as it was in 1850. The population of Oakland, starting with only 1,543 in 1860, increased to 10,500 in 1870, or 580.4 per cent., and to 34,555 in 1880, or 229 per cent. It now has a population of 66,960, or more than 43 times as many inhabitants as it had in 1860. The population of Los Angeles was 1,610 in 1850; in 1880 it was 11,183, but during the decade from 1880 to 1890 it increased to 50,395, or 350.6 per cent., and during the decade from 1890 to 1900 to 102,479, or 103.3 per cent.

In the two years ending Nov. 1, 1899, new fourth-class post offices to the number of 166 were established in the State.

The other cities having more than 5,000 are: San José, 21,500; San Diego, 17,700; Stockton, 17,506; Alameda, 16,464; Berkeley, 13,214; Fresno, 12,470; Pasadena, 9,117; Riverside, 7,973; Vallejo, 7,965; Eureka, 7,327; Santa Rosa, 6,673; Santa Barbara, 6,587; San Bernardino, 6,150; Santa Cruz, 5,659; Pomona, 5,526.

Valuations.—The valuations of property in the State, as given in the Comptroller's official report for this year, amounts to \$1,218,292,457, made up as follows: Value of real estate, \$660,905,988; improvements on real estate, \$272,447,321; personal property, \$184,380,015; money and solvent credits, \$43,847,378; railroads, \$47,711,755. The rate of State taxation is 49.8 cents.

The original assessed value of mortgages is \$156,444,755; the assessed value of university and other State mortgages, \$1,180,985. The total county indebtedness is \$3,629,379.40, of which \$3,502,700 is funded.

The total valuation this year is \$24,527,684 greater than in 1899. There is a falling off in the amount of solvent credits and money, and, on the other hand, a decrease in the value of mortgages amounting to \$4,416,237. Mortgages have increased during the year in those sections of the State only where the rains last winter were scant and the people have not fully recovered from the effects of a series of dry seasons.

The funded and floating debts of counties have been reduced. Many counties have made expensive improvements, but without incurring new debts.

Education.—The State University graduated a class of 353 in May. "It was the first time in the history of Berkeley that the gowns appropriate to the various collegiate degrees had been worn by the entire faculty, and the draped satin, velvet, and silk indicative of so much erudition and academic distinction made the parade down the campus a long-to-be-remembered feature of this gala day of the college year. The graduating class wore the plain black silk undergraduate gowns, but there were tasseled mortar boards, flowing sleeves, and low-hanging silk hoods that represented every degree given in America and nearly every noteworthy institution of learning in this country, besides many of England's and Germany's universities. The gowns of university graduates were trimmed in velvet, the bachelors being distinguished by long, pointed sleeves and three-foot

hoods; the masters by full square sleeves and three-and-one-half-foot hoods; the doctors by sleeves of three velvet bars, gold tasseled mortar boards, and four-foot hoods. The color of the outside of the hood in each instance shows the department in which the degree is granted, white designating letters or arts; blue, philosophy; yellow, science; green, law; and purple, medicine. The inside of the hood displays the colors of the university at which the degree was granted." Of 49 appointments made in the year 1899-1900, 31 are of graduates of the university.

A tract of 20 acres adjoining the campus is to be added to the grounds, and a part has already been bought. Hearst Hall will be moved to the new ground, and fitted up as a gymnasium for the woman students. Mrs. Jane K. Sather has given about \$100,000 to the university for a chair of Classical Literature and a law library, to become available at her death; in the meantime she is to receive the income of the property, which the regents are to invest. Mrs. Hearst has made provision for a series of archaeological explorations in Egypt, Greece, Etruria, South and Central America, Mexico, and California, under charge of the university.

At the Wilmerding school 140 boys are learning trades. A building has been erected and equipped with machinery, at a cost of \$60,000.

The graduating class of the normal school at San José in June numbered 86.

The corner stone of a memorial chapel was laid at Stanford University, Jan. 29. A course of lectures on horticulture was given to the fruit growers of the State during the week of Feb. 19-24, at Stanford.

The experience of California in publishing its own schoolbooks is thus set forth: "Our appropriations from taxation to date for this purpose have been, for plants \$466,000 and for 'compilation' \$40,000, total \$506,000, for which we have to show a worn-out plant and a lot of book plates which could not be sold to anybody except as old metal. In the meantime for all these years we have been paying for books which, for the most part, no school would take as a gift, unless, like our schools, they were compelled by State law to use them, at prices decidedly higher than the best books in the world can be obtained for in the open market."

Banks.—From a table made up from the returns of the Bank Commissioners in the past ten years it is learned that the amounts on deposit in all the banks of the State has risen from a total of \$171,229,531.61 in 1890 to \$279,838,089.35 in 1900. There has been an increase every year except in 1893-'94, when there was a falling off of \$2,305,841.49. The increase from July 1, 1899, to Aug. 11, 1900, was \$22,973,693.88. The amount on deposit in savings banks was \$98,442,007.01 in 1890; it had risen to \$145,943,102.59 in 1899, and to \$158,167,402.61 in 1900, with 214,250 individual depositors.

Militia.—The organized military force of the State, as given in the figures of the Adjutant General's office, is 4,202 men; the number of men liable for service, but unorganized, 211,991.

Railroads.—The first through passenger train over the recently completed Santa Fé system from Chicago to San Francisco arrived at the latter place June 30.

The suit of the Railroad Commissioners to compel the Southern Pacific to observe the order of the commission in the Fresno rate case (see Annual Cyclopædia for 1899, page 97), was decided against the company in June, in the Superior Court. The case will be ended, however, only by the decision

of the Supreme Court, and possibly only by that of the United States Supreme Court.

In 1899 175 miles were added to the railroads in the State, and in the first six months of 1900 the added mileage was 122.

Products.—The gold product of the State in 1899 was given at the mint as approximately \$15,335,031, and silver \$504,012. The silver is given at its commercial value; its coining value was \$1,106,578.

The returns to the mint show the employment of 18,701 miners in the gold, silver, lead, and copper mines of the State, a decrease of 1,122 compared with the previous year.

The copper product was estimated unofficially at about \$4,000,000, and the oil at \$3,000,000. The entire value of the base metals and inferior minerals was estimated at \$13,976,969. The oil industry is rapidly becoming one of the most important in the State.

The sowings of sugar beets were reported at 42,300 acres. The wheat crop was an average one, estimated at 30,833,333 bushels; barley, 20,782,608 bushels; hops, 8,325,000 pounds; wool, 29,500,000 pounds; raisins, 68,000,000 pounds; prunes, 96,500,000 pounds; canned fruit, 2,900,000 cases. The nut crop of southern California, mostly walnuts, was estimated at 450 car loads.

Public Lands.—The slow rate at which surveys of lands in the State are made, while those in other States are carried on with vigor, is a public grievance, especially with settlers on the unsurveyed lands. A bill passed Congress in March providing for the preservation of the big trees. The State has received, by bequest of Col. J. B. Armstrong, between 400 and 500 acres of redwood forest, adjacent to Guerneville, for a public park.

Public Works.—The report that has occupied the Débris Commission since 1896 was presented to Congress in February. Two projects are spoken of in the report. That of 1899 is the one approved by the commission, the chief of engineers, and the Secretary of War. It consists of a series of dams constituting restraining barriers and forming impounding reservoirs in and about and above and below De Guerra point, in extent 2,000,000 acres of settling basin, with lateral outlets, and calculated to impound 50,000,000 cubic yards of *débris*. The project likewise touches upon the plan of the confining of the Yuba river below the works to a single channel. The report estimates the cost of constructing the works at present advised at \$800,000.

A new contract has been made for the construction of the San Pedro breakwater.

San Jacinto Mountain.—A dispatch of March 19 from San Jacinto said: "Tremendous excitement prevails in San Jacinto, it having been discovered that part of San Jacinto mountain has slipped into a subterranean cavern. A territory covering 60 acres, at an elevation of 4,000 feet, was dislodged by the Christmas earthquake, and slipped 150 feet lower than it had stood for many centuries. The face of this new valley is thickly traversed with fissures and cracks varying in width from 1 inch to 6 feet across, and it is not possible to see the bottom nor to sound the depths by throwing stones into them."

Legislative Session.—As no Senator was chosen at the regular session in 1899, a special session was called this year and continued from Jan. 28 to Feb. 10. Thomas R. Bard was made the nominee of the Republicans and was elected Feb. 6, receiving the full Republican vote, 85. James D. Phelan was the Democratic nominee.

Other purposes for which the session was called, as named in the Governor's proclamation, and the

disposition made of bills embodying them, are summarized as follows:

To re-enact the law creating a Commissioner of Public Works. Law re-enacted on lines proposed in the proclamation.

To enact a law relative to an auditing board for the Commissioner of Public Works. Law enacted as proposed in the proclamation.

To repeal the wide-tire law of 1897. Law repealed.

To repeal the act of March 27, 1897, relative to the location of mining claims. Law repealed.

To amend section 3494 of the political code, relative to the sale of public school lands. Bill defeated.

To empower the Governor to remove summarily all public officers appointed by or under his authority. Bill defeated.

To empower the Governor to suspend for cause during recess of the Legislature appointees subject to confirmation by the Senate. Bill defeated.

Constitutional amendments relating to the judicial department, providing for three district courts of appeal, and to municipal charters were adopted. Concurrent and joint resolutions adopted were: Asking Congress to make appropriation for roads in Yosemite National Park; favoring election of United States Senators by the people; favoring American manufacture of the proposed Pacific cable; favoring the completion of public surveys; opposing the Jamaica reciprocity treaty; asking Congress to prevent fraud in the location of oil lands; asking action of the Government on the report of the Débris Commission.

Political.—No State officers were elected this year, their term of office being four years. Conventions were held to choose delegates to the national conventions and to nominate presidential electors.

The Republicans approved the national and State administrations, favored the construction of the Nicaragua Canal under Government ownership, appropriations by Government for reclamation and irrigation of arid lands with co-operation of the States, establishment of national forest reserves, prevention of fraud in acquirement of mineral lands, continuance of the Chinese exclusion laws, road improvement, increased appropriations to the State University, and adoption of the proposed amendment for regulation of primary elections.

The Democrats adopted a platform approving the Chicago platform, favoring the candidacy of William J. Bryan, favoring an amendment to the Federal Constitution to require the election of United States Senators by direct popular vote; demanding a similar amendment providing for the income tax; favoring the immediate construction, control, and protection of the Nicaraguan Canal by the United States; extending sympathy to the South African republics; condemning imperialism; condemning the Porto Rican tariff law; affirming that the Constitution follows the flag; favoring the abolition of all unnecessary war taxes; condemning the trusts; favoring the passing of laws for the exclusion of all Asiatic laborers and congratulating the Democracy on the selection of W. R. Hearst to be president of the National Association of Democratic Clubs. On State matters, the resolutions called for preservation of the redwoods, rehabilitation of hydraulic mining, storage reservoirs, increase of university revenues, reduction of hours of labor for minors, and election at large of railroad commissioners.

In the Legislature the Republicans have 34 members of the Senate and 59 of the House; the Democrats, 6 of the Senate and 21 of the House.

Eight constitutional amendments were proposed by the General Assembly, and submitted to vote at this election. They were:

To exempt from taxation buildings used solely and exclusively for religious worship and the land on which they are built.

To assure the perpetuity of Stanford University, which is believed to be in danger either from defects in the original law or the deeds of gift, and to enable it to receive property by legacy and to hold property outside the State of California, and to authorize the Legislature by special act to exempt the property of the university from State taxation and the Palo Alto farm and the personal property from county and municipal taxation upon condition that tuition be made absolutely free to residents of California. The amendment itself makes no exemption of taxation, and the Legislature could pass no such law which could not be repealed. The funds of the university are now invested in United States bonds and so pay no taxes.

To exempt from taxation the property of the Lick School of Mechanical Arts on condition that the trustees make annual reports to the Governor.

To exempt from taxation all bonds hereafter issued by the State or any political subdivision or district thereof.

To make possible the enactment of a primary election law.

To make the salaries of superior judges payable entirely by the State, instead of half by the counties, as now; to provide for the appointment of as many salaried stenographers as there are superior judges; and to make salaries of supreme judges payable monthly.

To permit Vallejo and San Francisco to pay certain indebtedness.

To make changes in the judicial system, the principal one of which is the creation of three new appellate courts, in order to relieve the Supreme Court, the decisions of the courts of appeal being made final in the majority of cases.

The total vote for presidential electors was 303,793, compared with 296,503 in 1896. Of this, the Republican candidates received 164,755; the Democratic, 124,985; the Prohibitionist, 5,024—a Republican majority of 34,746.

Semicentennial.—The fiftieth anniversary of the admission of California to the Union was celebrated Sept. 9-12.

Saturday and Sunday yacht races and regattas were held on the bay. Saturday night there was a magnificent naval parade on the water front, in which the battle ship Iowa and the Naval Reserve steamship Marion and a large fleet of tugs, launches, and other craft participated, and in which the big four-masted sailing vessel May Flint took an involuntary part by colliding with the Iowa and other vessels at anchor and then plunging to the bottom of the harbor, where she now lies. On Sunday afternoon Claus Spreckels's gift of a grand band stand at Golden Gate Park was one of the features of the day. Monday the greatest parade ever witnessed in San Francisco passed over the principal streets, and on Tuesday the festivities closed with a variety of special features. The celebration attracted visitors by the tens of thousands. The city was smothered in bunting, and the street decorations and illuminations were never before equaled in the city.

CANADA, DOMINION OF. Legislation and Politics.—The history of Canada in 1900 includes two all-absorbing issues—the South African war and the general elections. Public sentiment was deeply and continuously stirred by the former; legislation and politics were greatly affected by

the latter. The Parliament met in its last session at Ottawa, Feb. 1, and was opened by the Earl of Minto as Governor General. The Government of Sir Wilfrid Laurier was practically unchanged from its composition of the preceding year, and was composed of himself as President of the Council; Sir Richard Cartwright, Minister of Trade and Commerce; Hon. R. W. Scott, Secretary of State; Hon. David Mills, Minister of Justice; Sir L. H. Davies, Minister of Marine and Fisheries; Hon. F. W. Borden, Minister of Militia and Defense; Hon. William Mulock, Postmaster-General; Hon. S. A. Fisher, Minister of Agriculture; Hon. J. Israel Tarte, Minister of Public Works; Hon. R. R. Dobell, minister without portfolio; Hon. W. S. Fielding, Minister of Finance; Hon. A. G. Blair, Minister of Railways and Canals; Hon. Clifford Sifton, Minister of the Interior; Hon. W. Paterson, Minister of Customs; Sir H. Joly de Lotbiniere, Minister of Inland Revenue; Hon. James Sutherland, minister without portfolio. Later in the year Sir Henri Joly retired to take the lieutenant governorship of British Columbia, and was succeeded by Hon. M. E. Bernier.

Lord Minto's speech from the throne, describing the general situation and outlining the ministerial programme for the session, contained these passages:

"Hostilities having unfortunately broken out, during the recess, between Great Britain and the South African Republic, it appeared to my ministers expedient to anticipate the action of Parliament by equipping and forwarding two contingents of volunteers to the seat of war as a practical evidence of profound devotion and loyalty of the entire people of Canada to the sovereign and institutions of the British Empire. In addition to the contingents sent by the Government, another Canadian force is being organized and dispatched at the personal expense of the High Commissioner of Canada. I have been instructed to convey to you her Majesty's high appreciation of the loyalty and patriotism thus displayed, which, following the preference under the present tariff to articles of British manufacture, has had the happiest effect in cementing and intensifying the cordial relations subsisting between Canada and the mother country. A bill will be submitted for your approval, making provision for the cost of equipping and paying the Canadian contingents.

"The measures which have been taken from time to time to facilitate the safe transportation of foodstuffs to European markets have resulted in a large increase in the exportation of several important articles of produce, and it may become necessary in the interest of this very important branch of industry to require a more careful inspection than has been customary, for the purpose of maintaining that high standard of excellence heretofore secured, and which is absolutely indispensable if the people of Canada are to increase their large and profitable trade with other countries in these commodities.

"I am glad to observe that the returns from the Post Office Department afford good ground for believing that the temporary loss of revenue caused by the great reduction recently made in the letter postage will speedily be made good by the increased correspondence consequent thereon.

"Negotiations are now in progress with several of our sister colonies in the West Indies which it is hoped may result in increasing and developing our trade with those islands, and possibly with certain portions of the adjacent continent of South America.

"It gives me great pleasure to observe that, in pursuance of a policy which was defined at the

last session of Parliament, a carefully devised body of regulations has been adopted, applicable to all railways and public works within the Federal jurisdiction, making adequate provision for the sanitary protection and medical care of workmen.

"The attention of the Government has been called to the conflicts which occasionally arise between workmen and their employers. While it may not be possible wholly to prevent such difficulties by legislation, my Government think that many of the disputes might be avoided if better provisions could be made for the friendly intervention of a board of conciliation—the conclusions of which, while not legally binding, would have much weight with both sides, and be useful in bringing an intelligent public opinion to bear on these complicated subjects. You will be invited to consider whether the provincial legislation in this matter may not be usefully supplemented by an enactment providing for the establishment of a Dominion tribunal for assisting in the settlement of such questions.

"I am happy to observe that the number of settlers who have taken up lands in Manitoba and in the Northwest Territories is larger than in any previous year, and affords conclusive evidence of the success which has attended the efforts of my Government to promote immigration, and I have no doubt that the greatly increased production of the West will henceforth add materially to the growth of the trade of the whole Dominion. While the efforts made to secure increased population for the West have thus been successful, much attention has also been devoted to the repatriation of Canadians who in less prosperous times have left Canada. You will be pleased to learn that this work has been attended with satisfactory results.

"I am pleased to say that our canal system, connecting the Great Lakes with the Atlantic seaboard, has been completed so as to allow vessels having a draught of 14 feet to pass from the head of Lake Superior to the sea. The vigorous and successful prosecution of these works by my Government has already attracted the attention of those interested in Western transportation, and there are good grounds for the hope that when the necessary facilities for quick and inexpensive handling of ocean traffic are provided, and which are in progress, Canadian ports will control a much larger share of the traffic of the West.

"Measures will be introduced to renew and amend the existing banking laws, to regulate the rate of interest payable upon judgments received in courts of law, to provide for the taking of the next decennial census, for the better arrangement of the electoral districts, to amend the criminal code and the laws relating to other important subjects."

In the ensuing session the issues connected with or growing out of the South African war were the most interesting, and will be discussed elsewhere.

On Feb. 9 Mr. Mulock reintroduced in the House the redistribution bill which had been rejected by the Senate in 1899, and which aimed, according to the Liberal contention, at remedying the inequalities and injustice of the "gerrymander act" of 1882, and, according to the Conservative belief, at making a new gerrymander which would keep the Liberal party in power for another term of years. The plan proposed was to restore, nominally, the old county boundaries, and to create a board of high court justices to divide the constituencies accordingly. The Conservatives also opposed the measure as improper and unnecessary just before the decennial census, which is to be taken in 1901, and which would involve another readjustment

of constituencies. This view was embodied in an amendment by Sir C. Tupper, and rejected by 45 to 91 votes. After passing the Commons the measure was again thrown out by the Senate on a vote of 41 to 19. In connection with this and other evidences of the Conservative character of the Senate, the agitation of previous years in favor of the reform of that body entered upon one of its periods of fitful activity, and the Liberal press joined in a fierce attack upon the upper house. Events, however, tended to show that the hand of death would soon change its composition if the Government remained in power, and during this very year several vacancies were filled by the appointment of Liberals—notably Hon. Joseph Shehyn, of Quebec; Hon. Finlay Young, of Manitoba; Hon. Charles Burpee, of New Brunswick; Hon. George T. Fulford, of Ontario; Hon. J. P. B. Casgrain, of Quebec; and Hon. Robert Watson, of Manitoba.

In the course of the session evidences of corruption and irregularity in by-elections in Huron and Brockville were brought home very strongly to Liberal representatives, and hot debates and charges ensued. Early in June the Government decided to appoint a judicial commission to investigate alleged fraudulent practices at elections. The commissioners were Sir John A. Boyd, Chancellor of Ontario; Hon. W. G. Falconbridge, of the Ontario High Court of Justice; and B. D. McTavish, County Court Judge of Carleton, Ontario. Mr. Justice Falconbridge was soon afterward promoted to a chief justiceship without the Conservative Opposition even hinting at the possibility of his views being influenced by such action. The commissioners were given a pretty free hand, and the power of summoning witnesses under oath. The Opposition held, however, that their powers were only on the surface, and in a proposed amendment declared that the provisions of the act were not sufficiently comprehensive. The proposal to widen the scope of the commission was voted down on a party division.

On July 18 the session was formally closed by the Governor General in a speech from the throne, which briefly and succinctly outlined the legislation passed, from the Government's point of view. He said:

"I desire to congratulate you on the buoyant state of the revenue. The large receipts have enabled my Government to provide liberally for the public service and to maintain Canada's strong financial position. The improvements of the act relating to banks will tend to perfect a system of banking of which Canada has reason to feel proud. The extension of the British preference in our tariff will tend to reduce the burden of taxation and stimulate the growth of every trade with the mother country. The measure you have passed respecting the admission of Canadian inscribed stock to the list of securities in which trustees in Great Britain may invest is being followed by similar legislation in the Imperial Parliament, which will in due course consummate this very important improvement in the financial affairs of the Dominion. I particularly congratulate you upon the passing of the conciliation act, which, it is confidently hoped, will not only improve the condition of the industrial classes, but will also better promote the relations which ought to exist between capital and labor."

By-elections in the early part of the year had resulted in a Conservative victory in Sherbrooke, Quebec; the choice of an Independent-Liberal, supported by the Conservatives, in Winnipeg; and the success of an Independent-Liberal in Lotbiniere, Quebec, over the Government candidate.

In February Mr. W. F. Maclean, M. P., editor and proprietor of the *Toronto World*, published the following platform, which he has since continued to press, and many planks of which are approved by the Conservative party. Some, however, such as nationalization of telegraphs and public ownership of franchises, are new to party platforms:

1. Rounding off confederation by taking in Newfoundland.

2. Imperial federation and preferential trade between the sections of the empire.

3. Protection to Canadian industries and a reciprocity of tariffs as between us and those who tax Canadian products. Export duties sufficient to compel the manufacture in Canada of Canadian logs, woods, pulp, ores, metals. Customs duties or bounties sufficient to build up a great iron industry in Canada.

4. State-owned cables between Britain and Canada, and between Canada and Australia.

5. Nationalization of the Canadian telegraph and telephone systems as a part of the post office.

6. A national fast Atlantic service between the nearest available Canadian and British ports.

7. Canadian railways to have their Atlantic terminals in some Canadian port.

8. Maintenance of the independence of the Canadian national railway (the Intercolonial), and its gradual extension westward. This national railway to be the complement of the fast Atlantic service.

9. A strong and impartial railway commission to regulate rates and the relations of railways one with the other and with municipalities and individuals.

10. No railway subsidies without corresponding control and ownership of the roads subsidized.

11. A federal insolvency law.

12. Laws to regulate trusts, corporations, trade combinations, and holders of patents in their treatment of the public.

13. Extension of the principle of public ownership and control to all public franchises within provincial and municipal jurisdiction.

As the electoral conflict approached the press teemed with references to the policies and performances and promises of the two parties. The Government, or the Liberal party, held that during its four years of power an immense amount of useful legislation had been enacted and the country greatly helped in its path toward prosperity and nationality within the broad bounds of the British Empire. Their claims may be summarized as follows: The settlement of the Manitoba school question; the reduction of the tariff; the granting of a preference to Great Britain; sending of Canadian volunteers to South Africa; the vigorous development of transportation facilities; the establishment of imperial penny postage; the establishment of the postal-note system; the placing of the Intercolonial railway on a paying basis; the abolition of land grants to railways; the gaining of valuable concessions from existing railways and the control of freight rates and running powers over all new roads; the opening up and establishment of liberty, law, and order in the Yukon, without cost to the Dominion; the abolition of the franchise act; the repeal of the superannuation act; the attempted repeal of the "gerrymander act" of 1882; the abolition of the sweating system in Government contracts; the securing of the concession by the British Parliament allowing British trust funds to be invested in Canadian securities; the securing of the abolition of the United States quarantine regulations, which increased the export of cattle to the United States from \$8,870 in 1896

to \$1,173,000 in 1899; the establishment of a system of cold storage for the transportation of our products to Great Britain; the reservation of Dominion lands for the settler and not for the speculator.

The Conservative view of the issues involved can not be better outlined than in the following denunciation of the Government, contained in the *Montreal Gazette* of June 16 and repeated in various forms from a thousand platforms:

It broke a contract for fast Atlantic mail service to put the St. Lawrence on a level with New York, and it proved itself unable to make another.

It broke an arrangement by which the Crow's Nest Pass Railway was to have been constructed for \$1,600,000, and made another that cost the country \$3,600,000.

It bought from a political supporter, at a price far above its cash cost, the Drummond County Railway, and then bonused another railway to take trade away from it.

It made a contract, without tenders being asked, for the construction of a railway into the Yukon country, pledging as a bonus millions upon millions of square miles of land in the great gold-bearing region, a contract so bad that the whole people revolted against it.

It filled the Yukon country with officials whose conduct was so scandalous that the greatest journal of opinion in England said the relations between people and rulers in that section of the British Empire were everything that they should not be.

It refused a public independent inquiry into the conduct of these officials, though charges were made against them by name on the floor of Parliament by a member of the Privy Council.

It bungled its tariff legislation so that Canadian grain was shut out of the German market.

It instituted a splurge preferential tariff system from which Canada has not received, and can not receive, any commercial advantage, and which can not be made effective of its intended purpose except at the risk of Canadian industries.

It put an insulting "no precedent" proviso in the order in Council authorizing the dispatch of Canadian soldiers to the war in South Africa.

It compounded cases of customs fraud which had been brought into the courts, and this against the protests of straightforward importers and merchants.

It appointed unqualified men, and men who had been condemned by the courts as political corruptionists, to important places of trust and emolument.

It spent tens of thousands of dollars in paying partisan commissions for going about the country looking through the public service for employees who had voted against its party candidates.

It raised millions more by taxation than its members had declared the people could bear, and spent ten millions more a year than they had pledged themselves to show was sufficient for the needs of the country.

It established the system of giving contracts without tender to political friends, who sublet the work, at a profit to themselves and a loss to the country, to men not capable of doing it.

It forced two qualified commanders of the militia to throw up their positions in disgust at the ideals and methods of its administration of the country's armed forces.

On Oct. 9 Parliament was dissolved, the nominations to be on Oct. 31 and the elections on Nov. 7. The country was at once in a political turmoil, although the issues were really not very serious. Sir Charles Tupper, the veteran Conservative lead-

er, now in his eightieth year; Mr. Hugh John Macdonald, Premier of Manitoba; and Mr. George E. Foster, long Finance Minister in the preceding Conservative Government, made a tour of the country and were well received. Sir Wilfrid Laurier, Mr. Fielding, and other members of the ministry did the same, with a similar result. In the Parliament thus dissolved the Government had a majority of 59, which had grown up, through successful by-elections, from about 30 majority obtained at the polls in 1896.

Mr. Foster left his previous constituency and joined issue, in St. John, N. B., with Mr. Blair, whose position as a Cabinet minister with a previous Liberal majority of more than 600 made the result appear almost hopeless for the Conservative leader. Mr. H. H. Cook, ex-M. P., long a well-known Liberal in Ontario, issued a manifesto denouncing his party upon an indictment containing 17 counts, and declaring them guilty of corruption and absolutely indifferent to their pledges of previous years. He also charged the Government with offering him a senatorship in return for a \$10,000 contribution to party funds. This Sir W. Laurier promptly and earnestly denied. The other charges were not answered by the Liberal leader. Mr. John Charlton, also a prominent figure in the same party, issued an address to his constituents supporting parts of the Conservative platform and condemning portions of the Liberal record. Sir Mackenzie Bowell, a former Conservative premier, revived the internal party troubles of 1896 by going to the constituency of Hon. J. G. Haggart, a former colleague of his own and of Sir C. Tupper, and denouncing him with vigor. And so the contest proceeded, both parties in favor of closer British unity, but differing strongly in detail. The preferential tariff was a prominent feature, Sir Charles Tupper declaring that the Government should have invited reciprocity from England, and expressing the belief that such a result was possible. This the Government denied strenuously, and in doing so certainly had the record of English free-trade policy for fifty years. Mr. Tarte's alleged anti-British utterances made another strong card for the Conservatives, and each party accused the other of trying to raise racial issues in Quebec.

The general result of the struggle, Nov. 7, was somewhat extraordinary. The Laurier Government was sustained by a majority of about 50. The great bulk of this was from Quebec, which gave a total of 57 Liberals to 8 Conservatives. Ontario turned a Liberal majority of 14 into a Conservative majority of more than 20. The maritime provinces increased their previous Liberal majorities somewhat, and Manitoba, the Territories, and British Columbia divided about equally. All the ministers were re-elected from comparatively safe seats; nearly all the Conservative leaders, including Sir Charles Tupper, Hon. George E. Foster, Hon. Hugh John Macdonald, Sir Adolphe Caron, and J. G. H. Bergeron were beaten in trying to carry Liberal constituencies, or from spending all their time speaking throughout the country. The French of Quebec voted almost solidly for a French-Canadian Premier, while the French in some of the Ontario and Manitoban constituencies, and the Acadian-French in all the maritime provinces, apparently did the same. The day after the election Sir Charles Tupper announced his retirement from public life.

Canada in the South African War.—Including the Royal Canadian Regiment of 1,000 men under Col. W. D. Otter, the Canadian Mounted Rifles under Lieut.-Col. F. L. Lessard, the Royal Canadian Dragoons under Lieut.-Col. T. D. B. Evans, and the Strathcona Horse under Lieut.-Col.

S. B. Steele, there were about 3,000 Canadian troops in South Africa by January, 1900. There had been some hesitation in sending the first contingent, and for this the Government had to meet severe party denunciation during the ensuing year. Popular opinion forced its dispatch by having an order in Council prepared which formally announced that the action taken should not be considered a precedent, which was promptly broken through in the sending of a second and a third contingent. Lord Minto hinted at this situation when he said, in a speech of farewell at Quebec to departing troops, that "the Canadian contingent goes out because you" (the people of Canada) "insisted upon its going." This matter, and the fact that in Quebec the Liberal leaders said they had "allowed" the volunteers to go, while elsewhere they declared with pride that they "sent" them, held a large place in the subsequent elections.

The Government paid for the equipment of the contingents and their transportation to the Cape, and after that they became British soldiers and subject to similar rates and rules. In February Mr. Fielding introduced into the House a vote of \$2,000,000, which was carried almost unanimously, for the payment of these expenses and for an increase in the regular army remuneration of the men, to be given to them on their return. The Strathcona Horse was equipped and all expenses borne by the personal generosity of Lord Strathcona, Canadian High Commissioner in London, who also privately arranged through Sir Charles Tupper for an insurance of \$1,000 each on the lives of the men in the first contingent. Tributes to the conduct of the Canadian troops were numerous, and included the direct congratulations of the Queen, Lord Roberts, Sir Alfred Milner, and Mr. Chamberlain, and praise from almost the entire British press. It appears to have been a revelation of what colonial volunteers could do. At Paardeberg 13 men were killed and more than 30 officers and men were wounded. Parliament promptly expressed its gratulations to the living and its sympathy for the dead and wounded in a dispatch sent by the Premier. After this time the Royal Canadians were brigaded with the Gordons and other crack British regiments, and on July 16 Gen. Smith-Dorrien issued the following congratulatory order:

"The Tenth Brigade has achieved a record of which any infantry might be proud. Since the date it formed, namely the 12th of February, it has marched 620 miles, often on half rations and seldom on full. It has taken part in the capture of 10 towns, fought in 10 general actions, and on 27 other days. In one period of 30 days it fought on 21 of them, and marched 327 miles. The casualties have been between 400 and 500, and defeats nil."

During the progress of the campaign the regiment marched more than 1,000 miles. Most of its members returned in October, 1900, and received an enthusiastic greeting. In the year from October, 1899, to the same month in 1900, the Canadian losses were 61 killed or died of wounds, 180 wounded, 43 died from disease, and 52 were missing or prisoners—a total of 336. On June 7 the Premier moved in the House of Commons, seconded by the Opposition leader, an address to the Queen, which included the following paragraph:

"The feelings of pride and satisfaction with which we hail every fresh addition to the long and the glorious roll of deeds wrought by British valor and resource are enhanced on the present occasion by the proud consciousness that, through the active operation of her sons on the battlefield,

Canada is entitled to share in a new and special manner in the joy of the present triumph. We rejoice that the conflict now happily drawing to a close will result in the removal of those disabilities under which many of our fellow-subjects have labored for so long, and we can not doubt that the extension of your Majesty's gracious rule over the whole of South Africa will be attended by those blessings which flow from a wise and beneficent administration of just and equal laws."

The attitude of the French-Canadians during the conflict and its imperialistic developments was a most important matter. There was undoubtedly much of sympathy at first with the Boers, and of a sort of passive deprecation of the British position. As time passed on, and Sir W. Laurier continuously proclaimed his belief in the justice of the war and was joined by French Conservative leaders such as Casgrain, Chapais, and Bergeron, this feeling was modified. Mr. Tarte's peculiar attitude, however, produced a new complication, while two Liberal members of Parliament—Bourassa and Monet—inaugurated a distinct campaign against any kind of participation in the affairs of the empire and in favor of Canadian independence. On March 12 Mr. Henri Bourassa introduced the following resolution in the Commons:

"That this House insists on the principle of the sovereignty and the independence of Parliament as the basis of British institutions and the safeguard of the civil and political liberties of British citizens, and refuses, consequently, to consider the action of the Government in relation to the South African war as a precedent which should commit this country to any action in the future. That this House further declares that it opposes any change in the political and military relations which exist at present between Canada and Great Britain, unless such change is initiated by the sovereign will of Parliament, and sanctioned by the people of Canada."

This was voted down by 119 to 10 and was chiefly important as producing an eloquent speech from Sir W. Laurier in condemnation of its general tone, in the course of which he declared that should Canada be compelled to participate in all the wars of Great Britain it would have the right to say, "If you want us to help you, you must call us to your councils."

Outbreaks of this sentiment occurred from time to time during the year in an extreme form. One was the appearance of an article in *La Semaine Religieuse*, the organ of the Quebec archbishop, denouncing the British. Other papers took, upon occasion, a similar line. In each case, however, the result was assurances of loyalty from the highest quarters, and in the first-mentioned instances most ultra-British speeches from Archbishop Bégin and Lieut.-Gov. Jettén of Quebec. Mr. Tarte's utterances in France during the Paris Exposition took the form of asserting continually that he was French by origin and birth and sentiment but British in loyalty. His position in this respect became the subject of wide discussion and keen hostility in Ontario.

Canada and the Empire.—Apart from the war, many imperial issues demanded attention in 1900. In June the Fourth Congress of the Chambers of Commerce of the Empire drew forth a large representation from Canada, and discussions in which the Dominion held a foremost place. Resolutions were passed in favor of closer commercial and defensive relations and the appointment of a permanent Imperial Council. In March the Montreal Board of Trade passed a series of resolutions favoring a similar policy, which was approved by bodies of the same importance all over the country.

Complications arose in connection with the proposed Pacific cable, created by the rivalry of the eastern extension system in Australian waters. Resolutions of protest were passed by the Senate, and explanations were offered in the Commons by Mr. Mulock. Eventually the contract was let by Mr. Chamberlain, and toward the end of the year the various colonial interests in the matter appear to have been harmonized. In the British war loan of £30,000,000 sterling, Canadians subscribed many millions of dollars, notably \$5,000,000 by the Bank of Montreal, and were allotted a fair proportion.

Sir Charles Tupper delivered a speech in Quebec early in the year, in which he strongly opposed colonial representation in the Imperial Parliament, and this was directly replied to by Mr. Chamberlain, on April 3, in a speech in which he said: "So far the colonies have not made any definite suggestion with respect to representation; and I am convinced that nothing would be more fatal than a premature discussion of details. I do not think the time has arrived to suggest to the colonies the form which imperial unity should take."

An outcome of the war was the Canadian offer to relieve the regular forces at Halifax, and the creation of a special provisional regiment of volunteers for the purpose. A practical result of the sentiment aroused in England by Canadian aid in this connection was the formation in July of a Lord Mayor's fund to help the sufferers from the Ottawa fire, and the contribution of about \$200,000 for the purpose.

The preferential tariff of the Government came in for keen discussion, and on the whole may be said to have commanded popular approval. The manufacturers, however, found fault with the increase from 25 to 33½ per cent., and their association passed resolutions in favor of a reciprocal preference, of protection high enough to guard their interests, and of protest against certain reductions, notably that upon woolen goods. They also urged a more careful adjustment of duties to suit special cases. This idea of reciprocity was not only the principal platform in Sir Charles Tupper's political policy, but was strongly urged by the Boards of Trade in Montreal, Toronto, and Halifax. The Canadian Manufacturers' Association passed the following resolution on July 11:

"That in the opinion of this association the bonds of the British Empire would be materially strengthened and the union of various parts of her Majesty's domains greatly consolidated by the adoption of a commercial and fiscal policy for the colonies of Great Britain, based upon the principle of mutual preference whereby each component part of the empire would receive a substantial advantage in trade as a result of this national relationship; that this is a singularly opportune time to look to the adoption of this policy in two of the largest of her Majesty's colonies; and, therefore, that the Dominion Government be urged to take such steps as may be possible to bring about the adoption of this policy by the sister colonies."

In Parliament, Mr. Fielding's proposed increase of the British preference to 33½ per cent. was chiefly opposed by the Conservatives on the ground of giving something for nothing and helping to prevent the obtaining of future reciprocal British concessions. It was supported by Liberals as not only granting a preference, but as involving a steady lowering of the protective tariff. It passed, as a matter of course. The Conservative attitude was summarized on March 30 in the following resolution, presented in the House by Sir Charles Tupper:

"That this House is of opinion that a system of mutual trade preference between Great Britain

and the colonies would greatly stimulate increased production in and commerce between these countries, and would thus promote and maintain the unity of the empire; and that nothing which falls short of the complete realization of such a policy should be considered as final or satisfactory."

Militia and Defense.—The record of this department's work was necessarily largely connected with the war. The minister came in for some very severe criticism, but his despatch of nearly 3,000 officers and men to South Africa, and of another thousand to Halifax, with the details of their equipment and transport, entailed much work and responsibility, and was upon the whole well done. Dr. Borden, speaking in the Commons on June 26, pointed out what he had done and what he intended to do in the following words:

"Since he had been in office annual drill had been adopted; a limit was placed upon the period of command for corps; an age limit had been established for officers; cadet corps in connection with high schools and the regiments of militia had been formed; steps taken to form an engineers corps in connection with the universities of Montreal and Toronto; a completed scheme of defense for the Dominion; and an army medical service upon the British model, modified to meet the requirements of the Canadian service, has been formed, and will be increased until a complete medical service for an army corps of 36,000 has been provided. Mounted infantry was to be inaugurated. An experiment will be made in the Northwest and Manitoba, and the cavalry and infantry converted into mounted infantry."

One scandal did undoubtedly disgrace his administration of affairs, and the purchase of some "emergency food" for the troops, at a high rate, which was found to be practically useless, created much discussion in Parliament and the press, and was investigated by a parliamentary commission which on June 28 issued majority and minority reports, in which the Liberals practically cleared the minister of responsibility, while the Conservatives proclaimed him inefficient and corrupt.

The expenditure of the Militia Department for 1899 was \$2,489,551. That for 1900 would include the whole of the South African war expenses, and be at least double this sum.

Finances.—Mr. W. S. Fielding, as Finance Minister, presented his budget to Parliament on March 23. It was stamped with the evidences of good times and redundant revenues, and its programme included free trade between Canada and the island of Trinidad—an arrangement which subsequently fell through; the free admission of machinery used in the manufacture of beet-root sugar; an increase from 25 to 33½ per cent. in the tariff; preference given to British goods; the statement that the Imperial Government had at last consented to the listing of Canadian Government securities as an investment for trust funds; and the announcement of a surplus of more than \$4,800,000. In his speech Mr. Fielding declared that the past fiscal year had been the most prosperous in Canadian history; that the revenue had been \$46,741,249, the expenditure \$41,903,500, and the surplus \$4,837,749. The minister then continued as follows: "The capital expenditure for the year amounted to \$9,137,562, and, deducting surplus, sinking fund, and like charges, the net increase of the debt last year was \$2,317,047. The average increase in the public debt from 1878 to 1896 was \$6,503,075, and in the last three years \$2,502,000—a considerable diminution under the present Government. Of the expenditure of the last three years, \$2,500,000 was for obligations entered into by the last Government, and if this amount were deducted the aver-

age annual increase under this administration was about \$1,700,000. What had the country got for all this? Taking the four classes of expenditure—for canals, public works, the Intercolonial railway, and the railway subsidies—the expenditure for the three years ending with July 1, 1899, was \$16,667,500, compared with \$14,351,433 for the three years before that. As to the present fiscal year, of which eight months had elapsed, he estimated that the total revenue would pass \$50,000,000."

On June 26 the supplementary estimates were brought down to the House, consisting of grants to harbors and rivers, public buildings, railways, and canals, and sundry Yukon expenditures. The total was \$7,244,135. The figures of revenue, as finally announced, for the fiscal year ending June 30, 1900, included \$28,102,751 from customs, \$9,817,121 from excise, \$3,098,410 from the post office, \$5,173,544 from public works, and \$2,842,770 from miscellaneous sources—a total of \$49,034,597. In the matter of the expenditures on capital account, there was an increased outlay of \$629,216 upon public works, railways, and canals, from \$4,699,692 in 1898-'99 to \$5,328,908 in 1899-1900. There was an increase in the outlay upon Dominion lands from \$140,126 in 1898-'99 to \$191,460 in 1899-1900. These, together with an item of \$1,372,707 for the South African contingent, were the only items of increase in capital expenditures as compared with the previous year. Over against these increases there was in the outlay for railway subsidies from \$3,194,302 in 1898-'99 to \$724,388.73 in 1899-1900—a decrease of \$2,469,914. This decrease, together with several minor items, made a total reduction in the expenditure on capital account of \$518,714—from \$8,318,181.86 in 1898-'99 to \$7,799,467.11 in 1899-1900.

Agriculture.—The crops of 1900 were generally good and prices fair. The production and export of butter largely increased in 1899, and the total was 20,000,000 pounds, an increase of 100 per cent. over the preceding year. The exports of cheese fell off a little, and amounted to 199,827,000 pounds. In his annual report, the Minister of Agriculture stated that Canadian eggs were gaining favor rapidly in England, and referred to experiments which were going on for the growth of apples in the Northwest. Considerable advance was made in the fattening and export of poultry. The value of the total export of butter in 1899 was \$3,700,873; of cheese, \$16,776,765. Nearly all this went to Great Britain. The export of cattle to Great Britain was \$7,129,430, and to the United States \$1,298,170. The total export of horses showed a decrease and was only \$898,063 in value, but sheep increased slightly and were valued at \$1,540,857, the bulk of which went to the United States. The total export of provisions was \$32,460,844, nearly all of which went to Great Britain.

An interesting appendix to the minister's annual report was a statement by Prof. McEachran regarding disease in animals. He declared that tuberculosis was rapidly decreasing: "Hog cholera, although it occasionally breaks out, is also on the decrease, and has disappeared almost entirely in several of the hitherto most infected centers. Scab in sheep is unknown in the maritime provinces, and exists to but a limited extent in Ontario. One outbreak near McLeod, in Alberta, was stamped out by the voluntary destruction of the flock by the owner. Another flock was similarly dealt with in a district northeast of Calgary. No scab was discovered in the 62,308 sheep inspected prior to export from Canada to England, and only 2 of the animals were reported affected by the disease on their arrival in England. Mange exists

to considerable extent among the range cattle of Alberta and Assiniboine."

Banks.—This year was marked by the decennial consideration of the bank act. The changes were not many and the revision of the charters was largely formal. On May 22 Mr. Fielding introduced the subject in the House, and declared that the present act had been found reasonably satisfactory. "The present bank charters expired in 1901, and they proposed by this bill to extend them for ten years, or until 1911. There were new provisions in regard to bank notes, designed to prevent the issue of notes by a bank after its suspension. It was desirable, in the light of the experience of recent years, that a better supervision of the affairs of the banks, when the bank suspended, than now existed should be provided. They believed that the best medium for doing this was by using the services of the Canadian Bankers' Association, and for that purpose they had asked the association to become incorporated."

The bank circulation on Dec. 31, 1899, was \$49,588,236, and the circulation of Dominion notes \$27,076,309—a joint increase of \$10,000,000 over the same date in 1898. The bank clearings in Toronto, Montreal, Winnipeg, Hamilton, Halifax, and St. John were \$1,549,966,696, showing an increase of \$250,000,000 in the year. The discounts in chartered banks on Jan. 31, 1900, were \$301,000,000, or \$18,000,000 more than in June, 1899. The deposits in chartered and savings banks had increased in the same period from \$308,000,000 to \$321,000,000.

Trade and Commerce.—The figures for the year ending June 30, 1900, showed a phenomenal increase in trade. The total exports amounted to \$175,656,947, an increase over 1896 of \$46,440,165. The items included products of the mine, \$14,106,764; products of the fisheries, \$11,303,028; products of the forest, \$30,050,018; animals and their products, \$55,897,800; agricultural products, \$27,429,121; manufactures, \$13,692,773; miscellaneous, \$339,413.

The goods entered for consumption were valued at \$183,209,273, compared with \$154,051,593 for the previous year. In the fiscal year 1899 the total trade was \$308,388,968; in 1900 it was \$358,866,220.

Labor Matters.—The approach of the general elections naturally brought labor interests into prominence, and especially as the Government made strenuous efforts to conciliate this particular class in the community. A commission was appointed in September, composed of Messrs. R. C. Clute, Q. C., Daniel J. Munn, and Ralph Smith, to investigate and report upon the Chinese immigration trouble in British Columbia. Legislation was passed forming a Department of Labor at Ottawa, under the administration of Mr. Mulock, Postmaster-General, and a paper was established under its auspices entitled the Labor Gazette. A conciliation act was passed, dealing with the settlement and prevention of trade disputes by conciliation and arbitration. On March 22 Mr. Mulock introduced, and the House passed, the following resolution, which the Opposition designated as a piece of buncombe, but did not otherwise oppose:

"That it be resolved that all Government contracts should contain such conditions as will prevent abuses which may arise from the subletting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy and deems it the duty of the Government to take immediate steps to give effect thereto. It is hereby declared that the work to which the foregoing policy shall apply includes not

only work undertaken by the Government itself, but also all works aided by the grant of Dominion public funds."

The Conservatives declared, on the other hand, that the alien labor law was not enforced; and that while Americans were working at will in this country, Canadians were still excluded from employment on the other side of the border.

Several strikes occurred during the year, the chief ones being that of the Fraser salmon fisheries in July, the machinists on the western division of the Canadian Pacific Railroad in August, and the troubles at the Valleyfield cotton mills in Quebec in August.

Mining.—The steady increase of mineral production in Canada has been one of the chief incidents in its recent development. The output of 1890 was \$16,000,000; that of 1896, \$22,000,000; 1897, \$28,000,000; 1898, \$38,000,000; and for the year ending Dec. 31, 1899, it was as follows: Copper, \$2,655,319; gold (Yukon District, \$16,000,000; all other, \$5,049,730), \$21,049,730; iron ore, \$248,372; lead, \$977,250; nickel, \$2,067,840; platinum, \$835; silver, \$1,834,371—total metallic, \$28,833,717; total nonmetallic, \$18,141,795; total mineral output for 1899, \$47,275,512.

With exception of a slight falling off in the value of asbestos, the chief minerals showed considerable advances, both in amount and value.

Fisheries.—In 1900 changes in fishing regulations were made necessary by the decision of the Judicial Committee of the Imperial Privy Council, which handed the control of inland water fisheries over to the provincial governments. The system of administration was not greatly altered, and the chief change was in the appointment of officials by the provincial authorities. The fishery statistics of the Dominion are always behind in publication; the latest figures, those for 1898, show a catch valued at \$19,667,126, a decrease of \$3,000,000 from the unprecedented figures of 1897 and an approximation to the usual average.

The chief commercial fishes were lobster, with a valued production of \$3,887,939; salmon, \$3,159,306; cod, \$2,990,583; herring, \$1,987,454; and mackerel, trout, haddock, whitefish, sardines, smelts, hake, halibut, pickerel, oysters, etc. The Canadian sealing catch in Bering Sea for 1899 showed an increase on the two preceding years, and amounted to 34,454 seals. The Dominion Government expenditures for 1899 upon the fisheries was \$417,610, which included \$34,522 spent upon fish culture, \$105,133 upon the protective service, and \$159,459 as fishing bounties. In 1898, 80,000 men were engaged in the fisheries, with boats, nets, etc., valued at \$9,860,000. There were 1,150 schooners, manned by 8,657 sailors, and 72,877 fishermen using 38,675 boats.

Prohibition.—The year opened with a general feeling of disappointment among prohibitionists throughout the Dominion regarding the Laurier Government's refusal to act upon the small majority given to the proposal in the plebiscite of 1898. In March the Dominion Council of the Royal Templars of Temperance accepted a report which spoke of this fact in no uncertain terms. "The Government," declared this document, "with shameful violation of their pledges, have refused to give us the law for which the majority voted, and have utterly ignored the expressed will of the people, clearly showing, as most of us believed at the time the scheme was first proposed, that the whole thing was a subterfuge and a farce, and once again we find ourselves mere trickster's tools and fools." On April 23 the House of Commons debated the question, and Mr. T. B. Flint moved a resolution in favor of a prohibitory law to take

effect "in at least those provinces and territories which have voted in favor of such prohibition." Mr. C. H. Parmelee (Liberal) moved an amendment to the effect that, in view of the state of public opinion revealed by the plebiscite, it would be unwise to enact a prohibitory law at present, and this was carried by 98 to 41 votes.

The Post Office.—This department made marked strides in efficiency during the year under the administration of the Hon. William Mulock. Imperial penny postage proved a great success. In South Africa the Canadian postal corps came in for warm praise at the hands of the army officials, and Capt. Ecclestone's services in its supervision were so much appreciated that he was transferred to the imperial postal department in that country. The Canadian statistics for 1899 show 9,420 post offices, 838 savings-bank offices, 2,640 postal-note offices, 142,141 new savings-bank accounts opened, 471,407 postal notes sold, 1,779 money-order offices; \$14,467,997 as the value of the money orders issued, 31,989,778 as the number of miles the mails were carried, 228,024,900 articles carried, a net revenue of \$3,182,930, and expenditure of \$3,581,848.

Railways.—In 1899 Canada had 165 railways, 17,358 miles of track, \$964,699,784 capital invested in railways, and a train mileage of 52,215,207. Its railways carried 19,133,365 passengers and 31,211,753 tons of freight; earned \$62,243,784, and had working expenses of \$40,706,217. There were 2,217 locomotives in use and 286 sleeping and parlor cars. The Canadian Pacific is the great railway of Canada. At the close of 1899 it had 6,681 miles in operation, a capital of \$340,714,110, a passenger record of 3,483,843, a freight of 5,971,205 tons, a train mileage of 16,873,771, receipts amounting to \$26,745,971, and expenses totaling \$95,454,173. All these items showed a marked increase over the preceding year.

The Grand Trunk Railway, during the same period, had 3,147 miles in Canadian operation, \$343,722,162 of a paid-up capital, a passenger record of 6,178,315, a freight of 8,880,000 tons, a train mileage of 17,007,740, receipts amounting to \$18,471,159, and expenses to \$11,603,335. The Government railways, comprising principally the Intercolonial, showed 1,511 miles in operation, \$61,943,900 of paid-up capital, 1,732,762 passengers carried, a train mileage of 5,139,970, receipts amounting to \$3,903,343, and expenses to \$3,893,739.

An important controversy occurred between the Minister of Railways and the Canadian Pacific, arising out of the latter's demand for a special subsidy to carry on its winter port business at St. John, N. B., under threat of going to a Maine port if its desire was not acceded to. Mr. Blair refused to grant the subsidy, and matters were complicated by a further discussion as to the Canadian Pacific Railroad receiving and handling a portion of the Intercolonial's business below Montreal. Upon this issue generally Mr. Blair and the Hon. G. E. Foster fought the battle at St. John during the general elections, and upon it Mr. Blair won.

Canals.—Upon the canals of Canada, up to June 30, 1899, \$92,036,524 had been expended. The expenditure in 1899 for construction, repairs, and staff maintenance was \$4,533,193—an increase of \$700,000 over the preceding year. The revenue derived by the Government from these canals was \$369,044, against \$407,863 in 1898. The number of Canadian vessels passing through the canals in 1898 was 23,320, with a tonnage of 4,201,916, and the number of American vessels was 6,128, with a tonnage of 3,624,463.

Miscellaneous.—The governments of the Dominion, Ontario, and Quebec were advised of three

awards issued by the arbitrators—Sir John Boyd, Chancellor of Ontario; Sir L. E. N. Casault, Chief Justice of Quebec; and Mr. Justice Burbridge, of the Dominion Exchequer Court—appointed to settle the long-standing disputed accounts between the federal authority and the old provinces of Upper and Lower Canada. Under the awards Ontario lost about \$2,000,000. One award dealt with the claim of the Dominion in behalf of the Ojibway Indians of Lakes Huron and Superior. The claim had been stubbornly contested, not only before the arbitrators, but in the Supreme Court and the Privy Council in England. The arbitrators found that the Dominion was entitled to receive, in behalf of these Indians, from the provinces of Ontario and Quebec jointly, the sum of \$313,000. The second award dealt with what is known as the province of Canada account, and decreed that two provinces owed to the Dominion, Dec. 31, 1892, on this account, the sum of \$212,904, of which \$112,350 is chargeable to Ontario and \$100,553 to Quebec. The third award had reference to the province of Canada account as between the Dominion and the province of Ontario only. The submission to arbitration required that the accounts be brought down to Dec. 31, 1892, on which date the commissioners found the province of Ontario was indebted to the Dominion in the sum of \$1,815,848.

On April 25 the Dominion Government advised that of British Columbia that it had disallowed four statutes passed by the province in 1899. The reason in each case was that restrictive legislation against the Japanese had been included, despite warnings previously given that the royal assent would be refused.

In September the first of a line of 7 vessels which are to ply between British Columbia and South Africa arrived at Victoria, B. C. The attempt of dynamiters to blow up the Welland Canal in April occasioned some excitement. The Fenians who made the crazy attempt were captured and tried, and on May 25 three men were found guilty and sentenced to imprisonment for life. The Ottawa fire was a disaster that will be long remembered. Thousands of people were rendered homeless in Hull and Ottawa on the night of April 27, 15,000,000 feet of lumber were burned, and property in buildings, etc., to the value of many millions was destroyed. The relief fund at Ottawa soon grew to more than \$300,000. The Dominion Government gave \$25,000, as did the cities of Ottawa and Toronto. Cape Town, in the midst of war, raised \$10,000, and the New Zealand Government cabled \$25,000, while the Lord Mayor's fund in London soon amounted to \$60,000.

CHEMISTRY. Chemical Theory.—Discussing in the British Association the Influence of Pressure on the Formation of Ocean Salt Deposits Dr. H. M. Dawson said that in the uppermost layers of the large salt deposits at Strassfurt a double salt containing magnesium and calcium chlorides was found, to which the name of tachhydrite had been given. Experiments showed that this double salt could separate only from solutions the temperature of which was higher than 22.4° C. If the temperature was lower than this limit a mechanical mixture of the simple chlorides separated from the solution. Experiments on the influence of high pressure on the value of this limiting temperature showed that by the application of 100 atmospheres the temperature was raised by only 1.5° C. In comparison with the influence of temperature, that of pressure was small. Thermodynamical considerations indicated that the temperature displacement by the application of high pressures in

the case of other salts must be of the same order of magnitude as that which had been found in the case of tachhydrite. From the insolubility of other sea salts in the mother liquor from which tachhydrite separated, and the direction in which pressure exerted an influence, it might be definitely concluded that the temperature of the mother liquor when tachhydrite was deposited was higher than 22.4° C.

The chairman's address of James Lewis Howe before the chemical section of the American Association, on The Eighth Group of the Periodic System and Some of its Problems, concluded with a brief consideration of the group from the theoretical point of view. Following Dr. Venable, the author said that we may assume that each of the first seven groups consists of a group element, as, in group one, lithium; a type element, as sodium; and two series, one of more positive elements, as potassium, rubidium, and cesium, and the other more negative, as copper, silver, and gold. Further, the more positive the type metal, the more closely will the metals of the positive series resemble it. Thus, in the first group, the positive series, potassium, rubidium, and cesium, resemble the type element, sodium. In the seventh group, the negative series, bromine and iodine, resemble the type element, chlorine. Now, the eighth group differs materially from the other seven groups in that it contains three series, with no group or type element. These three series are transitional from the least positive among the seven positive series, manganese, to the least negative among the negative series, copper, arsenic, and gold. The properties of the metals of group eight show the transition as from a chemical point of view. Iron, cobalt, and nickel form a direct gradation between manganese and copper. Now comes a further question as to the possible transition elements between the most negative series, fluorine, chlorine, bromine, iodine, and the most positive series, sodium, potassium, rubidium, and cesium. From a theoretical point of view such transitional elements should be neither positive nor negative, and should have a valence of zero. A few years ago the realization of such a conclusion would have seemed impossible, yet since the discovery of argon and its congeners it seems almost probable that these places have been filled in accordance with the theory. Taking the most commonly accepted atomic weights, we find helium preceding lithium, neon following fluorine and preceding sodium, and argon really between chlorine and potassium, but with an atomic weight apparently slightly greater than that of potassium, which follows it, resembling in this respect cobalt and nickel of this same group, and also tellurium and iodine. There would, in addition, be expected from the analogies of group eight one, two, and three transitional elements between bromine and rubidium of atomic weight 80 to 85, and Ramsay has suggested that krypton may belong to this place; so also an element or elements of similar character might be expected between iodine and cesium with atomic weight of about 130. The recently published work of Ladenburg and Kruegel on krypton gives it an atomic weight of about 59. This would, as Prof. Ladenburg suggests, make it immediately precede copper; but unless we change very materially our ideas of the periodic law, it is difficult to conceive of an element with the properties of krypton lying between nickel and copper. If these inert gases belong to the eighth group it may seem strange that iron and the other familiar metals which belong here should be so unlike such a type element as argon or neon; it must, however, be

borne in mind that this is only an expected exaggeration of the departure found in the first and seventh groups, where copper departs from its type element, sodium, and manganese from its type element, chlorine. As to whether three elements are expected of atomic weight 150 between the light and the heavy platinum metals, we have little data upon which to theorize. As a matter of fact, there is very little definite knowledge of the metals between cesium and tantalum. The inter-Jovian planet proved to be an indefinitely large number of asteroids; Sir William Crooke's study of the rare earths leads him to the conception of a group of asteroidal meta-elements in the vacant space of the periodic table. We must await further knowledge before these problems can be satisfactorily solved.

The existence of a relation between the different factors of equilibrium (temperature, electromotive force, pressure, physical, and chemical nature, condensation, and concentration) is affirmed by M. O. Boudouard. This relation is such that each of the factors is a function, and a continuous function, of the others. This is known exactly in the law which concerns the correlation changes of pressure and temperature (Clapeyron's formula). There exists further at constant pressure and temperature a relation between the proportions of different bodies present in a gaseous mixture in equilibrium (Isebart's experiments in ammonium sulphate).

Mr. W. J. Pope, in a paper on recent developments in stereo-chemistry, read at the last meeting of the British Association, reviewed the results of investigation in that branch since the hypothesis of the asymmetric carbon atom was first put forward by Van t' Hoff and Le Bel in 1874. Pope and Peachey prepared in 1899 a series of compounds which owed their optical activity to their containing asymmetric nitrogen atoms; and during the present year they had prepared optically active compounds containing asymmetric tin and sulphur atoms. In the discussion of the paper, Dr. Divers commented upon the light thrown upon the atomic theory by this work. Dr. H. E. Armstrong observed that considerable elucidation of the difficult question of valency might be expected from it.

The report of a committee on alloys of the British Association mentions the fact of the belief of most students that certain definite chemical compounds exist in alloys. To prove this, however, special means had to be devised to detect these compounds. Ordinary chemical methods of isolation were of little use under the circumstances. Fractional solution has been effective in some cases, and by means of it several distinct metal compounds have been separated from alloys, such as platinum-tin, copper-tin, zinc-copper, and other compounds. Another method is by observation of the "freezing point." The molten mixture is cooled down slowly, and the temperature is noted at which solid matter begins to appear from the liquid. This varies with the proportions of the constituents, and by making many observations with varying proportions a curve may be obtained of their solidifying temperature, any irregularity pointing to the formation of something more than a mere mixture. By this means many interesting facts have been indicated which have subsequently been rendered evident by examination under the microscope. Valuable and interesting results have thus been obtained, Profs. Roozeboom and Chatelier having particularly distinguished themselves in this direction. A remarkable instance of peculiarity is exhibited by mixtures of aluminum and antimony, when all the mixtures freeze out at a

higher point than either of the components, and show two irregularities indicative of two distinct compounds. In these mixtures it appears that the component that predominates to a considerable extent is always a solvent to the compound formed with the other component; but as the proportion of the other component is increased, the condition becomes reversed. Interesting results have been obtained by observing, not only the freezing point, but the point where the whole mass solidifies, so that for every mixture the exact composition of the mass from which the compound has separated and of the separate compound is indicated. Röntgen-ray photography has also been utilized to demonstrate the formation of these intermetallic compounds. A long list of known and supposed alloy compounds is given in the report; and it appears that the atomic relations generally assumed by chemists do not hold in the case of the alloys.

In presenting the foregoing report Mr. F. H. Neville held that intermetallic compounds may be compared with the unstable compounds of the halogens to each other and with sulphur. They often bear a great superficial resemblance to their constituent elements, and appear to show marked dissociations or to form systems in true equilibrium with the liquid mixture of their components.

An experiment described by Schönbein nearly forty years ago in which on shaking lead amalgam with air and water equivalent quantities of lead oxide and peroxide of hydrogen were formed has been followed in recent years by many isolated cases indicating a phenomenon of autoxidation or simultaneous oxidation by air of two substances, one of which is incapable of being oxidized by air alone. The formation of peroxide of hydrogen in such cases is proved by the researches of Bamberger, and of Manchot in particular. The probability has been suggested by Engler that in all these instances the reaction is simultaneous, half of the oxygen molecule going to oxidize the substance present, and the other half to form hydrogen peroxide. In many cases the formation of the latter substance is difficult to prove, on account of the secondary oxidizing action in the substance used. Dr. H. Biltz has described experiments on the oxidation of hydrazone of debromoxylbenzaldehyde in alkaline solution by air at the ordinary temperature, and in this case he has been able to prove that the amount of oxygen in the hydrogen peroxide formed is exactly equal to the oxygen used up by the hydrazone.

Prof. Brauner said at the German scientific meeting in September, 1899, concerning the position in the periodic system of the elements of the rarer earths, that he considered that the position indicated by the fourth group and the eighth series must be assigned to a group of three elements—cerium, 140; praseodymium, 140.8; neodymium, 143.6. This conclusion was based in a great measure on the study of the higher oxides. The author considered that the oxides Pr_2O_3 and Nd_2O_3 belong to the oxides of the PbO_2 , or ozonic type—that is to say, that the metals in these oxides are tetravalent, and the oxides correspond to Ce_2O_4 . At first sight the oxides obtained by precipitation with hydrogen peroxide should belong to the second, H_2O_2 , or autozonic type of oxide. Prof. Brauner found that on repeating this experiment at low temperatures the hydrates of true superoxides were formed, possessing the formula Pr_2O_4 and Nd_2O_4 , and losing oxygen with great ease.

Chemical Physics.—The record of the study of radio-active substances, as it is summarized in

a paper read by H. Carrington Bolton before the Chemical Society of Washington, and published in the Journal of the American Chemical Society, begins with the announcement by Becquerel that the salts of uranium emit invisible radiations capable of discharging electrified bodies and of inducing skiagraphic images on sensitive plates. Other experimenters found that a number of other substances had the power of emitting "Becquerel rays": Mr. Henry, phosphorescent zinc sulphide; Niewengloski, insolated calcium sulphide; Troost, artificial hexagonal blende; Schmidt, thorium compounds. Mme. Curie, studying the subject with her husband and using a special apparatus, found the property in a number of minerals, and observed especially that pitchblende contained a substance analogous to bismuth, which emitted rays 4,000 times stronger than those of uranium. She called this substance polonium. Afterward Mme. and M. Curie discovered a second radio-active body in pitchblende which they called radium. This hitherto unknown element was found to accompany barium in analytical separations. Its chloride is wholly soluble in water, and it responds to the usual tests for barium. Its spectrum shows the lines peculiar to barium, and other lines peculiar to itself. Attempts to separate barium from radium have been unsuccessful, but a salt has been obtained having 900 times the activity of uranium. The rays emitted by the two new substances possess luminosity and actinic and skiagraphic power, and render the air through which they pass a conductor of electricity. In some other respects polonium and radium manifest noticeable differences in behavior. The rays emitted by these substances have the power, when in contact with inert bodies, of communicating their activity to them, and of exciting phosphorescence in gems and minerals (barium sulphide, calcium sulphide, etc.). Mme. and M. Curie have observed that this induced property continues for a considerable time. In fluorite the phosphorescence remained twenty-four hours after the influence of radium had been removed. The authors, having obtained samples that were from 5,000 to 50,000 times more powerful than uranium in communicating radio-active energy to inactive bodies, observed while experimenting with them that the induced activity immediately after exposure varied between one and fifty times that of uranium, but was reduced two or three hours later to one tenth its original value. A research was made to determine whether induced radio-activity is due to traces of radio-active matter carried in the form of vapor or powder to the exposed surface. The fact that no differences were found in the radio-activity of the various substances experimented upon seemed to favor this supposition; but the authors believe they have proved the theory to be incorrect, and that real induced radio-activity exists. They regard the phenomenon as a kind of secondary radiation due to Becquerel's rays, but differing from the phenomenon which is known to exist for Röntgen rays. "Indeed, the secondary phenomenon of Röntgen rays, as known at present, becomes apparent at the moment when the body is struck by the Röntgen rays, and ceases abruptly with the cessation of the latter." The energy imparted to metallic plates was not removed by washing in water, although radium chloride is soluble in water. Mme. and M. Curie have further found that the rays emitted by radiferous salts of barium are very active, and are capable of transforming oxygen into ozone. The radiferous products necessary for the production of ozone are all very active and very luminous, the phenomenon ap-

pearing to be more directly connected with radio-activity than with luminosity. Very luminous radium produces less ozone than radium chloride, which is much less luminous, but more strongly radio-active. Again, if a radium salt is contained in a glass vessel, a violet coloration is seen in the glass, which proceeds from the interior to the exterior surface. At the end of about ten days the bottom of the flask is almost black. With a less active product the tint is less deep, and requires a longer time to develop. The phenomenon is not due to the reduction of lead, as it occurs in glass containing no lead. All these phenomena indicate that the rays emitted by radium represent a continual development of energy. In another paper on the subject Mme. Curie cited both her experiments and the spectrum examinations as seeming to prove that radium exists as a substance, and possesses an atomic weight slightly higher than that of barium. In the course of further experiments with radium, Mme. and M. Curie found that the radiant emission charged bodies which received it negatively, while the radium itself was charged positively. In the light of these and other experiments, M. Becquerel declared, in March, 1900, that only one interpretation seemed possible, at least for that part of the emission comprising the deviating rays, and that was that the emission was composed of material particles carrying negative charges. He did not consider the objection to this view based upon the loss of mass of the radium valid, because, as the Curies had shown, the charges carried off were so feeble "that if we admit the same proportions as with cathodic rays, some millions of years would be required to remove one milligramme in the case of the most intense radiation that has yet been observed." This author added, as a thing that could be said with certainty, that "the new discoveries singularly limit the field for hypotheses, and by fixing the direction for research, permit us to foresee a generalization of great magnitude, which will be of great attraction in the study of certain properties of matter to which in the last few years a large body of scientific men have turned."

Throughout the researches of Mme. and M. Curie on the isolation of radium, the progress of the condensation of the element was controlled by examination of the spectrum and by determinations of atomic weights. In all the separations a part of the product was kept for spectroscopic studies, and a part for atomic weight. The spectroscopic studies have been made by M. Demarçay. The last of his products apparently contained only a trace of barium, and might be considered almost a pure radium chloride. It was not in large enough quantity for atomic weight investigation, and Mme. Curie was obliged to deal with the less concentrated product. Her determinations gave 138 as the atomic weight of pure barium in barium chloride, while two determinations carried out on the radio-active chloride gave 174.1 and 173.6 as the numbers for the atomic weight of the metals in this chloride. The author had no means of distinguishing the relative quantities of radium and barium in this product, but M. Demarçay thinks, from the aspect of the spectrum, that there is rather more radium than barium. In any case, it appears to be certain that the atomic weight of radium is much higher than 174. The quantity of radium chloride isolated has been insufficient for an examination of the properties of pure radium. Mme. and M. Curie, however, express themselves much pleased at having obtained a proof of the existence of this element, and

at having confirmed the idea which guided them in their researches on radio-active materials.

A fundamental difference has been found by M. Henri Becquerel to exist between the rays emitted by radium and those of polonium, in that a part of the radium rays are deflected by an electro-magnet. The deviation appears to be the same in the air and in a vacuum. The rays given off appear to be the same in nature, but to differ only in intensity. Herr F. Geisel has observed a considerable difference in the penetrating power of the rays of the two bodies: while the rays from radium penetrate fairly well a silver thaler, those from polonium, although more intense, are absorbed by thinner metallic plates. The shadows of the band and of metallic objects thrown by the polonium rays on a fluorescent screen are stronger in contrast than those produced by the radium rays. Experiments by M. Henri Becquerel on the velocity of propagation of the rays emitted by radium indicate that this factor is of the same order as that of the cathode rays. The spontaneous luminosity of radium compounds was announced by Mme. Curie in March, 1899. M. A. Debierne, experimenting with pitchblende, found associated with titanium a substance showing 100,000 times more radiant power than uranium, and having chemical properties distinct from radium and polonium. The rays emitted by this body, which was named actinium, had the same manifold action as those from the other substances, except that it was not self-luminous. M. Debierne found the new substance analogous to thorium, and suggests that the radio-activity of the latter is due to its presence. Other experiments have been made with these radio-active substances by some German chemists and by Mr. Bolton. The primary source of the energy manifested by them is still unknown. B. von Lengel, of Buda-Pesth, has pointed out that the chemical evidence is insufficient to establish their elementary character, and claims, in a preliminary paper, to have prepared radio-active barium synthetically. By treating uranium nitrate and barium nitrate fused in the electric arc with nitric acid, water, and sulphuric acid successively, he obtained radio-active barium sulphate possessing all the characteristic physical properties observed in that substance.

The property of becoming luminous under the influence of the Becquerel rays has been observed by M. Paul Bary to be acquired by certain metals of the alkalis and the alkaline earths—by sodium, potassium, lithium, rubidium, cesium, magnesium, calcium, strontium, and barium. Of other metals, only phosphorescent salts of uranium exhibited this property. These results lead the author to the conclusion that the same class of bodies which yield salts phosphorescent to light yield also compounds which become luminous under the influence of the X and the Becquerel rays. From this point of view, at least, these latter rays behave like luminous rays of shorter wave length.

At the conclusion of an article in *Nature*, on the nature and properties of the Becquerel rays, Mr. G. H. Bryan observed that before 1896 physicists were just beginning to grasp Maxwell's theme and to realize more clearly the simplification into the notions of electric and optical phenomena by the conception of the ether. The discovery of rays capable of discharging electrified bodies in the air had not only shown the fallacy of our preconceived dogmatic notions as to the division of substances into conductors and dielectrics, but had taught us that the properties of the ether are not so simple as we had anticipated.

New Substances.—A new sugar has been described by Mr. Gabriel Bertrand as produced by the action of the sorbose bacterium upon erythrite. By its reaction it appears to be a ketone of the composition $\text{CH}_2(\text{OH})\text{CO}\cdot\text{CO}_2(\text{OH})\text{CH}_2\text{OH}$, thus being a lower homologue of levulose. Erythrollose, as it is called, is not fermentable by yeast, but forms a well-crystallized osazone. It resists oxidation by bromine water, and hence is probably a ketone.

Samarium prepared by the crystallization of a double magnesium nitrite, as already described by M. Eugène Demarçay, can, according to that author, be obtained in a state of comparative purity, showing, after continuous fractionation, the properties of the first and last portions to be absolutely identical, both with regard to the absorption and the spark spectrum. The absorption spectrum obtained by the author corresponds in all respects with that previously published by Lecoq de Boisbaudran. The line 614.4 is, however, absent in this specimen of pure samarium. The author obtained the absolute weight of his samarium by the synthesis of the sulphate from samaria and sulphuric acid, varying between 147.2 and 148. Nitrite of samarium and magnesium, $\text{Sm}(\text{NO}_2)_2 \cdot 3\text{Mg}(\text{NO}_2)_2 \cdot 24\text{H}_2\text{O}$, is a pure yellow salt, crystallizing in large rhombohedrons and melting between 93.5° C. and 94.5° C. The simple nitrate, $\text{Sm}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$, is formed in large orange-yellow crystals, melting at 78°–79° C., and is very hygroscopic.

By passing dry cyanogen into a glass tube heated to redness and full of iron nails T. L. Phipson obtained a gas which could be collected over water. As described by the author, this gas is colorless and almost odorless, extinguishes a lighted match without taking fire itself, and is not absorbed by potash. It does not detonate when mixed with oxygen and submitted to the electric spark. Its weight is materially different from that of nitrogen, and more so from that of cyanogen, so as to make it sure that it is neither. From two determinations that were made, its atomic weight was deduced as that of a substance having one half the carbon contained in cyanogen. The author intimates that it is perhaps identical with argon, of which about 1 per cent. has been found in atmospheric air. If this be so, then argon is a carbide of nitrogen containing half the carbon found in cyanogen.

In a paper read in the British Association on some new chemical compounds discovered by the use of the electrical furnace Mr. C. S. Bradley announced the production of silicides of barium, calcium, and strontium by heating the carbonates or oxides with silica in the electric furnace in the presence of carbon. These silicides have a metallic appearance with a crystalline structure, oxidize in the air, evolve hydrogen when decomposed with water, and yield silico-acetylene, Si_2H_2 , with hydrochloric acid. Silico-acetylene, unlike ordinary acetylene gas, is a yellow crystalline compound.

Experiments are described by M. Eugène Demarçay with gadolinium, which, besides small quantities of terbium, contained a certain quantity of Σ -Z, which had not been eliminated. In the course of the fractionations, a decided quantity of the double nitrate of magnesium and gadolinium was isolated. The spectrum of the gadolinium extracted from this salt, examined under the spark of the induction coil, showed only slight traces of the strong lines of Σ -Z and yttrium. The stronger lines of this spectrum were only feeble, and the traces of yttrium were estimated at less than 1/1000 part of the absorption spectrum. This gadolinium, at first sight, appears to be as white

as magnesia, but with a little attention slight yellow tinges may be seen, which are ascribed to the presence of a trace of terbium. The double magnesium nitrate melts at 75.5°–78° C. The simple nitrate, crystallizing with CH_2O , melts at about 91.5°–92° C. At this temperature the nitrate with CH_2O seems to lose water and be transformed into a less hydrated nitrate, which remains in solution, and may lower the freezing point. This gadolinium gives the band spectrum of M. Lecoq de Boisbaudran. The atomic weight of gadolinium has been found by the various chemists who have investigated the properties of this element to be about 165. From several attempts the author has deduced a number approximately the same, but he believes it to be slightly too high, on account of the defects of the method used.

Gadolinium has been found by C. Benedicks to be closely allied to the yttrium metals, and to resemble the cerium metals in a much slighter degree. Therefore a small intermediate group is formed of samarium and gadolinium. For trivalent elements, most characteristic are the platinum-chloride and gold chloride double salts, the potassium double sulphate, and the basic carbonate of gadolinium. Nothing can yet be definitely stated with regard to the position of gadolinium in the periodic system, but it will certainly, the author affirms, find a place in the eighth horizontal row.

The manufacture of artificial dyestuffs in Germany is referred to in a recent consular report from Frankfort-on-the-Main. The endeavors of manufacturers and industrial chemists are directed, generally speaking, to producing the organic natural products by artificial means, and in a more serviceable form for dyeing; also to producing new colors approaching and even surpassing the natural kinds in effectiveness and brilliancy. Since the discovery that the important dyestuff of madder—alizarine—could be produced in an easy and cheap manner from the carburetted hydrogen of coal tar, the use of dyestuffs obtained by coal-tar distilling has gradually grown to such an extent that in Germany about five times as many artificial colors are made as in all other countries combined. The importance of indigo is evidenced by the fact that the production of vegetable indigo equals in value the entire world's production of artificial dyestuffs. The present artificial indigo represents almost pure indigotin. It is sold in the form of a 97-per-cent. powder, whereas the indigotin contained in vegetable indigo fluctuates between 70 and 80 per cent. It contains no indigo red, no indigo brown, and no indigo blue. The lack of indigo red and indigo blue, which both seem to be of some importance in the relation of the dyestuff to the fiber, are its special disadvantages. The indigo red seems to be of importance in the production of darker shades of color. There is no doubt that at some time not too far off it will be possible to produce this ingredient also. Artificial indigo is used by dyers in the same way as vegetable indigo.

A peculiar, light-brown, highly voluminous substance is described by Erdmann and Köthner as being formed by the action of acetylene below 250° C. upon cuprous oxide, or even, though more slowly, upon copper. At higher temperatures a black carbonaceous mass is the result, and at a red heat (from 400° to 500° C.) carbon is deposited in a graphitic condition. The light-brown stuffy material yielded cuprous chloride with hydrochloric acid, a distillate from its mixture with zinc dust possessing the characteristic of naphthalene, or, at high temperature and under rapid heating, aromatic compounds, among which naphthalene and a cresole were indicated. Erdmann and Köthner

classify this body as a very complex but nonexplosive copper acetylene, and give it a formula which implies a loss of carbon. This formula is criticised by F. A. Gooch and DeForest Baldwin, who, upon revising it, deduce the conclusion that the new product is deficient in hydrogen, not in carbon, as compared with acetylene. The results of the experiments of these authors go to show that, while metallic copper may at comparatively high temperatures induce the polymerization of acetylene, the action is an oxidizing one which starts at moderately low temperatures; and they find no evidence that the product of the action of acetylene on the oxides of copper under the conditions of their experimentation is other than a mixture of a hydrocarbon or hydrocarbons with metallic copper, and, probably, in the darker preparation, some free carbon.

The hydrate of sulphuric acid, $H_2SO_4 \cdot 2H_2O$, whose existence was predicted by Mendeléeff, has been obtained in crystalline form by Von Biron by cooling with liquid air a mixture of strong sulphuric acid and water in the required proportions. The whole solidifies into an amorphous mass, which, when rubbed with a glass rod, becomes crystalline, the temperature at the same time rising to $75^\circ C$. If a solution of sulphuric acid of the right strength is now cooled with solid carbonic acid and ether, and a fragment of the crystalline hydrate is added, the liquid crystallizes well. The crystals melt at $-38.9^\circ C$.

Numerous attempts have been made to obtain the condensation product N_6 from the curious compound of nitrogen and hydrogen known as hydrazoic acid. Among the experiments were those made in the laboratory of Prof. William Ramsay, using the method of the interaction of silver azoimide and iodine. Although the substance sought could not be isolated, Prof. Hautzsch has succeeded in isolating a definite iodide of nitrogen from the products of the reaction. By working at a low temperature and as rapidly as possible in the presence of ether, the new iodide is taken into solution by the ether, and can be obtained as a yellowish solid in minute quantities, not exceeding 0.2 gramme, by the rapid evaporation of the ether. The solid is too unstable to submit to analysis, but an examination of the solution showed that its composition was N_6I . This iodide is violently explosive. Attempts to prepare N_6 by the action of the iodide on silver azoimide, or by the spontaneous decomposition of the iodide, were unsuccessful.

M. Moissan has been able, by the aid of a method in which a U-tube of copper takes the place of his original platinum-iridium apparatus, to study without difficulty reactions demanding considerable quantities of fluorine. A new fluoride of manganese obtained by him casts some light on the valency of the metal. Fluorine gas reacts readily with powdered manganese, and in Prof. Moissan's experiments a higher fluoride than MnF_2 was formed, which, however, on account of the violence of the reaction, was not of constant composition. The interaction of fluorine and manganese iodide gave a definite fluoride, Mn_2F_7 , which in many of its reactions behaved like free fluorine, giving with pentachloride of phosphorus PF_5 , and with amorphous carbon a fluoride of carbon. On heating this manganese fluoride splits up into MnF_2 and fluorine gas.

Metallic cesium may be prepared, according to Herren Graeffe and Eckhardt, by the reduction of cesium carbonate by means of magnesium powder. The mixture is heated in an iron tube, through which a slow current of hydrogen passes. The metal distills over, and is collected under melted

paraffin. It has a silvery luster with a slight yellow tint, and remains bright under paraffin. On exposure to air it oxidizes quickly, melts, and finally inflames. In its action on water it resembles potassium.

Experiments have been described by Hall in the American Chemical Society which he has made to ascertain the cause of the loss in weight which platinum vessels are known to suffer when heated in the flame of a Bunsen burner or over a blow-pipe. Platinum wires inclosed in glass tubes were heated strongly by an electric lamp in the vapor of various gases. There appeared practically no loss in hydrogen, carbonic oxide, and carbonic acid, but there was a rapid loss when the gas was oxygen or air. Similarly it was found that platinum wires suffered a greater loss of weight when heated in an oxidizing flame than when heated in a reducing flame. The author suggests that these phenomena are best explained by the hypothesis that platinum forms a volatile oxide, stable at high and low temperatures, but unstable at intermediate temperatures—a similar behavior having been observed by Troost and Hautefeuille in the case of platinum chloride.

A new cellulose product—acetate of cellulose—is described by Dr. C. O. Weber as a substance which constitutes a point of departure for a whole series of homologous bodies, some of which are destined to play an important part from the industrial point of view. The new substance is prepared by a method discovered by Cross and Bevan, the application of which is already carried on on a large scale, as is also the manufacture of tetrabutryrate of cellulose, which is prepared in an analogous manner. Besides these ethers of cellulose, nothing is at present known beyond the nitrates of cellulose, which are distinguished from the ethers by their explosive properties. The ethers are not inflammable, and burn only imperfectly. With solvents they behave in the same manner as the nitrates, in so far that all their solutions are of a colloidal nature, but they differ from the nitrates in regard to the extent of their solubility. The solution of the acetate in nitrobenzene becomes on cooling a solid but completely transparent jelly. The acetate resists the action of reagents in a remarkable manner; dilute acids, with the exception of nitric acid, do not attack it at all; neither do the alkaline lyes, even at a high temperature; while these reagents completely destroy the nitrates, even in the cold. When boiled for several hours with an alcoholic solution of soda very fine particles are completely saponified; but the saponification does not disintegrate the materials, so that the particles retain their form and transparency. The insulating properties of the acetate surpass those of India rubber and gutta-percha. The substance is very durable and does not begin to soften below a temperature of $150^\circ C$. The change is not accompanied by any destruction of material. Hydrate of cellulose resembles the acetate in chemical properties and resistance to the action of reagents and to high temperatures, but is more soluble in many substances. The filaments prepared from the butyrate closely resemble those formed from the acetate, but are a little more flexible and softer. These properties promise to give commercial importance to the acetate and butyrate of cellulose, which will probably be found preferable to celluloid in cases where a noninflammable material is desired rather than a very inflammable one. By reason of their noninflammability, their resistance to the action of moisture and to high temperature, and their high insulating properties, they can easily replace

mica and be employed for insulators. It is also certain that they can be advantageously used as metallic lacquers.

Essence of chrysanthemum is described by O. Perrier as a greenish liquid of an oily consistence, with a special odor recalling those of peppermint and camomile. It begins to boil at 160° C.; its density is 0.932 at 15° C., and its index of refraction at 18° C. is 1.4931. It is soluble in 10 parts of alcohol at 95° C., but is almost insoluble in alcohol at 70° C. When cooled down to -15° C. it deposits a small quantity of an amorphous solid substance, which is probably paraffin. At 240° C. it becomes black; and it solidifies in a mixture of ether and solid carbonic acid.

A new gutta-percha lately discovered is the product of a tree which grows principally at Dunge, near Zanzibar. When the tree is tapped a white fluid exudes, which, placed in boiling water, coagulates into a substance strikingly resembling gutta-percha. As the material cools it becomes very hard, but while soft it can be molded into any required shape. The experiments made upon it indicate that while it may not prove equal to gutta-percha, it will be suitable for some of the purposes for which that material is used.

Among the products of the action of fluorine upon sulphur recently investigated by M. Moissan, thionyl fluoride, SOF_2 , was noticed. MM. Moissan and Lebau have made this fluoride the subject of a more careful study, and have succeeded in obtaining it pure by the action of iron upon thionyl chloride and by the interaction of fluoride of arsenic with thionyl chloride. It is a colorless gas, foaming slightly in moist air, and possessing an unpleasant odor resembling that of carbonyl chloride. It is easily condensed by the action of carbonyl dioxide and acetone, giving a liquid that boils at -32° C. In the absence of moisture glass is not attacked by the gas at temperatures lower than 400° C. Above this temperature silicon tetra-fluoride and sulphur dioxide are produced. Water decomposes thionyl fluoride at ordinary temperatures, giving hydrofluoric and sulphurous acids. Indications were observed of another oxyfluoride of sulphur, not absorbed by water and possessing a lower boiling point.

New Processes.—Of recent developments in the textile industries, Dr. A. Liebmann mentioned in the British Association the process for producing the peculiar "scroop" in silk and an increase in luster on woolen fabrics by means of chlorination and bromination. He described different modes of producing artificial silks from gun cotton, cellulose, and gelatin, and referred to the mechanical improvements made for increasing the brilliancy of cotton fabrics and to the operation for obtaining highly lustrous effects by mercurization.

In a paper by Mr. A. E. Sunderland on applications of electro-chemistry in dye and print works, the requirements to be fulfilled by a machine for electrical dyeing are defined as being: 1. the poles must not be of metal, but of carbon or biscuit porcelain, which conduct by being saturated with the electrolyte; 2. they must be as near to one another as possible; 3. the cloth must pass between the poles in the open width; 4. the poles may be perfectly smooth and perfectly cylindrical, revolving freely. These particulars are necessary, because in the ordinary passage of the electric current across any dye solution the tendency of the dye is to concentrate itself around the negative pole, and not to circulate freely in the whole dye vessel. There is always thus a great danger of unevenness. In the finishing of goods

the peculiar effect called watermarking or *moiré* can be produced by a process which resolves itself practically into the local application of electrolysis. A platinum plate of suitable size is connected with the positive pole of the source of current. On this conducting surface is placed some absorbent material saturated with a solution of common salt. On this pad is placed the fabric to be watermarked, and the plate engraved with the watermark, connected with the negative terminal, is pressed down upon it. The salt solution is decomposed, and a facsimile of the watermark is printed on the cloth. To produce opaque designs the absorbent material is saturated with a solution of barium chloride which is decomposed on passing the current.

Chlorine has been used by Traube and Bassenge for the purification of water, Bassenge recommending a dose of 0.0978 gramme of chlorine per litre of water for ten minutes. Bromine, recommended by Schimburg, gave the same result with 0.04 gramme per litre after five minutes' contact. According to Allain, a dose of 10000 part of iodine kills all the nonsporadic pathogenic germs in half an hour, as well as most of the saprophytes. F. Mainejac has carried out a systematic series of experiments with a badly contaminated water, using varying equal quantities of chlorine, bromine, and iodine per litre. Taking the lowest quantity given by the above-mentioned authors as the basis—that is to say, 0.01 centigramme per litre of water for half an hour—he found that the number of microbes per cubic centimetre was reduced from 17,500 in the original water to 300 by the action of chlorine, to 190 by that of bromine, and to 90 by that of iodine.

From a number of papers, published in abstract in the *Moniteur Scientifique*, on the purification of acetylene it appears that solutions of metallic salts do not wholly remove the impurities, while chromic acid and chloride of lime seem to be the only substances that effect a complete purification. Of these chromic acid is preferable, since explosions have occurred with chloride of lime. The acetylene works which supply the Hungarian state railways with gas use, according to M. Pfeiffe, a solution of chloride of lime and plumbate of soda, chloride of lime having been found likely to cause an explosion. Experiments with the new mixture indicate that it is not dangerous.

Up to the present time lithium has been obtained by electrolyzing lithium chloride in the molten state. The reason why this metal can not be obtained from aqueous solutions by electrolysis is that it reacts with water, forming hydrogen and lithium hydroxide. If a solvent for a lithium salt could be found upon which lithium does not act, the metal could be deposited from the solution by electrolysis, provided the solution proved to be an electrolyte. Pyridine has been found by Louis Kahlenberg to be a solution of this kind. It will dissolve lithium chloride and thus form a solution that conducts electricity. The author has obtained lithium in white metallic form from solutions of lithium chloride in pyridine by electrolysis at room temperatures. It can be obtained thus from a comparatively cheap ore in quantities sufficient for most scientific purposes. Lithium, being an alkali metal that is not very plentiful in Nature, has thus far not found use in practical life in the metallic form; and the indications at present are not that it will be used in practice.

In all the usual methods the ignition of a jet of recently generated hydrogen gas is attended by danger of explosion. The following method is recommended by C. G. Hopkins, who has used it

with his classes for several years, as absolutely safe and involving no loss of time. As soon as the action begins collect the escaping gas in a test tube, and when the tube is thought to be full of pure gas remove 2 or 3 feet from the generator and ignite the hydrogen in the test tube; then immediately attempt to light the jet of hydrogen with the hydrogen flame contained in the test tube. If the gas is explosive it will explode in the test tube and leave no flame. If, on the other hand, a flame remains in the test tube with which the jet can be ignited it is certain that the gas in the generator is no longer explosive. Hence the caution: Never light the hydrogen jet except with the hydrogen flame obtained as just described.

In the preparation of oxidomorphine, A. Loubiou has obtained a very white and well-crystallized product by the aid of peroxide of hydrogen. The return by this new process is less than by that with ferrocyanide, but the product is obtained pure immediately; further, not more than an hour is required for the performance of the operation.

Two striking reactions of silver salts and solution of ammonium persulphate have been observed and put under investigation by Dr. Hugh Marshall. When a small quantity of silver salt is added to a strong ammoniacal solution of ammonium persulphate, nitrogen is evolved almost immediately. The temperature rises rapidly, and the action may soon become violent. Apparently the silver is rapidly peroxidized by the persulphate and reduced by the ammonia. In the second reaction an aqueous solution of ammonium persulphate was steadily decomposed at the ordinary temperature in presence of small quantities of silver salts. No evolution of gas takes place, but part of the nitrogen of the ammonium salt is converted into nitric acid. It was found that in the space of two or three days a milligramme-equivalent silver salt per litre of solution decomposed one half of the persulphate originally present, the temperature being 20° C.

The fact that the alkaloids cocaine, atropine, and nicotine are derivatives of pyrol has suggested experiments in synthesis of pyrol products. Among the latest of these syntheses is that of pyrol aldehyde, the analogue of benzaldehyde and furfuraldehyde, which has been accomplished by Bamberger and Djierdjian. The process was by Reimer's reaction with chloroform and potash. The new aldehyde forms a well-crystallized hydrazone, oxime, and also an insoluble sodium sulphite compound, but differs from its analogues in crystallizing readily and in having no smell. Prismatic crystals of this substance several centimetres long have been obtained.

Among the different substances which have been proposed for the biological purification of waters oxidizing agents occupy a preponderating place, especially the permanganates. The attempts at purification by these means have, however, been nullified by reason of the impurities introduced by the reagent. For example, the use of permanganate of potash and lime gives rise to the presence of free alkali in the water, and small quantities of free lime (the alkali present in most cases) make the water absolutely unfit for drinking purposes. This difficulty may be done away with by using permanganate of alumina and permanganate of baryta in variable proportions. The reactions take place easily in the cold, and the quality of the water can be determined five minutes after the addition of the first drop of the reagent. In some cases the reaction is instantaneous.

Having found that recently reduced nickel acts

directly on acetylene, either slowly or with incandescence, Paul Sabatier and J. B. Senderens experimented with other substances. With platinum black, iron, or cobalt the slow reaction was scarcely perceptible, and the phenomenon was limited to the decomposition with incandescence, followed by the more or less complete hydrogenation of a portion of the acetylene. Ethylene, on the other hand, was rapidly decomposed above 300° C. by recently reduced nickel. The metal swelled up considerably, and evolved a variable mixture of methane, ethane, and hydrogen, accompanied by a very slight proportion of higher formene carbide.

On reviewing the science of electro-chemistry and its application to modern manufacturing processes, "one is struck with amazement," says Mr. F. Mollno Perkin in Nature, "at the enormous strides which have been made within the last ten or twenty years. On studying works on chemistry little more than ten years old hardly a reference is found to the use of electricity in metallurgy, still less in regard to the manufacture of metallic salts or of the nonmetals, and absolutely none in reference to the preparation of organic chemical bodies, at any rate, on a large scale." Within the last few years electro-chemical analysis has been very much studied, and now many laboratories are fitted with special apparatus for pursuing it. While the process for depositing metals from their solutions has not undergone any radical change, the means at our disposal for carrying out the work have enormously improved. With the cheapening of production since the advent of the dynamo and the storage battery very much has been made possible that would have been regarded as visionary only a few years ago. Among the important applications for various purposes mentioned by the author is the preparation of copper for electrical purposes, of which the absolute purity required is hardly obtainable by furnace methods. Such copper is, however, obtained by the electric process, while the gold and silver present in the metal are also separated and saved. While zinc can not as yet be obtained from its ores by electrolytic methods, zinc galvanizing by electrolysis is used to a considerable extent in place of the old method of hot dipping. The inner surfaces of tubes and the bottoms of ships, torpedo boats, and other large surfaces are now galvanized in this way, with a large saving of convenience. Electrical processes are now used largely, too, in the reduction of aluminum, the manufacture of calcium carbide, gold, silver, and nickel plating, the procuring of nearly all the metals from their oxides, the purification of tin from gold, and the making of accurately reflecting mirrors.

Among the special processes to which electrolytic methods have been successfully applied, the author mentions the preparation of a very pure white lead from a dilute solution of sodium chlorate and carbonate, the electrodes being of lead; of dye products, the nature of which depends upon the solutions employed, the strength of the current, and the material of the electrode, by the electric oxidation of aniline; the production of hypochlorite bleaching solutions by the electrolysis of potassium chloride at low temperatures; and the production of iodoform by the electrolysis of a solution of potassium iodide and sodium carbonate with alcohol.

In the simple method of Dr. R. Uhludruth for preparing free hydroxylamine, when the phosphate of the base is heated gently under reduced pressure the base distills over in a state of such purity that the distillate solidifies on placing the receiver in melting ice.

Atomic Weights.—Discrepancies still appear in the value of the atomic weight of nitrogen as deduced by chemical and by physical methods. The mean value as found by the best chemical determinations is 14.034, while the value calculated from the practically identical densities found by Lord Rayleigh and Leduc is 14.006. A more recent chemical determination, made by Mr. G. Dean from silver cyanide in a state of great purity, gives 14.031—nearly identical with the average chemical value given above. Further work, Nature says, is clearly necessary to explain the considerable discrepancy of nearly 0.2 per cent. between the results obtained by physical and by chemical methods.

Experiments published several years ago indicated that the formula of hyposulphurous (or hydrosulphurous) acid was $H_2S_2O_3$, instead of the accepted form H_2SO_3 . This view was not generally adopted, and the author has made new experiments in conjunction with M. Bazlen, to test them. The results sustain them, and accordingly hyposulphurous acid must be held to correspond in its state of oxidation to the oxide S_2O_3 .

Four series of determinations of the atomic weight of boron by Henri Gautier, using boron sulphide, carbon boride, boron bromide, and boron chloride, gave results the average of which is 11.016. This value is adopted by the author. It is a little larger than the values previously found by Abrahall, and again by Ramsay and Aston.

The International Commission on Atomic Weights has published a paper recognizing the desirability of a universal standard of atomic weights as asked by the German Chemical Society, but expressing the conviction that unanimity can not be reached by starting from $O=16$. Grave reasons are urged by many voices against the abandonment of the standard $H=1$. If alteration of the standard is thought necessary, it would be better to start from an element whose atomic weight can be conveniently ascertained—such as silver or iodine—which also serves as a practical starting point in consideration of the sharpness of its reactions in numerous analytical operations. In the opinion of the commission, urgent reasons for an alteration do not yet present themselves. The time has not yet come for an unchangeable table of atomic weights. Teachers want simplicity and clearness, and instructors must suffer no difficulty in presenting intelligible and confidence-inspiring statements. The commission asks from teachers answers to the following questions:

Shall the unity of hydrogen be retained as the standard for reckoning atomic weights?

Shall the atomic weights be given approximately with two decimal places in which the uncertain figures can be recognized by the eye?

Shall the International Atomic Weight Commission have the current table of atomic weights edited on this basis?

By experiments on the density of sulphur vapor at very low pressures, O. Bleier and L. Kohn have obtained results indicating that the true molecular formula of gaseous sulphur, undissociated, is S_8 . This value agrees with the conclusions previously arrived at by the application of the freezing-point and boiling-point methods to sulphur solutions.

From two determinations with ferric oxide prepared from precipitated ferric hydroxide, T. W. Richards and G. Paul Baxter found 55.900 as the mean value of the atomic weight of iron, and five determinations with oxide made from ferric nitrate gave the average 55.883. The latter value is regarded as nearest the truth. Experiments are described which prove that ferric oxide occludes no appreciable quantity of gas, and the same had

been previously shown to be true of iron ignited in hydrogen. Previous determinations are criticised in the author's paper, and the errors which led to the higher value commonly adopted are suggested.

Chemical Analysis.—In a paper on the Chemistry of Perfumes, Dr. W. H. Warren, of St. Louis, says that for the most part substances designated as perfumes are high boiling oils. Formerly the oils, which are complex mixtures of several compounds, were obtained exclusively from flowers, but recently some of the essential principles have been produced by chemical means, whereas the artificial perfumes are mere imitations. With a few exceptions, the essential principles that give the perfumes their value belong to the class of the terpenes. Nearly every substance having the properties of a perfume has in its molecule certain atomic groups, the presence of which exerts a marked influence on the odor. Among the more important of these may be mentioned the aldehyde, ketone, ester, ether, and alcohol groups.

Dr. Carl Otto Weber begins a paper on The Nature of India Rubber, with a reference to the great experimental difficulties encountered in the investigation of colloid bodies whose physical constants are highly indeterminate, and which, instead of melting points, boiling points, and solubility, simply exhibit a gradual merging of the one state into another. These difficulties are met with in a pronounced degree in the chemical investigation of India rubber. If unworked India rubber (Pará) be treated with chloroform or carbon bisulphide partial solution gradually takes place; and it was very early observed that by this treatment the rubber was separated into two parts, the one being soluble, the other insoluble and presenting a peculiar reticulated appearance under the microscope. Very divergent statements are to be found respecting the relative proportions in which these two constituents occur. The author, on treating a specimen of Pará rubber with chloroform, obtained a solution consisting of two layers, the lower of which was a bright clear solution, while the upper part consisted of small clots or shreds of the insoluble part, composing nearly 6.5 per cent. of the dry weight of the rubber used. This swelled to an enormous volume in various solvents, but no appreciable part of it ever passed into solution. The insoluble body was free from stickiness, remarkably tough when dry, and only moderately distensible.

The body representing the soluble part contained nearly 2 per cent. of oxygen, which on further purification tended to approach a vanishing point. Analysis showed that the soluble and insoluble parts were not identical in composition, as had been supposed. A high percentage of hydrogen and a large amount of oxygen are remarkable facts concerning the insoluble part. The experiments left no doubt that to within a very few per cent., India rubber consists of a soluble hydrocarbon of exactly the same empirical composition as the terpenes, $C_{10}H_{16}$. While the percentage of oxygen may vary very considerably, the carbon-hydrogen ratio is left practically unaffected, and a number of varieties contain substantially the same $C_{10}H_{16}$. We may therefore state that India rubber consists chiefly of a hydrocarbon, $C_{10}H_{16}$, readily soluble in benzene, chloroform, and carbon bisulphide; that at least one variety (Pará) contains a small quantity insoluble in the above solvents, and possessing a composition widely different from that of India rubber as above stated; and that, in addition, oxygen products of the hydrocarbon $C_{10}H_{16}$ occur in quantities varying considerably in different kinds of India rubber, but

the solubility of which appears to be much the same as that of the India-rubber hydrocarbon itself. The oxygen addition products contained in it do not appear sensibly to affect the chemical behavior of the whole. A high molecular weight is thus indicated. The composition of a chlorine compound obtained by Gladstone and Hibbert is in agreement with their conclusion that the hydrocarbon has for $C_{10}H_{16}$, three pairs of doubly linked atoms. Accordingly, India rubber (polyprene) must be an olefinic, and can not be a cyclic compound like the ordinary terpenes. In other words, the constitution of polyprene would be that of an olefinic polyprene, standing at the end of the terpene series, just as the ordinary polyrenes stand at the end of the cycloterpenes—the hemiterpene C_5H_8 —isoprene—representing the connecting link between the two series.

A method proposed by Carl Otto Weber for separating India rubber from the mineral matter it contains by boiling finely divided rubber in a flask fitted with a vertical condenser with nitrobenzene, has given very satisfactory results in the author's practice. The only drawback to it is represented to be the difficulty sometimes experienced in eliminating the mineral matter from the solution of the products of decomposition of the India rubber. The author's experiments are continued on this and other points in the analysis.

A number of analytical methods applicable to the treatment of manufactured India rubber, published by Dr. R. Henriques, give processes for the estimation of the total sulphur and mineral constituents; of factitious matter in vulcanized India rubber; of nonsaponifiable oils in vulcanized mixtures; of factitious matter and of nonsaponifiable oils in nonvulcanized India rubbers; and of carbonic acid. The author says he has not, on many occasions, been able to obtain satisfactory results when following the method proposed by Weber, either in its original or in its improved form. Nonvulcanized or slightly vulcanized rubber, it is true, dissolves in boiling nitrobenzene, but if we have to deal with hard or highly charged rubbers it is very difficult to dissolve the whole of the gum, and the filtration of the residue presents insurmountable difficulties.

Armand Gauthier concludes from the researches he has made that pure air contains normally about 1/1000 of its volume of free hydrogen, to which must be added, owing to the exhalations and fermentations of the soil, vegetables, animals, and products of human industries, a certain proportion of hydrocarbons, which is relatively great in populous towns, small in country districts, very slight on rocky plateaus and peaks of high mountains, and particularly absent in the higher regions of the atmosphere. There will remain to be determined the nature of the hydrocarbons of the air of towns and woods and the origin of atmospheric dryness.

A method of estimating halogen elements in organic compounds by combustion in a calorific bomb is described by M. A. Valeur, who finds it eminently practicable by reason of the complete and instantaneous combustion of the substance and the rapidity of the operations.

The report of the British Government Laboratory records the examination of a number of tinned meats which had been furnished by the Admiralty for the detection of food preservatives. No antiseptic other than common salt was found. Numerous butters contained boric preservatives, and were artificially colored. The use of boric acid is most prevalent in butters from France, Belgium, and Australia, and is very common also in Holland. The most frequent coloring matter

is annatto, but the use of coal-tar yellows is on the increase, and is especially prevalent in the United States, Holland, and Australia. A filter for passenger ships capable of freeing water from microorganisms had been constructed at the laboratory. An investigation had been undertaken into the mode in which phosphorus in steel is chemically combined, from which it was shown that that substance, like the carbon, is not unfrequently present in more than one form of combination. Another investigation was directed to lead poisoning from the use of lead compounds in pottery manufacture. A considerable number of "fritts" and "glazes" had been examined, and the conditions determining the ease with which lead compounds may be extracted from them by dilute acids comparable as regards their action with that of the gastric juice and other animal solvents had been ascertained. As a result of the inquiry, the Home Secretary has requested the manufacturers of pottery to abandon the use of raw lead; and in view of the facts brought to light by the examination of the fritts and glazes, he has expressed the intention of prescribing that in future such glazes shall conform to a standard of insolubility as regards lead.

Besides a paper on The presence of Fluorine in the Mineral Waters of Spain and Portugal, a preliminary account of researches on the subject has been published by A. J. Ferreira da Silva and Alberto d'Aguilar. M. Parmentier mentioned the presence of fluorine in considerable quantities in the waters of the springs of Gerez. M. Ricardo Jorge regards these waters as the most fluorized waters in Europe, and estimates that they contain four times as much fluorine as those of Carlsbad. This author has tabulated, from this point of view, the values of other similar springs in Europe, and has further shown by experimental research the therapeutic action of the alkaline fluorides, thus clearing up the mystery which enveloped the salutary action of these waters. One of the authors of the paper now under consideration found in the spring at Campilho, at Vidago, fluorine in much greater quantity than it had been found in other springs in northern Portugal. Dr. Casares Gil has found fluorine in quantities corresponding, but a little exceeding, that found at Gerez. He believes that fluorine is to be found in many mineral waters in much higher proportions than has been observed up to the present, and that for this reason many analyses should be revised. He suggests that the reasons fluorine has not been more generally detected in springs are because it has not been carefully looked for, and because the action of hydrofluoric acid on the glass has been chiefly relied upon as the test, while in the usual method of analysis by treatment with concentrated sulphuric acid, not hydrofluoric acid is given off, but fluoride of silicon, the action of which on glass is barely noticeable.

A specimen of soot from an ordinary household chimney in Birmingham, England, analyzed by H. Worth, yielded totals of 7.4 per cent. of ammonium salts and 1.3 per cent. of fixed soluble salts. The fixed salts consisted of sulphates and chlorides of sodium, magnesium, calcium, and iron—more sulphates than chlorides (3 to 1). This circumstance explains the almost total absence of sulphates among the volatile portion. The sulphur trioxide was chiefly retained by the nonvolatile metals, and thus it is that the volatile portion consists of nearly pure ammonium chloride. The proportion of ammonium salt in the soot is large enough to justify the esteem in which soot is held as a plant manure.

A reaction of cotton-seed oil, described by S. A.

van Kettel in 1897, is based on the presence in a number of fatty oils of minimal quantities of pentosanes which are not contained in fats of animal origin. These pentosanes may easily be detected by means of a hydrochloric solution of phloroglucine. Shortly after this the author's attention was directed to a reaction discovered by Halphen, in which equal volumes of the oil under examination, amylic alcohol, and sulphide of carbon containing 1 per cent. of sulphur in solution, are heated in a boiling salt-water bath for ten minutes or a quarter of an hour, when, if a red or orange color is produced, the presence of cotton-seed oil is indicated. For detecting cotton-seed oil in butter, the author dissolved a quantity of butter in benzene, and after having filtered the liquid obtained and driven off the benzene by evaporation, added Halphen's reagent to the melted fat and heated half an hour in a boiling-water bath. In 20 experiments made he discovered cotton-seed oil in only one sample. The commercial oils are submitted to a series of manipulations for the purpose of improving the smell, taste, and color, and oils thus treated give negative results with colored reactions.

Miscellaneous.—Attention has been called by Thomas B. Stillman to important variations in the composition of Paris green under the increasing consumption which has been stimulated by its extensive use in horticulture as an insecticide. The article as formerly prepared for pigment purposes was of uniform composition, or nearly so; but of late years, since it has been hurriedly manufactured in enormous quantities, variation in composition has become very marked. The commercial product now fails in many instances as an insecticide; for, when arsenious oxide is present in it combined as arsenite, in certain percentages, its action is nullified. When pure, the composition of Paris green may be stated as an aceto-arsenite of copper—a combination of arsenious acid 58.65 per cent., oxide of copper 31.29 per cent., and acetic acid 10.06 per cent. A part of the arsenic may exist as arsenic acid as well as arsenious acid, and copper suboxide may be present in small amounts. Adulteration, in the sense of foreign material added, is rare with manufacturers of Paris green in the United States. The cost of production is lessened by increasing the percentage of arsenic, while the effectiveness of the product as an insecticide may be diminished. Paris green manufactured in Germany is often adulterated with barium sulphate. The chemical examination of Paris green is comparatively simple, since it is soluble in slight excess of ammonia, forming a dark-blue solution; the chemical examination of a sample containing other pigments may or may not be a complex undertaking according to the number of materials that are added. When Paris green is intended for a pigment, foreign substances may be introduced to modify the color, as when chromate of lead is added to lighten it.

An instance is given by E. T. Allen in which a number of analytical weights of gold-plated brass, put away for the summer in an iron safe, were found, at the end of three months, to have been attacked with moisture. The tops of all the weights were covered with a white substance which could not be removed by brushing or rubbing, and which, when scraped off, proved insoluble in water, but soluble in hydrochloric and nitric acids. The weights were, moreover, abnormally heavy. The presence of organic matter was revealed on heating upon platinum foil. Other tests showed that the substance was some compound of zinc—probably, it was thought, the hydroxide mixed with mold, or a zinc salt of some organic acid. The action was evidently due to water and

mold, which were certainly present. It is well known that plated metals at exposed points are more liable to corrosion than either metal alone, owing to electrolytic action. In such cases it is of course the more positive metal which is attacked. This was true in the case under consideration; the zinc was attacked, while the copper and the gold were unaffected. A microscopic examination showed that wherever corrosion had touched the weights the gold had become granulated or blistered. The author refers to a case somewhat similar to this, described by Witter, in which the amalgamated plates of a stamp mill in Småland, Sweden, were attacked by the water used, which had its source in a peat bog.

A paper on The Driving Energy of Physico-chemical Reaction and its Temperature Coefficient is contributed to the Proceedings of the American Academy of Arts and Sciences by Prof. Theodore William Richards. In it the author, starting with the close similarity between the equations of Clausius and Van t' Hoff, points out the advantages, previously recognized by Arrhenius, of considering pressure to be the fundamental quantity which determines the progress of chemical reactions; and this aspect is believed to afford a more direct method of analysis than the study of volume, concentration, or energy. An expression called the "reaction metatherm" is evolved, which represents in terms of pressure the temperature coefficient of the equilibrium ratio of ideal physico-chemical reaction. The equation obtained is the mathematical expression of the theorem of Maupertuis or Le Chatelier, and when analyzed it shows that the part played by each substance in a reaction may be considered as the logarithm of the product of its "physico-chemical potential," and is actually present pressure. The reaction metatherm may be simplified into a reaction isobar, according as the pressure or volume is kept constant during the reaction. While, however, the reaction isobar offers the most convenient basis for calculations to which it is applicable, results under constant volume are more conveniently calculated if the reacting substances are expressed in terms of concentration according to the equation of Van t' Hoff.

In the course of the president's address before the Society of Chemical Industry, Prof. Chandler, speaking of the work of American chemists, said that many important investigations in agricultural chemistry had been conducted by the chemical division of the United States Department of Agriculture. Among them were the practical determination of the number and activity of the nitrifying organisms in the soil, the influence of a soil rich in nitrogen on the nitrogen contents of a crop, the manufacture of sugar from the sorghum plant, and the comparative study of the typical soils of the United States. Chemists connected with agricultural experiment stations had done a large amount of original investigation on subjects more or less closely allied to agricultural and physiological chemistry. The author referred to the progress that had been made here in electro-chemistry, to the method of reducing aluminum practiced at Niagara, to the manufacture of corundum and artificial graphite, and to the expansion in the manufacture of water gas, which is used in whole or in part by 500 gas companies.

CHILI, a republic in South America. The Congress consists of a Senate of 32 members and a House of Representatives containing 94 members, the Senators elected for six years in the provinces and the Representatives for three years in the departments by the direct vote of the adult male population. The President is elected for five

years by the indirect vote of the nation. Federico Errazuriz was elected for the term ending Sept. 18, 1901. The Cabinet, constituted in September, 1899, was composed as follows: Prime Minister and Minister of the Interior, Rafael Sotomayor; Minister of Foreign Affairs, Worship, and Colonization, Rafael Errazuriz-Urmeneta; Minister of Justice and Public Instruction, Francisco Heriboso; Minister of Finance, Manuel Salines; Minister of War and Marine, Carlos Concha.

Area and Population.—The area of Chili is 290,829 square miles according to the most recent estimate. The population on Jan. 1, 1899, was estimated at 3,082,178. The estimated population of Santiago, the capital, was 311,704; of Valparaiso, 140,262; of Concepcion, 51,781. Of a total population of 2,712,145 enumerated in 1895, the town population was 1,240,353 and the rural 1,471,792. The number of marriages in 1898 was 13,921; of births, 104,536; of deaths, 83,919; excess of births, 20,617. The number of immigrants in 1897 was 870. The Government grants land to immigrants, and money aid to the extent in 1898 of 616,890 pesos.

Finances.—The ordinary revenue in 1898 amounted to 88,472,693 pesos, and expenditure to 87,726,307 pesos. Including a balance of 28,939,594 pesos from the preceding year and 58,978,777 pesos of loans, the total receipts were 176,391,064 pesos. The total disbursements, including 11,908,077 pesos of special expenditure, 14,415,715 pesos of extraordinary military and naval expenditure, and 45,940,991 pesos of advances to banks and exceptional expenditure for financial purposes, were 160,051,090 pesos. The ordinary revenue for 1899 was estimated at 80,872,937 pesos in gold, of which 64,698,357 pesos were derived from customs and 16,174,580 pesos from premiums, and 19,700,000 pesos in paper. The estimated expenditures were 4,267 pesos in gold and 9,305,286 pesos in paper by the Ministry of the Interior, 712,067 pesos in gold and 512,140 pesos in paper by the Ministry of Foreign Affairs, 5,000 pesos in gold and 631,138 pesos in paper for public worship, 527,300 pesos in paper for colonization, 39,480 pesos in gold and 3,804,190 pesos in paper for justice, 28,406,994 pesos in gold and 5,933,417 pesos in paper for public instruction, 78,932 pesos in gold and 4,655,707 pesos in paper for finance, 13,185,156 pesos in paper for the army, 9,053,739 pesos in paper for the navy, 767,822 pesos in paper for industry, 4,323,786 pesos in paper for public works, and 12,556,892 pesos in paper for railroads; total, 29,246,740 pesos in gold and 65,259,573 pesos in paper. The ordinary revenue for 1900, according to the budget estimate, was 95,954,390 pesos in paper, reckoning the premium on gold at 10 per cent.; extraordinary revenue, 22,404,386 pesos; making a total of 118,358,776 pesos in paper. The estimated expenditure was 104,251,423 pesos in paper. The chief source of revenue is the taxation imposed on the nitrate industry. The treaty of Ancon, signed on Oct. 23, 1883, provided that the Peruvian provinces of Tacna and Arica were to be held by Chili for ten years, at the end of which a plebiscite was to be taken in the provinces to determine their future ownership, the country chosen by the people paying the other \$10,000,000. The financial difficulties of Peru have among other reasons prevented the fulfillment of this clause of the treaty. Some Peruvian politicians have been willing to appeal to the United States to intervene and compel Chili to fulfill the terms of the treaty. The duties collected by Chili from exports of saltpeter and iodine from Tarapaca since the occupation of the nitrate fields in 1879 and those which may be collected during the next thirty-five years

are estimated by a Peruvian diplomatist at \$2,350,000,000, and those collected and to be collected in the Bolivian province of Antofagasta at £650,000,000. A convention for the purpose of carrying out the plebiscite was signed at Santiago on April 16, 1898, but new difficulties have since arisen.

The foreign debt on Dec. 31, 1898, amounted to £18,070,080 sterling, equal to 244,934,400 pesos, paying 4½ and 5 per cent. interest, a small portion even 6 per cent., the total interest charge being £965,455 or 12,872,733 pesos. The internal debt amounted to 72,892,119 pesos.

The Army and Navy.—By the law of 1897 the strength of the regular army is limited to 9,000 men, organized in 10 infantry, 8 cavalry, 5 artillery, and 1 coast artillery regiments, the corps of engineers, and invalid corps. The number of officers is 884. The infantry weapon is the Mauser rifle. The navy consists of 5 armor clads, 2 second-class and 2 third-class cruisers, 11 gunboats, 4 destroyers, and 15 first-class and 4 second-class torpedo boats.

Commerce and Production.—Agriculture employs about half the population. Wheat is the principal crop, but other cereals are grown as well as vegetables and fruits in abundance. The nitrate output in 1899 was 1,360,000 tons. In Valparaiso and its environs are sugar mills, gas works, breweries, machine shops, and other industrial establishments. The total value of imports in 1898 was 102,262,058 pesos, reckoning the peso at 37 cents; exports, 168,069,431 pesos. The values of the principal imports were 7,034,909 pesos for white cotton goods, 3,301,720 pesos for cattle, 2,966,419 pesos for bags and bagging, 2,696,201 pesos for machinery, 2,395,453 pesos for oil, 2,195,335 pesos for Japanese kimonos, 1,556,635 pesos for cassimeres, 1,457,808 pesos for candles, 1,347,106 pesos for tea, and 407,053 pesos for wines. The export of nitrates was valued at 90,675,297 pesos; copper bars, 20,600,103 pesos; copper concentrates, 561,999 pesos; copper ore, 2,022,730 pesos; gold, 2,445,735 pesos; wheat, 7,696,460 pesos; beans, 1,163,211 pesos; nuts, 576,305 pesos. The exports of copper ores in 1898 showed an advance over 1897, and in 1899 they were nearly 15,000 tons more than in 1898, amounting to 35,290 tons. Mines that were closed have been reopened, new companies formed, and more scientific and economical methods introduced. Mining machinery is now turned out by local foundries established by Englishmen.

The trade with the chief foreign countries, valued in pesos reckoned at 76.8 cents, was in 1897 as follows, the total imports for the year having been 65,502,805 pesos and exports 64,754,133 pesos:

COUNTRIES.	Imports.	Exports.
Great Britain.....	29,078,000	42,002,000
Germany.....	16,474,602	10,853,000
United States.....	4,460,645	3,383,000
Peru.....	4,631,237	1,493,000
France.....	2,879,686	2,785,000
Argentine Republic.....	3,308,268	389,000
Brazil.....	592,771	365,000
Italy.....	780,311	69,000

Navigation.—The number of vessels engaged in foreign commerce entered at Chilean ports in 1897, was 1,734, of 3,140,760 tons; cleared, 1,628, of 2,943,514 tons. The tonnage of coasting vessels entered was 7,233,911. English and Chilean steamers trade between Chilean ports and other parts of the west coast of South America, and English, German, and French lines run between Chilean and European ports. The commercial navy of Chili consisted on Jan. 1, 1899, of 51 steamers, of

26,744 tons burden, and 111 sailing vessels, of 40,363 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1898 was 2,662 miles, of which 1,223 miles belonged to the Government. The Government railroads cost 84,902,425 pesos to build. The receipts in 1898 were 13,738,667 pesos; expenses, 12,788,749 pesos.

The post office during 1898 forwarded 12,454,050 letters and postal cards, 16,020,957 packets of printed matter, and 1,423,904 other packets. The postal receipts were 953,128 pesos; expenses, 1,028,333 pesos.

The telegraph lines, belonging to the Government, had a length of 9,968 miles, with 11,200 miles of wire, in 1898. The number of messages for the year was 1,181,960. Railroad and private lines had a length of 2,613 miles.

Political Affairs.—The dispute with the Argentine Republic with regard to the boundary in Patagonia, which endangered the peace between the two nations and led to the acquisition of expensive armaments, naval and military, on both sides, was finally referred to the arbitration of the British Government, which appointed arbitrators, who met in February, 1900. The questions pending with Peru and Bolivia were still the subject of negotiation. The Chilean Congress began its session on June 2. The state of the country was described by President Errazuriz in his opening speech as satisfactory. A surplus of £1,000,000 sterling was on hand, besides a special fund for the conversion of the paper currency, which had been accumulated without difficulty. The Government intended to bring in measures for an extraordinary amortization of the public debt.

CHINA, an empire in eastern Asia. The Government, as laid down in the regulations of the Tsing dynasty, is based on the government of the family, and in theory the Emperor exercises supreme paternal authority. The principles and system of government were taken over by the Manchu conquerors from the Ming dynasty, and have been established since the age of Confucius. The acts of government are largely regulated by precedents running back thousands of years. Imperial affairs are under the direct control of the Cabinet, called Neiko, consisting of 4 members, 2 of whom must be Manchus and 2 Chinese. They are advised by 2 members of the Hanlin College, whose function it is to see that all edicts and proclamations conform in style and substance with dynastic regulations and Confucian precepts. All important questions are decided by the Grand Council, the Chun-Chi-Chu, under the Ming emperors a purely civilian body, becoming a military council after the conquest of 1644, and now again civilian in its character and functions, but having control over the Manchu army. Unless the Emperor is a strong and resolute ruler, this council, composed of 5 or 6 of the highest officers of state, both Manchus and Chinese, wields the real authority of government. The business is transacted in secret, usually in the presence of the Emperor. Decrees and orders are issued in the Emperor's name to the executive boards in Peking and to the provincial authorities, and the Emperor is practically constrained to accept the decisions of his council, which in recent years always includes one or more of the princes of the royal family who hold the highest commands in the Banner army. Subordinate to the Cabinet are the boards of administration, presided over each by a Manchu and a Chinese. One board, called the Civil Office, supervises the conduct and administration of the officials, confers titles, and grants rewards and precedence for meritorious conduct; another, the

Board of Revenue, manages the finances; the third, the Board of Rites, enforces the laws relating to the ceremonies of the court and all public functions ordered by the Emperor, and regulates the rites called for by an eclipse or any national calamity; the fourth, the War Board, has charge of military affairs and directs the movements of troops; the fifth is the Board of Public Works; the sixth, the Board of Punishments, is the high court of criminal jurisdiction. A seventh board, the Admiralty Office, created in 1885, sits at Tientsin and directs naval affairs. The board of censors, consisting of 40 to 50 members, presided over also by a Manchu and a Chinese, is independent of the Government, the members having the duty of watching over all branches of the administration and the right to present remonstrances and memorials to the Emperor regarding any public need or evil or any relapses from the ancient standards. Their duty is to keep the Emperor informed of all that is going on in any part of his dominions that is worthy of his notice, and in particular to keep an eye on malfeasance or oppression on the part of the officials. The Tsung-li-Yamen, or Foreign Office, is a modern body which since 1861 has conducted all business with Western nations and with institutions directed by foreigners, such as the Maritime Customs and the Peking University. It is composed of all the members of the Grand Council and about as many other high officials.

The Celestial Empire and the Middle Kingdom are names that the Chinese give to their own country, which they believe to occupy the greater part of the earth and to contain most of its inhabitants. The Emperor of China is not only regarded as the father of his people, possessing in theory all the property and the power of life and death over his subjects, but he is also the Son of Heaven, the only human being who can mediate with the celestial powers by sacrificing on the altar of heaven. China does contain over a fourth of the earth's population, but has long been the fountain of Asiatic civilization. The rulers of Asia have willingly acknowledged a formal vassalage to the Celestial court. When trade first brought European governments into relation with the Peking authorities the envoys of Europe, partly through ignorance and partly because they saw no other way of facilitating their immediate business of securing trading advantages for their countrymen, accepted the position that was accorded them, that of representatives of vassal states. The Chinese, judging Europeans from their greed of money and the grosser vices exhibited by them in the seaport towns, finding them, moreover, entirely ignorant of the elaborate forms of respect displayed by Chinese toward one another and of all Chinese standards of culture and refinement, regarded them as a low order of beings, outside barbarians, foreign devils who brought ill luck. While Europeans unwittingly offended Chinese properties and roused superstitious repugnance in countless ways, they were the unconscious objects of incessant insult and contemptuous derision. The treaty of Tientsin, signed after the occupation of Peking by British and French troops in 1860, first recognized the right of European governments to maintain embassies in Peking, as well as that of foreign traders to reside in Canton, Amoy, Fuchau, Ningpo, and Shanghai. Russia, for her friendly attitude toward China during the war, obtained the cession of the Amur province, and a few years later acquired the northern Manchurian coast lands with the harbor of Vladivostok. All eastern Siberia was Chinese until the Russians occupied it in the time of Peter the

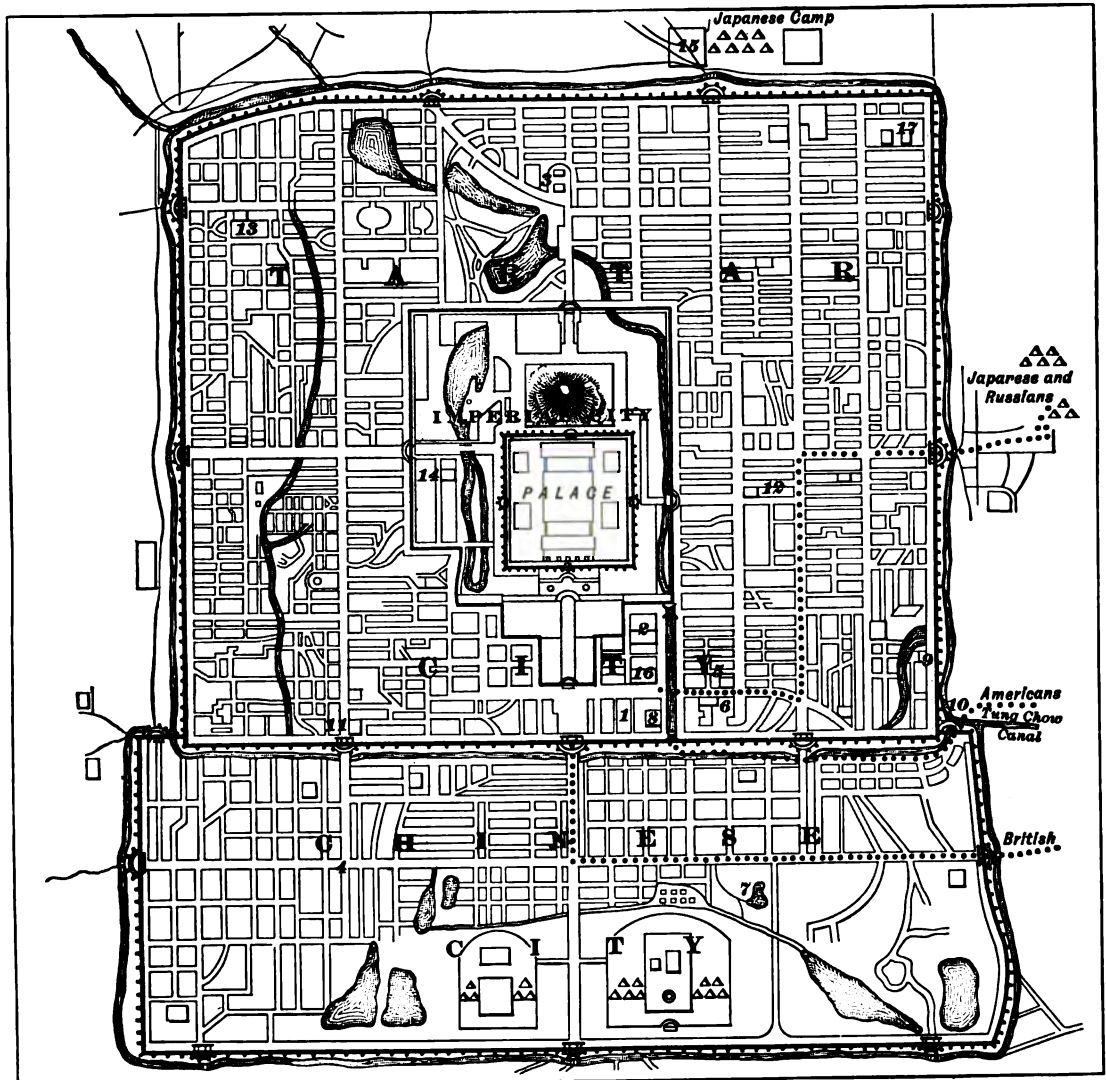

Great, about contemporaneously with the seizure of Macao by the Portuguese, who also conquered Formosa, which later fell to the Dutch and was retaken from them by the Chinese. After the war of 1841 Hong-Kong was ceded to Great Britain. This war was waged against China by the English chiefly for the purpose of removing the imperial interdict against the importation of opium. When its importation was legalized once more, the Emperor issued edicts prohibiting its use, which, however, could not be enforced. The war of 1856 was likewise occasioned in part by the necessity felt by the British for preserving the opium trade and the revenue derived from it by the Indian Government. Cambodia, Annam, and later Tonquin, once tributary countries, were wrested from China by France, while Great Britain conquered first Lower Burma, the tributary Himalayan states, and finally Upper Burma, and Chinese influence in Central Asia receded before Russian conquests. Despite these successive encroachments of the military powers of Europe the Peking court still maintained its arrogant reserve. European ambassadors were not received in audience by the Emperor till 1873, and then only in a pavilion outside of the palace. In 1890 the present Emperor, on coming of age, received them in the building where envoys from Korea and Annam have been accustomed to present the annual tribute to the Son of Heaven. In 1894 the foreign ambassadors were first admitted within the portals of the palace. Diplomatic business can only be done with the Tsung-li-Yamen, the board created for the purpose after the signing of the treaty of Tientsin. This board consisted at first of 3 members, and now it has 11. Although strengthened by the inclusion of members of the Grand Council, still it possesses no real power, as all its decisions must be approved by the Grand Council and ratified by the Emperor.

In 1897 Russia, having intervened after the Japanese victories to preserve Manchuria for China, obtained, in connection with the privilege of building a branch of the Siberian Railroad through Manchuria to a seaport on the Gulf of Pechili, a lease for ninety-nine years of the seaport of Talienwan to serve as the terminus of the railroad and also of the military harbor of Port Arthur. Germany, in the guise of retributory damages for the murder of two missionaries by a mob, demanded and obtained the port of Kiaochau, after landing troops there in the spring of 1898, and preferential commercial and political rights throughout the peninsula of Shantung, thus establishing a claim to a sphere of influence in China. The British Government, receding from the position of the open door which it had first taken in opposition to the Russian and German claims to exclusive spheres, acquired a lease of Wei-Hai-Wei, a naval port on the Gulf of Pechili, on the identical terms of the lease of Port Arthur to Russia, and an agreement by the Chinese Government never to alienate any of the territories in the provinces adjoining the Yangtse-Kiang to any other power, whether under lease, mortgage, or any other designation. The French Government, which as protector of Roman Catholic missionaries and as an active and important military power formerly had more frequent diplomatic dealings with China than any other, though French trade in the country was comparatively small, and which had engaged in hostilities with China on account of the participation of the Black Flags in the Tonquinese rebellion, now demanded and obtained a coaling station on the mainland opposite the island of Hainan, also on a ninety-nine-year lease. The nonalienation assurances

which had already been obtained regarding Hainan were extended to the Chinese provinces adjoining Tonquin. Great Britain, asserting that parts of these provinces of Kwangtung, Kwangsi, and Honan lie in the Yangtse valley, and unwilling to concede to France preferential treatment in the trade of the West river or in territory adjacent to Burma as well as to Tonquin, demanded compensation in the shape of an extension of the Kaulung settlement opposite Hong-Kong, and an assurance, identical in terms with that given to France, that two of the provinces would not be alienated. Japan, which after the victorious war of 1895 had been forced by European intervention to be content with the cession of Formosa, secured the promise now that the provinces opposite that island would never be alienated to any other nation, but did not seek any preferential economical advantages in those provinces. Italy put forward a demand for a coaling station on lease, and this, though formally supported by Great Britain, was contemptuously refused. Thirteen out of the 18 provinces of China have thus been marked out as spheres of influence by various European powers, and innumerable mining, railroad, and commercial concessions have been granted to foreigners. The number of treaty ports has gradually been increased to 32, some of them situated far in the interior, where the people have never yet come into contact with Europeans.

The Imperial Government at Peking has retained its authority, aside from the sentimental or symbolical reverence which Chinamen are bound by tradition to pay to the Emperor, by means of its controlling the only efficient military force in China, the Manchu banner troops of the imperial province, and by the complete control that it exercises over the official hierarchy, for the most powerful viceroy must submit to removal or degradation. This power, however, is used only for reasons that command the general approval of the official class, the support of which is the main security of the Manchu dynasty. The Imperial Government has never ventured to advance to high office any favorite or tool, but only those who have entered the service by the recognized channel and risen through the regular stages and are therefore imbued with the traditional principles of government and the bureaucratic spirit. The Chinese people have never willingly submitted to the Tartar conquerors. There have been four serious rebellions, the last of which, that of the Taipings, was only suppressed by the aid of European support. The great secret societies of China—the White Lily, the Triad, the Redhead, and others—were started with the object of expelling the Tartars and restoring a Chinese dynasty. Still, the Manchu rule has not been oppressive, and in recent times it has been weak. Except the tribute rice, the Chinese contribute little to the support of the imperial clan and the Manchu army.

For the last forty years the Empress Dowager and her clique have managed imperial affairs. Tsu-Hsi, born Nov. 17, 1834, was a secondary wife of the weak Emperor Hien-Feng, who died in Mongolia, whither he had fled when the British and French troops occupied Peking. The law of succession in China permits the Emperor to select his successor from among the sons of his first three wives. Tsu-Hsi, originally a concubine, had been raised to the dignity of a secondary wife on giving birth to a son, who was the only heir to Hien-Feng, and on his father's sudden death was declared Emperor under the style of Tung-Chih. As he was an infant, the first Empress and his own mother ruled as co-regents, but the latter,

MAP OF THE CITY OF PEKING, CHINA.

by her imperious will and talent for intrigue, wielded all the authority, even independently of the Manchu party which originally supported her. When her son died, on Jan. 22, 1875, after a nominal reign of fourteen years, she selected as his successor the son of Prince Chun, who was proclaimed Emperor under the designation of Kwangsu, meaning continuation of splendor. This infant Emperor was born Aug. 2, 1872, and his aunt was continued in the regency until he ascended the throne in 1887, but in ostensibly resigning her powers she retained the essential part of the prerogative, the great seal and the right to appoint all the principal civil and military officers. In 1898 the young Emperor, who had come under the influence of the reform party, which aimed at the regeneration of the civil and military services through the adoption of Western methods as the only means of rendering China strong enough to resist the encroachments of the European powers, called some of the reformers into his council and issued a series of edicts embodying the reform principles. The startling changes that he decreed alarmed the conservative element in the official world and created consternation among corrupt mandarins and Manchu nobles, who saw their emoluments and sinecures threatened. Combining with the Empress Dowager, they compelled the Emperor to rescind his decrees, which were formally rejected by the Grand Council, and to resign his power once more into her hands, the military commanders being all on the side of the Empress. Kwangsu was punished with practical imprisonment for having been undutiful to his aunt, and for his attempt to inaugurate radical changes for which China was not yet prepared.

The internal government of the 18 provinces of China proper is practically independent of the imperial authorities. Each province maintains its own civil service and collects its own revenues. The maritime and riverine provinces maintain separate flotillas of war vessels. Every province should have an army, but in most cases this is nonexistent, as the Chinese despise military service, and the pay and rations of rice for the soldiers are treated as a perquisite of the governor, who can collect his nominal quota of men from the riffraff whenever an inspection takes place. At the head of each province is a governor, and in several instances two or three provinces are grouped under a governor general or viceroy, such as the Viceroy of Nankin, who governs the three provinces of Kiangsu, Anwei, and Kiangse; the Viceroy of Wuchang, who rules over the central provinces of Hupeh and Hunan; the Viceroy of Chengtu, whose jurisdiction is confined to the great province of Szechuen; and the Viceroy of Canton, who controls the two Kwang provinces. Admission to official life is only obtained through the study of the Chinese classics, which treat largely of ethics and the principles of government, the history and traditions of the Chinese people, and literary refinements and forms. Examinations are held in the provincial capitals twice in three years for the lower degree necessary as a passport to the public service. Although not more than 1 per cent. of the candidates are usually admitted to the degree, there are innumerable literati who must be excluded from office, and these disappointed ones are often the leaders of disaffection and promoters of disturbances. For the higher degrees other examinations are necessary. In the Peking University, European languages, mathematics, and sciences are taught by European, Japanese, and American professors, but all such knowledge is of use to officials only as supplementing Chinese education, and is seldom

sought by those seeking a public career, but young military mandarins attend the military and naval colleges where the methods of European warfare are taught. The Christian mission schools give instruction in the English language and the lower branches of science to those who seek a career outside of China or employment with Europeans. Entrance to the public service and advancement are free not only to Manchus, but to Chinamen of the humblest origin, and until very recently no preference was given to Manchus in appointments to the highest offices in the provinces or in Peking. Chinese officials are expected to fulfill all administrative, judicial, and military duties when required. The lowest provincial officer is the district magistrate, who is at once collector of revenue, judge, coroner, chief of police, and public prosecutor. Death sentences require in ordinary circumstances to be ratified at Peking, though the viceroys and governors are armed with discretionary powers to be used in times of danger. They are charged with the duty of maintaining peace and order within their boundaries, and so long as they do this and carry on the government in accordance with the established rules the central authorities do not interfere with them. Whatever dangers or disturbances occur in other provinces, no governor is disposed to go to the aid of his colleagues without express imperial orders, and even then he often evades the duty. The great body of officials constitutes the actual governing force in China, from which emanate the suggestions for the redress of grievances and the formulation of new legislation. Advice tendered to the throne by the viceroys and governors is invariably heeded. Independently of the Manchu Government, with which the people of the prosperous central and southern provinces do not come in contact, independently even of the provincial administrations, the Chinese possess a very large measure of municipal self-government and a degree of individual liberty scarcely equaled elsewhere. The principle of association in trade guilds and societies for mutual aid and protection is developed to a far higher degree than in the Occident, and through their clubs and fraternities, of which only the secret organizations are interdicted but not suppressed, they exert much influence in public affairs.

All general legislation in China is enacted by imperial decrees. The penal code is the only body of statutory law in existence, and this is supposed to contain provisions to meet every case. If, however, a difficulty arises for which there is no precedent, it is referred to the board concerned, which in turn reports to the throne, whereupon a decree or rescript is issued which settles the case. From time to time the code is revised, and these various decrees are consolidated or incorporated, becoming part of the statute law.

Finances.—Provincial administrative autonomy is carried so far that the Imperial Government has no effective money revenue of its own, and must depend on the quotas that it can assess on the provinces. The Maritime Customs revenue, collected under European management, is now pledged to the foreign bondholders who loaned money to pay the Japanese war indemnity, and for other needs growing out of the defenseless state of the empire. The money for the support of the Manchu troops, as well as for the support of the imperial household itself, must be drawn from the provinces. The practice has been for the Board of Revenue to indent annually for the sums required for the use of the central Government, a certain amount being assessed on each province according to its supposed means. So

long as the amount did not vary greatly from year to year and was remitted in case of flood or famine occurring in any province, imperial aid being given instead of a tax demanded when the disaster was grave, the assessments were paid with some punctuality. When more and more was asked for, it was only obtained with increasing difficulty. The expenses of local government had first to be provided for, and the demands of the Peking Government could only be met out of the surplus, or, if there was no surplus, by increased taxation, with its attendant unpopularity and risk of rebellion. The viceroys and governors have power to resist demands for fresh taxation from Peking, for, though one of them be deposed, his successor would be prompted to repeat the refusal, such is the solidarity of interest that pervades the whole civil service. Of the revenue collected by the provincial officials, it is supposed that they retain from 50 to 70 per cent. as costs or perquisites. An estimate of the revenue of the Imperial Government for the years immediately preceding the Japanese war made the average total amount 88,979,000 haikwan taels of the par value of about 45 cents. Of this total, 25,088,000 taels in silver and 6,562,000 taels worth of grain come from the land tax, which varies in different provinces from 25 cents to \$1.50 per acre. The duty and likin tax on salt yield 13,659,000 taels, salt being a monopoly of the Government, which buys up the whole product and resells to merchants at a price covering the duty. The likin, or tax on merchandise in transportation, payable at appointed barriers, produces 12,952,000 taels a year, including a tax on production that is now united with it. The receipts of foreign maritime customs are about 21,952,000 taels a year. Native customhouses have been accustomed to collect 1,000,000 taels, the duty and likin on native opium is 2,229,000 taels, and various other duties yield 5,550,000 taels. The disbursements of the Imperial Government were apportioned according to the same estimate, as follows: imperial household, Manchu garrisons, and administration of the metropolis, 19,478,000 taels; admiralty board for the Peiyang squadron, 5,000,000 taels; southern naval squadrons, 5,000,000 taels; forts, guns, and coast defense, 8,000,000 taels; defense of Manchuria, 1,848,000 taels; Kansuh and Central Asia, 4,800,000 taels; aid to Yunnan and Kweichau, 1,655,000 taels; interest and repayment of foreign loans, 2,500,000 taels; railroad construction, 500,000 taels; public works, river embankments, sea wall, etc., 1,500,000 taels; customs administration, including maintenance of lighthouses, beacons, and revenue cruisers, 2,478,000 taels; administration of the 18 provinces, including cost of troops, 36,220,000 taels; total, 88,979,000 taels. Since these estimates were made the foreign debt has been greatly increased, the expenditure for military purposes and on railroads, telegraphs, etc., has swollen enormously, and changes have been made in the collection of taxes, principally the likin on imported merchandise, which by the convention of March 2, 1898, is collected in the ports of Suchau and Kiukiang and in the Shanghai district and eastern Chekiang, as also is the salt likin in the districts of Hupeh and Anhui and the port of Ichang by the Imperial Maritime Customs, which expects to obtain a revenue therefrom of 5,000,000 taels. The only public accounts of which reports are published are those of this branch of the service, which is superintended by Sir Robert Hart. The public debt of China has been raised mainly for the purpose of paying the Japanese war indemnity. Before the war a loan of 5,000,000 marks

at 5½ per cent. was contracted in Germany in 1887, and a silver loan of 11,300,000 taels was obtained abroad in 1894 at 7 per cent. In February, 1895, a gold loan of £3,000,000 was raised on the security of the customs, which were further pledged for advances amounting to upward of £2,000,000 obtained from banks and foreign syndicates. Internal loans amounting to nearly £5,000,000 were raised at the same time. After the close of the war, in order to pay the indemnity of 200,000,000 treasury taels and 30,000,000 taels for the evacuation of Liao-Tung, a foreign loan of £15,820,000 was raised at 5 per cent., and in March, 1896, an Anglo-German loan of £16,000,000 was contracted, which was followed on March 1, 1898, by another loan of £16,000,000 raised through English and German banking corporations doing business in the East, for the purpose of paying off the last installments of the war indemnity and secured on the likin collections transferred to the Imperial Maritime Customs. Foreign merchants have brought diplomatic and financial pressure on the Chinese Government to induce it to do away with the likin taxes, which are a greater incubus on trade than the similar *octroi* duties ever were in Europe. The Chinese Government on its part has tried to induce foreign governments to consent to an increase of the customs duties. The import duty on foreign merchandise is fixed by treaty at the uniform rate of 5 per cent. ad valorem, and the commuted likin duty, payable at the port of entrance at 2½ per cent. Merchants have discovered that the payment of likin commutation does not altogether exempt their goods from further taxation in the interior, because the provincial mandarins, unwilling to sacrifice the revenue formerly derived from likin, have imposed or revived various other taxes in the place of likin. In May, 1900, Chinese commissioners were authorized to offer to abolish likin and all further charges on imports if the European governments would consent to an increase in the import duty from 5 to 10 per cent., and in the transit pass or commuted likin duty from 2½ to 5 per cent., making 15 per cent. in all. The export duty they proposed to fix at 5 per cent., as the treaty allows, although lower rates have been charged. The Maritime Customs collections for 1899 showed an advance under every heading, the total amounting to 26,661,460 taels.

The Army.—The principal military organization of China is the Army of the Eight Banners, descendants of the Manchu conquerors and their allies, subdivided into Manchu, Mongol, and Chinese groups, and constituting a military caste in which intermarriage is compulsory. This army, which is recruited constantly from among the population of Manchuria, is supposed to number 300,000 men, of whom from 80,000 to 100,000 have in recent years received a training in European fashion and been armed with modern weapons and kept on a war footing. This Manchu army is under the direct control of the Imperial Government at Peking, and, with the exception of garrisons in chief cities of the center and south, is quartered in the imperial province. The national army, or Army of the Green Flags, is the name of the Chinese force which the governors and viceroys are required by law to raise in each of the 18 provinces, and which some of them have raised, armed, and drilled in accordance with modern methods; some have trained in the old Chinese way, and some have neglected, keeping only a nucleus and pocketing the pay of the rest of the contingent. The nominal strength is 660,000 men, of whom about a third are available. The most important force is the Wuwei army, or Grand

Army of the North, stationed ordinarily at Tientsin, Taku, and other places convenient for the defense of the capital province against invasion. These troops are taught by European instructors and have the best of modern arms. In 1899 they numbered 50,000, and afterward 20,000 more were incorporated. In emergencies, mercenary troops are raised which display varied efficiency and discipline, according to the nature of the population among which they are recruited, the ability of their commanders, and the kind of service they are called upon to perform and the experience they acquire. There is also an irregular cavalry, mostly Mongolian, nominally 200,000 strong, but really not more than a fifth or a tenth as many, and of slight military value. The total of the armed forces is estimated at 1,752,000, but there is no effective central authority, no common organization, little discipline except among the picked corps, and outside of these only obsolete training and armament, worthless against modern arms and tactics. Large numbers of European arms have been acquired by the Government within the last two years, and the proportion of soldiers who have these and are able to use them with more or less skill has been more than doubled. About 900,000 Mauser rifles have been imported since 1897. The field army in active service in north China is 205,000 strong, composed of 50,000 Manchurian regulars, 20,000 irregular troops, 10,000 disciplined troops in the capital, and 125,000 other active troops in the capital and neighboring provinces, including the foreign-drilled detachments of Gen. Nieh and Gen. Yuan-Shih-Kai, intended for the defense of the coast of the Gulf of Pechili. The reserves are composed of 13,000 Pekin field troops, 75,000 of the Eight Flags in the metropolitan province, 95,000 of the Eight Flags in the other provinces, and 506,000 of the Green Flags. Miscellaneous troops, including river and canal guards, transport convoys, 103,000 Manchurian militia, and bodies formed of men of different alien races, number 858,000. The Chinese official statement of the effective troops on the peace footing is 850,000 infantry and artillery and 60,000 cavalry. Many of the cavalry have no horses, and only a few detachments are armed with carbines or rifles. A very small part of the artillery has received special training. Most of the Green Flags are entirely without training, and the same is generally true of the reserves.

Commerce and Production.—Land in China is held in fee simple on payment of an annual tax. Every property is registered, and when it is sold a fee of 6 per cent. of the price is paid for the conveyance. No farm or dwelling can be sold to a stranger until all near relatives have declined to buy. Farms are generally small, and are kept in a high state of cultivation by the aid of irrigation and careful use of fertilizing materials. Oxen and buffaloes are the common farm animals, but tillage is often done by hand with primitive tools. Wheat, barley, corn, millet, beans, and peas are grown in the north, and in the south rice, sugar, cotton, and indigo are common crops. In the west and other elevated sections where the land is suitable the poppy is grown extensively for opium. Tea is cultivated only in the western and southern provinces of Fu-Kien, Hupeh, Hunan, Kiangsi, Chehkiang, Anhui, Kwangtung, and Szechuen. Silk culture is not less important and is carried on in all parts of China, but the best silk, and the main supply, comes from Szechuen, Kwangtung, Chehkiang, and Kiangsu. Filatures with modern machinery have been started in Shanghai and Canton, capa-

ble of winding 1,600,000 pounds of silk a year, and in Canton Chinese and foreign capitalists have large cotton mills in operation, with 313,000 spindles running in 1898.

Coal beds exist in all the provinces. The Kaiping mines, northeast of Pekin, have been operated under European superintendence. Anthracite is mined for the supply of Pekin at Fang-Shan Hsien. Coal is mined also at Poshan, in Shantung, and other fields in that province promise an abundant supply. Shansi has a field of anthracite coal in its eastern section and one of bituminous in the west, each estimated to cover 13,500 square miles, and a British syndicate has been formed to open mines there, while German capitalists expect to develop the Shantung mines. In southeastern Hunan the beds, part anthracite and part bituminous, have an extent of 21,700 square miles, and in some places considerable coal is dug also in the central and northern parts of Szechuen. French syndicates have obtained concessions here. Coal and iron are found together in Manchuria, where a smelting industry has sprung up.

Adjacent to the coal deposits of Hunan are iron mines which have been worked from ancient times. The copper mines of Yunnan have been productive for centuries, and in the same province silver and lead are found.

The imports of foreign merchandise, according to the returns of the Imperial Maritime Customs in 1898, were 209,579,334 haikwan taels in value; exports, 159,037,149 taels. Corrected by deducting the expenses of landing, storing and selling, and duties paid, the value of imports was 184,486,528 taels; and that of exports, when commissions and export duties and the cost of storing, packing, and shipping have been added, was 177,165,384 taels. The values of the principal imports were 39,295,000 taels for cotton yarns; cotton cloth, 38,324,000 taels; opium, 29,255,903 taels; kerosene oil, 11,914,699 taels; rice, 10,449,000 taels; metals, 9,787,077 taels; sugar, 9,019,000 taels; fishery products, 5,430,842 taels; coal, 5,280,620 taels; woolen goods, 3,190,169 taels; raw cotton, 2,839,730 taels; matches, 2,597,000 taels; ginseng, 2,545,000 taels; tin, 2,179,000 taels. The principal exports were raw silk, of the value of 45,413,000 taels; tea, 28,879,482 taels; silk manufactures, 10,691,000 taels; beans and bean cakes, 7,820,000 taels; skins, 6,820,000 taels; tobacco, 3,830,000 taels; matting, 3,683,000 taels; raw cotton, 3,151,000 taels; coal, 2,462,000 taels; straw braid, 3,131,791 taels; sugar, 2,445,891 taels; shoes and clothing, 1,982,672 taels; paper, 1,741,707 taels; china ware and pottery, 1,504,307 taels.

The direct commerce with various foreign ports and countries in 1898 was valued in haikwan taels as follows:

COUNTRIES.	Imports.	Exports.
Hong-Kong	97,214,000	62,084,000
Macao	3,348,000	5,882,000
Straits Settlements	2,620,000	2,152,000
India	19,186,000	1,324,000
Japan	27,376,000	16,093,000
Siberia	300,000	12,798,000
Russia in Europe	1,454,000	5,005,000
Great Britain	34,962,000	10,710,000
Rest of Europe	9,808,000	25,929,000
United States	17,168,000	11,987,000
Rest of America	1,965,000	264,000
All other countries	3,809,000	5,304,000
Total	218,745,000	159,037,000

Among the imports are included re-exported merchandise of the value of 9,166,000 taels. The figures for Japan include 4,794,000 taels of imports from and 925,000 taels of exports to Formosa.

The trade of Hong-Kong is made up of goods from Europe, the United States, Australia, India, and other countries destined for China, and of Chinese goods to be shipped to those countries.

The foreign trade of China in 1899 was marked by a great development in which the United States participated proportionally more than any other nation except Japan. The total value of imports and exports was 460,533,288 haikwan taels, more than double the figures for 1890. The United States doubled the sales in China in four years, and in 1899 sold 12,000,000 taels more than all Continental Europe. The gains of Japan were twice as great, while British trade has fallen off. The imports credited to Great Britain as well as to Hong-Kong contain a large and increasing proportion of American goods, some of which reach China by way of Japan also. Besides petroleum, cotton cloth, and other staple imports from the United States, a trade has sprung up in condensed milk, which the Chinese consider a dainty, and in American cigarettes, clocks, bicycles, sewing machines, windmills, canned goods, provisions, and other miscellaneous products and manufactures, besides railroad materials and machinery.

Navigation.—The number of vessels entered and cleared at the ports of China during 1898 was 52,661, of 34,233,580 tons, of which 43,164, of 32,896,014 tons, were steamers. Of the total number, 22,609, of 21,265,066 tons, were British; 23,547, of 8,187,672 tons, Chinese; 1,831, of 1,685,093 tons, German; 2,262, of 1,569,134 tons, Japanese; 743, of 239,152 tons, American; and 577, of 420,078 tons, French. The Chinese treaty ports are Shanghai, Chinkiang, Suchau, and Wuhu, in Anwei; Canton, Swatau, Kaulun, Lappa, Pakhoi, Kiungchau, Samshui, and Kongmun, with Kumchuk, in Kwangtung; Amoy and Fuchau, in Fukien; Chifu, in Shantung; Tientsin, in Pechili; Newchwang, in Manchuria; Ningpo, Hangchau, and Wenchau, in Chehkiang; Wuchau and Lungchau, in Kwangsi; Mengtsz and Szemao, in Yunnan; Yatung, in Tibet; Kiukiang, in Kiangsi; Hankau, Shasi, and Ichang, in Hupeh; and Chungking, in Szechuen. The Chinese Government has announced the intention of opening to foreign trade and residence the additional ports of Yochau, in Hunan; Santuao, in Fukien; Chingwangtao, in Pechili; and Wusung.

Communications.—A railroad has been built from Pekin to Tientsin, 80 miles, with continuation to Tangku, 27 miles, thence through a coal district to Shanhaikwan, 147 miles, and along the coast to Chenchau, 113 miles, with a branch to Tienchiaochang, 7 miles, and one of 30 miles to the Nanpao coal mines. The length of lines in operation at the beginning of 1900 was 404 miles. An extension to Yungkau, connecting this line with a branch of the Manchurian line, will be built by the Russians, and another extension from Chenchau to Hsinmintun, 106 miles, brings it near to Mukden. The Russian railroad through Manchuria, connecting the Siberian Railroad with the Chinese ports leased to Russia, is expected to be completed in 1902, the main line having a length of 950 miles, and the branch to Port Arthur a length of 650 miles. The section from Port Arthur to Telin, 318 miles, was finished early in 1900. A line running southwest from Pekin has been completed to Paotingfu, 88 miles, with a branch of 10 miles to the Chaokautien coal mines. Like the Tientsin line, this was built with British capital, but it is to be extended by a Belgian syndicate to Hankau, on the Yangtse-Kiang. An American syndicate has obtained a concession for a line from the Yangtse to Canton. British concessionaires have undertaken to develop with the

aid of railroads the coal and petroleum fields of Shansi, and to bring coal from the Honan mines to the Yangtse river near Nanking by a railroad running through Kaifong. The short line connecting Shanghai with Wusung, 12 miles, was opened in 1898. A line from Shanghai is projected which will run through Hangchau, Ningpo, and Wenchau to Canton. The French have a project for a railroad to run from Tonquin into Yunnan, through Mengtsz, Wuchau, and Pakhoi.

There are nearly 4,000 miles of telegraph lines, connecting Pekin with Newchwang, Chifu, Shanghai, Fuchau, Amoy, Kashing, Ningpo, Yangchau, Suchau, and the seven treaty ports on the Yangtse up to Chungking; with Canton, Wuchau, Lungchau, and Yunnan Fu, whence a line runs to Manwyne to connect with the system of British India; with Taku, Port Arthur, and Séoul, in Korea; and with the chief places in Manchuria up to the Russian frontier on the Amur and the Ussuri rivers, where connection with the Siberian line affords direct communication with Europe overland, while at Shanghai, Hong-Kong, and other ports connection is made with cables running to Japan, India, and Europe.

The postal business of the country has been carried on by postal carts and messengers under the direction of the Minister of War. Private runners are also employed. In 1897 the Inspector-General of Maritime Customs was commissioned to organize a new postal service, and the Swiss Government was notified by China of her intention of entering the Universal Postal Union.

Declaration of the Open Door.—Secretary Hay, in September, 1899, instructed the American representatives in England, France, Germany, Russia, Italy, and Japan to intimate to the governments to which they were accredited the apprehensions felt by the United States Government of the danger of complications arising between the treaty powers that might imperil the rights assured to the United States by treaty. The representations were made with the express reservation that the Government of the United States did not commit itself to any recognition of exclusive rights of any power within or control over any portion of the Chinese Empire under the agreements recently made by which Great Britain, Germany, and Russia claimed and conceded to each other the possession of spheres of influence or interest, particularly in respect to railroads and mining enterprises. Hoping to retain China as an open market for the world's commerce, with the object of removing dangerous sources of international irritation and thereby hastening united action by the powers at Pekin to promote administrative reforms so greatly needed for strengthening the Imperial Government, in which it was believed that the whole Western world was alike concerned, the United States Government requested the powers claiming spheres in China to declare their intentions with regard to the treatment of foreign trade in those spheres, and invited from each a declaration to the effect that it will in no wise interfere with any treaty port or any vested interest within any so-called sphere of interest or leased territory that it may have in China; that the Chinese treaty tariff of the time being shall apply to all merchandise landed at or shipped to all such ports as are within such spheres unless they be free ports, no matter to what nationality they may belong, and that duties so leviable shall be collected by the Chinese Government; that the power approached will levy no higher harbor dues on vessels of another nationality frequenting any port in such sphere than shall be levied on vessels of its own nationality,

nor any higher railroad charges over lines built, controlled, or operated in its sphere on merchandise belonging to citizens or subjects of other nationalities than are levied on similar merchandise belonging to its own citizens. Lord Salisbury wrote, on Nov. 30, that Great Britain was prepared to make a declaration in the sense desired in regard to all leased territory or spheres of interest at present held or hereafter to be acquired. The German Government, which had already given an assurance that America's treaty privileges would not be impaired, raised no objections, and in December the Count von Bülow wrote a declaration assuring absolute equality of treatment of all nations with regard to trade, navigation, and commerce. The Russian Government answered that it was happy to comply with the wishes of the United States, with the reservation that the leased territory of Talienwan might in the future be separated by a customs limit from the port, which has been declared a free port, duties to be levied in that zone on all foreign merchants alike. M. Delcassé, on Dec. 16, wrote that France was ready to apply equal treatment to the citizens of all nations, especially in the matter of customs duties and navigation dues, as well as transportation tariffs on railroads. On Jan. 7 the Marquis Visconti Venosta expressed Italy's adherence to the American suggestion. The Japanese Government replied that it would assent to the fair and just proposals of the United States. The answers of the various powers were all accompanied by the proviso that the other governments concerned would also agree to make the desired declaration. On March 20 Mr. Hay sent a circular letter to the American representatives abroad, saying that all the powers concerned had accepted the proposals of the United States, and he would therefore consider their consent as final and irrevocable.

Palace Politics.—After the *coup d'état* of 1898 the Empress Dowager, who formerly accepted the guidance of Li-Hung-Chang, Chang-Chih-Tung, and other progressive Chinese statesmen, fell entirely under the influence of the Manchu princes and the most reactionary section of the Conservatives, who proceeded to strengthen the Manchu military forces for the support of the dynasty against either foreign or internal menaces. Of the reformers to whose advice the Emperor had listened, some were executed, some escaped abroad, and others were exiled to the frontiers. The governors and high officials who had leaned toward reform were replaced by Manchus, and the former chief advisers of the Empress were sent away from Peking to provincial posts. The Manchu troops in and about Peking were brought up to a strength of 72,000 men, rearmed with modern weapons and trained in European tactics. They consisted of the Peking field force, 50,000 in all, and the Husheng brigade, 10,000 strong, both under Prince Tuan, and the Imperial Guards, or Banner Corps, 12,000 men in all, under Yung-Lu, who was also generalissimo of the northern forces, and was the most intelligent politician in the entourage of the Empress. On Jan. 24, 1900, the Empress procured the signature of Kwangsu to a proclamation announcing the selection of Pu-Chun, born in 1886, son of Prince Tuan, a brother of Hien-Fung, as heir apparent. This infant prince was declared to be the heir, not of Kwangsu but of Tung-Che. All China scented a plot to put the reforming Emperor out of the way in order to prepare for a new regency under reactionary auspices of the old Empress. Mutterings of remonstrance were heard in every quarter. A month after the announcement of the new crown prince the Empress

Dowager prepared a proclamation dethroning permanently the Emperor Kwangsu, followed by one in his own name declaring his reign a usurpation. Although this new *coup d'état* was sanctioned by the princes of the imperial clan and approved by the majority of the Grand Council, nevertheless it was not carried into effect. The generals of the Nanyang army declared to Viceroy Liu at Nankin that the new Emperor would not have the services of their troops. The officials and *literati* of Hankow, Hanyang, and Wuchang sent a deputation to Peking to protest. All the officers and notables of Shanghai forwarded a remonstrance, and from all the other centers of wealth and intelligence came similar memorials, followed by appeals to the Chinese everywhere to stand by the legitimate Emperor. The result was that the edicts were withdrawn, and another was issued in which the Prince Pu-Chun was mentioned as heir apparent only.

Edicts issued by the Empress Dowager in the early part of 1900 indicated a complete relapse into old methods. One dated Feb. 7 commanded a return to the ancient method of study according to the teachings of Confucius for examinations for official rank, and imposed penalties for the teaching of what were called the new, depraved, and erroneous subjects. A secret edict was issued by the Empress on Nov. 21, 1899, urging the viceroys and governors of the maritime and Yangtse provinces to be prepared to resist any foreign aggression, giving them authority to oppose with arms hostile acts of foreign forces without first seeking instructions from Peking, and warning them that they would be held responsible if they allowed foreign troops to occupy Chinese territory. Prince Tuan, Prince Chuang, and the other Manchu princes, with the exception of Prince Ching and one or two more, were intensely hostile to Europeans, and were persuaded by Kang-Yi, Tung-Fuhshian, and other officials and generals who took the lead in Peking, that China was strong enough to defy the Western nations. The Chinese statesmen at Peking, such as Wang-Wenshao, Hsi-Ching-Cheng, Hsu-Yung-Yi, though not less anxious to preserve the independence of the empire and retain the territories which European nations claimed as spheres of influence, were aware of the military weakness of China and of the superiority of foreign organization and fighting power. The viceroys and governors of the central and southern provinces held the same opinions. The French had taken summary vengeance in the vicinity of the Kwanchauwan territory leased or ceded to them for the death of two naval lieutenants who fell in a collision with natives when they took possession on Nov. 18, 1899, and fixed their own boundaries. Their action roused the suspicion of the Chinese, who were apprehensive, moreover, that the Italians, disappointed in their ambition to secure Sammun Bay, would seize some other part of the coast. At Wei-Hai-Wei the British early in 1900 proceeded to demarcate their territory without the assistance of Chinese commissioners. The edict of the Empress was followed by orders to provincial authorities requiring them to resist every further attempt to seize Chinese territory and to assist one another in such resistance, and giving them authority to proclaim a state of war, if necessary, without waiting for instructions from Peking.

The concessions of territory and pre-emptive claims to foreign powers had shaken the loyalty of the Chinese toward the dynasty, and especially toward the Empress Tsu-Hsi, who since the *coup d'état* was considered a usurper by a large element among the intellectual Chinese, especially

by the reform party, strong in the center and the south, whose purposes she had frustrated. The anti-foreign crusade begun by the secret society known as the Boxers was begun at a time when the ignorant Manchu Conservatives in Peking were seriously considering the policy of defying the powers and perhaps winning back the alienated seaports, or at any rate checking further encroachments, and by a firm anti-foreign attitude regaining the wavering loyalty of the Chinese provinces. The Government had purchased 128,000 Mauser rifles with 1,000 rounds of ammunition, 105 field guns with 3,000 rounds, and improved guns of large caliber for the Taku forts, which Chinese gunners had been taught to handle by German instructors.

The Boxer Uprising.—The process of slicing China alive, as the Chinese statesman Li-Hung-Chang calls the setting up of territorial claims by European powers, seems to Chinamen to have been started in retaliation for the killing of two German missionaries by a mob in Shantung. In that province a strong anti-foreign feeling was evoked by the action of the Germans, which gave an impetus to a certain secret society that had already evinced strong opposition to the propagation of Christianity by Roman Catholic missionaries, and now adopted a general anti-foreign propaganda. Its name is I-Ho-Chuan—the League of United Patriots—but the last word can also be spoken so as to mean fists, and since athletic contests were practiced by its members foreigners gave them the name of Boxers. The Ta-Tao-Hwei, or Great Sword Society of Shantung, whose membership had been augmented in consequence of the Hoangho flood, and the opportunities afforded for smuggling opium and salt as a relief to the misery caused by it in southwest Shantung, had already taken a threatening attitude toward the missionaries in this province, which, as being the native country of Confucius and Mencius and of a long list of illustrious Chinese statesmen and generals, and the home of a proud and stalwart race, resented sorely the growing pretensions of Germany and the presence of a foreign garrison. This society took advantage of the effort of the governor, in obedience to orders from Peking, to strengthen the constabulary, in which many of its members enrolled themselves. Later it became merged in the Boxer organization, which became active in the latter part of 1899. The Boxers, although originally hostile to the Manchus, adopted as their tenets support of the heavenly dynasty and death to all foreigners. The leaders of the society were Chinese *literati*, and their secret purpose may have been to bring about the downfall of the Manchu Government by embroiling it with foreign powers, as well as to wrest the leased territories from the Europeans, and render their rule impossible in the spheres of influence that they had wrung from the Empress Dowager.

The recrudescence of anti-foreign fanaticism among the country people of Shantung and Pechili and in Manchuria was caused not so much by political sentiment as by the superstitious belief that the foreign devils bring ill luck. They were suffering from the effects of a prolonged drought and with famine staring them in the face, when the Boxers told them that the celestial powers were angry because they permitted the presence of devils, and could only be appeased by the extermination of Christians, as had happened in 1870, when a massacre had brought rain; they joined the society by thousands, those who were less superstitious being moved by desperation and the prospect of plunder, and by envy of the Chris-

tian converts who were fed by the missions. In diplomatic and commercial circles the rising anti-foreign sentiment was, as on former occasions, laid to the charge of the missionaries, who were accused of interfering in local politics and in the course of justice to secure privileges and advantages for their converts, and of invoking the support of their legations when such activity brought them into conflict with the authorities or provoked the resentment of the populace. Protestant missionaries, while denying that they attempted themselves to exert undue influence or interfere in lawsuits, affirmed that the Roman Catholics were accustomed thus to intervene in local affairs. The Roman Catholics on their part reversed the accusation and exculpated themselves. There were 800 priest missionaries who had 2,000,000 converts, while Protestant missionaries of various nationalities, but chiefly English and American, and of different denominations, numbered 1,700, with 27,000 converts. The Chinese converts are generally despised by their fellow-countrymen, who say that they embrace the foreign religion for selfish and mercenary reasons.

The Boxers gained so many converts wherever they carried on their propaganda, not among the poor, the ignorant, and the disreputable alone, but among merchants, learned officials, and people of influence and standing, and especially among the Manchu nobility and military class, that the Imperial Government did not and could not treat them as members of one of the ordinary seditious and lawless secret societies. They clothed their doings with mysterious and spiritualistic rites, besides practicing boxing and fencing, and the movement had the aspect of a religious awakening. Every one looked on it as something strange and supernatural, bringing deliverance not only from foreign aggression but from the wrongs and evils incidental to Chinese officialism. The rapid growth of the sect, which gained millions of adherents in the course of a few weeks, suggested to the Governor of Shantung and to the bellicose Manchu generals the plan of utilizing the Boxers as a militia if it came to a war with the European powers. In the earlier conflicts between the Boxers and the native Christians the Government assumed an attitude of impartiality, and when the Boxers committed depredations that called for complaints from the foreign ministers the Government characterized the culprits as bad Boxers who had crept into the society by false professions. When, later, their acts threatened to provoke European intervention, they were spoken of as rebels in the diplomatic correspondence, and at the same time praised as patriots in secret edicts. When military intervention actually resulted, they were armed and organized as a militia.

The Boxer society was over a hundred years old when it took on new life and began to attract attention in the beginning of 1899. For ninety years it had been under an imperial interdiction. In 1898 trouble arose in northwestern Shantung over an old temple near Linchinchau which the Roman Catholics claimed to have bought and which they tore down in order to build a chapel on the site. The people of neighboring villages demolished the chapel and rebuilt their temple, which was in turn pulled down and the chapel was re-erected by the Government. In the summer of 1899 a difficulty arose in the vicinity of a station of the London mission in southeastern Pechili, and serious trouble was only averted by the vigorous action of the British consul at Tientsin. In the autumn of 1899 the Boxers planned a rising in northwestern Shantung, but at the request of the United States consul at Tientsin a

force of Chinese troops marched into the district and dispersed the Boxers after killing 98 of their number in a fight. On Dec. 31, 1899, the Rev. Mr. Brooks, an Englishman, was cruelly murdered in Shantung. Sir Claude MacDonald addressed a grave remonstrance and warning to the Tsung-li-Yamen. The German Government objected to Yu-Hsien, who was removed, but only to be appointed Governor of Shansi, the Tsung-li-Yamen, with Prince Tuan at its head, receiving with merit the charge of the German representative, backed up by his British and American colleagues, that he was responsible for the disturbances in Shantung. Yuan-Shih-Kai was appointed Governor of Shantung, and he began to put down the Boxers, giving his brother charge of his troops, which are the best disciplined soldiery in China. The brother was immediately recalled, and the new governor was made to understand that he would be held answerable for any popular disturbance resulting from his action against the Boxers.

The burning of a Christian congregation in its chapel and the cruel murder of two native preachers occurred in January, 1900. The pillage of converts and the exaction of fines for the support of the Boxers were matters of daily occurrence. Two of the murderers of Mr. Brooks were beheaded and some of the officials were punished, but the British Government declared the settlement unsatisfactory in that no punishment was inflicted on Yu-Hsien. The British minister, on Jan. 11, warned the Tsung-li-Yamen that whether the negotiations took a friendly course or the reverse would depend on the manner in which the local authorities carried out the imperial edict enjoining strong measures. On the same day another edict was issued which seemed to encourage the Boxers, and in view of its equivocal language identical notes were addressed to the Tsung-li-Yamen on Jan. 27 by the American, British, French, German, and Italian ministers pressing for the promulgation of an imperial decree condemning by name and abolishing the I-Ho-Chuan and Ta-Tao-Hwei societies. The answer received on Feb. 25 was so unsatisfactory that the ministers demanded a joint audience of the Tsung-li-Yamen. A decree denouncing the I-Ho-Chuan was issued, but its failure to produce the desired effect was attributed to the honors and promotion bestowed on the late Governor of Shantung, whom the foreign representatives regarded as the chief instigator of the anti-Christian movement. At every new outbreak of lawlessness fresh proclamations were issued, some of them excusing or encouraging the Boxers and their patriotic spirit while condemning their excesses. Soldiers were posted at various points, many of them being members of the Boxer society and all except troops brought from Tientsin sympathizing with its objects. These foreign-drilled troops dispersed various bands and killed numbers of their members, but the scattered bands reassembled in a safer place. Proclamations that were issued threatening punishment if the Boxers did not disband within a certain time were neutralized by secret edicts representing them as Chinese patriots who wished to organize a local militia to help their country in its difficulties. The society, which was originally founded by Taoist priests, practiced peculiar rites and incantations, and its members claimed to be invulnerable to bullet or sword. They made no effort to procure rifles, but were armed only with swords, pikes, and three-pronged forks. Their claim to invulnerability against all kinds of weapons was believed implicitly by themselves even when they saw men in their ranks

falling in numbers. The chiefs of the Manchu party believed it also, or affected to believe it; and when one of the Chinese ministers told the Empress that he had seen heaps of slain Boxers, she said that they must have been robbers who had joined the bands under false pretenses. Tung-Fuhsiang, honored as the only victorious Chinese general, ever since he arrived with his fierce, undisciplined Mohammedan troops from Kansu two years before after suppressing the rebellion in Mongolia, had been eager to engage in a war with all Europe. Prince Tuan also, who had passed much of his life at Mukden, was persuaded that the regular Chinese army, aided by the invincible Boxers as irregulars, would prove strong enough to drive out any force that the outer barbarians were likely to send to China.

The Boxer movement had spread from Shantung into Pechili and Manchuria and invaded Tientsin and Peking before the Boxers began openly to drill and to threaten the Christian communities. They established their headquarters at Paotung-Fu, 80 miles south of Peking. Before the end of May this district was filled with Boxer camps, and the movement spread toward Peking. In Chochau were many thousands of Boxers, who ate up all the food in the district, and compelled the Taotai to stamp with his official seal their orders and proclamations. Attacks were made on the small scattered communities, especially upon native Christians. These began to flock to the missions for protection. Some of the American missionaries made formal charges against the society and accused several of the provincial officials of upholding it. Yu-Hsien, Governor of Shantung, in a secret memorial advocated the society as a useful agent in driving out foreigners and preserving Shantung for the Chinese. The Empress Dowager, in a number of edicts, while condemning secret societies in general, made an exception of this patriotic organization, whose watchword was to uphold the dynasty and exterminate or expel the foreigners. Its members were declared to be peacefully practicing athletics and learning gymnastics for self-defense and to protect their villages and homes.

On May 28 some bands which set out from Tungechau destroyed the railroad station at Yeng-Tai, close to the capital, where the Tientsin and Peking and the Lu-Han Railroads have their junction. The track was torn up for many miles, and the machine shops and locomotives were destroyed. After the attacks on Catholic missions near Paotung-Fu, on May 17, Bishop Favier, in Peking, warned the French minister that Peking was surrounded by Boxers, who were planning to attack the legations; that they were numerous within the city, and were compelling Catholic converts to take refuge in the mission compounds; that the Boxers were approaching from the east as well as the south, and only delayed their progress in order to exterminate all Christians on the way. The bishop fortified the Peitang cathedral, bought supplies, rifles, and ammunition, and in the end obtained guards for which he petitioned—32 French and 10 Italian marines. The Belgian and other engineers at Chang-Hsin-Tien, on the Lu-Han Railroad, were rescued with their families by a party of civilians from Peking. A large number of engineers, mostly Belgians, endeavored to escape from Pao-Ting-Fu by boat to Tientsin with a Chinese escort, which betrayed them to the Boxers. The party, after losing the boat, divided into two companies. One company tried to return, but went astray, and the survivors finally reached Cheng-Ting-Fu, where they helped the bishop, priests, and nuns to defend the mission station against repeated attacks. The other com-

pany marched overland to Tientsin, suffering great hardships, and was at last escorted into the foreign settlement by a strong rescue party. An earlier attempt at relief had failed, the party, escorted by 30 Russian soldiers, having returned with the two officers and several men wounded. Three American missionaries at Kalgan made their perilous way across Mongolia to Kiachta and thence to Europe by the Siberian Railroad. Other missionaries who attended a convention at Tungchau, having been warned by the Taotai that the soldiers he had obtained to protect them were untrustworthy, were brought away by a party of armed missionaries from Pekin. After the departure of the missionaries the college and mission buildings and the imperial post office at Tungchau were wrecked. The Taotai became the virtual prisoner of the Boxers, who compelled him, like the Chochau magistrate, to sign decrees at their dictation.

When the Boxers at Chochau were making preparations to march on Pekin the Chinese party at court obtained a majority in the Grand Council in favor of sending Gen. Nieh with his troops to suppress them. Yung-Lu, however, induced the Empress to commission two mandarins of high rank to precede Nieh and secretly reassure the Boxer leaders, and when Nieh dispersed some bands and killed 500 Boxers he was recalled and reprimanded.

Unsuccessful Relief Expedition.—Foreign war ships began to assemble at Taku only a day or two before the legation guards were sent up to Pekin at the request of the ministers. A score of ships were anchored there when the request came on June 9 from the British and American ministers for more guards, as the situation was most serious. The naval commanders had been instructed at the beginning of the month to consult as to any concerted action that might become necessary, the ministers having urged their respective governments to give their officers such discretion at the suggestion of M. Pichon. A considerable force of marines of the various nationalities had been landed and taken up to Tientsin when the call for additional guards was made. The commanders and consuls held a conference in regard to the message, and the French consul agreed with his Russian colleague that the information was not sufficient to justify an act amounting to forcible intervention without orders from their governments. Capt. McCalla said: "My minister is in danger and asks for help. I am going." Admiral Seymour agreed with this decision, and the other commanders, being unwilling to leave the initiative to Great Britain and the United States, decided to take part in the expedition. The Chinese authorities, after first refusing, consented to furnish railroad transport.

Marines and seamen were landed from the ships the next morning, others were detached from the force already at Tientsin, and the expedition set out in four trains, the last one, holding the French and Russians, being delayed till the following day. The mixed force was composed of 915 British, 350 Germans, 104 Americans, 300 Russians, 158 French, 54 Japanese, 40 Italians, and 25 Austrians; total, 1,846 men. The British had 3 9-pounder muzzle-loaders, 3 Maxims, 3 Nordenfeldts, and, mounted on a truck in front of the first train, a 6-pounder Hotchkiss quick firer; the Americans had a 3-inch fieldpiece and a Colt automatic gun; the Russians a field gun, the Italians a machine gun, and the Germans 2 machine guns. The trains passed through Peitsang and Yangtsun without misadventure and reached Lofa the same afternoon, having been detained

only by a small break, which was quickly repaired, but the stations had been burned by Boxers. At Lofa the track was badly torn up, and the forenoon of June 11 was spent in mending it. The work of repairing was done by sailors, mostly British, German, and American, with the assistance of coolies that the Japanese and British had brought from Japan. The commanding officers, after conferring, announced that the purposes of the expedition were to reopen railroad communications with Pekin and thus insure the safety of their legations and national interests in that city, and to assist the Chinese Government to restore peace and order. Admiral Seymour commanded in chief, and on each train the senior officer was in command. Beyond Lofa working parties repaired the tracks ahead, making slow progress because the rails were torn up and often twisted. Only two or three miles had been repaired when a large body of Boxers advanced boldly to attack the troops. After misunderstanding of orders and much confusion the men were formed in line as the Boxers, who themselves had stopped to go through a fantastic ritual, rushed forward, brandishing their swords and spears, but they were checked before coming into close quarters by a fusillade that killed 35 and put the rest to flight. Beyond Lang-Fang the troops were attacked by another body of Boxers who had torn up the tracks at that point just before. Again there was confusion among the commands of the different nations. The Boxers rushed rashly up to the bayonets, and were not driven off until a Maxim gun was brought into action; yet they did not hurt a single man, although they left 102 dead on the ground. The guard attached to the construction train killed 25 in another fight. No loss was sustained by the allies until 5 Italian pickets were killed on June 14 while guarding Lang-Fang station. The Boxers, 600 strong, advanced on the station up to within 25 yards of the line of British tars, braving the volleys of the latter and the fire of a German Maxim, which killed a quarter of their number before they retreated. The roadbed beyond was destroyed, and the expedition gave up hope of reaching Pekin by the railroad, but planned, if Anting could be made, to dash through by a forced march. On the same day 1,500 Boxers attacked the guard left at Lofa station, and were driven off by the aid of re-enforcements that were sent back, losing over 100 and wounding 2 men with missiles from an old cannon. Other large bodies of Boxers were seen in the rear, and these tore up the track, destroying communications with Tientsin. Ahead the railroad was completely wrecked. On June 18 the troops at Lang-Fang were attacked by a force of 5,000, in which were many imperial troops and a large body of cavalry. These were the mutinous Mohammedan soldiers of Tung-Fuhsiang's army, who had left Pekin to check the advance of Admiral Seymour's expedition. The troops formed in line, consisting of Germans, Russians, British, and Japanese, commanded by Capt. von Usedom, a German. They advanced in skirmishing order and quickly scattered the Boxers who came in the first line and charged with their usual futile courage. Behind them were the Chinese soldiers, who delivered a heavy fire from magazine rifles. They also were stopped, but renewed the attack when the Europeans started back for the train. The Germans faced about quickly and, taking a position in advance of the others, got a cross fire on the Chinese which forced them to retreat hastily, leaving many banners and over 400 slain, while the losses of the allies were 7 killed and 48 wounded. After

this fight the allies concentrated at Yangtsun, where the decision was taken to retreat, abandoning the trains because the line was cut probably beyond repair, and camps of Chinese troops as well as Boxers had been seen between Yangtsun and Peking.

They started on June 19 to march down the Peiho, placing the wounded and stores on four junks that had been seized by a German reconnoitering party. The march was exceedingly slow on account of the difficulty of managing the junks in the eddies of the river. On the second day the Americans at the head of the column encountered Boxers and drove them away with a cannon. After that every village wall, every clump of trees, and every ditch gave cover to the enemy, who contested the whole way with rifles and cannon. When the Chinese appeared in the open they were easily scattered by fire from machine guns. The villages were cleared by bayonet charges. They were scarcely half a mile apart, and at every one there was a fight, while in the intervening spaces the men were constantly exposed to the fire of the Chinese, who were armed with Mannlichers, using smokeless powder, and had a small gun, fired with smokeless powder also. Peitsang was taken from a garrison of Chinese troops after a stubborn battle. Below that place they had to fight Chinese regulars having field guns and cavalry. Capt. McCalla and Cadet Taussig were wounded. They turned a village from which the enemy could not be dislodged, and on July 22 approached the old city of Tientsin, having seized three more junks, on which they put their heavier guns as well as the wounded. They attempted a night march, but were checked by a heavy fire. The junk with the guns on board sank. In the morning they came opposite a walled inclosure on the other bank and were hailed by soldiers of the viceroy, who were told that the troops were going to Tientsin and had no trouble with anybody but Boxers. To the surprise of the allies, the Chinese opened fire with rifles and guns all along the wall. They knew nothing of the capture of the Taku forts by the fleet. All the force sought cover and returned the fire. The Frenchmen on their junk stopped close to the wall and began firing on the Chinese, while a party of British and one of Americans and Germans crossed the river above and below and stormed the low wall at different points. The British entered first and turned on the Chinese one of their own guns, causing them to run in surprise and consternation. The Germans and Americans took two other guns and turned them on the garrison, and soon the place was abandoned by its defenders. It was the great Hsiku arsenal, with a garrison of about 500 men, who were not more surprised by the attack than the captors were when they found, besides 7 guns mounted on the walls, 60 odd stored in the buildings, all of the most modern design, and Mannlicher rifles by the thousand, with millions of rounds of ammunition. The Chinese, with 5,000 native troops, had field guns, seconded by guns of position in Tientsin. The expeditionary force therefore determined to remain there, and brought over the troops left on the other side of the river and the wounded from the junks. Large guns were mounted at every corner, with smaller rifles and machine guns along the walls. By rocket signals they found that the Europeans still held Tientsin, and they were confident of being able to hold out with their superior artillery against the incessant attacks of the Chinese until relief came. On June 25 came a relief column of Russian troops, and on the following morning they marched unopposed down to Tien-

tain after destroying guns and war stores in the arsenal worth 40,000,000 taels. The expedition had lost more than 60 killed and 200 wounded.

Reduction of the Taku Forts.—As soon as the extra guards under Admiral Seymour set out from Tientsin, Yansu soldiery marched from Peking to oppose them and cut the railroad, and large bodies of Boxers congregated at points along the line. On June 6, when the railroad between Admiral Seymour's party and Tientsin was cut, the American, British, French, German, Austrian, Italian, and Japanese admirals held a council of war for the purpose of arranging combined action if required. There were 25 ships in the harbor and 900 men on shore. Each government intrusted its naval commander with discretion to decide, in consultation with the other commanders, what action was required by the necessities of the case for the protection of its legations and citizens. The Boxers and troops that cut the railroad in the rear of Admiral Seymour immediately invested Tientsin. Until then the officers at Tientsin did not know definitely that the relief force was cut off, and after that they knew no more about Admiral Seymour until they saw the rockets sent up from the Chinese arsenal. When Seymour's expedition started, the Government at Peking gave orders to the Viceroy of Pechili to resist by force the landing of any more troops. Gen. Liu had been sent to garrison the Taku forts with about 3,000 well-trained soldiers from Hunan when the additional guards started for Peking against the protest of the Chinese Government. The works at the mouth of the Peiho, partly of modern and partly of older construction, mounted 200 guns, half or more of them of modern patterns.

On receiving information that the Chinese were re-enforcing Taku and were sending troops to attack Tientsin and occupy Tangku and preparing to mine the mouth of the Peiho, the admirals determined to seize Taku. They first held a naval council on board the Russian flagship on June 15, and resolved to land 300 Japanese marines to guard the railroad station at Tangku, but not to assume the offensive unless the 2,000 Chinese reported to be coming should advance to seize the station. On June 16 they resolved at another council that although the Chinese Government, when the Boxer disturbances began, had seemed sensible of its duty and anxious to restore peace, its troops were now engaged in laying torpedoes in the Peiho and advancing against the railroad, and were plainly co-operating with the insurgents; therefore, since the responsibility of preserving communication with the land forces devolved upon the naval commanders, it became necessary to occupy temporarily the Taku forts, with or without the consent of the Chinese authorities. This intention was conveyed to the Viceroy of Pechili and the officer commanding the forts, who were notified that unless these were evacuated hostilities would begin at two o'clock in the morning of June 18.

The admirals designed a combined attack on the forts by land and water, and for this purpose 1,200 men were landed on June 16 to take the forts in the rear while the gunboats bombarded them from the river. The Chinese did not wait for the time of the ultimatum to expire, but opened fire on the vessels a quarter before 1 in the night of June 17. The storming parties came into action only on the following morning, and the operation was therefore more costly than it would have been had the original plan been carried out. The large ships outside the bar could not assist, as no vessel drawing 20 feet of water

can get within 10 miles of the forts. The Russian Capt. Dubrowolski, as senior officer, was in command of the allied fleet of gunboats. On June 17 Japanese and British sailors and Russian infantry took possession of the railroad station of Tongku and wharves 2 miles from the forts. In the river above the forts the gunboats and destroyers took their stations—the Russian Bohr, Koreetz, and Gilyak, the French Lion, the German Iltis, and the British Algerine, Whiting, and Fame. The American Monocacy was there also, and was utilized as a hospital ship. Outside, 10 miles off the forts, lay the British Centurion, Barfleure, Orlando, Aurora, and Endymion, the French D'Entrecasteaux, Jean Bart, Descartes, Pascal, and Surprise, the Russian Sissoi Veliky, Rossia, Demitri Donskoi, Makhimoff, Sivoutch, and Gremiaschky, the Italian Elba and Calabria, the German Hansa, Hertha, Gefion, and Kaiserin Augusta, the Japanese Yoshimo-Kan and Marko-Kan, the Austrian Zenta, and the American Newark. The Chinese Hai-Tien and Hai-Chu were there, and when notified of the intended action the admiral agreed to put out his fires. The Monocacy had been ordered to observe a strict neutrality, and took no part in the affair. The Atago, besides sending landing parties ashore, was likewise inactive. An armored train with a searchlight, manned by 100 men, was sent off for Tientsin when night set in.

The engagement was begun after midnight by one of the Chinese forts firing on the Algerine, a third of a mile distant, which replied directly, and was promptly supported by the Russian gunboats moored in line a quarter of a mile beyond. The Iltis, which had cleared for action days before and was the only vessel in perfect fighting trim, sent in a few shells, and the Lion also. Most of the forts took up the fire. The Iltis left her moorings, and with all lights out steamed down the river to the aid of the British and Russian vessels. As soon as anchor could be lifted the Lion followed. The six gunboats were then under fire of all the forts at ranges averaging a mile, and working all their guns. With the machine guns in their tops they made it impossible for the Chinese to serve the new Krupp quick firers mounted in cavaliers over the high redoubts, but the guns in the angles and the parapets could not be seen, for the night was very dark. The Gilyak, moving close to Taku village, lost many men by rifle fire. When the battle began the British destroyers Fame and Whiting steamed up the river to the naval dockyard and captured the first-class 32-knot German-built destroyers Hai-Lung, Hai-Nui, Hai-Ching, and Hai-Hoba. They were fully manned with Chinese crews, who jumped upon the wharf and ran without striking a blow or firing a shot. During the night the six gunboats, although their shells were well placed, could do no more than hold in check the fire from the forts, which was, however, ineffective. Many of their guns had to be fired with extreme depression from the high redoubts. The powder charges were too light to carry the projectile to its mark, or sometimes they were excessive. There were no well-trained gunners among them. Yet with all these disadvantages they might have won the battle by their valorous persistency if their shells had not been worthless, most of them having either no bursters, or fuses so defective that they failed to explode. If only a part of the shells had burst the six gunboats could not have stood up under the fire of two miles of fortifications for six hours. When daylight broke, the Chinese poured in a much more vigorous fire, and the gunboats got under way on the flood tide—all

except the Gilyak, which received a heavy projectile on the water line. Steaming closer to the forts and moving about rapidly to whatever point invited attack, or passing up and down to deliver their broadsides, the ships worked all their guns with desperate energy. The Iltis had to be beached, a heavy shot having pierced a boiler. An explosion of a magazine in the largest fort checked the Chinese fire for a time, but soon it was renewed more fiercely than before. The storming parties had reached the forts on the north bank of the river, the Russians from one side, the Japanese from the other. Yet it appeared that the attack had failed. The heavy guns of the south fort were brought to bear on the gunboats, and when the storm of projectiles, which exploded now better than before, was becoming too severe for the ships to live in, the main magazine of the fort blew up, sending a blast of fire, smoke, and *débris* a thousand feet into the air. The concussion was so terrible that forts and ships ceased firing, and as cheers arose from the allies the Chinese fire was renewed with little vigor, gradually slackened, and finally ceased. When the storming parties entered the north forts the garrison made no resistance, but was leaving as fast as possible, and when the south fort was reached, Chinese soldiers were seen fleeing across the plain. Many prisoners were taken, and employed in removing the dead, nearly one third of the garrison having been killed or wounded. The guns were in good order, and some of them had never been fired. The storming parties, consisting of 200 Russians in the van, 250 English and 130 Germans forming the main body, and 300 Japanese in the rear, had to advance 2 miles along a narrow road. The Russians were checked by a heavy fire, and the British and Germans marching through paddy fields made little progress in the mud. The Japanese, more accustomed to such ground, found a better path and passed the others on the double quick, entered the north fort first, and drove the Chinese out at the point of the bayonet. Their captain was killed outside the walls, and their losses were 5 killed and 4 wounded; the Russians, 18 killed and 39 wounded. In the river the Iltis was struck 8 times, the Gilyak received 4 shells, the Koreetz 4 and took fire, the Lion was struck once, and the Algerine once. There were killed in the naval action 18 Russians, 10 Japanese, 7 Germans, 1 Englishman, and 1 Frenchman. About 100 wounded were conveyed to Japan for treatment. The allied naval commanders issued a proclamation from Chifu stating that the powers were not making war on the Chinese people, their only object being to rescue their countrymen and to suppress the Boxers.

The Taking of Tientsin.—The Boxers and Kansu troops that destroyed the railroad and cut off Admiral Seymour's column proceeded to invest the European settlements at Tientsin, which were defended by about 3,000 men, with few machine or other guns and a short supply of ammunition. The besiegers had modern artillery, and after the fall of Taku the guns in the forts and troops of the Pekin field force joined in the attack. Three hours after the capture of the Taku forts a determined attack was begun, which was kept up day after day, burning most of the European buildings and compelling the garrison and residents to retire to the British settlement. The Russian troops endeavored to hold the railroad station across the river, but withdrew on June 19, having lost 7 officers and 150 men and shot away nearly all their ammunition. Relief could not be brought from Taku because the railroad

was cut on June 15. A force of 400 Russians and 150 American marines with 3 field guns attempted to break through on June 20, and were driven back. On June 20 a relief force of 1,500 Russian soldiers and 380 British, 240 German, 100 Japanese, and 50 Italian marines started in armored trains, with an abundance of artillery, followed by 750 German troops. This force raised the siege on June 23, after silencing the field guns of the Chinese and the guns of the forts in the old city. In the night of June 25 a detachment of 2,000 Russian and other troops relieved Admiral Seymour in the Chinese armory and brought his force and 200 wounded safely away. The railroad was then opened, and troops were landed at Taku and taken up to Tientsin. As the allies made no further move, the Chinese were encouraged to take the offensive again. As soon as the allies advanced on Tientsin regular Chinese troops from Peking and other ports were ordered to oppose them. Gen. Nieh with 10,000 Chinese regulars arrived on July 4 and occupied the arsenals and

southwest to the northeast, taking in the arsenal as the final objective. Gen. Fukushima, commanding the Japanese, suggested the plan and conducted the operation. With 1,000 infantry, 150 cavalry, and 2 mountain batteries, on July 9 he made a wide sweep, with the British in line on the right, under Gen. Dorward, consisting of the Welsh Fusiliers, a regiment of Chinese trained at Wei-Hai-Wei, a Hong-Kong regiment, and a naval brigade under Admiral Seymour, and at the pivotal point of the turning movement a force of Japanese blue jackets and 100 United States marines under Major Waller, whose duty it was, when Gen. Fukushima approached the arsenal from the left, to advance under cover of the mud wall, the whole of the forces converging on the arsenal. Gen. Fukushima's infantry charge, prepared by the British artillery and carried out under cover of his own guns, was a marvel to the military men of other nations. When the Japanese soldiers came into the fire zone they broke into a brisk run and kept it up for 2,000 yards. The

THE FRENCH QUARTER IN TIENSIN, RUINED BY THE BOXERS.

forts in Tientsin. Extending their lines so as to partly inclose the settlements, the Chinese planted guns in close proximity to the lines of the allies and held the large European force practically in a state of siege. On July 6 the English and French settlements were shelled with fieldpieces concealed in the suburbs of the Chinese city. Outpost fighting was constant, and the rifle and gun practice of the Chinese continually improved. The railroad station was all the time under fire, and along the whole line the Chinese attacked nightly. Shells exploded in the buildings used as barracks with increasing frequency. The investing line was extended until it formed a crescent six miles in length. The battery of British naval 12-pounders was shelled from front, rear, and side, and this cross fire and the bombardment from a fort and several field batteries caused many casualties in the settlements. The military commanders decided to clear the flank and rear of their principal battery, when its position became precarious, by a wide flanking movement from the

Chinese, as soon as they saw the Japanese coming, stopped firing and retreated helter-skelter. The rest of the line then advanced so as to encircle the Chinese works. All the Chinese disappeared, leaving 4 guns and many banners, except 500 Boxers, who were found in a village and nearly exterminated by the Japanese infantry and cavalry. The arsenal was deserted when the Japanese and American storming party scaled the wall.

In the afternoon the settlement was hotly shelled from the city, but on the following day the Chinese even refrained from attacking the outposts. The portion of Gen. Nieh's command with whom the battle had been fought was reported to be retreating, about 3,000 in number, and the rest of these trained Chinese soldiers to be quarreling with the Boxers, who alone made a vigorous bayonet attack on the railroad station on July 11, and were only repelled after three hours of sharp fighting, in which the Japanese lost 80 men, the French 60, and the British 18. The troops were on the spot, because a general attack on the Chi-

nese position was planned for the same day. The plan was that of the Russian Gen. Stoessel, who undertook to cross the Lutai Canal on a pontoon bridge and capture the batteries on the north bank, after which his force was to attack the Chinese camp and afterward the fort, while the rest of the allied forces made an attack on the south wall of the city and the neighboring suburbs. The operation was not carried out until July 13, when with the newly mounted British naval guns the European artillery, numbering 42 guns, for the first time overmatched the Chinese. A reinforcement of 1,200 Americans arrived on July 12, bringing the international force up to 10,000, including 1,200 Japanese. The Russians advanced early the next morning on the right with 3,100 soldiers and 400 French and German marines, to capture the batteries on the Lutai Canal and clear the camps, while under cover of the naval battery on the west 2,000 Japanese, under Gen. Fukushima, and 850 French, 800 Americans, 800 British, and 50 Austrians under command of Gen. Dorward, attacked the city by another wide flanking movement. The Russians were successful after a hard day's fight. They captured the batteries and destroyed the camps, losing 150 men, and returned in the evening, leaving a force to attack the forts at dawn. The attack on the city was begun by a heavy bombardment from the two English naval batteries, which landed their shells so well that a powder magazine exploded at the beginning of the battle, and the Chinese fire, which was spirited at first, soon grew slack. A terrific explosion of brown prismatic powder occurred soon after the infantry began to advance. The turning movement was made in long lines, the Japanese advancing under cover of the mud wall to the south gate, the other troops following in three lines, the plan being to take the city by working round the walls. As the Japanese led the attack in the center, the Ninth American Regiment, supporting them on the left, was taken over to their center when it was seen that they urgently needed help there, and was caught in a furious rifle fire. Col. Liscum was killed while directing his men to cover. The French also went to the support of the Japanese and lost heavily. The Japanese were brought to a stop by the heavy fire from the walls, and made only slight and intermittent progress beyond the mud wall, from which the artillery of the allies at times caused a momentary pause in the Chinese fire. The Japanese hung on to every foot they gained, although their losses were enormous. Those of the British, resting under cover, were slight excepting among detachments of sailors and marines that were sent to support the Americans and to strengthen the Japanese right. The shell fire of the allies produced considerable effect, yet evening came before the Japanese could reach the gate to blow it up. The Chinese had destroyed the bridge over the moat. Gen. Fukushima determined to hold his position through the night, to throw a bridge over under cover of darkness, and to resume the attack early in the morning unless the Chinese, as his experience taught him they might, should evacuate their positions during the night. This most of them did, and when the Japanese crossed the moat, blew up the entrance to the bastion, and scaled the walls with remarkable quickness and skill before it was light in the morning of July 14, they met with but little opposition. The French, British, and Americans followed. The Chinese troops retreated toward Peking. The losses of the allies in the battle were 775 men among 8,000 troops engaged. The city was divided into four sections, and these were placed respec-

tively under British, Japanese, French, and American jurisdiction. The guards were of little use, except the Japanese. Arson and the butchery of noncombatants began at once, and the object was the looting of this rich commercial city, in which European soldiers and officers vied with the Chinese rabble. The Yangtse viceroys appealed to foreign powers to save Tientsin from destruction, as it would take a hundred years to restore it, and the effect would be disastrous to foreign as well as to Chinese commerce, saying that the foreign ministers in Peking were protected, and that Li-Hung-Chang had been transferred to north China as Viceroy of Pechili.

After the capture of Tientsin the generals decided that, in view of the large forces that the Chinese Government had assembled to contest the route and of the difficulty of moving troops and transporting supplies in the rainy season, they could not safely advance to the relief of the legations until their forces were much strengthened and the organization of transport more complete.

Capture of Peking.—The march from Tientsin to Peking began on the afternoon of Aug. 4. There were 22,000 men in the relief column when it started. Of these, 12,000 were Japanese, forming 11 battalions, 3 field and 3 mountain batteries of 6 guns each, and 3 squadrons of cavalry. They were organized in two brigades, one under Gen. Yamaguchi and one under Gen. Fukushima. The chief command of the international forces devolved upon the Russian Gen. Linevich as senior officer. The British contingent consisted of a battalion of Welsh Fusileers, a Sikh and a Rajput regiment, a regiment of Punjabi infantry, one of Bengal lancers, and a naval brigade of sailors and marines, with a battery of 4 12-pounder naval guns, 1 of 15-pounders of the royal artillery, and 1 of muzzle-loading 7-pounder screw guns belonging to the Asiatic artillery, the total force numbering 2,800. The Americans, under Gen. Chaffee, numbered 2,400 men of the Ninth and Fourteenth Infantry and the Sixth Cavalry, marines, and a field battery and a number of Colt automatic and Gatling guns. The Russians had 3 battalions of 1,000 men each, with 4 field batteries of 8 guns each, some Maxim guns, and a sotnia of Cossacks. The French had a force of 800 men, Anamese and Europeans, ready to start, with a battery of old field guns. The Austrians, Italians, and Germans were not in sufficient force to join the column.

During the preliminary reconnoissances Capt. de Marolles, with a party of French marines, embraced a chance to seize the Hsiku arsenal, which his men held in spite of the determined efforts of the Chinese to recapture the position. When the general movement began the Japanese had the advance on the west side of the river, supported by the British and Americans. The Russians and French, 4,000 strong, took the east bank between the river and the railroad, beyond which the Chinese had flooded the country to prevent a flanking movement. Reconnoissances had shown a long line of intrenchments at Hsiku, which were believed to be held by about 30,000 men. At daylight on Aug. 5 the Japanese cavalry made a brilliant charge into a battery on the extreme right of the Chinese line and cut down the gunners before they recovered from their surprise, though not without severe loss. This capture equalized the artillery forces. Under cover of a heavy fire from the British naval 12-pounders which checked the Chinese fire of shrapnel, the Japanese infantry, without waiting for the British and Americans to come up, extended their line, advanced close to the Chinese intrenchments, and

charged on the double quick through a rain of bullets, not once faltering in spite of prodigious losses. Before they reached the trenches the Chinese fled. The main trenches, partly enfiladed by the British artillery, were evacuated when the whole line advanced, the Chinese artillery having already retired and the infantry only waiting to empty their magazine guns at long range. They evacuated the left bank also without coming into action with the Russians and French, and deserted the town of Peitang. The Russians and French precipitated their withdrawal by sending a column beyond Peitang, threatening the line of retreat. The impetuous assault on the first line of trenches cost the Japanese 300 men, but it had the effect of demoralizing the Chinese, who believed after that that with repeating rifles behind the best intrenchments they could not stop a rapid infantry charge. From that time they would not await a Japanese attack on their trenches. Before other troops they stood their ground better. They retreated from Peitang to the much stronger position that they had prepared at Yangtun. It was the suggestion of Gen. Yamaguchi that the allies should follow up their initial victory by continuing to pound the Chinese until they became completely demoralized. Accordingly, the allies advanced on Yangtun the next day. There the Boxers and imperial troops were found in greater force and in a more extended position. The Americans and British began the fight with artillery preparation, and when the Chinese right retired the infantry advanced in the center. The Indian troops began to waver as the shell and small-arms fire from the railroad embankment became hot, but the Fourteenth Americans, under Col. Daggett, dashed onward with a yell and carried the embankment, where for a time they suffered from the fire of the English artillery in the rear as much as from that of the Chinese intrenchments ahead. The casualties of the Fourteenth were 10 men killed and 55 wounded, 10 of them by British shells. Gen. Chaffee with the rest of the Americans cleared the villages on the right, coming under a severe cross fire at one point, and the Russians advanced cautiously through the already deserted villages on the left, and after a stubborn fight made themselves masters of the bridges and railroad station, losing 118 men. The Chinese had several lines of excellent intrenchments, but most of them were undefended. The Japanese, who were in the rear, brought up their batteries in time to join the Americans in shelling the retreating columns. The fighting lasted six hours, in the midst of tall corn that shut off the view in front, and in an atmosphere so stifling that, while the casualties of the Americans were 74, more than 1,000 men dropped from exhaustion. Of the British, 45 fell in the battle. The Chinese, screened by the broom corn and evading a close fight, got away with slight losses.

The Chinese had been so well beaten at Tientsin, and chased away so easily from Peitang and Yangtun, that the generals formed a new estimate of their strength, supposed to have been 45,000, and of their power of resistance. At a council of war the Japanese generals proposed not to wait for 7,000 additional British troops that were expected, besides American re-enforcements, nor for their own complement of supplies and transport, but to push on with the whole force, instead of leaving one of their two brigades at Yangtun to guard communications, although they had provisions for less than five days and train for only a single brigade. By chasing the Chinese without giving them a chance to recover breath or courage they counted on rolling them up to the gates of

Pekin without another battle. The other generals concurred. On Aug. 8 the Japanese set out before daylight, the other troops some hours later, and the next two days it was the same. Before they had marched an hour they came up with the Chinese, and they harried their rear for the rest of the day. Fresh troops went forward each morning to form the advance guard of the day. Although the Americans had thrown away their blankets, ponchos, and other incumbrances, and the British had pack trains, none of the other troops could keep up with the Japanese, whose burden in light marching order was still the heaviest. They reached Hosiwu on Aug. 9, just in time to prevent the Chinese, who were working on a huge trench, from flooding the fields and roads and putting an end to boat transportation on the river above. The long marches in the hot sun were trying to all nationalities, but most so to the Americans, who were debilitated by their campaign in the Philippines, and least so to the Japanese, who rested in the middle of the day.

At Hosiwu the Chinese left behind a powder magazine. They made no determined stand in the fortified towns of Matou and Changkiawan, though their losses in the latter place were 500 men, most of them killed while trying to get away. At Huohsien they intended to give battle, having collected their Manchu troops, but these also were demoralized by the defeats they had suffered and took flight when the Japanese and European troops appeared.

Before Tungchau, on Aug. 11, the vanguard came in contact with some of Tung-Fuhsiang's troops, and preparations were made to assault the town in the morning, but in the night the Chinese evacuated it and fell back on Pekin. The total number of the allied forces between Taku and Pekin was at this time 39,000 men, with 120 guns, the Japanese and Russians making three fourths of the total. The troops mobilized by the powers would double this strength in a month's time. The generals no longer hoped to enter Pekin without a stiff battle. However, they were determined to make the assault with the forces they had at the front, knowing not only the preparations the Chinese had made for defense, but the extremity to which the legationists were reduced.

The commanding officers held a council of war at Tungchau on Aug. 12, and agreed upon a plan providing for a reconnoissance in force on four roads leading to Pekin on the following day. Each force was to go into camp 7 miles from Tungchau and 5 miles from Pekin and establish contact with the other forces, and on Aug. 14, when all the forces had been concentrated on the line of these camps, to make reconnoissances around the city, perhaps encircling the walls, as it was expected that there would be a hard battle to force an entrance. The general attack was planned to begin at daybreak on Aug. 15, and to be directed against the gates of the east wall. The camps were established at the places designated. The Russians pushed their reconnoissance in force up to the wall of the city, and, encountering no opposition, Major-Gen. Vasselievski decided to force the Tungpien gate that night. The cannonade that the Chinese in the city had begun upon the legations determined him to act quickly and impelled the other generals to push their forces forward. He succeeded in blowing in the gate, which was feebly defended, and when he entered with his small force he concluded that the way was free to the Tartar city and the legations, and therefore advanced in column. The Chinese were waiting on the wall near the gate, and as soon as the Russians emerged into the street they opened a

terrific fire at short range. The Russians retreated under cover of an embankment, having lost 26 killed and 100 wounded, and in the morning the Chinese reoccupied the gate in strong force. The Japanese, whose task it was to assault the great Chihua gate, developed their attack as speedily as possible when they received word that the Russians had entered the city during the night, although only a part of their artillery and infantry was on the ground. The Americans were notified by the Japanese of the premature and presumably successful assault of the Russians. Gen. Chaffee had all his men at the front, while the British had yet to march from Tungchau. A troop of American cavalry went out early in the morning to reconnoiter the road, and when within three miles of the city they came in touch with a superior force of the enemy. The troop dismounted and took position on a bank, and while they were returning the fire another lively fire was started in their rear, upon which they quickly retreated. This cross fire, it turned out, came from the Russians, who suffered more from the Chinese fire than the Americans, and answered it, thinking it was meant for them and unaware of a force of the allies on the intermediate ground. The missionary who acted as guide for the scouting party did not stop till he reached camp and told Gen. Chaffee that the reconnoitering force was cut off. Upon hearing this the commander ordered a general advance, and while it was still early morning the Americans were marching rapidly toward Peking. On the way Gen. Chaffee learned of the Russian night assault, and when he approached the city he found the Russians in hot action against the gate they said they had taken, the point where it was planned that the American force should enter also. The Americans were ordered at once into action. Col. Daggett led a scaling party by a sunken road up to the wall, crossing a moat that was raked by musketry fire directed against the Russians. The two companies of infantry climbed the wall with difficulty and planted the American flag, but not until the Russians had forced the gate and hoisted their flag over it. More American infantry entered by the gate, where the Russians were resting, being thoroughly exhausted. The Americans halted also, and their battery shelled the walls where Chinese still showed themselves. The British, who developed their attack on the southernmost gate while the other forces were well engaged and had the American battery to assist them, had not much difficulty in entering not long after the Russians. The Japanese had drawn the main force of the Chinese away to defend the Chihua and Tungchih gates of the Tartar city, against both of which they directed a heavy artillery attack. The main battle was fought by the Japanese in front of the Chihua gate, which was defended by strong bodies on the battlemented wall on each side and on the huge tower over the gate, which contained thousands of loopholes commanding the street leading to the gate. Although Gen. Yamaguchi and Gen. Fukushima began to make their dispositions early, it was several hours before the last of their 54 guns were brought up and all were planted in an arc of a circle on the brow of a hill a mile from the gate. The bombardment was nearly constant for three hours, every attempt of the infantry to advance being met by the Chinese, who returned instantly to their loopholes and poured in as hot a fire as ever. The Japanese lost 200 men in attempting to storm the wall. They were still shelling the gate when the British Indian troops made their way into the sluice gate and marched into the British legation close by,

with which Gen. Chaffee also established communication without bringing up his troops.

The Japanese, keeping up their attack doggedly, could not get to the gate till night. When they did blow it open and enter they soon cleared the walls and tower. A Japanese detachment had already marched in by the Tungpien gate and gone up to the Japanese legation. Before night the different forces were encamped in the neighborhood of the legations.

The Chinese who retired from the outer walls went into the imperial city, from the walls and towers of which a fierce fire had been kept up all day upon the legations, and much firing was still going on. To stop it, the Indian troops manned the barricades about the British legation and a party of American marines cleared the Chen gate of the Tartar city, which the Russians, coming up with a battery, blew in. The Japanese generals had a plan of which the other commanders were not fully cognizant or were not in accord with. As soon as they entered the Chinese city they sent a battalion of infantry to each of the main gates of the imperial city to guard them, in order to protect the Purple City and prevent any violation of the palace. Their object was to establish communication with some one within who could be accepted as representing the Chinese Government, so as to open a way to begin negotiations for the settlement. These guards, however, met with violent opposition, and instead of being able to deliver their communications, became involved in very sharp fighting, from which they suffered severely. The word that they endeavored to send through the gates of the Forbidden City was that they were there for the protection of the city and the Chinese within it. Gen. Chaffee's plan, which was the one recommended by some of the ministers and most of the missionaries and foreign residents, was to capture the Forbidden City and march in triumph into the palace, and thus humiliate the arrogant pride of the Chinese. Continued rifle firing from the lofty gates on the legations made their capture seem a necessary military measure. The advance was to be made through the Chen gate early on Aug. 15. The Russians were asked if they wished to join, but declined. American guns were first posted on the Chen gate commanding the walls of the Tartar city, on which tents and banners were seen in great numbers. When the American infantry advanced, no response having been made to the shell fire, the Russians sent an insignificant force so as to be represented, but Gen. Chaffee declined to recognize it. Beyond the Chen-Mun five massive walls bar the approach to the palace, penetrated by archways that are closed by heavy gates. The first archway, screened by a false gate and surmounted by towers, was vigorously defended, and when Capt. Reilly turned his guns on it he was killed by a musket ball. Guns were brought down, and the gate was finally opened by shooting off the locks and bars. Between that and the next gate the troops were exposed to a withering musketry fire, and had to go back and wait till the Chinese were shelled out of their position, a French battery taking part in the shelling. This was the gate giving entrance to the Purple City, an enormous defensive structure on which the Chinese troops made their main stand. From the top of this gate the infantry exchanged shots with the Chinese on the next one until they ceased firing. Then that one, too, was opened by blowing in the locks; but as the column was marching through the archway an enfilading fire from the gate beyond compelled the men to fall back and remain under cover until shell fire directed through the arch cleared that

one also. But into that one, the outer gate of the palace, the Americans did not enter. Gen. Chaffee gave orders to halt, and some hours later, after consulting with the other generals, he withdrew his whole force to the camp outside the Tartar city. While the Americans were engaged in heavy fighting during this day, with no ostensible object except to discourage the Chinese in the imperial city from firing into the legation grounds, the Russians rested and the British remained in camp, except parties that were sent in search of valuable spoils. The Japanese were busy preparing a camp outside the Tartar city. The following day and the day after were given up to looting, which was freely done by Russians and French, done by Americans against orders, and systematically done by the British, who stored up the loot to sell it later at auction and distribute the proceeds among the men as prize money. Only the Japanese abstained from looting altogether, and placed guards over buildings that were likely to be plundered; and their example was followed tardily by the other nations, but only after many princely residences had been stripped of old porcelains, rich embroideries, choice furs, carved jade, and other treasures. A joint administration was organized by England, France, Japan, Russia, and the United States. The Emperor, Empress Dowager, princes, ministers, and court fled before the allies entered the city, escorted by 3,000 of Tung-Fuhsiang's troops. They escaped to Taiyuen-Fu, in Shansi, with the intention of proceeding ultimately to Shensi to establish a new seat of government in the city of Singan-Fu. Before the departure of the Empress four high officials were executed because of their pro-foreign sympathies. On Aug. 17 Russian and French troops, led by the French Gen. Frey and supported by Japanese, marched to the relief of the Catholics in the cathedral, who were still persistently attacked by the Chinese troops in the Tartar city. The Chuenchen gate was captured after a brief struggle. The Sihoa gate was stoutly defended, and so were a succession of earthworks that blocked the passage to the north cathedral. The generals decided to clear the Tartar city as well as the Chinese city of the Chinese regulars and the bands of Boxers that still held numerous points, but first to drive all the troops out of the imperial city. The French and Russians held the gates on the west side, which they occupied in relieving the cathedral. Americans were stationed at the south gate, British at the southeast gate, and Japanese at the others. All marched in on Aug. 17, meeting with no resistance, and after a parade through the palace, sentries were posted in the palace buildings to prevent looting and destruction. The summer palace outside was occupied by Japanese troops. Small flying columns operated in the surrounding country to clear it of troops and Boxers. A Japanese force marched southward on Aug. 24. Pao-Tang-Fu and other places were occupied. In proportion as the forces were split up their difficulties increased. Small bodies were attacked by the enemy courageously and often with success. The English and Americans made an attempt to restore and keep open the railroad. Later the task was given to the Russians by vote of the commanders, though against their protest.

Russian Campaign in Manchuria.—When the troubles arose in north China the Russians were pushing the construction of the Manchurian railroads with the greatest expedition. The railroad from Talienswan and Port Arthur had been laid northward for 323 miles to Tielin, 40 miles beyond Mukden, and the section was rapidly being laid from Harbin southward to meet it,

southeastward from Harbin toward Vladivostok, and northwestward to join the Siberian trunk line at Nerchensk in the Transbaikal, 900 miles altogether in Manchuria, with a prospect of having the line running from Vladivostok before the end of 1900. The activity of the Russians excited the people of Manchuria and made them especially susceptible to the Boxer propaganda, which spread in their province as in Shantung and Pechili, not without awakening the suspicion of the Russian authorities. When the Boxers began in the latter part of June to tear up the track and burn stations at points widely separated, sotnias of Cossacks were rapidly moved from place to place, and these military movements hastened an insurrection. When the Europeans seized the Taku forts the soldiers of the Chinese garrisons decamped in all directions and joined the bands that were formed everywhere to drive out the Russians. On June 25 the Amur troops were ordered to be put on a war footing, and reserves were called out in Siberia. The Boxers, defying the Governor of Mukden, seized arms and ammunition to attack the Russians at Tielin. In addition to 5,000 Cossacks permanently stationed along the line, 6,000 regular troops were sent into Manchuria from Port Arthur and from the Amur and Ussuri, and Cossacks were brought from the Transbaikal. The governors of Tsitsihar, Mukden, and Kirin offered to guard the railroad with Chinese soldiers, and guaranteed the security of their provinces if the Russians did not begin hostile action. They were assured that the troops would be used only against Hungu brigands and Boxer rebels. The French and English missionaries in Mukden who did not get away early were killed. The officials made a show of suppressing rioters, but did nothing. The agitation quickly spread, and several Manchu officials, as well as the Chinese troops, joined the revolutionary movement. Multitudes of Chinese coolies working on the Russian railroads left their task to drill with the Boxers, and those who would not were compelled to quit work by the Chinese railroad guards. The Mukden governor was imprisoned by his assistant, who led a large party of Boxers against Tielin. They attacked the coal mines and the railroad bridge at Leoyang, and destroyed the Catholic church and sacked European shops in Mukden. The governors of Kirin and Tsitsihar, who had mobilized Chinese troops at the beginning of the disorders, announced that they could not answer for the conduct of their soldiery. On July 7, having received an Imperial edict directing Chinese troops to unite with the Boxers, the governors requested all Russian engineers to transfer the line to the Chinese and leave the country under escort. The Russian chief engineer reminded them of their duties toward Russia, and exhorted them not to be afraid of the Boxers, whom the Russians would help them to exterminate if they could not do it alone. On July 9 the chief engineer and his assistants, with the Cossack guard of 150 men, fled from Tielin before an immense number of Chinese. Simultaneously bands of Boxers and soldiers attacked other places on the line as far north as Harbin. Soon bodies of Chinese were moving against the Russians wherever they were found in Manchuria. They were formally notified by the Chinese officials that a state of war existed, and warned to leave the country and allow Chinese noncombatants in Russian territory to return to their homes. Ample opportunity was given whenever Chinese military officers gave the notice. All able-bodied men in Manchuria were called to arms. Most of the Russians employed on the railroads were safely escorted by Cossacks to the Russian

they refused to pay the fines exacted. Such acts had been committed in other times without being followed by a general attack on foreigners. When any new outrage was reported by the missionaries the ministers made representations to the Chinese Government, and the Tsung-li-Yamen courteously expressed doubt, demanded proofs, and promised to have the Governor of Shantung or the Viceroy of Pechili investigate the case. That nothing was done to check the disturbances beyond the punishment of a few insignificant Boxers was in keeping with the ordinary history of foreign relations with China. Mr. Conger was the first minister who warned the Tsung-li-Yamen that unless the Chinese authorities re-established security for the life and property of Americans strong measures would be taken by the United States to protect them. A joint representation was made by the ministers in January, 1900, calling attention to the secret societies as obnoxious to the missions, not as a danger to Europeans, and especially to the Great Sword Society. The ministers knew little about the Boxers at that time, nor later, until their fanatical crusade spread through north China and millions of adepts from all classes were sworn to unite in the expulsion of foreigners and the redemption of the leased ports.

When Monsignor Favier's letter convinced M. Pichon of the dangerous situation in Peking itself, the ministers of the powers had almost persuaded themselves that the crisis was past. A meeting of the diplomatic corps was called by the French minister, who impressed his own apprehensions upon his colleagues. A note was prepared demanding permission and facilities for bringing up to Peking guards for the legations. In case this were refused a majority of the representatives agreed to the suggestion of the German minister, that they should recommend to their governments the concentration of a naval force at Shanhaikwan, whence a passage to Peking could be forced by an international body of troops. The Tsung-li-Yamen, as was expected, objected to the bringing of foreign troops to Peking as an insult to China, and an action that would fan the flame of anti-foreign feeling. Ample protection by Chinese troops was promised. The ministers would not discuss the question, declaring that the guards must come, with or without the consent of the Chinese Government. Prince Ching had an audience with the Empress Dowager, and induced her to consent to the arrival of guards rather than face a rupture with the powers. The French and Russian guards had already landed, and the Tsung-li-Yamen was informed that the force would be larger if the Government persisted in refusing its acquiescence. The ministers accepted the representation of the Tsung-li-Yamen that the Boxers were rebels against the Government, but they were now aware that the soldiers were making common cause with these rebels, and this mutinous attitude of the army was the chief reason alleged for sending for their own troops to protect them. Their departure from Taku was delayed, to give time to the Chinese Government to reconsider its decision. The Government had already repaired the strip of the Tientsin Railroad that had been demolished by the Boxers, who were told in a proclamation that it was Government property, paid for by Government funds.

It was rumored that the Chinese Empress intended to flee with the Emperor and court to Singan Fu, in Shensi, in order to escape from the Boxers. The Russian minister was instructed to support any Chinese authority in Peking that was able to maintain order in case the regular Government collapsed. On June 1 the Church of England

missionaries Robinson and Norman were murdered by Boxers at Yung-Ching, 40 miles south of Peking. Sir Claude MacDonald demanded of the Government that it should rescue the latter, who had been carried off and was not known to be dead. The ministers of the Yamen gave the stereotyped reply that the Government could only refer the matter to the viceroy, who had already been instructed to send troops to the spot. Prince Ching admitted, when the British minister warned him that failure to suppress the Boxers was leading straight to foreign intervention, that the Government was reluctant to deal harshly with the anti-foreign movement because it was popular. He did not conceal the fact that the ignorant conservative advisers of the Empress Dowager had enlisted her sympathies in favor of the anti-foreign crusade, and that the intelligent statesmen who appreciated the seriousness of the situation were powerless to remedy the matter. A force of 6,000 Chinese troops had been ordered up from Tientsin to guard the railroad.

The legation guards were delayed on their journey at Tientsin, where the governor declined to furnish engines and cars until the foreign commanders threatened to take these by force and proceed without his permission. The total number of foreign troops introduced—Russian, French, American, Japanese, British, German, Italian, and Austrian—was 450. Immense throngs looked on in complete silence when the troops marched through Peking, where they arrived on June 1. Three days later all traffic on the Tientsin Railroad was suspended, the Boxers having overcome the Chinese troops guarding the line and torn up the rails for long distances. The Russian minister offered the assistance of Russian troops to suppress the Boxer outbreak. The Boxers from the south and east began to pour into Peking about June 7, after Kang-Yi with secret instructions from the Empress Dowager had annulled the order for their dispersal just given by two Chinese commissioners and enforced by Gen. Nieh's troops. At the same time Tung-Fuhsian's Kansu troops left their camp south of Peking and were quartered by order of the Empress inside of the city walls. Boxers streamed in by tens of thousands and stalked the streets, with their long swords and bright red badges, breathing destruction to the foreign devils and performing their magic rites in open places in sight of the Peking people, who up to this time had believed that the Empress Dowager would suppress these lawless hordes. When the American missionaries were in danger at Tungchau and Paoting-Fu, the Tsung-li-Yamen promised stringent measures, and imperial edicts were issued insisting that the Boxers must reform, otherwise the Grand Secretary, Yung-Lu, would order Gen. Tung-Fuhsiang and Gen. Ma-Yukun to attack and destroy them.

On June 7 a decree was published ascribing the trouble to the favor shown to converts in lawsuits and the admission of bad characters into the Christian bodies, and stating that bad characters among the Boxers, making use of the anti-Christian feeling aroused by these causes, had destroyed chapels and state railroads. Ringleaders in such proceedings must be punished—not those whom they misled—and fresh authority was given to generals to effect the arrest of such ringleaders. The American Methodist compound was put into a defensible condition and stocked with provisions for a siege. Before June 9 all foreigners except those who had been gathered into the legations or the north cathedral of the Roman Catholics were quartered, about 70 altogether, besides 600 converts whom the missionaries refused to abandon.

The Roman Catholic mission gave asylum to 2,000 converts, and several hundreds were received at different times into the British legation. A guard of 20 marines under Capt. Hall was sent by Minister Conger to help defend the Methodist compound.

The feeling of the court circles in regard to the occupation of the military ports by European governments, and their assertion of spheres of influence embracing the best parts of China, was expressed in edicts of the Empress Dowager, describing the foreigners as robbers of Chinese terri-

reflected in the remotest provinces, where the anti-European spirit was strong. The French consular officers in Yunnan were compelled to quit their posts when Prince Tuan sent a reactionary mandarin to supersede the governor of the province.

The author of most of the acts and edicts of the Government hostile to Europeans was Kang-Yi. Whenever he was not present, Prince Ching and his Chinese colleagues prevailed upon the Empress to issue orders and publish edicts quite different from those that had just before gone

BUILDING IN WHICH THE AMERICANS WERE QUARTERED DURING THE SIEGE.

tory, and people who had expanded the rights of commerce and intercourse and the privilege of propagating Christianity into claims for seizing territories and subjugating Chinese to foreign rule. When the Boxers first appeared in Pekin and began to attack the native Christians, the legation guards had several fights with them in the streets and killed a number. This led the Government to abandon its attitude of impartiality between the Christian Chinese and the Boxers, and to condone the misdeeds of the latter on the ground that they were provoked by the violent conduct of the European troops patrolling the streets unlawfully. The assemblage of war ships at the mouth of the Peiho, the landing of marines, the seizure of the railroad terminus at Tangku, and the preparations to send additional guards to Pekin made the Empress Dowager throw herself into the hands of the warlike Manchu party entirely. Tung-Fuhsiang was ordered to bring his troops from the hunting park up to Pekin, and the Boxers were virtually invited into the capital.

The entrance of the Boxers and the unruly Mohammedan soldiers into Pekin was synchronous with the transfer of the principal offices in the Government to the most reactionary of the Manchus. Prince Ching, the only member of the Tsung-li-Yamen possessing a knowledge of foreign affairs, was superseded as president by Prince Tuan, and three other Manchus of the Conservative stripe were appointed, while one Chinese retired. The serious state of affairs in Pekin was

forth. Twice orders were issued to respect the sanctity of the legations and to allow the Europeans to take converts under their protection.

On June 11 Sujiyama, the Japanese Secretary of Legation, while setting out for Tientsin to inform his Government of the situation, was killed by Chinese soldiers outside the city gates. On that day the telegraph line to Kalgan was cut, the Tientsin telegraph having been broken several days before. From that time for many weeks no communications passed between the foreigners shut up in Pekin and the outside world. On the next day the Boxers made an open attack on the British patrol. On June 13 the Boxers began the work of razing all buildings in Pekin not protected by foreign military, that were owned or occupied by foreigners. When the east and south Roman Catholic cathedrals were burned many native Christians lost their lives. A rescue party shot many Boxers who were massacring Christians, and a second one, led by Dr. Morrison and containing French and German marines, brought away a large number of Christians, who were lodged in a palace adjacent to the British legation. Buildings associated with foreigners or foreign methods were burned with the rest. The destruction of the compound of the Maritime Customs entailed a heavy pecuniary loss on the Chinese Government. The electric light works, and even the Pekin University with its library, were burned. For several days fires raged in all quarters of the city, obscuring the sky with their

smoke. On June 16 the flames from a steam flour mill and a foreign drug store spread to adjacent buildings, and a strong wind carried the conflagration on until the richest fur and cloth stores and the most important banks were in ashes. The Boxers supplicated the fire god in vain to spare the great tower in the south wall, which was opened only for the passage of the Emperor when he visited the Temple of Heaven or that of the God of Agriculture.

On the day following the entrance of their main body the Boxers made the first attack on the legations, to which the troops replied with a volley, killing a number, wounding many, and causing the rest to retire quickly out of sight. In their retreat they came upon and set fire to a mission compound that the missionaries had abandoned, leaving there 200 converts with their families, all of whom perished in the flames or were slain in trying to escape. The same night they burned several foreign houses, and on the night following, in two divisions of about 2,000 each, they renewed the attack on the legations. Several volleys were fired by the troops, putting the bands to flight; and as they fled in disorder the troops sallied out and chased them a short distance, killing a great number. After this a new proclamation of the Empress Dowager ordered the Boxers to disperse, and threatened all who remained in Peking with arrest and punishment as bad characters, since all good Boxers must already have departed in obedience to previous edicts. Soldiers were at the same time detailed to patrol the streets and special guards were set to protect the legations. The Boxers denounced it as false, the work of the Chinese party, and contrary to former decrees, and subsequently they murdered several high Chinese officials.

When Admiral Seymour's expedition set out without leave, the Chinese Government protested through its representatives abroad that it was a hostile act. The advocates of peace and moderation in Peking were rendered dumb. The Boxers were supplied with weapons from the Government armories and recognized as a militia for the defense of the country, and, recruited by deserting soldiers from Nieh's army, they were authorized to stop the expedition, for which purpose Tung-Fuhsiang's troops also marched out.

On June 16 the Empress Dowager summoned a Grand Council. She is said to have first consulted the Manchu princes and nobles and then to have announced their decision to the Grand Council, which was for war against foreigners until these should abate their pretensions. The Chinese officials protested that a general war against Christendom would be fatal, and urged that time should be taken to make a choice of enemies and also of friends, some advocating an understanding with Russia, others one with Great Britain and Japan. The Boxers in Peking from this time grew bolder, and the lawless soldiery of Tung-Fuhsiang joined them in attacks on the legations.

In the night of June 16 American and Russian sentries were fired upon by Chinese soldiers. On June 17 a collision occurred between a detachment of German and Austrian troops and Chinese regulars, some of whom were killed, which led to a request of the Tsung-li-Yamen that the foreign guards should be withdrawn, assurance of protection being given. The ministers replied that thereafter their own soldiers would protect them. Large bodies of Chinese troops encamped near the legations.

The capture of the Taku forts by the powers and the subsequent advance of the relieving column were accepted by the Chinese Government and

by all authorities in north China as acts of open war. The Empress proclaimed a state of war, called on the ministers of the powers with the Europeans in the legations to withdraw under a safe conduct to within the lines of the allies at Tientsin, and sent orders to the provincial authorities to notify Europeans to leave the country, and to raise troops for the purpose of repelling the foreign barbarians and maintaining the national prestige. Gen. Nieh, who had been sent out to suppress the Boxers when they damaged the railroads and then recalled because he carried out his orders with too much violence, was commanded to assist the Boxers and the troops of Tung-Fuhsiang in resisting the advance of the allies. When the ministers refused to leave the legations under the escort of Chinese troops, they were regularly besieged in the legation compounds and attacked nightly by the Boxers and mutinous soldiery, and intermittently were shelled by the imperial troops. The first notice to the foreign ministers to leave Peking was delivered on June 19 in an identical note from the Tsung-li-Yamen, stating that the admirals had demanded the surrender of the Taku forts and threatened to attack them and take them by force, showing the intention of the powers to break off friendly relations. The princes and ministers, astonished at this news, could not promise complete protection to the legations from the Boxer banditti if war ensued, and therefore begged the ministers to depart for Tientsin with their guards under the protection of an escort of Chinese troops that had been provided for the purpose. The ministers, who knew nothing before this of the action at Taku, asked for a conference with Prince Ching and Prince Tuan, to satisfy themselves as to the sufficiency of the military escort and the means of transport, and to stipulate that members of the Tsung-li-Yamen should accompany the expedition. The Russian minister still hoped for a peaceful outcome. The German minister, Baron von Ketteler, who felt called upon to uphold the interests of his Government with firmness and vigor, strongly dissented from the opinion of most of his colleagues that it was necessary to leave Peking, and determined to convey a serious warning to the Tsung-li-Yamen, and the Manchu princes in particular, that if they broke off diplomatic relations with European nations they would bring about the fall of the dynasty. Although he received no reply from the Tsung-li-Yamen to his demand for an interview, he set out without an armed escort in the morning of June 20, and as he passed a squad of soldiers he was shot dead in his sedan chair by the officer in command of the troops, his interpreter reported.

The death of the German minister convinced the other ministers that they could not depend on a Chinese escort, and determined them to fortify the legations and defend them until the relief column arrived. The missionaries in their quarter of the city, the staff of the Maritime Customs, and other Europeans and Americans, were hastily escorted to the British legation. At the hour when the time set for their departure by the Tsung-li-Yamen was up, the troops of Tung-Fuhsiang opened a rifle fire on the Austrian legation. On the day following the Tsung-li-Yamen sent a courteous reply to the diplomatic body, stating that the warning to leave Peking had been given in consideration of the dangers that the ministers incurred by remaining, but since the country outside was also disturbed and the time given was too brief for proper preparations, the Yamen agreed to the delay and to further negotiation; the relations between China and the powers had not been strained by any animosity on the part of the

Chinese Government, which could not have foreseen the outbreak of the people against the Christians, and the Government desired to learn from the foreign ministers what were the intentions and instructions of their governments. The ministers replied in a collective communication that they had none but friendly instructions, and that detachments were on their way to Peking for no other purpose than to assure safety. In calling attention to the firing upon the legation buildings they were convinced that it was chargeable to rebels or to soldiers acting independently, and they looked to the Chinese Government to put a stop to it.

For the next three weeks no communications passed between the Chinese Foreign Office and the legations, which were closely invested by Boxers and attacked with shell and rifle fire by imperial troops. The Austrians abandoned their buildings on June 21 and retreated to the French legation. The French and Italians evacuated their legations, but resumed their positions later. The German legation was abandoned on June 22. The British legation was the main defensive position. Adjacent buildings were torn down to deprive attacking parties of shelter, to avert the danger of fire, and to give material for fortification. When Prince Su abandoned his palace to take refuge in the imperial city it was occupied by Christian converts, some of whom he had already received in the outer court at the request of the ministers. These Chinese were employed in the work of fortification, in which all the inmates of the crowded British legation helped. Committees were formed to take charge of the administrative details. F. D. Gamewell, an American missionary having a knowledge of engineering and of Chinese construction and the management of Chinese labor, superintended the erection of the barricades according to the plans of the military men. Sir Claude MacDonald was recognized as the chief in military as in other matters, although sometimes the military officers objected to carrying out his orders. On June 22 the Boxers burned the Italian and Dutch legations and set fire to buildings within the British compound, which were saved with difficulty. The legation guards numbered only 430—79 British, 75 French, 75 Russians, 58 Americans, 50 Germans, 40 Italians, 30 Austrians, and 23 Japanese. The periodical attacks made by organized bodies of imperial troops were mere demonstrations. A small force of them with modern guns, of which there were hundreds in Peking, could have demolished the legations at any moment. Even the Boxers, outnumbering the defenders fifty to one, could have forced the position had they not been restrained. From June 23 the legations were completely besieged. The Imperial Guards under Yung-Lu continued to protect the legations at the instance of the Emperor and of Prince Ching and the Tsung-li-Yamen. Kang-Yi and Prince Tuan encouraged the Boxers and the troops under Tung-Fuhsiang, of whom there were 15,000 in Peking, to attack the legations, in order to frighten the ministers into leaving Peking. No one in authority acknowledged connivance

in such attacks, which were officially ascribed to riotous Boxers and mutinous troops. The barricades of the besiegers were gradually pushed close up to those of the legations. The anti-foreign party had its own way in Peking whenever the allies made a fresh move toward the city, but whenever they paused, more peaceful edicts were issued, and southern viceroys, who refused to support the warlike policy and petitioned the Empress Dowager to suppress the Boxers and protect the legations, appealed to the powers to stay their advance and present their terms of peace, promising on their part to check anti-foreign disturbances in their provinces, but adding that they could not guarantee the safety of the legations nor vouch for the temper of the people in their own provinces if the powers proceeded to the occupation of Peking and the humiliation of the Empress. An imperial

RUINS OF THE AUSTRIAN LEGATION, DESTROYED BY THE BOMBARDMENT.

edict of July 1 expressed disappointment in the achievements of the Boxer militia, who should have combated the enemy and averted the outrages China had suffered at the hands of the foreigners. They were still urged to proceed northward to ward off the danger that threatened Tientsin and Peking, but the disloyal bands that robbed and murdered in their name would be distinguished from the true Boxers and would be rigidly suppressed.

The legations were barricaded on every side with a succession of walls built of large bricks taken from houses, and on top of the walls and at the entrance of the buildings were placed sand bags, many of them made of silks, curtains, and garments, until the materials finally gave out and the fortifications had to be constructed of bricks alone.

When the allies relieved the forces besieged at Tientsin, notice was given to the ministers once more that they must leave Peking at once, the military authorities promising to protect them on the route to Tientsin. The ministers replied that they would remain and would protect themselves. On June 27, when the time limit of this ultimatum had expired, the Chinese troops again attacked the legations with shells and rifle fire. The Chinese Government, or the military leaders who had usurped all authority, determined to expel them by force, and on June 26 a message was conveyed to the consuls in the treaty ports which announced that they were being convoyed down to Tientsin by imperial troops. The death of Baron von

Ketteler was reported, but was not officially acknowledged till July 1. When Tung-Fuhsiang renewed the attack on the legations, Yung-Lu got word to the allied forces through Sheng, the Director General of Railroads, urging their speedy advance, as he and Prince Ching were no longer able to control events in Pekin and the soldiery were rioting in the streets.

After the second attack of Tung-Fuhsiang's troops the Chinese authorities sent some food to the legations, which the ministers declined to accept. Further attacks were opposed by the 10,000 men of the Manchu garrison controlled by Prince Ching, who killed many Boxers and Kansu soldiers in endeavoring to drive them from their positions in front of the legations. At the same time edicts were published praising Boxers for their patriotic services in uprooting Christianity, and commanding viceroys and governors to expel missionaries and compel Chinese Christians to recant. The siege of the legations became closer than ever, and the Boxers pushed their line so near that they succeeded in undermining and blowing up a corner of the French legation. In their determination to destroy the British legation they burned the adjoining Hanlin Academy with its invaluable library. They edged their barricades close up to those of the legation and placed two guns in position to make a breach in the defenses. The defenders had an old Chinese cannon, for which they improvised ammunition, but they considered their position extremely critical when the American guards sallied out in the night of July 3 and killed many Boxers, and a larger force made a sortie on July 6, killing 200 soldiers of Tung-Fuhsiang's force. Heavy guns were then put in position to bombard the legations, and the Governor of Shantung himself reported that they were destroyed and all the Europeans killed. All the legations still standing were burned except the British, American, German, Japanese, and parts of the French and the Russian. All the members of the diplomatic corps took refuge behind the defenses of the British legation. At this time the Empress Dowager issued warlike edicts declaring that there could be no reconciliation with Christianity, which the whole nation, including military men, *literati*, nobles, and princes, had united to stamp out since the foreigners had begun a war against China; that the bitter feeling against foreigners had reached such a pitch that any attempt to put down the people would be dangerous; and that while the Empress was anxious to protect the legations, the Chinese people were willing to put it to a test whether they or the foreigners were stronger; hence all governors should immediately enroll troops for the defense of their districts and act according to local circumstances on their own judgment, but for any loss of territory they would be held to strict account. The Yangtse and southern viceroys did after this enlist troops and mount guns, but used the discretion confided to them to protest their innocence of hostile feelings toward Europeans and their intention to use their forces only for the suppression of anti-foreign or rebellious disorders. At the same time the Chinese provincial officials conveyed warnings to the Empress to protect the legations and to avoid a general war against foreigners, and through Chinese ministers abroad and foreign consuls they cautioned the powers that continued aggression, and above all an attack on Pekin, might result in disaster to the legations. The governors of 11 provinces in a joint memorial recommended protection to foreign merchants and missionaries, whether there was war or not, in order to preserve China's prestige as a civilized state, and the rescue of the ministers so as

to render negotiations still possible, in which the governments of the ministers saved might use their influence in China's favor; also an apology to Germany for the murder of Baron von Ketteler, and a proposal for the mediation of other powers, with assurances of China's good intentions to be given specifically to France and the United States; furthermore, full compensation for all losses of foreign lives and property, and orders to the military and civil authorities to punish bandits and marauding troops. Li-Hung-Chang, whom the Empress in her perplexity summoned from Canton to take the vicerealty of Pechili and arrange matters with the powers, at the same time that he approached the United States and other powers with proposals of peace, informed the Empress that Great Britain and France made the heads of the Chinese Government personally responsible for the lives of their ministers and citizens in Pekin, and that it was necessary that the Boxer movement should be stopped altogether and the war party put down.

The first tidings received direct from the foreign ministers in Pekin was Mr. Conger's telegram of July 18, saying that they were under shot and shell and only quick relief would save them from massacre. The capture of Tientsin by the allies produced an immediate alleviation of the situation. The war party was no longer confident, and the troops that returned to Pekin with Gen. Nieh assisted the forces of Prince Ching and Yung-Lu to guard the legations. The memorial of the southern viceroys had its effect on the Empress Dowager, and still more the admonition of Li-Hung-Chang. From July 16 there was an armistice. The besieged, who were reduced to eating horseflesh, were able to obtain new supplies from outside, and foodstuffs, fruit, and vegetables were sent in by order of the Government. When an official of the Tsung-li-Yamen visited the legations on July 18 he renewed the proposal that the ministers should remove to Tientsin under an escort of imperial troops, until the population of Pekin became quiet and order was restored. An edict of July 18 enjoined protection of foreigners and promised compensation. The Banner troops attempted to clear away the Boxers and Kansu braves who still held the legations invested, and several encounters took place in the streets.

When the allies at Tientsin assumed the offensive again and made ready for the advance upon Pekin, the situation of the beleaguered Europeans became critical once more. Li-Ping-Heng, who took command of the defense of Pekin, began by beheading Hsu-Ching-Cheng, ex-minister to Russia, and another member of the Tsung-li-Yamen, because they advised making an effort to conciliate the powers. All food supplies were cut off from the legations, and the Chinese Government became more urgent and threatening in the demand that they should depart for Tientsin. Rifle firing was recommenced, and they strengthened their fortifications. Their ammunition was almost gone, and their provisions were so low that they reduced the rations. When Li-Ping-Heng and Tung-Fuhsiang left with their forces to resist the advance of the allies, Yung-Lu was able to give them more efficient protection. As soon as the ministers were permitted to send cipher dispatches to their governments, they all declared that foreign troops only could escort them safely. Besides being unwilling to trust a Chinese escort, they were unwilling to leave the Chinese converts to be massacred. Although the Russian and the Dutch governments authorized their ministers to accept the Chinese escort, all the ministers felt safer where they were, and no one was willing to break

up their union, although their situation was becoming desperate. On Aug. 5 shots were exchanged anew. In the incessant fighting for a month, 60 of the marines were killed and 110 wounded. The Americans, who held a strong and important position on the outer wall, had done valiant service and lost 16 men. The French and Austrians defended heroically the French legation, which was the key to the position and the post of danger, and they lost heavily, the Austrians half their number. When the Chinese forces retreated upon Peking and the allies began their assault on the city, the legations were attacked fiercely, and were shelled even after the foreign troops entered the city. While the troops were bombarding the gates, guns in the imperial city were turned on the legations; and although Prince Ching ordered his officers to cease firing on pain of death, the fire was continued all day with artillery and musketry. The losses in the last days of the siege raised the total to 67 killed and 160 wounded. The losses that the legation guards inflicted on the Chinese from first to last were more than 3,000.

The Roman Catholics shut up in the north cathedral were attacked fiercely and incessantly from the time when the Boxers first entered Peking. Bishop Favier and his priests, with 42 guards and 2,000 converts, were prepared for a long siege, having bought rifles and ammunition for some of the converts and an abundance of supplies. The Chinese attacked them day and night and battered the east face of the cathedral with shell fire. Once they exploded a mine, which killed both of the French officers and 3 of the guards, besides nearly 300 converts. The defenders still held out, and kept the Chinese out of the great breach they had made until it was repaired.

Intervention of the Powers.—The ministers at Peking made the first formal demand for the arrest of members of the Boxer society who organized street disturbances and seditious meetings or circulated manifestoes against foreigners in a collective note delivered to the Tsung-li-Yamen on May 21. The Russian representative went alone to the Tsung-li-Yamen and endeavored to convince the Chinese ministers of the necessity of prompt and stringent measures for the suppression of the Boxer revolt. The Tsung-li-Yamen replied to the collective note on May 24, saying that the Government on May 17 issued a decree in accordance with which the provincial officials of Pechili had drawn up measures for dealing with the revolt which corresponded in their main features with the ones demanded, and would suffice for the destruction of the society and prevent further disturbances. The foreign ministers, considering this reply evasive and unsatisfactory, came together to discuss the landing of forces.

The secretary of the Tsung-li-Yamen went to the Russian minister to inform him that severe measures had been taken to suppress the Boxers. A detachment of troops had in fact been sent against them. A few days later the Boxers defeated this force, killing the commander and 60 soldiers. At this stage the Chinese Government, in its edicts and actions, showed remarkable vacillation and infirmity of purpose. The appointment of Li-Hung-Chang—who had already been exiled from the capital to Nankin—to the viceroyalty of Canton, where he was entirely out of touch with the capital, betrayed the desire of the dominant party to thrust aside every restraining influence.

When the admirals demanded the surrender of the Taku forts, Admiral Kempf refused to join in the ultimatum or in the bombardment, for he thought it was against the policy and wishes of the United States Government to be entangled

with other foreign powers in such a step, and, moreover, that it endangered the lives of people in the interior in advance of absolute necessity for such drastic action. The act of the Chinese in opening fire without warning and in firing on the Monocacy he considered an act of open hostility that justified him in making common cause with the foreign forces for the protection of national honor and the preservation of American lives and property, and in this resolution he was confirmed later by the knowledge that the Chinese Government was paralyzed and in secret edicts showed sympathy with the Boxers.

When Admiral Seymour's force started from Tientsin, Boxers and a large part of the Kansu soldiery advanced from Peking to tear up the railroad and meet the foreign invaders. They had first to deal with

Nieh's troops that had been stationed along both the Tientsin and the Lu-Han lines to guard the tracks and stations. On June 5 they had a severe encounter with these troops, some of whom ran away, but some held their ground, and killed 500 Boxers. No further attempt was made by Nieh to protect the line, for his troops were ordered to retire, and he was censured for killing patriotic subjects.

GENERAL ADNA R. CHAFFEE.

The Kansu soldiers and the Boxers then tore up the railroads very effectively, bending the rails by main strength, throwing bolts and fishplates away, and destroying the grade in the vicinity of Peking. Tientsin was then besieged and Admiral Seymour's retreat intercepted. The United States Government decided on concurrent action with the European powers, while disclaiming an alliance, and Russia abandoned her independent attitude and joined in the accord. The admirals decided on an international blockade at Taku, and the occupation of a strip of territory where foreigners could take refuge under the guns of the fleets. This course was approved by all the foreign ministers at Peking, who also discussed the advisability of demanding an audience with the Empress Regent.

The proposal of the foreign representatives at Peking that a naval demonstration should be made by the powers in the Gulf of Pechili was not at first well received by the European cabinets. Russia in particular—and France following the lead of Russia—was very reluctant to intervene or even to exert pressure on the Chinese Government at a juncture when such action would excite to a higher pitch the anti-foreign sentiment in China and render it more difficult for the Empress Dowager to become emancipated from the influence of her European-hating advisers and listen once more to the rational statesmen of China. This led the Russian minister in Peking to hold aloof from the earlier representations of his colleagues. Count Muravieff, down to the time of the Boxer irruption into Peking, would not join in menaces or pressure, believing that the real state of things had been concealed from the Empress Dowager, and that if the Chinese Government were left alone, better

counsels would prevail. The situation in southern and central China, where a strong and growing revolutionary party aimed to upset the dynasty, seemed to the Russian chancellor to be more critical. The Japanese Government also was anxious not to complicate a position of affairs already serious. A cautious course was desired, too, by the United States. Germany, whose action had done most to rouse the national excitement, and Great Britain, which had followed the German initiative in the partition of China as a check to the spread of Russian influence, were least disposed to take account of the patriotic excitement they had done most to provoke, and took the lead in menacing the Chinese Government. No government, however suspicious of the motives of others, desired to precipitate an international crisis. None was prepared for isolated action, and a previous agreement among all the powers was understood to be the condition of any important step to be taken. Japan was received into this concert more thoroughly and cordially than before, and for military action was the most important member, because Japan alone had troops sufficient and ready to accomplish any operations in China that might become necessary. Russia made the first offer to lend troops for the suppression of the Boxers when the Chinese Government represented that the rebellion was too serious to be easily quelled with its own forces. This offer was followed by a similar one from Japan. Both were taken into consideration and courteously declined.

The admirals on June 5 decided in conference to assume, with the object of protecting the lives and property of their nationals, an attitude of armed defense, their military movements to be directed not against the Chinese Government, with which their countries were at peace, but against the insurgents seeking its overthrow. Should the rebels prove stronger than the Government, aid would be lent to the Government to quell them; but if the Chinese Government did not attack the rebels, then the allied powers would proceed to attack them. Each commander was to comply with the wishes or obtain the concurrence of his minister unless communication with Peking should be severed. Should a situation arise affecting the interests of all the foreign powers in common, they agreed then to act in concert, seeking instructions from home if there were time to do so; but in case the emergency were too pressing, they would determine their course after consultation together. At a later meeting they agreed to land men at once on the motion of the American admiral. Meanwhile Admiral Seymour had sent re-enforcements at the request of the British minister, and his course was followed by other admirals until railroad communication was interrupted. Thereafter followed the march of an allied force under Admiral Seymour toward Peking. The governments of the powers having naval forces in the Peiho—America, Austria-Hungary, England, France, Germany, Italy, Japan, and Russia—gave full discretion to their admirals to act in consultation with the other senior naval officers as the emergency seemed to demand. The French admiral suggested giving command of the detachments that were sent up to Tientsin to Col. Wogack, a Russian officer of experience. The German admiral held it better that each detachment should act independently in concert with its consul until an emergency should arise making it necessary to unite them under a single command. The British admiral saw no necessity of choosing a commanding officer before a column started for Peking. When the relief column did start the command was given to him as senior officer.

When all communications with Peking were cut off and Admiral Seymour's relieving force was stopped, troops were dispatched to Taku from the nearest foreign garrisons—German troops from Kiaochau, British from Hong-Kong, Russians from Port Arthur, and Japanese troops. On June 14 a Russian force of 1,700 men left Tientsin to join Admiral Seymour, but only succeeded in rescuing his exhausted and decimated expedition. A Russian contingent of 6,000 soldiers was ordered to Taku to be at the disposal of the Russian minister. After the capture of the Taku forts the British Government arranged for the dispatch of 10,000 Indian troops under command of Sir A. Gaselee. A third brigade, intended for the protection of Shanghai and the British interests in the Yangtse valley, was mobilized while the allies were marching to Peking. France arranged to bring the strength of its contingent up to 15,000 men.

The Government of Great Britain sounded the Japanese Government on June 25 with reference to the immediate dispatch of 25,000 or 30,000 Japanese troops for the restoration of order in Tientsin and Peking, and inquired of the Russian and German governments especially if they objected. Japan expressed a willingness to undertake the task on receiving assurances that it would not lead to complications with other powers. The Russian Government, while not disposed to give a mandate, did not wish to hinder Japan's freedom of action. The German Government would not assent to Japanese intervention unless convinced that the interests of third powers were left untouched. The Japanese Government ordered the mobilization of 22,000 men, and urged the advisability of an exchange of views as to joint measures, considering the troubles in the north of China so grave that an expedition of 70,000 men would be required, which it was not prepared to furnish without being indemnified for outlay of money as well as protected from complications by previous agreement among the powers. The British Government offered to guarantee the expense of an immediate expedition for the rescue of the legations, any ulterior operations to be left to future consideration.

Soon after the bombardment of the legations began detailed accounts were circulated from Shanghai that the ministers and other foreigners in Peking were massacred. A report of that nature was received later at St. Petersburg from Manchuria. It was reported also that the Emperor and the Empress Dowager had been poisoned. After June 11 there was no telegraphic communication with Peking, but a message from Sir Robert Hart came through by courier, declaring the situation desperate on June 25. The Chinese ministers in Europe and the United States and the viceroys in the south denied the stories that the ministers in Peking were dead, though they admitted later that they had no authentic information.

Secretary Hay defined the attitude of the United States in a circular dispatch of July 3. Adhering to the policy initiated by the United States in 1857 of peace with the Chinese nation, the furtherance of commerce, and the protection of its citizens by all means guaranteed by extra-territorial treaty rights or by the law of nations, the United States Government proposed to hold responsible the authors of any wrong done to Americans, and viewed the condition in Peking as one of virtual anarchy, whereby power and responsibility were devolved upon the local and provincial authorities, who, so long as they were not in collusion with the rebellion and used their power to protect foreign life and property, would be regarded as representing the Chinese people, with whom the United

States seeks to remain in peace and friendship. The United States would continue to act concurrently with the other powers in opening up communication with Peking and rescuing American officials and missionaries, in affording protection to American life and property and guarding legitimate American interests everywhere in China, and in aiding to prevent the spread of disorders and the recurrence of such disasters. The solution sought by the United States was one that should bring about permanent safety and peace in China, preserve China as a territorial and administrative entity, protect all rights guaranteed to friendly powers by treaty and international law, and safeguard to the world the principle of equal and impartial trade with all parts of the Chinese Empire.

On July 3 the Chinese Emperor appealed to the Mikado to intervene for the salvation of China, and proposed an alliance, on the ground that if China's independence were destroyed the position of Japan would become untenable; occupied in suppressing the insurgents, China might fail to resist successfully the invaders, and hence entreated Japan to restore peace and save the Chinese Empire from the ambition of the strong Western powers. The Japanese Emperor replied that if China suppressed the rising and rescued the ministers the powers would recognize her sincerity, and thus calamity to the empire would be averted; that Japan had sent troops solely for these objects, and in the ultimate negotiations would act a helpful part provided China rescued the foreigners and suppressed the rebellion. A message sent at the same time to the Czar explained that measures were taken on the insistence of the Russian minister against agitators who stirred up hatred to Christians; but already eminent persons and princes as well as the common people and the troops were roused by false rumors, and the Government had to stay its hand for fear that repression would cause a general rising against foreigners. This attitude led the powers to suspect connivance, and their military measures had complicated the situation and weakened hopes of a peaceful issue. The Emperor applied to the Czar, on the strength of two centuries of friendship between the two countries, to indicate what measures would be calculated to save China and to take the initiative in carrying them out. The Czar replied on July 13 that, guided by traditional friendship for China, and wishing to see the misfortunes and complications threatening the Celestial Empire averted, the Russian Government was willing to render assistance to the legitimate Government in China in suppressing the agitation, and would confine its efforts solely to the restoration of order and tranquillity. The Czar hoped that the Emperor of China would take determined steps to pacify the country and secure the safety of the lives and property of Russians and other foreigners, but the absence of exact information regarding the fate of the legations rendered it difficult to intervene in China's favor at that moment.

On July 17 an imperial edict was issued expressing regret at the murder of the Japanese *attaché* and the German minister, and the desire of the Chinese Government to punish the murderers and to pay compensation for the death or loss of property of missionaries or merchants and to protect the legations. The origin of the conflict was the long-standing antagonism of the people of China to Christians and their missions. The fall of the Taku forts precipitated the meeting of force with force. The Imperial Government, having due regard to the importance of international intercourse, was still unwilling to interrupt diplomatic relations, although the fighting at Tientsin

could only be regarded as an act of hostility. In communicating this edict to Secretary Hay the Chinese minister, Wu-Ting-Fang, presented a telegraphic message from the Chinese Emperor to President McKinley, in which he placed special reliance on the United States, which sought only international commerce, and had so long maintained friendly relations with China that neither country suspected or distrusted the other, to devise measures and take the initiative in bringing about a concert of the powers for the settlement of the difficulty into which China had irresistibly been driven, incurring well-nigh universal indignation because the recent outbreaks of mutual antipathy between the people and the Christian missions had led the foreign powers to suspect that the attitude of the Imperial Government was favorable to the people and prejudicial to the missions, with the result that the Taku forts had been attacked and captured, and consequently there had been a clashing of the forces with calamitous results. To this message, dated July 19, President McKinley replied on July 23, saying that the United States Government, desiring nothing but what was just and equitable, as the Emperor recognized, had landed troops to rescue the legation from danger and afford protection to Americans, and all the powers publicly avowed a similar motive. Inferring from the Emperor's message that the malefactors besieging the legations, far from receiving favor or encouragement, were actually in rebellion against the imperial authorities, the President urged upon the Chinese Government to give a public assurance whether the foreign ministers were alive, and, if so, in what condition; to put them in immediate and free communication with their respective governments, and to remove all danger to their lives and liberty, and to place the imperial authorities in communication with the relief expedition, so that co-operation could be secured between them for the liberation of the legations, the protection of foreigners, and the restoration of order. If these objects were secured the Government of the United States believed that no obstacle would be found to exist on the part of the powers to an amicable settlement of all questions arising out of the recent trouble, and it proffered its friendly offices, with the assent of the other powers, to secure such a settlement on the fulfillment of these conditions. Simultaneously with the appeal for President McKinley's mediation a telegram from the Emperor to the President of the French Republic stated that rebels had taken advantage of hostilities between the people and the Christians to commit depredations, and the foreign nations as a consequence suspected the court of displaying partiality toward the people and jealousy toward the Christians, whereupon occurred the capture of the forts and subsequent military action, and a succession of misfortunes rendering the situation complicated and dangerous. China looked chiefly to France, which had settled other questions by conciliatory methods, to settle the difficulties that now by the force of circumstances pressed so hard upon her as to bring down universal wrath; therefore the Emperor hoped that the President of the republic would find means to arrange matters and would take the initiative in changing the situation. M. Loubet replied to the Emperor that his request could not be examined until effective protection and complete liberty for their communications with their governments were secured to the French representative in Peking and his colleagues; until Prince Tuan and the high officials responsible for the existing state of affairs were removed from power pending their inevitable punishment; until the authorities and troops

throughout the empire received orders to cease hostilities against foreigners; and until measures were taken for the vigorous repression of the Boxer insurrection. So long as these indispensable guarantees were not furnished nothing was in order but military action. A message was also dispatched to the German Emperor of the same date containing a similar attestation of peaceful and friendly relations and absence of distrust on both sides, a similar explanation of the unfortunate and complicated situation in which China was placed, the foreign states having entertained the suspicion that the Government was conniving at the persecution of Christians when outbreaks of hatred between the people and the native Christians led to disturbances during which Baron von Ketteler was murdered—an unexpected outrage, for which the Emperor expressed the deepest regret. This suspicion grew at the very time that the Government was investigating the crime with the object of punishing the murderers. The seizure of the Taku forts followed and hostilities began. The position was the more difficult to reduce to order because the Chinese Government did not intend to permit any change to take place in the existing good

CHINESE POLICE, LI-HUNG-CHANG'S BODYGUARD.

relations. The force of circumstances placed it in a position where it was not free to act as it would wish. The only way to remove the resentment generally felt against the Chinese Government was to call in the assistance of Germany; therefore the Emperor of China begged the German Emperor to consider a plan by which the continuance of friendly relations might be secured and to assume the leadership in the restoration of the former peaceful state of affairs. Count von Billow, the German Secretary of State for Foreign Affairs, refused to communicate this telegraphic message to the Emperor-King until the truth should be known concerning the fate of the legationists and other foreigners in Peking, and until the Chinese Government atoned for the atrocious murder of the German minister, and gave a sufficient guarantee that its conduct in future would be in accordance with the dictates of international law and of civilization.

Li-Hung-Chang was appointed a peace commissioner to deal with the powers. Only the United States, Japan, and Russia were disposed to accept his credentials, and they only provisionally. The

American consul at Shanghai was instructed to place himself in communication with Li and avail himself of his influence in securing the objects laid down in the circular note of July 3. When the ministers in Peking were notified by the Tsung-li-Yamen that Li-Hung-Chang had been directed to negotiate with the powers, the French minister sent a dispatch on Aug. 9 protesting against negotiations that would stop the advance of the foreign troops while legations were hemmed in by barricades and reduced to siege rations of horse meat and rice, and were in imminent danger of falling into the hands of the Boxers. The Chinese Government at this time was endeavoring to force the ministers to leave with a Chinese escort, informed them that their governments had so directed, and sent word abroad that a reliable escort had been provided. When the ministers repeatedly refused, the Chinese Government requested the powers, through the Chinese ministers in Europe and America, to order their departure for the sake of their own safety. Mr. Conger telegraphed that imperial troops were firing on the legations, and that it would be certain death for the ministers to leave Peking as proposed in the edict of Aug. 2. In this edict the Imperial Government expressed a doubt as to its power to restore order and secure absolute safety in Peking. In a memorandum sent through Minister Wu on Aug. 8, Acting Secretary of State Adee demanded the immediate cessation of hostile attacks by imperial troops upon the legations, and said that if the Chinese Government was unable to protect the ministers in Peking it could not protect them on the journey to the coast; he suggested, therefore, that the Imperial Government enter into communication with the relief column and co-operate with it for the liberation of the legations, the protection of foreigners, and the restoration of order. In a later telegram Mr. Conger said that foreign troops only could safely escort them, and they must be in sufficient force to guard 800 foreigners and 3,000 native Christians, whom they could not abandon to certain massacre. Similar messages were received by the other governments. The imperial edict appointing Li-Hung-Chang plenipotentiary was issued on Aug. 8. The United States Government, when it was communicated with, Aug. 12, with a request for cessation of hostilities pending negotiations, expressed willingness to enter upon negotiations with Li-Hung-Chang with the desire to continue friendly relations with China, but pointed out that general negotiations were impossible so long as the ministers of the powers and persons under their protection remained in a position of restraint and danger, nor could the powers cease their efforts for the delivery of their representatives except under arrangements adequate to accomplish their peaceful deliverance. The United States stood ready to agree with the other powers to cease hostile demonstrations on condition that a sufficient body of the relieving forces be permitted to enter Peking and escort the ministers and residents back to Tientsin, the arrangements and dispositions to be satisfactory to the commanding generals. When the allied troops approached Tungchau, Li-Hung-Chang made an earnest request that they halt there, where they would be met by high officials of the Chinese Government empowered to negotiate an armistice. An advance on Peking he believed would shake the empire to its foundations, besides causing the deepest alarm to the Emperor and the Dowager Empress and calamities to the people. He pleaded especially with the United States and Japan, because they had shown a willingness to stop hostile action if the ministers were delivered safely, observing that a further advance would

wound the feelings of all China's people, high and low, while a compliance with his request would win their gratitude. At the same time he memorialized the Imperial Government to appoint an envoy with authority to negotiate an armistice with the military commanders. Authority was sent to Gen. Chaffee from Washington on Aug. 12 to make an arrangement in concert with the other commanders to receive the ministers at the gate of the city, if it could be done with regard to their safety, in which case the United States would agree to an armistice for a specified time, with a view to arranging terms of peace. Another message from Mr. Conger mentioned attacks by imperial troops, on receipt of which a warning was sent to Li-Hung-Chang that the instructions could not be carried out nor the advance of the forces on Peking be stayed while these attacks continued.

Li-Hung-Chang made his final appeal, and Mr. Adee agreed in principle to an armistice to be arranged in concert with the other powers on the very day when the allied troops made their entry into Peking. On Aug. 19 he approached the powers with a request that they should appoint plenipotentiaries with powers to open negotiations for the settlement of all difficulties, they having accomplished the sole purpose of the march on Peking, which they all declared to be the deliverance of the ministers, who were found to be in good health. Li was ready to conduct the negotiations in Peking or in Tientsin, or wherever the powers chose. The Japanese Government advised the Chinese Government to appoint plenipotentiaries acceptable to the powers, suggesting the Viceroy of Nanking and Wuchang, and offered to further the negotiations, but only on the conditions that China should express regrets, acknowledge formally its errors, and spontaneously offer to make a complete indemnity: The good offices of Japan on behalf of the Dowager Empress and the Emperor were volunteered previous to the capture of Peking, with a statement of the purpose to get hold of Prince Tuan, Kang-Yi, and other officials held to be chiefly responsible. Li-Hung-Chang memorialized the Empress to remain in Peking. Her flight and the disappearance of every vestige of the imperial authority from the capital left Li-Hung-Chang, who was personally distrusted by some of the powers, with no recognizable Government to which he could refer peace proposals. Russia, as well as the United States and Japan, was willing to treat with him as *prima facie* the accredited representative of the fugitive court, but Russia's willingness made England suspicious, because he was believed to have been the chief agent in extending Russian influence in China. He was formerly the chief adviser of the Empress Dowager, but in the present crisis he had taken a stand with the southern viceroys against the Manchu party, and when summoned to Peking went only to Shanghai, and from there memorialized the Empress to dismiss the war clique from power and destroy the Boxers. For his disobedience he was even deprived of his appointment as Viceroy of Pechili before the court left Peking. His proposal for the powers to appoint plenipotentiaries was not definitely accepted by any of them. The admirals would not even let him go to Peking or communicate with the local authorities unless he was accepted as the Chinese envoy by the powers. From this decision the American and Russian admirals dissented. The United States Government based its refusal to treat with him on the ground that China had failed to fulfill the conditions laid down in the American declarations. On Aug. 25 the Russian Government explained its policy in a circular, declaring that the immediate objects it had in view at the outset

were to protect the Russian legation and save Russian subjects from the criminal designs of Chinese rebels, and to help the Chinese Government in its struggle with them in the interest of the re-establishment of legal order. All the powers had the same objects in view, and since a comparatively insignificant detachment of the allied forces had succeeded in relieving the legations and chasing the rebels away from the capital, Russia suggested as the fundamental principles to guide the powers in China the maintenance of a common agreement among themselves, the maintenance of the former organization in China, the avoidance of everything tending to a partition of the Chinese Empire, and the establishment by the powers of a legal central government at Peking able alone to preserve order and tranquillity. Russia had occupied Newchwang and invaded Manchuria for the purpose of warding off the aggressive acts of Chinese rebels; but as soon as lasting order could be established and indispensable measures taken for the protection of railroad construction which China had assured by formal agreement, then Russian troops would be recalled from Manchuria, provided the action of other powers placed no obstacles in the way. The establishment of a legal central government with which the powers could co-operate in the establishment of order was rendered difficult by the departure from the capital of the Emperor and Empress Dowager and the Tsung-li-Yamen. Under such circumstances the Russian Government saw no good reason for the ministers accredited to the Chinese Government remaining in Peking, and therefore intended to withdraw the Russian minister and the Russian troops to Tientsin. As soon as a legal Chinese Government should again take the reins of power and appoint a representative with full authority to negotiate, Russia, after coming to an agreement with the other powers, would send a plenipotentiary to the place appointed for the negotiations. The United States Government was in full accord with this policy, seeing no prospect of the Chinese Emperor and Empress Dowager returning to Peking while it was occupied by foreign troops, or of successful negotiations until the Chinese Government was re-established in its capital. On Aug. 29 the Secretary of State sent a circular note appealing to the powers to conclude peace with China, and indicating the readiness of the United States to withdraw from Peking in order to permit the imperial court to return. The powers, however, could not easily agree on the terms to be exacted from China. The United States Government, while making the Russian policy its own, was unwilling to act with Russia or to raise any obstacle to a common agreement. Pursuing an independent course, it reduced its force in Peking to the proportions of a legation guard. A part of the Russian troops had already been withdrawn, and gradually the others were recalled. The Chinese Government intimated its intention to return to Peking and open negotiations as soon as the foreign troops evacuated Chinese territory, and also its purpose to punish officials who were implicated in the anti-foreign movement. Certain officials were executed, degraded, or exiled, and others were falsely reported to have been punished or to have committed suicide. Some of those, however, who were believed by the powers to be most guilty seemed to be still held in high favor at court. It was not till Nov. 14 that an imperial edict was promulgated depriving Princes Tuan and Chuang of all rank and offices and handing them over to the imperial clan court for punishment, and decreeing the banishment of Yu-Hsien to the frontiers. The Russian Government suggested that in case of a divergence of views the

question of indemnities might be referred to the International Court of Arbitration at The Hague.

On Oct. 4 the French Government suggested as the demands to be put forward by the powers as a basis for negotiation, that the Chinese Government should punish the guilty parties who might be designated by the representatives of the powers at Peking; the continuance of the interdiction against the importation of arms into China; equitable indemnities for the governments, companies, and individuals; the organization in Peking of a permanent legation guard; the dismantling of the forts at Taku; and the military occupation of two or three points on the road from Tientsin to Peking. Russia accepted these propositions with some reservations; Austria and Italy approved them as a whole; Germany desired to have the German point of view taken into consideration, and to insure a thorough investigation and the condign punishment of all guilty persons; Great Britain was unwilling to agree to the permanent interdiction of the importation of war munitions. The United States Government in its reply assumed that the interdiction was not intended to be permanent. On constitutional grounds the President could not undertake to maintain military guards in Peking or on the road from Tientsin. In the course of further correspondence, objections to the razing of Chinese forts, the establishment of international military posts in China, and the prohibition of the trade in war munitions were plainly intimated, and a similar view was taken by Japan and Great Britain.

On Oct. 16 Germany and Great Britain signed a mutual agreement to uphold for all China, so far as they can exercise their influence, that the rivers and littoral shall remain open and free to trade and to every form of economic activity for the peoples of all countries without distinction. Both governments agreed that they would not make use of the present complications to obtain for themselves any territorial advantage in Chinese dominion, and that they would direct their policy toward maintaining undiminished the territorial condition of the Chinese Empire; but in case of another power making use of the complications in China to obtain territorial advantages under any form whatever, the two contracting parties reserved for themselves the right to come to a preliminary understanding regarding the eventual steps to be taken for the protection of their own interests. The other governments were invited to accept the principles recorded in this agreement, and all assented to the declarations for the preservation of the territorial integrity of the Chinese Empire and the open door.

Count von Waldersee, German field marshal, was appointed commander in chief of the allied forces, the Czar having suggested or expressed approval of his selection in a preliminary correspondence with Kaiser Wilhelm, and all the cabinets having later accepted him at the proposal of the German Government. He did not arrive in China till after the occupation of Peking, and the large German military expedition came later. He sent flying columns through the districts adjacent to Peking and the railroads, but did not come into contact with the principal Chinese forces. The Chinese court did not arrive in Singan-Fu until Oct. 14. Meanwhile negotiations were opened at Peking between the ministers of the powers and the Chinese commissioners who had been suggested by them, namely, Li-Hung-Chang and Prince Ching, with whom were associated the Viceroy Liu and Chang. The French proposals, so far as they were accepted by the powers, were the bases of negotiation.

The German Government, in a circular note on Sept. 18, had demanded as a preliminary condition of entering upon diplomatic dealings with the Chinese Government that the persons whom the powers should designate as the instigators of the crimes against the law of nations should be delivered over and punished. The ministers at Peking, on Oct. 10, informally approved the following demands to be put forward as a basis of negotiations: (1) Punishment of the officials implicated; (2) payment of an indemnity; (3) dismantling of the Taku and other forts between Tientsin and the sea; (4) prohibition of importation of firearms; (5) establishment of permanent legation guards; (6) abolition of the Tsung-li-Yamen and appointment of one minister for foreign affairs; (7) suspension for five years of the provincial examinations in those districts where foreigners have been murdered; (8) provision for rational intercourse with the Emperor. All these provisions would be required to be promulgated by imperial decrees. Prince Ching and Li-Hung-Chang, on Oct. 16, in a circular note ascribing the disturbances to the Boxers, admitting that these had received support from princes and ministers, and stating that the punishment of the latter according to Chinese law had been ordered by imperial decree, proposed a preliminary convention containing the following bases of peace negotiations: (1) China expresses regret for the recent occurrences, and promises that they shall never recur; (2) China admits her liability to pay an indemnity; (3) regarding commercial treaties, China is willing to reaffirm or modify the old treaties or to make new ones; (4) the general principles having been approved, China asks that the Tsung-li-Yamen may be permitted to resume its functions, and that the foreign troops may be withdrawn as soon as the various items of the indemnities have been arranged; (5) negotiations having been begun, the foreign powers should declare an armistice and cease military action. The Chinese plenipotentiaries proposed to begin negotiations on Oct. 20. M. Pichon demanded the execution of Prince Tuan, Kang-Yi, and Tung-Fuhsiang, as the principal guilty parties, and declared that hostilities could not cease until their heads had fallen. The foreign governments, at the suggestion of M. Delcassé, had given instructions to their representatives in Peking to begin negotiations at once with Li-Hung-Chang, who was provided with authentic powers the reality of which had been verified. Great Britain, the United States, and Japan maintained their reservations regarding the original French propositions. The court arrived at Singan-Fu, the ancient capital, and was under the domination of Prince Tuan and Gen. Tung-Fuhsiang, whose decapitation was demanded by some of the powers, and was entirely in the power of Tung-Fuhsiang's Kansu soldiery. Meanwhile the allied troops, re-enforced by the German division and under the general command of Field-Marshal von Waldersee, scoured the whole province of Pechili, destroying villages that harbored Boxers and executing all who were identified as Boxers or accused of molesting native Christians. After Pao-Ting-Fu was occupied, the principal officials who were responsible for the massacre at that place were executed after an investigation by an international commission.

On Nov. 11 the ministers, having presented the names of 11 high officials and princes whose death was demanded, agreed on the terms to be presented as the basis for a preliminary treaty, subject to the approval of their governments. These terms, which they intended to press upon China in a conjoint note, were the following: (1) An extraordinary mission headed by an imperial prince

shall be sent to Berlin in order to express the regret of the Emperor of China and of the Chinese Government for the murder of Baron von Ketteler. On the scene of the murder a monument worthy of the assassinated minister shall be erected with an inscription in Latin, German, and Chinese, expressing the regret of the Emperor of China. (2) The death penalty is to be inflicted upon Princes Tuan and Chuang, upon Duke Lan, and, further, upon Ying-nien, Kang-yi, Chao-Shu-Chiao, Tung-Fuhsiang, Yu-Hsien, and other ringleaders, whose names will be given by the representatives of the powers. In all places where foreigners have been killed or maltreated official examinations shall be suspended for five years. (3) The Chinese Government shall erect a monument in every foreign or international cemetery which has been desecrated or where the graves have been destroyed. The prohibition of the import of arms into China shall be maintained till further notice. (5) China has to pay a just indemnity to governments, corporations, and individuals, as well as to those Chinese who suffered during the recent events in person or in property in consequence of being in the service of foreigners. (6) Every single foreign power is granted the right of maintaining a permanent legation guard and of placing the quarter of Pekin where the legations are situated in a state of defense. Chinese are not to be allowed to live in that quarter of Pekin. (7) The Taku forts and those forts which might prevent free communication between Pekin and the sea shall be razed. (8) The powers acquire the right of occupying certain points on which they will agree among themselves, with the object of maintaining free communication between the capital and the sea. (9) The Chinese Government is bound to post imperial decrees for two years at all subprefectures. By these decrees to belong to any anti-foreign sect is forever forbidden under penalty of death; the punishments inflicted upon the guilty are recorded; to prevent fresh disturbances, it is declared that the viceroys, as well as the provincial and local authorities, are made responsible for the maintenance of order in their districts. In the event of fresh anti-foreign disturbances or other infringements of the treaties which are not at once stopped and avenged by punishment of the guilty, these officials shall be promptly deposed and never again intrusted with official functions or invested with fresh dignities. (10) The Chinese Government undertakes to enter upon negotiations with regard to such alterations in the existing commercial and navigation treaties as the foreign governments consider to be desirable, as well as regarding other matters which are concerned with facilitating commercial relations. (11) The Chinese Government shall be bound to reform the Chinese Foreign Office and the court ceremonial for the reception of the foreign representatives, and to do so in the sense which shall be defined by the foreign powers.

The execution by the allies, in accordance with a verdict of the international commission, of Ting-Yung, acting Viceroy of Chih-li, and of other high officials, while negotiations were pending, called forth an indignant protest from the Chinese authorities. Li-Hung-Chang remonstrated against the punitive expeditions that were carried on more extensively and relentlessly than ever. When he asserted that the Chinese troops were dealing effectively with rebels, and reminded the ministers that the sole avowed object of the powers in sending troops to China was to relieve the legations, his note was returned to him. The United States Government, in a circular note, urged the powers to agree upon terms that it would not be im-

possible for China to fulfill. To demand the decapitation of the most highly placed and powerful men in the country and the payment of an indemnity that would be beyond the power of China to raise seemed likely to prolong indefinitely the foreign occupation. After further correspondence between the ministers and their governments, and some delay due to the replacing of Sir Claude MacDonald as British minister by Ernest Satow, the ministers agreed, on Dec. 4, upon the text of a joint note, which was subsequently amended in accordance with the views of various governments communicated to their ministers, who were instructed to sign it, and on Dec. 22 did sign it, in the final form given below:

"During the months of May, June, July, and August of the current year serious disturbances broke out in the northern provinces of China, in which atrocious crimes unparalleled in history and outrages against the law of nations, against the laws of humanity, and against civilization, were committed under particularly odious circumstances. The principal of these crimes were the following:

"1. On the 20th of June, his Excellency Baron von Ketteler, while on his way to the Tsung-li-Yamen, in the performance of his official functions, was murdered by soldiers of the regular army, acting under orders of their chiefs.

"2. On the same day the foreign legations were attacked and besieged. The attacks continued without intermission until the 14th of August, on which date the arrival of the foreign forces put an end to them. These attacks were made by the regular troops, who joined the Boxers, and who obeyed the orders of the court emanating from the imperial palace. At the same time the Chinese Government officially declared, by its representatives abroad, that it guaranteed the security of the legations.

"3. On the 11th of June Mr. Sujiyama, chancellor of the legation of Japan, while in the discharge of an official mission, was killed by regulars at the gates of the city. In Pekin and in several provinces foreigners were murdered, tortured, or attacked by the Boxers and the regular troops, and such as escaped death owed their salvation solely to their own determined resistance. Their establishments were looted and destroyed.

"4. Foreign cemeteries, at Pekin especially, were desecrated, the graves opened and the remains scattered abroad.

"These occurrences necessarily led the foreign powers to dispatch their troops to China to the end of protecting the lives of their representatives and nationals and restoring order. During their march to Pekin the allied forces met with resistance from the Chinese army and had to overcome it by force.

"Inasmuch as China has recognized her responsibility, expressed regret, and evinced a desire to see an end put to the situation created by the aforesaid disturbances, the powers have determined to accede to her request upon the irrevocable conditions enumerated below, which they deem indispensable to expiate the crimes committed and to prevent their recurrence:

"I. (a) The dispatch to Berlin of an extraordinary mission headed by an imperial prince, in order to express the regrets of his Majesty the Emperor of China and of the Chinese Government for the assassination of his Excellency, the late Baron von Ketteler, minister of Germany. (b) The erection on the spot of the assassination of a commemorative monument, befitting the rank of the deceased, bearing an inscription in the Latin, German, and

Chinese languages expressing the regrets of the Emperor of China for the murder.

"II. (a) The severest punishment for the persons designated in the imperial decree of Sept. 25, 1900, and for those whom the representatives of the powers shall subsequently designate. (b) The suspension for five years of all official examinations in all the cities where foreigners have been massacred or have been subjected to cruel treatment.

"III. Honorable reparation to be made by the Chinese Government to the Japanese Government for the murder of Mr. Sujyama.

"IV. An expiatory monument to be erected by the Imperial Chinese Government in every foreign or international cemetery which has been desecrated or in which the graves have been destroyed.

"V. The maintenance, under conditions to be determined by the powers, of the interdiction against the importation of arms as well as of materials employed exclusively for the manufacture of arms and ammunition.

"VI. Equitable indemnities for the governments, societies, companies, and individuals, as well as for Chinese who during the late occurrences have suffered in person or in property in consequence of their being in the service of foreigners. China to adopt financial measures acceptable to the powers for the purpose of guaranteeing the payment of said indemnities and the interest and amortization of the loans.

"VII. The right for each power to maintain a permanent guard for its legation, and to put the diplomatic quarter in a defensible condition, the Chinese having no right to reside in that quarter.

"VIII. The destruction of the forts which might obstruct free communication between Peking and the sea.

"IX. The right to the military occupation of certain points, to be determined by an understanding among the powers, in order to maintain open communication between the capital and the sea.

"X. The Chinese Government to cause to be published during two years in all the subprefectures an imperial decree: (a) Embodying a perpetual prohibition, under penalty of death, of membership in any anti-foreign society; (b) enumerating the punishments that shall have been inflicted on the guilty, together with the suspension of all official examinations in the cities where foreigners have been murdered or have been subjected to cruel treatment; and (c) furthermore, an imperial decree to be issued and published throughout the empire, ordering that the governors general (viceroys), governors, and all provincial or local officials shall be held responsible for the maintenance of order within their respective jurisdictions, and that in the event of renewed anti-foreign disturbances or any other infractions of treaty occurring and which shall not forthwith be suppressed and the guilty persons punished, they, the said officials, shall be immediately removed and forever disqualified from holding any office or honors.

"XI. The Chinese Government to undertake to negotiate amendments to the treaties of commerce and navigation considered useful by the foreign powers, and upon other matters pertaining to their commercial relations, with the object of facilitating them.

"XII. The Chinese Government to determine in what manner to reform the Department of Foreign Affairs and to modify the court ceremonials concerning the reception of foreign representatives, in the manner to be indicated by the powers.

"Until the Chinese Government has complied with the above conditions to the satisfaction of the powers, the undersigned can hold out no ex-

pectation that the occupation of Peking and the province of Chih-li by the general forces can be brought to a conclusion."

CHRISTIAN ARCHÆOLOGY, CONGRESS OF. The second Congress of Christian Archæology met in Rome, under the patronage of the Holy See, April 17. The Abbé Duchesne presided, and in his address spoke of the science of Christian archæology as relating to the study of the material monuments and memorials of the Christian past. The literature of Christianity and its liturgies were also to be subjects of study in two additional sections of the congress. Communications were presented by Cardinal Rampolla concerning an ancient index of the Christian cemeteries of Rome of the first half of the fourth century and a document concerning St. Melania which he had discovered.

Pere Delatre reported on the Christian anti-quarian remains visible at Carthage. Prof. Botti commented upon a papyrus containing a letter of a priestess of Alexandria, written during the third century, which was thought to relate to a priestess of Petesuchos who had become a Christian, but having lapsed in the persecution under Decius, was seeking a certificate that she had offered sacrifice to Petesuchos. Among the many other papers read by the ecclesiastics composing the congress were those on the discovery of the names of early teachers in the Christian schools of Alexandria; on three Roman edifices which had been preserved by the Church, viz., the tomb of Hadrian at the Castle of St. Angelo, the meeting hall of the Senate as the Church of Sant' Adriano with that of Santa Martina, and the Pantheon as the Church of Santa Maria ad Martyres; a statuette in the Berlin Museum, formerly part of a Roman lamp, supposed to be identified as St. Peter's; a recent supposed identification of the burial place of St. Peter and St. Marcellinus at the Tor Marancia, with the valuable paintings contained therein; catacomb and basilica remains at Monastirine, near Salona, with inscriptions having an important relation to the history of dogma; the origin of the columns of the altar of St. Mark in Venice; the substitution of Christian worship for the shrines of the gods on the Roman Campagna; two ancient Christian libraries recently found in Egypt; and a review of the progress of the study of Christian archæology of late years in papal Rome.

The discovery, by Prof. Hebardy, of a Greek inscription in the Doric dialect on the gateway of the old palace at Ephesus was reported to the Archæological Congress at Rome by Prof. Bohrean, of the University of Vienna, and a facsimile of the inscription has been published. The inscription purports to comprise copies of a letter from Abgarus, King of Edessa, and an answer from Jesus Christ. The letter is as follows: "I have heard of thee and the cures wrought by thee without herbs or medicines, for it is reported thou restorest sight to the blind, makest the lame walk, cleansest the leper, raisest the dead, castest out devils and unclean spirits, and givest health to those tormented by diseases of long continuance. Hearing all this of thee, I am fully persuaded that thou art very God, come down from heaven to do such miracles, or that thou, the Son of God, performest them. Wherefore I have sent thee few lines, entreating thee to come hither and cure my diseases. Besides, hearing the Jews murmur against thee and continue to do thee mischief, I invite thee to my city, which is but a little one, and beautiful and sufficient to entertain us both."

The pretended answer from Jesus is: "Blessed

art thou, believing me, whom thou hast not seen, for it is written of me, 'They that have seen me shall not believe; they that have not seen me shall believe.' Be saved; but concerning the matter thou hast written about, with this I acquaint thee, that all things for which I was sent hither must be fulfilled. Then I shall be taken up and returned to Him who sent me; but after my ascension I will send one of my disciples that shall cure thee of the distemper and give life to all them that are with thee."

In reference to this matter, Eusebius (A. D. 320) wrote that Abgarus, being a great sufferer from disease, and having heard of the miracles of Jesus, sent a letter to him, and that Jesus, in answer, sent him a picture of himself, and promised that after his death he would send one of his disciples. The discovery, while it does not afford any confirmation to the story, furnishes evidence that it was currently received in Ephesus at the time the inscription was made, probably in the fifth century A. D.

CHRISTIAN ENDEAVOR, SOCIETIES OF. The International Convention of the Societies of Christian Endeavor was held in London, beginning with meetings of welcome, July 14, in Exeter Hall, Albert Hall, and the Alexandra Palace. The general secretary reported the whole present number of societies as being 59,712, with 3,500,000 members. The enrollment in the United States represented 43,262 societies; in the United Kingdom, about 7,000; in Australasia, more than 4,000; in Germany, 168; in Africa, 130; in France, 69; in Jamaica, 120; in China, 148; in India, 459; in Mexico, 110; in Madagascar, 93; in Japan, 73; in Turkey, 60; in Spain, 36; while societies existed in nearly every other nation. Topics were discussed during the five days of the meetings relative to The Dawning Age and its Problems, World-wide Endeavor, Temperance, Citizenship, The Missionary Outlook, and Pentecostal Power. A "roll call of nations" was responded to by representatives of twenty nationalities speaking of the condition and prospects of Christian Endeavor work in their several countries. Opportunities were given for the special representation in "denominational rallies" of the various denominations with which Christian Endeavor Societies are connected. The Bishop of London addressed the meeting on the Spirit of Christ and the Cultivation of the Christian Temper. The "Junior rally" was participated in by several thousand children.

CHRISTIAN SCIENCE, a doctrinal, curative, and spiritual system, discovered in 1866 by Mary Baker Eddy. In that year, shut off from the outside world because of the effects of an accident pronounced incurable by physicians, and giving herself up to a close study of the Scriptures, Mrs. Eddy claims to have discovered and demonstrated in her own person the doctrine which she subsequently gave to the world, and which is now proclaimed and practiced by many thousands of her followers. In 1875 the Christian Science text-book, *Science and Health*, with Key to the Scriptures, prepared by Mrs. Eddy in the intervening years, was published in Boston. According to this book its tenets are as follow:

1. As adherents of Truth, we take the Scriptures for our guide to eternal Life.
2. We acknowledge and adore one Supreme Infinite God. We acknowledge one Christ, the Holy Ghost, and man as the Divine image and likeness.
3. God's forgiveness of sin, in the destruction of sin, and the understanding that sin and suffering are not eternal.
4. The atonement as the efficacy and evidence of

divine Love, of man's unity with God, and the great merits of Jesus, the Way-Shower.

5. Universal Salvation as demonstrated by Jesus, the Galilean prophet, in the power of Truth over all error, sin, sickness, and death; and the resurrection of human faith and understanding to seize the great possibilities and living energies of divine Life.

6. We solemnly promise to strive, watch, and pray for the Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*.*

The Christian Science Trinity or divine Principle is "Life, Truth, Love."

Mrs. Eddy also declares, in *Science and Health*, that "no analogy exists between the hypotheses of agnosticism, pantheism, theosophy, spiritualism, and Christian Science," and that "electrocism, hypnotism, and mesmerism are its antipodes." She adds: "I have set forth Christian Science and its application to disease only as I have found them. I have demonstrated the effects of Truth on the health, longevity, and morals of men through mind, and I have found nothing in ancient or modern systems on which to found my own except the teachings of our Great Master, and the lives of apostles and prophets."

In brief, the discovery and claim put forth by Christian Science is, that all mankind who come into true spiritual oneness with the divine mind may work upon themselves and others the miracles wrought by Christ and his apostles, to whom he imparted the knowledge, and who, in turn, imparted it to the early Christian Church, which practiced it while faith was strong. That the promise and power to heal the sick, cast out evil, and raise the dying was not confined to any special time or period, but is a fact demonstrable throughout all time, Christ being the great "way-shower."

Mrs. Eddy has explained Christian Science as follows: "There is but one God, one Christ, and one Jesus of Nazareth. God is mind and all in all; therefore there can be nothing real but infinite mind and its manifestations. The compound individual idea of divine principle is Christ, the spiritual idea of truth, personifying the primal order of being and as perfect as its source. Jesus represented the incarnation of Christ's principle. He stood for truth, healing the sick and sinful, and triumphing over the tomb. By his metaphysical therapeutics it was proved that miracles do not violate, but fulfill, the law. The curative system is based upon the unreality of matter. Nothing being real but Spirit, disease is an illusion of mortal mind, growing out of false conditions of thought. There is but one real mind in the universe, viz., God. Man being the idea of God, all is well with him when he divests himself of the illusions of mortal mind and becomes at-one with God.

"Man's origin is not material, but spiritual. The universe is not the result of physical propulsion, but is an evolution from the Infinite Mind. God is Spirit, Truth. As matter is the opposite of spirit, truth, so must it be the opposite of God. Matter is the subjective state of error, deflecting from everlasting uprightness and eventuating in false personal beliefs, in sickness and death, only to be overcome by conquering truth—radicated not by drugs or hygienic rules—that is, laws of matter—but by the power of Mind. Jesus referred to original evil, which he cast out in healing the sick, and called it 'the devil and a liar from the beginning.'

"Jesus's mission was not for a period, but touched universal humanity. Hence his promise,

* This statement of belief is protected by Mrs. Eddy's copyright, and is used here by special permission.

'Verily, verily, I say unto you, he that believeth in me, the works that I do shall he do also; and greater works than these shall he do.' And, 'these signs shall follow them that believe,' the word *them* instead of *you* clearly making this assurance applicable to Christians in all ages. Jesus's atonement for sin was a human sacrifice, which demonstrated man's life in God, divine Good; and this verity, when understood, is the way of salvation, for it destroys sin. (See Romans xii, 1.) This theory is corroborated by Jesus's supremacy over all phases of matter—a control not supernatural, but divinely natural in one abiding in God, Good, the center and circumference of the universe. From this it follows that genuine healing must be wrought upon thought, not body.

"When following these leadings of scientific revelation, the Bible was the writer's only text-book. When apparently near death, her convictions laid hold upon the sublime verity that all evil, whether moral or physical, must be nonexistent, because contrary to the omnipotent Good, God. She found in the Bible a new meaning, whereby she was snatched from the valley of shadows and her feet set on the rock. As it was through the understanding of God through Christ, God's idea, all healing must come, she adopted Christian Science as the name of this curative system."

It was a spinal injury which medical science deemed incurable in the case of Mrs. Eddy, and several persons still living attest to it. The same year that she regained health (1860) she began healing others, and also taught her first pupil. Science and Health was written while she lived at her home in Lynn, Mass. On July 4, 1879, The First Church of Christ, Scientist, was founded in Boston, with 26 members and Mrs. Eddy as its pastor, though she did not receive ordination till 1881. For several years this congregation met in a hall, gradually increasing, though not with the giant strides it has attained of late. In the same year Mrs. Eddy founded her metaphysical college at Boston, the laws then enabling her to obtain a charter for medical instruction, a privilege which was withdrawn after 1883. Mrs. Eddy has been from the beginning president of this college. Under its auspices a yearly course of instruction is given to a limited number of applicants, with a view to fitting them for authorized teaching. A class in obstetrics is also instructed yearly under the auspices of this college by a duly appointed Christian Scientist, formerly a medical practitioner of experience and standing, who now teaches and practices only Christian Science mind-healing and its obstetrical system. In 1883 she established the Christian Science Journal, becoming its editor and proprietor. It still remains the official organ of the society. A weekly publication called The Sentinel was established in 1898.

Christian Science was introduced to New York in 1886, the first national association convening there on March 11. The same year a denominational chapel was begun at Oconto, Wis., and others soon followed elsewhere. Christian Scientists never dedicate a church until it is paid for, and not until January, 1895, was the first imposing edifice, known as the Mother Church at Boston, dedicated as a testimonial to Mrs. Eddy. It was paid for by her followers throughout the world, and it cost, including land, nearly \$250,000.

The church that began with 26 members had at its dedication 5,000, with a local attendance of about 800. At the present date its total general membership is more than 20,000. In 1894 there were in the United States 300 Christian Science societies meeting regularly for worship, 26 teaching institutes, and 66 dispensaries and reading

rooms. At the present writing (November, 1900) there are in the United States and other countries, all told, 441 chartered churches, and of societies organized but not yet chartered 134, making a total of 575. Of reading rooms there are 284, and of institutes 75. The total number of professing Christian Scientists is officially estimated at 1,000,000 to 1,250,000. The headquarters of the movement are in Boston. Chicago comes next, New York third. There are now 8 congregations worshipping in Manhattan. Philadelphia has 4 churches. Kansas City ranks next in active growth, then Denver and Buffalo. In the Western States the sect has grown rapidly, and it is making headway in the South, even as far as Texas. Salt Lake City is a thriving center. A church has been begun at Dawson, Alaska. Next to the United States the sect has grown most in Canada and Australia. It has obtained foothold in England, Scotland, Germany, Sweden, Norway, France, and Italy. It has begun work in Hawaii, South Africa, and Japan, and of late in China, where Mrs. Conger, wife of the United States minister, has been an indefatigable worker in its behalf.

All the literature of the Christian Science body is published at one place, 95 Falmouth Street, Boston. Besides the Christian Science Journal (monthly) and The Sentinel (weekly), tracts, pamphlets, hymnals, Bible lessons, etc., are issued. The other published works of Mrs. Eddy include Christ and Christmas, a poem; Retrospection and Introspection, Pulpit and Press, Unity of God, Rudimentary Divine Science, Christian Science and Pantheism, Message to the Mother Church, No and Yes, Christian Healing, People's Idea of God, Miscellaneous Writings.

All churches rank as branches of the Mother Church in Boston and, although independent in the conduct of their own affairs, accept only the tenets of the Mother Church. Properly speaking, the church has no ministers. Each congregation has two readers, first and second, a woman and a man, and these read the lessons and conduct worship. This claims to be a revival of an ancient custom in the Christian Church. Every Wednesday evening all churches throughout the world hold meetings at the same hour. At these meetings personal experiences and observations are related by members of the congregation, and the manner of cures witnessed are told.

In 1898 the Christian Science Board of Education, with headquarters in Boston, was established, also the Board of Lectureship of the Mother Church, composed of official lecturers who reside in different parts of the United States.

The Mother Church has also a Publication Committee, composed of a man who attends to the press work of the movement, especially the correction of false statements and erroneous views pertaining to Christian Science. Duly appointed persons throughout the world co-operate with this committee and look after the presentation of Christian Science in the press.

To quote from a lately published article by a member of the Christian Science Board of Lectureship of New York, "the cardinal reasons given for the rapid growth of Christian Science are, first, the restoration of the Christian healing of the apostolic church; second, the establishment of Christianity on a scientific and practically demonstrable basis; third, the metaphysical and spiritual interpretation of Christ's teaching, representing a general and world-wide reaction against materialism and externalism in religion. Christian Science stands pre-eminently for the religion which heals the sick, reforms the sinner, demonstrates the naturalness of divine science, and unites in one

threefold system of science, theology, and medicine the divine way taught and demonstrated by the founder of the Christian religion, and practiced by his followers during the first three centuries." (See *METAPHYSICS*, in this volume.)

COLOMBIA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 27 members, 3 from each department, and a House of Representatives containing 66 members, 1 to 50,000 inhabitants, elected by adult male suffrage on collective tickets for the different departments. The President is elected by electoral colleges for six years. If the presidency and vice-presidency become vacant, the Congress elects an acting President for the remainder of the term. Since the abolition of state sovereignty in 1836, the President has power to appoint and remove governors, but the departments into which the former states were converted still collect and expend their separate revenues. The President elected for the term beginning Aug. 7, 1898, was M. A. Sanclemente, and the

enue of \$225,000 a year from the Panama Railroad concession, which in 1880 was paid up in advance till 1908. The internal debt in 1899 amounted to 11,359,074 pesos, of which 5,725,358 pesos were floating obligations and 5,633,716 pesos consolidated debt, requiring 353,300 pesos a year for the payment of interest, while for the payment of interest and principal on the floating debt the fund of 1,738,000 pesos is set aside. The paper money in circulation in 1899 was 30,984,022 pesos in amount. A law was made in 1894 to establish the gold basis, permitting the free coinage of gold. Silver has been issued in subsidiary coins to the amount of 3,000,000 pesos, but no gold has been coined. More paper currency was subsequently issued until the premium on gold rose in April, 1900, to 550 per cent. The foreign debt, held mainly in England, amounted with arrears of interest to £3,514,442 sterling, when an arrangement was made in January, 1897, to take it up by the issue of £2,700,000 of new bonds which pay only 1½ per cent. interest till 1900, 2 per cent. then

COLON.

Vice-President was J. M. Maroquin. The Cabinet at the beginning of 1900 was composed as follows: Minister of the Interior, F. Palacio; Minister of Foreign Affairs, G. C. Cuerva Marquez; Minister of Commerce and Communications, Carlos Calderos; Minister of Public Instruction, M. F. Suarez.

Area and Population.—The republic has an estimated area of 513,938 square miles. The population is supposed to reach 4,000,000, including 150,000 uncivilized Indians. The capital, Bogotá, situated on a lofty plateau, has about 120,000 inhabitants; Barranquilla, on the Magdalena river, connected by 20 miles of railroad with the coast, has 40,000; the mining town of Medellín, 40,000; the seaport Panama, 30,000; Bucaramanga, a coffee market, 20,000; the seaport Cartagena, 20,000. There is a boundary dispute with Costa Rica which has been referred to the President of the French Republic for arbitration. The boundary between Colombia and Brazil has not been settled. The boundaries with Peru and Ecuador by a convention of 1894 were referred to the Queen Regent of Spain.

Finances.—The Congress votes supplies for two years. For the biennial period 1897-'98 the revenue was 37,461,000 paper pesos, and the expenditure 41,429,180 pesos. Gold was worth 310 premium. For 1899-1900 the revenue was placed in the revised estimate at 29,918,640 pesos, of which customs duties provide 21,453,640 pesos. The estimate of expenditure balanced the revenue, the chief items being 2,524,848 pesos for military affairs, 4,493,900 pesos for justice, 3,773,500 pesos for debt charges, and 3,731,500 pesos for financial administration. The Government receives a rev-

till 1903, 2½ per cent. till 1906, and 3 per cent. thereafter. The revenues of the nine departments in 1899 amounted to 16,986,756 pesos in currency, and their expenditures to 17,348,040 pesos. The peace strength of the army was fixed by the law of 1898 at 1,000 men. In war time the President has authority to call the entire male population to arms. The naval force of the republic consists of a river gunboat, a small armed steamer, and a sailing vessel.

Commerce and Production.—The value of imports in 1898 was 11,083,028 gold pesos and of exports 19,157,788 gold pesos. The chief imports were cotton goods, metals and hardware, kerosene oil, foodstuffs, wine and beer, linen goods, chemicals, and paper. The export of coffee was 39,100,102 kilogrammes; of tobacco, 6,216,740 kilogrammes; of rubber, 410,423 kilogrammes; of hides and skins, 4,675,395 kilogrammes. Other exports are dyes, cinchona bark, copaiba, cabinet woods, various foodstuffs and vegetable products, live animals, gold, silver, cinnabar, emeralds, manganese, and other metals and mineral products. The gold and silver production is \$4,100,000 a year in value, and is increasing. Lack of transportation prevents the more rapid development of mines of copper, lead, and other ores, and of the rich agricultural resources of the country, while the valuable forest products are diminishing under wasteful methods of exploitation. Coal and iron are mined and some iron is manufactured. The Government salt mines near Bogotá yield the value of 680,000 pesos a year.

Navigation.—The number of vessels entered at the port of Barranquilla in 1898 was 266, of

441,673 tons; cleared, 263, of 442,777 tons. In 1897 were entered at Panama, Colon, Cartagena, and Santa Maria 923 vessels, of 1,213,110 tons; cleared, 919, of 1,210,629 tons. British, German, French, Spanish, and Italian steamers visit these ports, and American lines connect them with the Gulf and Atlantic ports of the United States. The merchant marine of Colombia in 1898 consisted of 1 steamer, of 457 tons, and 7 sailing vessels, of 1,770 tons. On the Magdalena and its tributaries, affording 1,000 miles of inland navigation, are 42 steamers, of 7,331 tons.

Railroads, Posts, and Telegraphs.—There are 11 lines of railroad, two owned by departments and the rest by companies, which had 389 miles completed, 270 miles under construction, and 85 miles contracted for in 1898.

The post office in 1897 carried 2,794,069 letters and postal cards, 1,233,313 papers and pamphlets, and 161,217 packets.

The telegraphs in 1898 had a total length of 8,600 miles.

The Panama Canal.—A company for the construction of a canal across the isthmus of Panama was formed in 1881 by Ferdinand de Lesseps. After 772,545,000 francs had been raised and expended, about half the amount that it was then estimated that the canal would cost, the company went into liquidation in 1889, having failed in the attempt to obtain a popular loan of 600,000,000 francs. The work was then suspended. In 1893 the Colombian Government gave an extension of the time limit to enable a new company to be formed, and in 1894 a company was formed and work was provisionally resumed and has since been carried on with more or less expedition. An American company was organized in 1899 to complete the canal, which it was estimated by the French engineers could be done in ten years at a cost of 512,000,000 francs in addition to what had been expended. Of the \$156,400,000 expended by the original company it was found that only \$88,600,000 had been legitimately expended for excavation and construction, the rest having gone to politicians, newspapers, and dishonest promoters and contractors, creating a financial scandal in France which was the greater because the bulk of the subscriptions had come from small investors and the work had been undertaken as a patriotic enterprise. The new French company was started with a capital of 65,000,000 francs, about half of which was cautiously expended on construction in four years, during which attempts were made in vain to induce the French public to invest the funds needed for the completion of the work, not as a tidewater canal, which was the original plan, but with locks. In 1898 an auxiliary company known as the Panama Company of America was organized in the United States. Congress authorized a new commission to examine the American isthmus at every available point in order to determine the most practicable and feasible route for a ship canal. President McKinley appointed this commission in June, 1899, consisting of Rear-Admiral Walker, Colonels Ernst and Hain of the engineer corps of the United States army, and five civil engineers, who first went to Paris to study the plans of the Panama Company before examining the route and the work done on the spot, the route chosen for the Nicaragua Canal, and other available routes. The directors of the new French company, despairing of raising sufficient capital in France, voted to transfer all its property, its rights, and its powers, with those of the auxiliary American company, to a new company that was organized under the laws of the State of New Jersey, which

undertook to complete the canal with American capital. The Panama Canal Company of America was incorporated on Dec. 27, 1899, for the purpose of acquiring the rights and property of the French Panama Company in the maritime canal across the isthmus and the Panama Railway, which will pass into its possession upon the completion of the canal. It obtained powers also to operate ships and steamer lines, to carry mails, passengers, and merchandise, to construct wharves, warehouses, and telegraph and telephone lines, and to enter into such arrangements with any governments as may conduce to its objects and assist in obtaining rights, grants, and privileges. The capital was fixed at \$30,000,000 in the beginning, with power to increase. The arrangement with the new French company was to pay its shareholders partly in money, but mainly in shares of the American company. The original French company retains only an equity in the shape of a percentage of the profits remaining after the payment of all operating expenses and fixed charges and a dividend to the stockholders of the new company. They will receive 60 per cent. of these surplus net earnings. The capital for the completion of the canal, \$100,000,000 or over, is expected to be raised by the issue of bonds. An international commission made up of French, German, Russian, English, and American engineers whom the French company consulted in drawing up its plans, estimated the cost of completing the entire canal at something over \$102,000,000 if the two locks are made of a certain width, or \$125,000,000 with wider locks. The extended concession from the Colombian Government runs until Oct. 31, 1910, a bonus of 3,000,000 francs having been paid to the Government to obtain the extension. After the American company was incorporated and the proposition was definitely brought before the French directors, so much opposition was developed to the surrender of an enterprise that had absorbed so much French enthusiasm and entailed such sacrifices on the French people that the directors were unwilling to shoulder the responsibility of carrying out the arrangement, and they all resigned. The trustees of the De Lesseps company in particular were reluctant to sanction the total transfer of the entire management and control from France to America. A new board of directors was chosen on Dec. 31, which continued negotiations with the American company. The prospects of the latter depended upon the report of Admiral Walker's commission giving the preference to the Panama over the Nicaragua route, and the commission in its consideration of the Panama route had to be guided in a large degree by the knowledge whether the French shareholders would transfer full control to the American company. The commission made a careful examination of the work already executed or in progress at Panama in March, 1900, and requested explicit information regarding the guarantees to be offered to the American nation as to the transfer of all rights, powers, property, and management to an American company. Work was going on in various places, especially with 3,000 workmen in the great Culebra cutting, which before July was brought down to within 45 metres of the level of the sea.

Rebellion.—President Sanclemente died early in January, 1900, leaving a precarious and complicated political situation. In April a revolution was started by the Liberal party under Gen. Gabriel Vargas Santos, who was proclaimed provisional President of Santander, the chief coffee-growing department. The rebels besieged Bucaramanga from May 11 to May 25, when they had

about 6,000 men, besides 2,000 guarding different points, while the Government forces were said to number 15,000. They fought daily with determination on both sides until the losses mounted up to several hundred killed and wounded and both parties used up their ammunition. The rebels then withdrew, and during the following month made themselves masters of the greater part of the department. Their provisional Government was established at Cucuta. They received countenance and aid in men and money from Venezuelans and Nicaraguans. The Government assumed that all foreigners favored the revolution, including Protestant missionaries, who were harshly treated in consequence. An expedition of 300 men on a Nicaraguan gunboat, which the Nicaraguan authorities represented they had stolen, landed at Chiriqui and took possession of the town, killing the garrison of 25 men, and putting to flight the citizens who opposed them or were afraid. Benjamin Ruiz, Governor of the Venezuelan state of Zulua, aided the Colombian rebels because he hoped if they got into power they would repay him by relinquishing the whole or a part of the Colombian claims to the territory in dispute between the two republics. Besides the Momotombo, which went to Chiriqui flying the Nicaraguan flag, the rebels obtained possession of the Nicaraguan steamer Rayo. The American steamer Hanaberg, chartered as a transport by the Colombian Government, was seized by the revolutionists, who had two other small steamers with which they captured San Antero, Loricá, and the other places on the Sinu river. When guerrilla bands appeared in the department of Bolívar the military at Cartagena placed guns at the entrance of the port and on the heights. The bands united with those operating in Magdalena until they formed under Gen. Ruiz a force as formidable as the Government troops pitted against them. Another filibustering expedition landed on the west coast and proceeded to David, near the border of Costa Rica. Cartagena was captured by the rebels early in July, giving them command of nearly the entire Caribbean coast and the rivers, except the Magdalena, leading to Bogotá, at the entrance to which Barranquilla still held out after long and severe fighting. The warfare was most disastrous to the country, causing a stoppage of all business and production in the districts where the fighting occurred, and seriously affecting the central and southern departments as well. The Government summoned to arms every male between the ages of twelve and sixty. Live stock, arms, saddlery, and whatever else was required by the army was requisitioned without payment, and the lawless soldiers and revolutionists often took away the food, utensils, and clothing of families. When the revolutionists advanced against Panama they were well disciplined and were already numerically superior to the Government forces opposed to them. Their supplies and munitions, however, were running short after two months of constant hard campaigning. The gunboats Peralongo and Augusto were taken by Gen. Francisco Ruiz to La Guayra, and there they were seized by the Venezuelan authorities in the belief that their commander, a veteran revolutionist, intended to use them in a rising against President Castro. The rebels had gunboats which could co-operate in the attack upon Panama. The United States Government protested against a bombardment of Panama, ordering a man-of-war to that port to interfere. A British war vessel was in the harbor, and marines were landed to protect property. The warning from the United States was effective. The Government forces went out to

meet the rebels when they appeared, under Gen. Emilio Herrera, 1,500 strong, at Corozal, on July 20, but after several hours of sharp fighting fell back toward Panama. The battle was resumed on the next day and the following, and still went against the Government troops, whose commander, Gen. Belisario Lozada, took refuge on the British gunboat, willing to give up the contest. A truce was arranged for a day, at the end of which the Government party decided to fight it out. Gen. Carlos Alban, the governor, then took charge of the defense, and fought the rebels in the streets of Panama and outside. The battle proceeded from day to day, and the landing of reinforcements for the rebels turned the tide still more in their favor. Both parties, although they used artillery freely, refrained from injuring the city or interfering in any way with the traffic of the Panama Railroad. On July 25 the commanders agreed to an armistice, which was extended through the efforts of the American and British consuls so as to allow the burial of the dead and care for the wounded, the number killed having exceeded 600. The fighting on both sides was of the most resolute description, especially on the part of the rebels, who tried to carry by assault a strongly entrenched position defended with Mauser rifles. Many hundreds were wounded, the Liberals having been the greatest sufferers. Nearly a quarter of the people engaged on both sides were killed or wounded. The trenches were full of dead, and the wounded had crawled into houses, and many had died for want of surgical attention. Both parties were supplied with arms of the most modern patterns. The armistice served the further purpose of allowing 1,000 fresh Government troops to arrive from Savanilla. As soon as these came over the railroad the Liberals were willing to make peace, agreeing to give up all their arms, ammunition, and ships on condition of receiving a complete amnesty, the officers to retain their side arms, the insurgents to be allowed to return to their homes, and all political prisoners to be set free. On the previous day a Government force led by Gen. Gonzalez Valencia took Cuenta, held by Colombian rebels and Venezuelans who had come to their aid, capturing many prisoners and a large quantity of war material. The foreigners who took part in the rebellion were expelled from the country.

When the Congress met, Vice-President Maroquin was intrusted with the executive power and a new Cabinet was formed on Aug. 10, composed as follows: Minister of Government and of War, Gen. Guillermo Quintero Calderon; Minister of the Interior, Dr. Pedro Antonio Molina; Minister of Public Instruction, Dr. Miguel Abadia Mendex; Minister of Finance, Alejandro Guitierrez; Minister of Foreign Affairs, Dr. Carlos Martinez Silma.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,969 square miles. The population was 194,327 in 1880; 412,198 in 1890; and 539,700 in 1900. Capital, Denver.

Government.—The following were the State officers in 1900: Governor, Charles S. Thomas, Democrat; Lieutenant Governor, Francis Carney, Populist; Secretary of State, E. F. Beckwith, Populist; Treasurer, John F. Fesler, Republican; Auditor, George W. Temple, Republican; Adjutant General, J. C. Overmeyer, Democrat; Attorney-General, D. M. Campbell, Republican; Superintendent of Education, Helen L. Grenfell, Republican; Commissioner of Mines, Harry A. Lee; Regents of the University, W. E. Anderson, C. R. Dudley, O. J. Pfeiffer, William J. Orange, D. M. Richards, Harold Thompson; Chief Justice of

the Supreme Court, John Campbell, Republican; Associate Justices, Luther M. Goddard and William H. Gabbert, Democrats; President Judge of the Court of Appeals, Charles I. Thompson; Associate Justices, Julius B. Bissell and Adair Wilson.

Population.—A small part of the increase in the past decade is due to the fact that there were 985 Indians and 66 other persons on Indian reservations, etc., who were specially enumerated in 1890, but were not included in the returns at that census with the general population. This year's census shows nearly 16 times as many inhabitants as that of 1860, the first year reported. In 1870 the population was 39,864. About one quarter of the counties show each a small decrease; it is believed that all these have been gaining since the panic, but have not fully recovered from the losses of that time. The population of Denver is 133,859.

Finances.—The financial condition of the State was described at length in the Annual Cyclopaedia for 1899, page 187. The revenues are not sufficient to pay the current expenses, owing to the legal limit to the rate of taxation and the low valuations. Appropriations made by the Legislature amount to about \$500,000 more than the income, according to report. The Legislature of 1897 made the following order for the use of the revenues:

1. Expenses of legislative, executive, and judicial departments, and interest on public debt.
2. Appropriations for penal and reformatory institutions.
3. Appropriations for educational and charitable institutions.
4. Appropriations for other officers, bureaus, and boards.
5. Miscellaneous appropriations.

"If the revenues of the State are divided between the first and second classes, as they must necessarily be by a strict adherence to the law, it means bankruptcy for the institutions contained in the third, fourth, and fifth classes."

Education.—The school census of 1899 showed 143,335 children of school age, that of 1900 gave 153,634. This indicates an enrollment of over 118,000.

The State Normal School, at Greeley, graduated a class of 69, May 31.

There were 425 students at the State University, at Boulder, in February, not including 360 who were in the preparatory school. The university opened Sept. 10 for its twenty-third session with large classes. The \$70,000 loan by citizens of Colorado last spring has made possible the continuance of the university's work and enabled President Baker to throw open the doors of the institution to several hundred students.

Colorado College, at Colorado Springs, has the promise of \$50,000 for an endowment fund for a science department, on condition that \$60,000 be raised in addition for a building.

The State School of Mines, at Golden, opened Sept. 16 with a large attendance, 203 having applied for entrance to the freshmen class. A gift of \$25,000 from W. S. Stratton will be used for new buildings and improvements to old ones. An assay building is under way and will be ready about Feb. 1. It will contain 28 furnaces, accommodating 56 students; the building is large enough to admit 50 furnaces.

A new thing in education has been organized this year, the "National Rough Riders' Military Encampment," in the Shenandoah valley, on a tract of 100,000 acres, 400 miles southeast of Denver. Gen. E. V. Sumner was chosen as the military head of the school, with Lieut. E. S. Farrow in charge of the instruction.

Concerning the plan and scope of the new enterprise, Lieut. Farrow said: "The plan has already met with such popular approval that the Governor is actually overrun with applications from young men wishing to take the training. Many of the applications come from students of Yale and Harvard, who are to graduate this year. Fifty applications have already been received from England.

"Young men between seventeen and twenty-five years of age will be permitted to join by regular enlistment. They will be sworn to serve one year, during which time they will receive practical training in rough riding, scouting, reading signs, trailing, and all the arts of up-to-date warfare. For this each applicant will have to pay a tuition fee of \$500, which covers his expenses for the entire year, including equipment, horse, clothing, and rations. Each applicant must also pass the United States army examination before entering the encampment for instruction."

A garden school undertaken last year at Pueblo as an experiment has proved so successful that it is to be continued indefinitely. Each pupil had a plot of his own and an interest in certain common beds. The children did all the work under instruction. During the latter part of the term the gardens added much to their luncheons and some sales were made, in the profits of which all shared.

Corrections.—There were 533 prisoners enrolled in the Penitentiary, at Cañon City, in March, and 163 inmates at the State Industrial School for boys, at Goshen.

State Lands.—The annual report of the State Land Board shows the total receipts of the office to have been \$204,096; the number of acres of school lands sold, 2,000; internal improvement, 1,258.25 acres; total, 3,258.25 acres; area under renewal certificates, 3,317.20; total area patented, 18,323.21; town lots sold, 21. Of the money received, \$38,577 goes to the permanent school fund, \$14,664 to the permanent fund of the Agricultural College, and \$5,695 to the income of the college. The permanent internal improvement fund receives \$22,302, and the income for internal improvement \$29,307.

United States Lands.—The report of the General Land Office for the year ending June 30, 1900, shows the railroad grants in the several States, which include 35,030 acres in Colorado to the Union Pacific. Colorado had 646 mineral and mill-site patents and 1,187 mineral or mill-site claims, covering 10,528 acres. There was a tract of 99,488 acres in Colorado embraced in Indian patents.

Products.—Following are the figures of the State's mineral production in 1899, as reported to the Director of the Mint: Gold, \$26,265,487; silver, coinage value, \$29,679,706; lead, \$6,051,156; copper, \$1,975,518; total, \$63,971,867. Other products have been estimated as follow: Zinc and manganese iron, \$557,500; stone and marble, \$1,825,000; iron and steel, \$7,681,719; coal, \$8,750,000; lumber, \$3,350,000; oil, \$1,500,000; live stock and their products, \$11,650,000; farm and dairy products, \$28,112,668.

An estimate of the beet-sugar production in 1900 placed the value of the output of the factories at \$2,000,000, of which about half would go to the beet growers.

In the spring more than 531,000 trout were put into the streams of the State from the hatchery at Gunnison.

The number of sheep in the State this year is given as 2,185,327, and their value \$6,250,036. Of wool 14,204,625 pounds were produced, the value of which was \$1,633,322.

The number of horses, as estimated by officials, was 157,427; of swine, 29,460; of mules, 9,118; of cattle, 1,290,421.

The increase in the number of cattle since 1890 is 572,560, or over 79 per cent. The sheep increase has been remarkable. From the estimates made for 1900 and the census figures of ten years ago there has been an increase of 1,667,337 in number, or 232 per cent., and yet the highest price was paid for Colorado lambs this year that ever has been recorded.

The report of the State Board of Horticulture says that 733 varieties of fruit are grown in the State, there being 225 varieties of apples alone. The prices received for fruit in 1899 were higher than ever, and contracting agents from every large Eastern city were here last year to secure the products of the Colorado orchards.

At present quail are distributed through the State as trout and other fish are given out for the streams. The explanation is given as follows: "In several of the counties on the western slope the quails have become so numerous that the citizens have petitioned the Fish and Game Commissioner to do something for them. There is no open season for hunting quails in Colorado, and they have become so thick that they destroy stocks of small grain and in some instances have become so bold that chickens have been driven from their food in the farmyard and the stuff appropriated by the quails. The only good the little birds accomplished was to destroy the grasshoppers, and in this work there was nothing that could equal them. In other sections of the State there was an abundance of grasshoppers, but no quail." The Game Commissioner therefore offered a reasonable price for live quails, to be distributed to farmers applying for them.

Complaint is made that the mule deer, which formerly roamed over the plains in vast herds, is threatened with speedy extinction. This is attributed to the unskilled and cruel work of amateur sportsmen, and to the greed of settlers, who live upon venison, though all the time raising the finest of cattle for the market. It is even said that there are children fifteen years old in these cattle districts who never have tasted beef.

A local paper says: "The plains country in eastern Colorado, which was once the breeding ground and home of thousands of buffalo, is now populated by thousands of coyotes, and so destructive have they become to the stock interests of the section in question that the State of Colorado and the cattle barons, working together, are offering \$37.50 for every coyote scalp presented."

The New Capitol.—It was announced in October that the Capitol was complete. The site was given to the State by Henry C. Brown. Construction work was begun in 1886; the corner stone was laid July 4, 1890; the whole cost was about \$3,000,000. It is of Colorado granite. The distance around the outside walls is a quarter of a mile; the height from the base line to the top of the statue on the dome is 256 feet. From the dome can be seen the Rocky mountains for a stretch of 200 miles; on a clear day Pike's Peak, Long's Peak, and Gray's Peak are distinctly seen.

Lawlessness.—A dispatch from Cañon City, under date of Jan. 27, said that Thomas Reynolds, the convict, who, with three others, escaped from the Penitentiary after murdering Night-Captain William C. Rooney, was captured near Florence, 10 miles east of Cañon City, and brought to the latter place in a wagon, where he was taken from the officers by a mob and hanged to a telegraph pole.

In May a negro was hanged by a mob at Pueblo for assaulting and murdering two little girls. His dead body was dragged through the streets, followed by a mob of about 3,000 persons.

Most horrible was the fate of a negro boy, Preston Porter, who assaulted and murdered a girl of eleven on her way home from school at Limon, Nov. 8. He was taken to the spot where the crime was committed, chained to a stake, and burned to death. The father of the little girl applied the match. The Governor has ordered an investigation.

Political.—State officers were elected in November. The Democrats, Populists, and Silver Republicans united on a fusion ticket. Following were the nominees: For Governor, James B. Orman; Lieutenant Governor, D. C. Coates; Secretary of State, D. A. Mills; Treasurer, J. N. Chipley; Auditor, C. W. Crouter; Attorney-General, C. C. Post; Judge of the Supreme Court, R. W. Steele; Superintendent of Public Instruction, Helen L. Grenfell; Regents, W. H. Bryant, F. E. Kendrick.

The Republican ticket was: For Governor, F. C. Goudy; Lieutenant Governor, P. S. Rider; Treasurer, O. Adams, Jr.; Auditor, J. S. Murphy; Secretary of State, J. W. Milsom; Attorney-General, R. T. Yeaman; Judge of the Supreme Court, G. C. Bartels; Superintendent of Instruction, Ione T. Hanna; Regents, C. R. Dudley, W. A. Packard.

The Prohibitionists named the following: For Governor, J. R. Wiley; Lieutenant Governor, T. C. Chamberlain; Secretary of State, Mary L. Henderson; Treasurer, W. H. McClure; Auditor, Joseph Harvey; Attorney-General, James Miller; Supreme Judge, F. I. Willsea; Superintendent of Instruction, Elizabeth Smith; Regents, B. D. Sanborn, W. E. Tetzl.

The trades unions nominated a ticket through the process of the initiative and referendum, but the State Federation of Labor voted to abandon it.

The official vote of the State was as follows: For President: Bryan, 122,733; McKinley, 93,072. For Governor: Orman, 121,995; Goudy, 93,245. The entire fusion ticket was successful.

A proposed amendment to the Constitution was voted upon and appears to have been carried. The effect is to permit the Legislature to propose as many as six amendments at one session; heretofore it has been limited to one at a session.

CONGO, INDEPENDENT STATE OF THE, a sovereign, monarchical, neutral, and independent State, created out of the Congo International Association, which was founded by the King of the Belgians in 1883, and whose sovereignty was recognized by the United States and the principal European powers before the signature of the general act of Berlin. The Berlin Conference was summoned by Prince Bismarck in November, 1884, with the object of regulating the African question, and its conclusions were embodied in a general act, dated Feb. 26, 1885. Subsequent negotiations resulting in treaties with France and Portugal gave the State its present boundaries. At the end of April, 1885, the Belgian Chambers passed resolutions authorizing Leopold II, King of the Belgians, to be the chief of the State founded in Africa by the Congo International Association. The union between Belgium and the Congo State was to be exclusively personal, and King Leopold was and is King of the Belgians and sovereign of the Congo State. In April, 1887, the King obtained from the French Government the waiving in favor of Belgium of its right of pre-emption conceded by the Congo Association in April, 1884, and thus secured for his own country the undisturbed reversion to the colony he had created in Central Africa. On

Aug. 2, 1889, the King made his will as sovereign of the Congo State, bequeathing to Belgium all his sovereign rights therein. In July, 1890, a convention was signed between Belgium and the Congo State, giving the former the right to annex the latter, if it judge good, within a period which expires in January, 1901.

The seat of the central Government is at Brussels, and a Secretary of State, Baron Edmond van Eetvelde, directs the administration with the assistance of secretaries in the different departments, that of Foreign Affairs being under the Chevalier A. de Cuvelier. Boma is the seat of the local Government, which is generally represented by a Governor General *ad interim*, at present Major E. Wangermee.

Area and Population.—The area of the Congo State is about 900,000 square miles, and the population probably not far short of 30,000,000. The population was diminished formerly by incessant slave raids and intertribal strife. These causes of depopulation have either wholly disappeared or greatly lessened in their effect, and a steady increase in the number of the blacks is anticipated. A census of the white population, taken on Jan. 1, 1899, shows that there were 1,630 Europeans and Americans, of whom 959 were Belgians, 129 Portuguese, 113 Italians, 94 English, 81 Swedes, 65 Dutch, 41 Danes, 29 French, 28 Americans, 21 Germans, 18 Swiss, 8 Austrians, and 3 Spaniards. The table of mortality among the State agents alone shows a death rate in 1892, the worst year, of 9 per cent. from all causes, of 7.3 per cent. from sickness—that is, excluding those killed on warlike expeditions. In 1897 the rates were respectively 6, 8, and 5.4 per cent. Steps to improve hygienic conditions are in progress. Certain parts of the Congo region are trying for Europeans, especially for those who have newly arrived; on the other hand, there are extensive provinces—Katangan, for example—in which the climate can not be surpassed.

Finances.—The financial position and progress of the Congo State are revealed by a comparison of the successive budgets, amounts being given in francs:

YEAR.	Revenue.	Expenditure.
1895	6,004,764	7,370,889
1896	7,002,735	8,236,300
1897	9,369,300	10,141,871
1898	14,765,050	17,251,975
1899	19,966,500	19,672,965

In the revenue is included the personal grant from King Leopold of 1,000,000 francs, and the advance from the Belgian Government of 2,000,000 francs; but the proportion of State receipts to expenditure, which had risen from less than 5 per cent. in 1886 to over 68 per cent. in 1897, shows a further increase to more than 86 per cent. An absolute equilibrium without extraneous grants is expected to be attained in 1901. The principal items in the revenue for 1899 are customs, 3,700,000 francs; transport service, 1,200,000 francs; and produce of the domain, in the form of native tribute and taxes, 10,200,000 francs. The largest amounts under the head of expenditure are the administration in Africa, 2,002,330 francs; the public force, 7,623,946 francs; the marine service, 1,481,624 francs; public works, 1,261,270 francs; agriculture, 600,530 francs; and development of the domain, 4,020,720 francs. In addition to the regular expenditure, the sum of 2,946,820 francs, provided for by loan, was spent on extraordinary public works, more than half of this total for the improvement of the means of

communication on the Upper Congo, and a grant of 500,000 francs was assigned to the telegraph from Lake Tanganyika to Boma. For 1900 the revenue was estimated at 26,256,500 francs. Of the 23,256,500 francs of local revenue, 11,200,000 francs come from the State domain, 4,680,000 francs from customs, 3,800,000 francs from transport, 2,950,000 francs from administration, and 626,500 francs from various sources. The total expenditures were estimated at 27,731,254 francs, of which 15,423,681 francs were allotted to Finance, 11,050,013 francs to the Interior, 158,000 francs to Foreign Affairs and Justice, 110,360 francs to the central office, and 989,200 francs were calculated for contingencies.

Military Force.—The army of the State is known as the Congo public force. The International Association employed foreigners—Hausas and Zanzibaris—for its expeditions, but in 1888 the first national corps was raised in the form of a regiment of 8 companies, or 1,200 men. In July, 1891, the official scheme for the public force was promulgated. The troops were to consist of two separate bodies, the first, or regulars, voluntarily enlisted for a period of seven years—five in active service and two in the reserve—and the second an enforced levy of militia by order of the Governor General. In 1897 the numbers had risen to 4,000 volunteers and 9,500 militiamen. The training of the men is carried out in fixed camps, and covers a period of eighteen months. The troops are armed with the Albin rifle and a short bayonet, while the white officers carry the Mauser with a magazine of five cartridges. Great care has been taken with the fire discipline of the troops. Recent events have suggested doubts as to the trustworthiness of the force, but the adoption of precautions similar to those taken in the Anglo-Indian army may avert serious danger. The two chief precautions are the employment of the men at a distance from their tribal homes, and the mixing of the tribes in the composition of each battalion. The principal stations are generally defended by a rampart and ditch, but two regular forts, Chinkakassa and Kinshassa, guard the river Congo below Boma and Leopoldville respectively.

Justice and Treatment of the Natives.—In the earlier years of the Congo State the administration of justice was not thoroughly organized. Throughout the greater part of the State military law was in force. The task which preceded every other was the settlement of the question whether the Arabs or the Europeans were to be supreme. The abolition of military law in the Upper Congo only became possible in 1897, and at the same time power was vested in the public prosecutor to summon Europeans guilty of some particularly grave offenses, such as murder, before the tribunal of the Lower Congo, even when such offenses were committed within the jurisdiction of the upper river tribunals. The Court of Appeal at Boma was strengthened by three councilors of different nationalities being substituted for one Belgian judge. The access to this Court of Appeal was made so simple and cheap that the blacks might be neither unaware as to how they should proceed nor unable to do so. As a final safeguard, the lower courts are enjoined to lodge an appeal on behalf of the accused against their own decisions. A commission for the protection of natives, international in its composition and with Protestant missionaries as well as Catholic among the members, was formed for the purpose of watching over the interests of the natives and preventing acts of tyranny. It has the right to notify to the judicial authorities and the Governor General all acts that are injurious to the natives or acts of violence of which they are the victims. Finally, the president of the

Court of Appeal is required to make periodical tours of inspection, with the view of ascertaining if there are any abuses or grievances. In 1898, when a native proved that an official had requisitioned supplies from him by force, the Court of Appeal sentenced the offending official to a term of hard labor. On another occasion the Matadi tribunal decided against the State in favor of some Zanzibari petitioners, who claimed that they should be sent to their homes by sea instead of by land, as the authorities wished to do. With regard to the general treatment of the blacks, the State has done all it can by clear instructions and peremptory orders to prevent tyranny in any form. Allegations that it grants its officers or servants a commission or premium for the collection of ivory or caoutchouc are opposed to the truth. All public employees are forbidden to take gratuities or commissions, and are liable to immediate dismissal on detection. If cruelty is perpetrated by the European agents of the different commercial companies, the ill treatment of natives by whomsoever committed is a penal offense under the code, and the commission for the protection of the natives has a free hand to put the machinery of the law in force. Cases of harshness and even of cruelty now and then occur. The climate and conditions under which the Europeans work are not conducive to sweetness of temper, and the negro is admitted by his friends to be lazy, improvident, and inattentive. It will be long before the black races will take to work for its own sake and remain persistently at it without stimulus or coercion, but simply in their own permanent interests. The Brussels act of July, 1890, was very clear in the obligations it imposed on all its signatories to exclude spirituous liquors from the interior of Africa and to guard the natives against the curse of drink, which would outweigh all the benefits from the introduction of civilization. King Leopold imposed the heaviest import duty he could, and in the Upper Congo, where no prior rights had to be respected, he restricted the importation to non-Africans and limited the quantity that might be sold to any European. It was also forbidden to use alcohol as an article of barter with the natives. The sale and introduction of alcohol above a certain boundary on the Lower Congo was thus made subject to the authority of the Governor General. At first the boundary was the Inkissi stream, then it became the Kwilu, and finally it was fixed at the Mpozo, which may be regarded as signifying Matadi. The practical result of these changes is that the Congo Railway has been placed outside the strip of coast territory within which alcohol can be imported by payment of the duty of 1s. a gallon. Alcohol forms only 1 per cent. of the total imports of the state, and in the three years ending Dec. 31, 1897, there was a diminution in the quantity imported of 25 per cent. Statements having been made that the abuse of absinthe was greatly increasing among the Europeans, a decree was issued on Oct. 15, 1898, prohibiting its import or sale throughout the whole of the State's territory.

Commerce and Production.—The trade of the Congo is steadily increasing, as is shown in the following returns of the total exports: 1887, 7,667,969 francs; 1888, 7,392,348 francs; 1891, 10,535,619 francs; 1894, 11,031,704 francs; 1895, 12,135,656 francs; 1896, 15,091,137 francs; 1897, 17,457,090 francs; 1898, 25,396,706 francs. The principal articles exported are caoutchouc, of which 8,311,900 francs worth was exported in 1897; ivory during the same year, 4,916,480 francs; palm oil, 650,206 francs; palm nuts, 1,098,879 francs. Several new products are beginning to make their appearance

on the schedule. Of these, coffee and cacao are the most promising, but the young plantations can not be productive to any great degree before 1902. With the view of promoting this cultivation, the State made the following arrangement with the recognized chiefs in the districts of Aruwimi and Stanley Falls. They were required to cultivate either coffee or cacao on their waste lands. The Government provided the necessary seeds, and promised a reward for each shrub on its attaining two feet in height. The chiefs are also to receive as their share 50 per cent. of the value of the coffee on the Belgian market. Nothing has yet been done toward developing the undoubted mineral resources of the country, but a large number of companies, formed for the exploitation of the Congo region, promise an early movement in this direction. The special imports in 1898 amounted to 23,084,447 francs, in which sum tissues and clothing stand for 6,246,981 francs, food substances for 6,246,981 francs, steamers and their machinery for 2,374,424 francs, other machinery for 1,928,586 francs, beverages for 1,579,989 francs, metals and hardware for 1,228,159 francs, and arms and ammunition for 872,533 francs. The special exports, or exports of produce of the State alone, in 1898 were valued at 22,163,482 francs, of which 15,850,988 francs represent caoutchouc, 4,319,260 francs ivory, 1,279,769 francs palm nuts, 660,870 francs palm oil, 31,950 francs timber, 9,720 francs hides and skins, and 1,381 francs kola nuts.

Of the special imports in 1898, Belgium furnished 15,468,565 francs' worth; Great Britain, 3,457,739 francs; Germany, 1,669,164 francs; and the Netherlands, 1,015,986 francs. Of the special exports, the value of 19,329,387 francs went to Belgium, 1,305,619 francs to Portuguese possessions in Africa, 738,091 francs to the Netherlands, and 298,872 francs to Great Britain.

Railways, Steamers, and Telegraphs.—Owing to the existence of cataracts below Stanley Pool, access to the main course of the Congo by water is impossible. At an early stage it was recognized that a railway was essential to supply this natural defect. In 1887, accordingly, the first steps were taken by the formation of a company for the construction of a railway from Matadi to Leopoldville on Stanley Pool. The distance between those places is 260 miles, and the principal obstacle to be overcome was presented by the Pallaballa mountain, which lies at a little distance from Matadi. Four years were occupied in overcoming it, and during that period very pessimistic views were expressed as to the success of the line. Once the Pallaballa was left behind, however, the difficulties of the undertaking vanished, although a distance of not more than 26 miles had been traversed. The remaining 234 miles were completed at less cost and in a shorter time than the first section, so that the formal inauguration of the whole line was celebrated on July 6, 1898. The great advantage of this railway is that it supersedes the slow and costly portage system in the district of the cataracts. Two days only are required for the transit where three weeks were necessary; and the material for railways in the interior and for the large steamers that are to navigate the river can now be easily and expeditiously forwarded. The terminus of the line is at Ndolo, near Leopoldville, where quays and slips for repairing the river flotilla have been prepared. Several other railway lines are urgently needed in the interior to supplement and complete the natural communications provided by the great river and its tributaries. Of these, the projected railway in the Welle valley and that connecting the upper courses of the San-kuru, Lomami, and Lualaba are the most impor-

tant. A royal decree was issued in January, 1898, sanctioning a line of railway from a point to be determined on the Itimbiri through the Welle valley to another point on the Nile near Redjaf, and money was assigned for the necessary preliminary surveys.

Scarcely less important than the railway question is that of improving the means of communication by water, and in June, 1898, the sum of 6,000,000 francs was assigned for the purchase of steamers, tugs, etc., the improvement of the port of Ndolo, and other similar works. Among the new river boats are stern-wheelers of 150 to 250 tons, and light fast-steaming packet boats capable of carrying 12 passengers. One large steamer of 500 tons is specially designed for the conveyance of railway material. All these boats are sent in sections over the railway and put together on Stanley Pool.

Telegraphs have not been neglected, and during 1900 great progress was made with them. The line from Boma to Tanganyika, with branches to Redjaf on one side and Katanga on the other, has been built at a total cost of 3,000,000 francs.

Recent Events.—The Germans established in 1899 military stations on the river Rusisi and on Lake Kivu, to guard against an invasion of their territory in East Africa by the mutinous Batatela troops of the Congo State. The Belgian garrisons on Lake Kivu, which had previously been withdrawn, were thereupon reinstated, and a formal protest was made against the occupation by Germany of Congolese territory. The German Government asserted in reply that the map which illustrated the treaty of 1884 makes the Rusisi the frontier, and places Lake Kivu on the German side of the line. M. Beernaert went to Berlin as special envoy of the Independent State in January, 1900, to show that it was another map on which neither river nor lake appears, and that in subsequent documents Germany recognized a more easterly boundary. He arranged with the German Government to have the boundary surveyed by a mixed commission. Pending the demarcation both governments kept military forces of equal strength in the disputed district.

In the early part of 1900 a fresh outbreak of the Budjas occurred in the Mongalla district of the Congo. On March 4 they killed Lieut. Weylants and another European near Jambeta, having two months before attacked the military station. The new revolt was attributed by some to cruelties practiced on the natives to compel them to collect caoutchouc for the trading companies. In the Belgian Chamber an investigation was demanded, to show how far the officers and public force of the Congo State were implicated in barbarous methods of collecting rubber whereby the population was practically condemned to hard labor under the pretext of civilizing the natives. The Belgian ministers having rejected the proposal on the ground that the conditions of the loan of the Belgian Government to the Congo State gave only the right to obtain financial and commercial information, not to intervene in the affairs of the Congo State, which was a foreign country, the Chamber refused to entertain the interpellation. During the debate stories were brought out of Belgian officers having ordered hands to be cut off and sanctioned other atrocities, and charges were made that the agents of trading companies were ferocious. In suppressing the revolt in the Mongalla district, wholesale massacres of natives were alleged to have taken place. The Congo Government submitted these reports to the judicial authorities, to be investigated. In order to prevent any complicity on the part of its own officers, it

forbids all its agents to engage in trade. It also prohibits them from having recourse to arms except for legitimate defense. The state did not intervene in any way in the nomination of agents of private companies or in the direction of the latter, but had decided to repress all excesses in its territory. The Mongalla revolt was not terminated by the first re-enforcements sent into the Budja country, and in July an additional force of 500 soldiers was sent up. On April 17 the black garrison of the Chinkakassa fort below Boma mutinied. It was composed mainly of about 100 Batatelas, who had been sent to the Lower Congo when the expeditionary force of Baron Dhanis revolted. The black soldiers killed a white officer, attacked the rest in the house of the commandant, where they had taken refuge, and began to bombard Boma with the guns of the forts. Volunteers from Boma relieved the beleaguered whites, and began an assault on the fort, upon which most of the mutineers fled and the rest surrendered.

CONGREGATIONALISTS. The Congregational Yearbook for 1900 gives in its summary of the statistics of the Congregational churches in the United States the following numbers: Of churches, 5,604; of ministers, 5,614; of members, 629,874; of families, 400,249; of additions by confession during the year, 24,514; of baptisms during the year, 10,390 of adults and 11,824 of infants; of members of Sunday schools, 682,907, with an average attendance of 408,506; of societies of Christian Endeavor, 3,696, with 191,753 members. Of the churches, 4,228 are recorded as "supplied" and 1,376 as "vacant"; of the ministers, 3,655 were "in pastoral work" and 1,919 "without charge." Amounts of contributions (4,883 churches reporting): For foreign missions, \$445,508; for education, \$193,376; for church building, \$88,388; for home missions, \$477,852; for the American Missionary Association, \$141,022; for Sunday schools, \$61,938; for ministerial aid, \$24,107; for other purposes, \$678,227; making a total, as footed up in the tables, of \$2,110,413. Amount of contributions for home expenditures reported by 4,854 churches, \$7,023,124; amount of legacies, \$438,738.

The Congregational Education Society in 1899 aided 162 students preparing for the ministry, 8 colleges, and 17 academies. In the New West department for the aid of mission schools in Utah and New Mexico, Salt Lake College with Gordon Academy, Proctor Academy in Utah, and 10 mission schools were assisted. The receipts for the year were \$147,372.

The Congregational Church Building Society in 1899 received \$247,307 and expended \$197,560.

The Ministerial Aid fund of the National Congregational Council, which in 1899 amounted to \$118,000, furnished an income of about \$5,000, which was distributed in pensions of from \$25 to \$200 a year to aged or disabled Congregational ministers and missionaries and their families. Fifty-nine persons or families were thus aided in 1899.

The 7 theological seminaries—Andover, Bangor, Chicago, Hartford, Oberlin, Pacific, and Yale—return 22 resident licentiates and fellows, 17 members of advanced and graduate classes, and had, in 1898-'99, 64 professors and 23 instructors and lecturers.

The receipts of the Congregational Sunday School and Publishing Society for 1899 were \$62,990, a gain of about \$5,000 over those of the preceding year. Of this amount \$23,554 were Children's Day receipts. The sum of \$7,500 was appropriated for missionary work. The superintendents and missionaries of the society had organized 325 Sunday schools directly and 150 through

others, and had reorganized 191 schools. Three thousand and forty-six grants of lesson helps, periodicals, and other literature had been made to 1,278 schools.

Congregational Home Missionary Society.—The seventy-fourth annual meeting of the Congregational Home Missionary Society was held in Detroit, Mich., June 5 to 7. Gen. Oliver O. Howard presided. The report showed that the receipts of the society for the year had been \$346,597, showing an increase of nearly \$40,000 over those of the previous year, and the expenditure \$321,672. The debt of \$133,469 standing at the beginning of the year had been reduced to \$108,544. The Auxiliary Societies had raised and expended, on their own fields, in addition, \$199,163. Seventeen hundred and sixty-two missionaries and superintendents had been employed, preaching to 2,504 congregations, with which 2,005 Sunday schools were connected, having 142,812 members. Seventy-four churches had been organized during the year, 36 had assumed self-support; 62 houses of worship had been completed, 69 parsonages provided, and 7,400 persons added to church membership.

The eighteenth annual meeting of the Woman's Department was held in connection with the meeting of this society.

American Board.—The ninety-first annual meeting of the American Board of Commissioners for Foreign Missions was held in St. Louis, Mo., beginning Oct. 10. Mr. Samuel Capen presided. Recognition was made in the report of the Home Department of the death of the Rev. R. S. Storrs, D. D., ex-president, and of the value of the services he had rendered as a corporate member and as president of the board. Forty new missionaries had been sent out during the year; 39 had returned on furlough, besides those who had been driven out of north China by the Boxer disturbances, and 13 had been killed in those disturbances. The year had been prosperous financially, and had it not been for the extra expenses arising from the famine in India and the disturbed condition of China, the debt of the board might have been met. The plan for raising a "Twentieth Century fund" of \$250,000 was being pushed. The receipts of the year from all sources, including \$1,273 for the debt, had been \$737,957—an increase of \$93,756 from the previous year. Of these receipts, \$516,536—or \$26,128 more than in the previous year—came in the form of gifts from individuals, churches, and various societies, of which sum \$214,774 were contributions of the several woman's boards. The income from legacies showed an increase over the previous year of \$52,603, and the income from the permanent funds an increase of \$7,125. The increase in special donations amounted to \$19,568. The "Annual Survey" of the missions represented 20 mission fields, in which were included 102 stations, 1,268 out stations, and 1,641 places for stated preaching, which were served by 166 ordained missionaries, 239 native pastors, 1,872 native school teachers, and 518 other native laborers, making a total of 4,011 agents. The churches, numbering 495, returned 51,609 members, 4,523 of whom had been added during the year; while the whole number of members from the first, as nearly as could be learned, had been 153,107. The educational work of the various missions comprised 14 theological seminaries, with 196 students for the ministry, 11 boarding and high schools, and 1,153 common schools, with a total of 59,671 pupils under instruction. The native contributions amounted to \$156,642. In the several mission fields it was represented that the persecution

of the Armenians in Turkey had opened their minds as never before to the reception of missionary instruction. The workers in China had increased tenfold. Though missionary work had been brought to an enforced halt in north China, it would not retreat. In south China there had not been much active disturbance. In Madura, India, the work in the hospital had appealed so powerfully to the hearts and minds of native Hindus that men of wealth contributed to the extent of \$14,000 for the erection of the building, and gave liberally toward its support. The increase in missionary converts during the year had been more than 10 per cent. The meeting following up suggestions offered in the president's address, approved of a yearly canvass in October of every church for the six benevolent societies; commended the forward movement for a "Twentieth Century fund"; and, recognizing the paramount importance of educating the rising generation in responsibility for the redemption of the world through Jesus Christ, advised the provision in the Sunday schools of a permanent place for this education. A letter of greeting was received from the Hawaiian Evangelical Association, Sandwich Islands, with a contribution of \$9,000 toward the Twentieth Century fund.

The Doshisha, or College of the American Board, at Kioto, Japan, which had been for a few years under the control of trustees not in sympathy with the doctrines of the orthodox churches, having been reorganized, has begun its work again as a publicly declared Christian school, and the fact is explicitly set down in its constitution.

American Missionary Association.—The fifty-fourth annual meeting of the American Missionary Association was held in Springfield, Mass., October 23, 24, and 25, the Rev. Dr. F. A. Noble presiding. The treasurer reported that the receipts for the year had been \$336,651, of which \$168,096 consisted of gifts from institutions and individuals, \$104,641 were from legacies, and a large part of the rest from tuition fees. The expenditures had amounted to \$345,049. The receipts were \$38,802 larger than in the previous year, and for the third consecutive year it was possible to report no debt and a small balance on hand. The Executive Committee reported in the Southern educational work 29 common schools closely related to the churches, in places where there was no worthy provision in public schools, and taught chiefly by the graduates of the normal and graded schools; 43 normal and graded schools, 12 of which were under the care of negro graduates of the association's own higher educational institutions; and 5 chartered institutions; making 77 schools in all, 10 of which are otherwise classified as mountain schools, with 432 instructors and 13,203 pupils. Of the students 95 were taking theological, 85 collegiate, and 1,523 normal courses. The committee remarked that in these schools, in a large measure, pupils were completing their studies at an average age in which twenty years ago they began their education. The normal and graded schools were represented as enjoying, as a rule, the good will of the educated people of the localities in which they are situated; and the good character and correct behavior as citizens of their students were commended. The demand upon them for service as teachers and skilled workers was in excess of the supply, and no dependent graduates of the schools were heard of. In the Southern church work, 222 churches, with 147 ministers and missionaries, 11,602 members, 1,023 additions on profession of faith during the year, and 15,293 children in Sunday schools, were returned. Six-

teen new churches had been organized and 5 dropped. In the development of the Church work during the past ten years, 122 churches had been established, only 8 of which were connected with pre-existing schools. The 54 mountain churches (included in the 222) had 1,613 members. The ministrations of their pastors usually covered from 2 to 5 different church organizations, sometimes many miles apart. The Indian missions included 21 churches with 34 out stations, 1,303 members, 2,803 Sunday-school scholars, and 211 pupils in the 5 ordinary schools, and were served by 49 white and 42 Indian missionaries and teachers. The churches had contributed \$2,419 for benevolence and self-support. A decrease in the number of schools during the past ten years was accounted for as the result of changed conditions of education among the Indians. In future attention would be predominantly given to direct evangelizing and mission work among these people, rather than to increase of educational work, or even to the permanent maintenance of the present schools. From the work among the Chinese were returned 21 missions, 43 workers, 15 of whom were Chinese, and 1,446 pupils in schools, 183 of whom had given evidence of conversion. A work in Porto Rico, now in its second year, comprised 2 schools with 8 instructors, 292 pupils, and 1 evangelist. The committee of nine appointed by the six national Congregational societies to consider plans for the readjustment of their work so as to secure greater unity of action and economy of administration, brought in a report embodying recommendations that all the six societies hold a joint annual meeting in the month of October, while provision shall be made for a united missionary conference also each year in a part of the country where the annual meeting is not held; that the six societies adopt a common basis of representation by delegates to the annual meeting, the delegates to be selected each year either by the churches directly or by the local conferences acting for the churches; that each society have its separate executive board and committees, and its separate budget of receipts and expenses; that each society have its own secretary, to be appointed by its executive board; that the treasuries of the societies be combined in two offices with two treasurers, one to be located in Boston and the other in New York city, and that these treasurers, respectively, be chosen by the local executive boards acting together; that the solicitation and collection of funds for all the societies be under the care of a special subcommittee of 9 members, to be composed of representatives of all the societies, which shall be given the powers and facilities (specified in the report) to reach the Church in an effective manner; and that there be such an adjustment of the work or territory as will secure greater economy, and prevent two societies from doing similar work upon the same field; if two or more societies fail to agree upon the adjustment of work or territory, the committee of nine provided for above to be a committee of arbitration on the matter, the vote of 7 of them to be decisive. This report is to be submitted to the six missionary societies for discussion and future action. The committee of five appointed in 1899 to consider the relations of this association with other benevolent societies of the denomination and such administrative adjustments as might help toward their federation and toward the efficiency of the work of the association, presented a report, of which three resolutions were adopted, while three others were laid on the table to be taken up when the movement toward unity on the part of the other missionary

societies shall have reached a stage more appropriate to their consideration. The resolutions that were adopted approve the steps already taken toward a closer alliance of the societies, and promise co-operation with the efforts of the committee of nine toward that end; recommend the holding of one general conference of the benevolent societies each year, where the work of all the societies shall be presented, to constitute their annual meeting; and advise the publication of a single monthly magazine for the representation of the interests of all the societies.

The seventeenth annual meeting of the Women's Home Missionary Association was held in Springfield, Mass., October 18. The Bureau of Woman's Work reported that the contributions in the past twelve months from women's missionary societies had been \$24,673. Forty-four missionaries had been assigned as special representatives of the State organizations to whose support in the mission fields of the association those organizations were pledged. The literature of the association had been circulated freely.

The thirty-second annual meeting of the Woman's Board of Missions of the Interior was held in Chicago, October 23. The total receipts of the society had been \$77,632, being \$2,770 less than those of the preceding year. The gifts of the Young People's Christian Endeavor Societies and of the Young Women's Societies had amounted to \$9,347, or \$1,769 less than in the previous year. Seven missionaries had returned during the year to their fields after furlough; 13 were at home on furlough, 4 of them from China; 4 had resigned; and 4 new missionaries had been adopted. Nearly \$4,800 had been raised on a "Century Call" for \$20,000.

Congregationalists in Canada.—A statistical report presented at the annual meeting of the Congregational Union of Ontario and Quebec included returns from 64 out of 81 churches. In the province of Quebec 17 churches had 1867 members, with 1,572 members in 15 Sunday schools. In Ontario 47 churches had 4,322 members and 49 Sunday schools 4,507 members. The annual meeting of the union was held at Montreal in June. The Rev. Dr. George, principal of the Congregational College, was elected chairman for 1901. The work of the churches in the home field and the "Forward Movement" in the Northwest were reviewed. Concerning foreign missions a report was made of the Chisamba Mission in Africa. An invitation which had been offered by the Canadian delegates to the International Congregational Council to hold its next meeting in Montreal was approved. A number of religious, social, and practical questions were the subjects of addresses. A committee was appointed to consider the practicability of a Congregational Union for Canada.

Congregationalists in Jamaica.—The Congregational Union Assembly in Jamaica adopted a Twentieth Century scheme, the principal features of which are the holding of special meetings in all the churches with the view of raising the standard of spiritual life and service; a revision of the lists of church members; the printing in 1901 of a memorial volume giving the history of each church with its roll of members; and a fund, to be composed of gifts of 5 shillings and upward, for local purposes, home mission work, and other objects of the union.

Congregationalists in England and Wales.—The statistics of the British Congregational churches for the year ending December 1, 1899, show that on that date there were in England and Wales (including the Channel Islands) 4,592

churches and mission stations, an increase of 23, in which were provided 1,836,269 sittings. In these churches, so far as the returns show (417 churches or mission stations having failed to send information as compared with 516 in 1898), there were 388,009 members, and in their Sunday schools 614,742 scholars, an increase of 10,670; and 54,135 teachers, an increase of 7,389. Adding to these the churches and mission stations in other parts of the kingdom (those of the missions in Scotland and Ireland being, however, incomplete) the whole number of places of worship was 4,851, with a total membership of 415,664, showing an increase of 37,900. The total sitting accommodation provided in these churches was 1,733,065. The clerical force comprised 3,132 ordained ministers in the British Isles, 221 recognized evangelists and lay pastors, and 5,484 local preachers. Two hundred and ninety churches were without pastoral oversight, and 289 ministers were described as "without pastoral charge." The 781 churches and mission stations in the British colonies comprised 121 in Canada, 257 in Australasia, and 288 in South Africa; and 155 churches and preaching stations were maintained on the Continent of Europe. Four hundred and fifty-nine missionaries were resident in the colonies, 383 of whom were in active service. The theological colleges and institutes returned 407 students for the Congregational ministry; in addition to which 10 institutions in heathen lands belonging to the London Missionary Society had about 300 students in training. Sixteen new churches had been formed during the year, 41 chapels erected, of which 12 were in the colonies; 37 foundation stones of new buildings had been laid, and 24 additional sites secured.

The Colonial Missionary Society returned an income of £6,108 for work in 11 colonies. The report presented to the annual meeting, May 10, gave a survey of work in Canada, Newfoundland, Jamaica, Australia, New Zealand, and South Africa. The war in South Africa had naturally increased the difficulties there, both of churches and of ministers, and added to their claims on the society, but it would be difficult to tell till the war was over how much would be needed from the Emergency fund. Schemes were being considered by which the scope of the Twentieth Century fund might be so enlarged as to include all the Colonial Congregational Unions, when the effort would be made to raise 1,000,000 guineas.

The annual meeting of the London Missionary Society was held in London, April 30. The total ordinary income for the year had been, including legacies, £148,930; while, adding what had been received for the India Famine fund and certain sums received from other sources, an aggregate income was made up of £157,910. The expenditures had been £184,815. The whole amount so far obtained from the Centenary fund was £105,958.

The annual meeting of the Congregational Union of England and Wales was held in London, beginning May 7, with Mr. Canvill Williams as chairman for the year. The report of the Executive Committee represented that the total amount of the year's receipts and stock was £16,248, and that there remained a balance of receipts over expenditure of £180. The Publication Department reported a falling off in the year's business, which was attributed to the inauguration of the Twentieth Century fund and the appeals for the various war funds. The effect of the canvassing for the Twentieth Century fund was spoken of as "in the widest and best sense of a propagandist character." It had afforded opportunities

for the inculcation of Congregational principles and for instruction in Congregational church history which had been diligently used and greatly enjoyed by the churches that had profited by them. The council of the Young People's Union was organizing its work in London, a part of it being a bureau through which young people coming up to the metropolis might be introduced to Congregational churches. A number of active district branches had been formed. Several manuscripts of historical value, among them some unpublished works of ejected ministers, had been added to the collections in Memorial Hall.

A resolution was adopted commending the Simultaneous Mission of the Free Church Federation. A declaration relative to the recent educational proposals of the Government reaffirmed the profound conviction of the assembly that the children of the people should receive the best possible education in public schools, free from retrograde limitations and sectarian tests, and under popular and representative—not private and clerical—control. Papers were read upon *The Place of the Church Meeting in the Life and Work of the Churches*, *The Present Position of the Temperance Question, Doctrine and Ethics in Modern Preaching*, *The Present Position of the Sacerdotal Movement in the Established Church*; and a Young People's meeting was addressed on *The Joyousness of Christian Life, The Attractions of Nonconformity, and Sex*. The Rev. Joseph Parker, D. D., was elected chairman for 1901.

The autumnal session of the union was held at Newcastle-upon-Tyne, beginning October 16. The address of the chairman, Mr. Carvell Williams, was on the subject of *Present-day Evils and Duties*, and related to denominational questions awaiting solution, the war in South Africa, the trouble in China, disestablishment, the conflict against ritualism, the educational question, intemperance, Sunday-school reform, general missions, and the Simultaneous Mission contemplated for 1901. The annual report contained remarks on the striking change which the denomination had experienced during the closing century; the despised sect of 1800 having in 1900 won an acknowledged place among the religious forces at work in the nation. The recent Church Congress had given evidence that some of the ablest men in the Anglican Church had come to recognize the necessity of adopting toward Non-conformists a tone more in harmony with religious sentiment, and more consonant with the facts of the case. Regarding the sacerdotal controversy within the Church of England, it was observed that Congregationalists would have had no right to interfere with the internal arrangements of a Church from which they had seceded if that Church did not still claim to include the whole nation within its fold. Two appeals from South Africa—one from the Natal Congregational Union and one from 414 Dutch ministers—taking opposite ground respecting questions of the war—had been referred to the Special Purpose Committee for acknowledgment. The treasurer of the Publication Department reported the receipt of £10,377 from sales. A special committee was appointed to investigate the subject of ministerial removals and settlements. A report made on behalf of the Twentieth Century fund showed that while the amount contemplated at first had been more than promised, it had been so allotted by the donors that there was danger lest some of the objects on which the hearts of its projectors were most set would not be realized. A very large proportion of the money had been set apart by the givers exercising the privilege allowed them

under the terms of the scheme for local purposes, to the neglect of the great public societies of the denomination. A discussion of The Problem of Congregational Churches in Large Towns resulted in the appointment of a committee to consider the whole subject, together with that of village churches, with power to take such immediate steps as might be considered desirable and found to be practical. A deputation was appointed to represent the union and convey its congratulations at the celebration of the Union of the Free and the United Presbyterian Churches of Scotland, about to be held. A resolution passed by the assembly urged a uniting of all Christians in order to promote any practical measures for the restriction of the liquor traffic. Other resolutions affirmed that the internal strife within the Established Church itself showed the necessity for a definite change in the ecclesiastical conditions, and that in the opinion of the assembly the only change which would prove satisfactory was disestablishment; declared the various proposals for a Roman Catholic University in Ireland to be unwise and reactionary attempts to meet the case by a remedy contrary alike to wise principle and sound policy; and emphasized the necessity of the application of the fundamental principles of religious equality to the question of national education. A meeting was held in behalf of the Congregational settlements of Mansfield (Canningtown), the Women's Settlement (Canningtown), Brown- ing Hall (Walworth), Ipswich, Middlesborough, and Manchester.

A Congregational Historical Society is in course of formation, the object of which will be to collect, examine, edit, and publish the documents and records of the denomination, which are described as being numerous and interesting.

Congregational Union of South Africa.—The amalgamation of the Congregational unions of Natal and the Cape Colony as "the Congregational Union of South Africa" was consummated at a joint meeting held for that purpose in Durban, Natal, early in the fall. About 50 ministers and delegates from all parts of South Africa were present on the occasion. The Rev. W. Friend, of Port Elizabeth, presided. The Rev. J. F. Ritchie was chosen secretary; to devote all his time to the work of that office. Besides an anticipated year's income of £800, the union expects to receive grants from the London and the Colonial Missionary Societies.

CONGRESS. The Fifty-sixth Congress met for its first session Monday, Dec. 4, 1899. Its membership was as follows:

SENATE.

President *pro tempore*, WILLIAM P. FRYE.

<i>Alabama.</i>	<i>Florida.</i>
1901. John T. Morgan, D.	1903. Stephen R. Mallory, D.
1903. Edmund W. Pettus, D.	1905. J. P. Taliaferro, D.
<i>Arkansas.</i>	<i>Georgia.</i>
1901. James H. Berry, D.	1901. Augustus O. Bacon, D.
1903. James K. Jones, D.	1903. Alex. S. Clay, D.
<i>California.</i>	<i>Idaho.</i>
1903. George C. Perkins, R.	1901. George L. Shoup, R.
1905. Thomas R. Bard, R.	1903. Henry Heitfeld, P.
<i>Colorado.</i>	<i>Illinois.</i>
1901. Edward O. Wolcott, R.	1901. Shelby M. Cullom, R.
1903. Henry M. Teller, I.	1903. William E. Mason, R.
<i>Connecticut.</i>	<i>Indiana.</i>
1903. Orville H. Platt, R.	1903. Chas. W. Fairbanks, R.
1905. Joseph R. Hawley, R.	1903. Albert J. Beveridge, R.
<i>Delaware.</i>	<i>Iowa.</i>
1901. Richard R. Kenney, D.	1901. John H. Gear, R.
1903.	1903. William B. Allison, R.

<i>Kansas.</i>	<i>North Dakota.</i>
1901. Lucien Baker, R.	1903. H. C. Hansbrough, R.
1903. William A. Harris, P.	1905. P. J. McCumber, R.
<i>Kentucky.</i>	<i>Ohio.</i>
1901. William Lindsay, D.	1903. Joseph B. Foraker, R.
1903. William J. Deboe, R.	1905. Marcus A. Hanna, R.
<i>Louisiana.</i>	<i>Oregon.</i>
1901. Donelson Caffery, D.	1901. George W. McBride, R.
1903. Samuel D. McEnery, D.	1903. Joseph Simon, R.
<i>Maine.</i>	<i>Pennsylvania.</i>
1901. William P. Frye, R.	1903. Boies Penrose, R.
1905. Eugene Hale, R.	1905. Matthew S. Quay, R.
<i>Maryland.</i>	<i>Rhode Island.</i>
1903. Geo. L. Wellington, R.	1901. George P. Wetmore, R.
1905. Louis E. McComas, R.	1905. Nelson W. Aldrich, R.
<i>Massachusetts.</i>	<i>South Carolina.</i>
1901. George F. Hoar, R.	1901. Benjamin R. Tillman, D.
1905. Henry C. Lodge, R.	1903. John L. McLaurin, D.
<i>Michigan.</i>	<i>South Dakota.</i>
1901. James McMillan, R.	1901. Richard F. Pettigrew, R.
1905. Julius C. Burrows, R.	1903. James H. Kyle, I.
<i>Minnesota.</i>	<i>Tennessee.</i>
1901. Knute Nelson, R.	1901. Thomas B. Turley, D.
1905. Cushman K. Davis, R.	1905. William B. Bate, D.
<i>Mississippi.</i>	<i>Texas.</i>
William V. Sullivan, D.	1901. Horace Chilton, D.
1905. H. D. Money, D.	1905. C. A. Culberson, D.
<i>Missouri.</i>	<i>Utah.</i>
1903. George G. Vest, D.	1903. Joseph L. Rawlins, D.
1905. F. M. Cockrell, D.	1905.
<i>Montana.</i>	<i>Vermont.</i>
1901. Thomas H. Carter, R.	1903. Jonathan Ross, R.
1905. William A. Clark, D.	1905. Redfield Proctor, R.
<i>Nebraska.</i>	<i>Virginia.</i>
1901. John M. Thurston, R.	1901. Thomas S. Martin, D.
1905. William V. Allen, P.	1905. John W. Daniel, D.
<i>Nevada.</i>	<i>Washington.</i>
1903. John P. Jones, S.	1903. George Turner, P.
1905. William M. Stewart, I.	1905. Addison G. Foster, R.
<i>New Hampshire.</i>	<i>West Virginia.</i>
1901. William E. Chandler, R.	1901. Stephen B. Elkins, R.
1903. Jacob H. Gallinger, R.	1905. Nathan B. Scott, R.
<i>New Jersey.</i>	<i>Wisconsin.</i>
1901. William J. Sewel, R.	1903. John C. Spooner, R.
1905. John Keas, R.	1905. Joseph V. Quarles, R.
<i>New York.</i>	<i>Wyoming.</i>
1903. Thomas C. Platt, R.	1901. Francis E. Warren, R.
1905. C. M. Depew, R.	1905. Clarence D. Clark, R.
<i>North Carolina.</i>	
1901. Marion Butler, P.	
1903. Jeter C. Pritchard, R.	

Senator Sullivan, Mississippi, was appointed in place of E. C. Walthall, deceased; Senator Allen, Nebraska, in place of M. L. Hayward, deceased; and Senator Ross, Vermont, in place of Justin S. Morrill, deceased. The Senate refused to admit Mr. Quay, appointed by the Governor of Pennsylvania, and Mr. Clark, of Montana, resigned, May 15, 1900, to anticipate action on charges of bribery brought against him. The vacancies in Delaware and Utah remained unfilled.

HOUSE OF REPRESENTATIVES.

Speaker, DAVID B. HENDERSON, IOWA.

Amos L. Allen, Maine, was elected in place of Thomas B. Reed, who resigned; William F. Aldrich, Alabama, took his seat March 8, 1900; Charles A. Chickering, New York, died Feb. 9, 1900; W. T. Crawford, North Carolina, was unseated May 10, 1900; S. P. Epes, Virginia, died March 3, 1900; Alfred C. Harmer, Pennsylvania, died March 6, 1900; Smith McPherson, Iowa, resigned June 6, 1900; G. A. Robbins, Alabama, was unseated March 8, 1900; B. H. Roberts, Utah, was refused admission Jan. 25, 1900; J. W. Smith, Maryland, resigned Jan. 12, 1900; W. A. Young, Virginia, was unseated March 12, 1900; June W. Gayle, Kentucky, was elected in place of E. E. Settle, deceased; Joseph J. Gill, Ohio, in place of Lorenzo Danford, deceased; Henry D. Green, Pennsylvania, in place of Daniel Ermentrout, deceased; Francis R. Lassiter, in place of Sydney P. Epes, Virginia, deceased; C. E. Littlefield, Maine, in place of Nelson Dingley, deceased; William Neville, Nebraska, in place of W. L. Greene, deceased; D. W. Shackelford, Missouri, in place of Richard P. Bland, deceased; E. B. Vreeland, in place of Warren B. Hooker, resigned.

The first business of the House of Representatives after roll call was the election of a Speaker. David B. Henderson, of Iowa, was chosen, receiving 181 votes, to 156 for James D. Richardson, of Tennessee, 4 votes for John C. Bell, of Colorado,

and 2 votes for Francis G. Newlands, of Nevada. There were 12 members not voting. The organization of the House was completed by adopting the following resolution, offered by Mr. Grosvenor, of Ohio:

"Resolved, That Alexander McDowell, of the State of Pennsylvania, be, and he is hereby, chosen clerk of the House of Representatives;

"That Henry Casson, of the State of Wisconsin, be, and he is hereby, chosen sergeant-at-arms of the House of Representatives;

"That William J. Glenn, of the State of New York, be, and he is hereby, chosen doorkeeper of the House of Representatives;

"That Joseph C. McElroy, of the State of Ohio, be, and he is hereby, chosen postmaster of the House of Representatives; and

"That Henry N. Couden, of the State of Michigan, be, and he is hereby, chosen chaplain of the House of Representatives."

The rules of the Fifty-fifth Congress were then adopted by a vote of 178 to 159. In opposition to that course Mr. Richardson, of Tennessee, said:

"I feel certain that either the power of the Committee on Rules could be curtailed or the membership of that committee could be enlarged. I remember that the first time I ever had the honor to address this House it was in opposition to the powers of the Committee on Rules in the Fifty-second Congress, and I predicted that the three members who constitute a majority of that committee would in time become a legislative triumvirate. Under these rules the Committee on Rules not only decides what business the House must transact, but also what business the House shall not transact.

"It is enough to clothe the Speaker with the power of recognition and to supplement that by adding the power to appoint the committees of the House; but to add to those powers, great almost to the point of being dangerous, the absolute control of the House through its Committee on Rules is giving greater power to the Speaker of this House than any one man in this free republic ought to possess. To say that the power still remains with the House is a subterfuge, because the House can never pass upon a question until the Committee on Rules see fit to report. To say that the committee can be controlled by the majority is not candid, because that committee is considered the Speaker's official family, and no gentleman of the Speaker's party would serve upon it unless he could support the Speaker's policy. If a Democrat were the Speaker of this House, and I could not cordially and loyally support his policy in that committee, I would resign my membership upon it.

"I respect the gentleman from Pennsylvania, and no man on this side of the Chamber respects the gentleman from Iowa, now the honorable Speaker of this House, more than I do; and yet I divulge no secrets of the committee room when I say that with these gentlemen on it the Speaker of the Fifty-fifth Congress, with their help, absolutely controlled the Committee on Rules. I know that the Speaker of the Fifty-third and the Fifty-second Congresses—a great and splendid Democrat, whom we mourn even until this day—completely dominated the Committee on Rules when the House was Democratic. I know that the honorable Speaker of this House, under these rules, if they are adopted, will be practically the Committee on Rules; and the Committee on Rules is practically the House of Representatives. In view of that it does seem to me that if you will not curtail the power of that committee, certainly its membership ought to be enlarged."

Dec. 5 the Congress notified the President that it was ready to proceed to business, and he sent in his annual message, as follows:

To the Senate and House of Representatives:

At the threshold of your deliberations you are called to mourn with your countrymen the death of Vice-President Hobart, who passed from this life on the morning of Nov. 21 last. His great soul now rests in eternal peace. His private life was pure and elevated, while his public career was ever distinguished by large capacity, stainless integrity, and exalted motives. He has been removed from the high office which he honored and dignified, but his lofty character, his devotion to duty, his honesty of purpose, and noble virtues remain with us as a priceless legacy and example.

The Fifty-sixth Congress convenes in its first regular session with the country in a condition of unusual prosperity, of universal good will among the people at home, and in relations of peace and friendship with every government of the world. Our foreign commerce has shown great increase in volume and value. The combined imports and exports for the year are the largest ever shown by a single year in all our history. Our exports for 1899 alone exceeded by more than a billion dollars our imports and exports combined in 1870. The imports per capita are 20 per cent. less than in 1870, while the exports per capita are 58 per cent. more than in 1870, showing the enlarged capacity of the United States to satisfy the wants of its own increasing population, as well as to contribute to those of the peoples of other nations.

Exports of agricultural products were \$784,776,142. Of manufactured products we exported in value \$339,592,146, being larger than any previous year. It is a noteworthy fact that the only years in all our history when the products of our manufactories sold abroad exceeded those bought abroad were 1898 and 1899.

Government receipts from all sources for the fiscal year ended June 30, 1899, including \$11,796,314.14, part payment of the Central Pacific Railroad indebtedness, aggregated \$610,982,004.35. Customs receipts were \$206,128,481.75, and those from internal revenue \$273,437,161.51.

For the fiscal year the expenditures were \$700,003,564.02, leaving a deficit of \$89,111,559.67.

The Secretary of the Treasury estimates that the receipts for the current fiscal year will aggregate \$640,958,112, and upon the basis of present appropriations the expenditures will aggregate \$600,958,112, leaving a surplus of \$40,000,000.

For the fiscal year ended June 30, 1899, the internal-revenue receipts were increased about \$100,000,000.

The present gratifying strength of the Treasury is shown by the fact that on Dec. 1, 1899, the available cash balance was \$278,004,837.72, of which \$239,744,905.36 was in gold coin and bullion. The conditions of confidence which prevail throughout the country have brought gold into more general use, and customs receipts are now almost entirely paid in that coin.

The strong position of the Treasury with respect to cash on hand and the favorable showing made by the revenues have made it possible for the Secretary of the Treasury to take action under the provisions of section 3694, Revised Statutes, relating to the sinking fund. Receipts exceeded expenditures for the first five months of the current fiscal year by \$13,413,389.91, and, as mentioned above, the Secretary of the Treasury estimates that there will be a surplus of approximately \$40,000,000 at the end of the year. Under

such conditions it was deemed advisable and proper to resume compliance with the provisions of the sinking-fund law, which for eight years has not been done because of deficiencies in the revenues. The Treasury Department therefore offered to purchase during November \$25,000,000 of the 5-per-cent. loan of 1904, or the 4-per-cent. funded loan of 1907, at the current market price. The amount offered and purchased during November was \$18,408,600. The premium paid by the Government on such purchases was \$2,263,521, and the net saving in interest was about \$2,885,000. The success of this operation was sufficient to induce the Government to continue the offer to purchase bonds to and including the 23d day of December, instant, unless the remainder of the \$25,000,000 called for should be presented in the meantime for redemption.

Increased activity in industry, with its welcome attendant—a larger employment for labor at higher wages—gives to the body of the people a larger power to absorb the circulating medium. It is further true that year by year, with larger areas of land under cultivation, the increasing volume of agricultural products, cotton, corn, and wheat, calls for a larger volume of money supply. This is especially noticeable at the crop-harvesting and crop-moving period.

In its earlier history the national banking act seemed to prove a reasonable avenue through which needful additions to the circulation could from time to time be made. Changing conditions have apparently rendered it now inoperative to that end. The high margin in bond securities required, resulting from large premiums which Government bonds command in the market, or the tax on note issues, or both operating together, appear to be the influences which impair its public utility.

The attention of Congress is respectfully invited to this important matter with the view of ascertaining whether or not such reasonable modifications can be made in the national banking act as will render its service in the particulars here referred to more responsive to the people's needs. I again urge that national banks be authorized to organize with a capital of \$25,000.

I urgently recommend that to support the existing gold standard, and to maintain "the parity in value of the coins of the two metals (gold and silver) and the equal power of every dollar at all times in the market and in the payment of debts," the Secretary of the Treasury be given additional power and charged with the duty to sell United States bonds and to employ such other effective means as may be necessary to these ends. The authority should include the power to sell bonds on long and short time, as conditions may require, and should provide for a rate of interest lower than that fixed by the act of Jan. 14, 1875. While there is now no commercial fright which withdraws gold from the Government, but, on the contrary, such widespread confidence that gold seeks the Treasury demanding paper money in exchange, yet the very situation points to the present as the most fitting time to make adequate provision to insure the continuance of the gold standard and of public confidence in the ability and purpose of the Government to meet all its obligations in the money which the civilized world recognizes as the best. The financial transactions of the Government are conducted upon a gold basis. We receive gold when we sell United States bonds, and use gold for their payment. We are maintaining the parity of all the money issued or coined by authority of the Government. We are doing these things with the means at hand.

Happily at the present time we are not compelled to resort to loans to supply gold. It has been done in the past, however, and may have to be done in the future. It behooves us, therefore, to provide at once the best means to meet the emergency when it arises, and the best means are those which are the most certain and economical. Those now authorized have the virtue neither of directness nor economy. We have already eliminated one of the causes of our financial plight and embarrassment during the years 1893, 1894, 1895, and 1896. Our receipts now equal our expenditures; deficient revenues no longer create alarm. Let us remove the only remaining cause by conferring the full and necessary power on the Secretary of the Treasury and impose upon him the duty to uphold the present gold standard and preserve the coins of the two metals on a parity with each other, which is the repeatedly declared policy of the United States.

In this connection I repeat my former recommendations that a portion of the gold holdings shall be placed in a trust fund from which greenbacks shall be redeemed upon presentation, but when once redeemed shall not thereafter be paid out except for gold.

The value of an American merchant marine to the extension of our commercial trade and the strengthening of our power upon the sea invites the immediate action of the Congress. Our national development will be one-sided and unsatisfactory so long as the remarkable growth of our inland industries remains unaccompanied by progress on the seas. There is no lack of constitutional authority for legislation which shall give to the country maritime strength commensurate with its industrial achievements and with its rank among the nations of the earth.

The past year has recorded exceptional activity in our shipyards, and the promises of continual prosperity in shipbuilding are abundant. Advanced legislation for the protection of our seamen has been enacted. Our coast trade, under regulations wisely framed at the beginning of the Government and since, shows results for the past fiscal year unequalled in our records or those of any other power. We shall fail to realize our opportunities, however, if we complacently regard only matters at home and blind ourselves to the necessity of securing our share in the valuable carrying trade of the world.

Last year American vessels transported a smaller share of our exports and imports than during any former year in all our history, and the measure of our dependence upon foreign shipping was painfully manifested to our people. Without any choice of our own, but from necessity, the departments of the Government charged with military and naval operations in the East and West Indies had to obtain from foreign flags merchant vessels essential for those operations.

The other great nations have not hesitated to adopt the required means to develop their shipping as a factor in national defense and as one of the surest and speediest means of obtaining for their producers a share in foreign markets. Like vigilance and effort on our part can not fail to improve our situation, which is regarded with humiliation at home and with surprise abroad. Even the seeming sacrifices, which at the beginning may be involved, will be offset later by more than equivalent gains.

The expense is as nothing compared to the advantage to be achieved. The re-establishment of our merchant marine involves in a large measure our continued industrial progress and the exten-

sion of our commercial triumphs. I am satisfied the judgment of the country favors the policy of aid to our merchant marine, which will broaden our commerce and markets and upbuild our sea-carrying capacity for the products of agriculture and manufacture; which, with the increase of our navy, mean more work and wages to our countrymen, as well as a safeguard to American interests in every part of the world.

Combinations of capital organized into trusts to control the conditions of trade among our citizens, to stife competition, limit production, and determine the prices of products used and consumed by the people, are justly provoking public discussion, and should early claim the attention of the Congress.

The Industrial Commission, created by the act of the Congress of June 18, 1898, has been engaged in extended hearings upon the disputed questions involved in the subject of combinations in restraint of trade and competition. They have not yet completed their investigation of this subject, and the conclusions and recommendations at which they may arrive are undetermined.

The subject is one giving rise to many divergent views as to the nature and variety or cause and extent of the injuries to the public which may result from large combinations concentrating more or less numerous enterprises and establishments, which previously to the formation of the combination were carried on separately.

It is universally conceded that combinations which engross or control the market of any particular kind of merchandise or commodity necessary to the general community, by suppressing natural and ordinary competition, whereby prices are unduly enhanced to the general consumer, are obnoxious not only to the common law, but also to the public welfare. There must be a remedy for the evils involved in such organizations. If the present law can be extended more certainly to control or check these monopolies or trusts, it should be done without delay. Whatever power the Congress possesses over this most important subject should be promptly ascertained and asserted.

President Harrison, in his annual message of Dec. 3, 1889, says:

"Earnest attention should be given by Congress to a consideration of the question how far the restraint of those combinations of capital commonly called 'trusts' is matter of Federal jurisdiction. When organized, as they often are, to crush out all healthy competition and to monopolize the production or sale of an article of commerce and general necessity, they are dangerous conspiracies against the public good, and should be made the subject of prohibitory and even penal legislation."

An act to protect trade and commerce against unlawful restraints and monopolies was passed by Congress on the 2d of July, 1890. The provisions of this statute are comprehensive and stringent. It declares every contract or combination, in the form of a trust or otherwise, or conspiracy in the restraint of trade or commerce among the several States or with foreign nations, to be unlawful. It denominates as a criminal every person who makes any such contract or engages in any such combination or conspiracy, and provides a punishment by fine or imprisonment. It invests the several circuit courts of the United States with jurisdiction to prevent and restrain violations of the act, and makes it the duty of the several United States district attorneys, under the direction of the Attorney-General, to institute proceedings in equity to prevent

and restrain such violations. It further confers upon any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by the act the power to sue therefor in any circuit court of the United States without respect to the amount in controversy, and to recover threefold the damages by him sustained and the costs of the suit, including reasonable attorney fees. It will be perceived that the act is aimed at every kind of combination in the nature of a trust or monopoly in restraint of interstate or international commerce.

The prosecution by the United States of offenses under the act of 1890 has been frequently resorted to in the Federal courts, and notable efforts in the restraint of interstate commerce, such as the Trans-Missouri Freight Association and the Joint Traffic Association, have been successfully opposed and suppressed.

President Cleveland in his annual message of Dec. 7, 1896—more than six years subsequent to the enactment of this law—after stating the evils of these trust combinations, says:

"Though Congress has attempted to deal with this matter by legislation, the laws passed for that purpose thus far have proved ineffective, not because of any lack of disposition or attempt to enforce them, but simply because the laws themselves as interpreted by the courts do not reach the difficulty. If the insufficiencies of existing laws can be remedied by further legislation, it should be done. The fact must be recognized, however, that all Federal legislation on this subject may fall short of its purpose because of inherent obstacles, and also because of the complex character of our governmental system, which, while making the Federal authority supreme within its sphere, has carefully limited that sphere by metes and bounds which can not be transgressed. The decision of our highest court on this precise question renders it quite doubtful whether the evils of trusts and monopolies can be adequately treated through Federal action, unless they seek directly and purposely to include in their objects transportation or intercourse between States or between the United States and foreign countries.

"It does not follow, however, that this is the limit of the remedy that may be applied. Even though it may be found that Federal authority is not broad enough to fully reach the case, there can be no doubt of the power of the several States to act effectively in the premises, and there should be no reason to doubt their willingness to judiciously exercise such power."

The State legislation to which President Cleveland looked for relief from the evils of trusts has failed to accomplish fully that object. This is probably due to a great extent to the fact that different States take different views as to the proper way to discriminate between evil and injurious combinations and those associations which are beneficial and necessary to the business prosperity of the country. The great diversity of treatment in different States arising from this cause and the intimate relations of all parts of the country to each other without regarding State lines in the conduct of business have made the enforcement of State laws difficult.

It is apparent that uniformity of legislation upon this subject in the several States is much to be desired. It is to be hoped that such uniformity founded in a wise and just discrimination between what is injurious and what is useful and necessary in business operations may be obtained and that means may be found for the Congress

within the limitations of its constitutional power so to supplement an effective code of State legislation as to make a complete system of laws throughout the United States adequate to compel a general observance of the salutary rules to which I have referred.

The whole question is so important and far-reaching that I am sure no part of it will be lightly considered, but every phase of it will have the studied deliberation of the Congress, resulting in wise and judicious action.

A review of our relations with foreign states is presented with such recommendations as are deemed appropriate.

The long-pending boundary dispute between the Argentine Republic and Chili was settled in March last by the award of an arbitral commission, on which the United States minister at Buenos Ayres served as umpire.

Progress has been made toward the conclusion of a convention of extradition with the Argentine Republic. Having been advised and consented to by the United States Senate and ratified by Argentina, it only awaits the adjustment of some slight changes in the text before exchange.

In my last annual message I adverted to the claim of the Austro-Hungarian Government for indemnity for the killing of certain Austrian and Hungarian subjects by the authorities of the State of Pennsylvania, at Lattimer, while suppressing an unlawful tumult of miners, Sept. 10, 1897. In view of the verdict of acquittal rendered by the court before which the sheriff and his deputies were tried for murder, and following the established doctrine that the Government may not be held accountable for injuries suffered by individuals at the hands of the public authorities while acting in the line of duty in suppressing disturbance of the public peace, this Government, after due consideration of the claim advanced by the Austro-Hungarian Government, was constrained to decline liability to indemnify the sufferers.

It is gratifying to be able to announce that the Belgian Government has mitigated the restrictions on the importation of cattle from the United States, to which I referred in my last annual message.

Having been invited by Belgium to participate in a congress, held at Brussels, to revise the provisions of the general act of July 2, 1890, for the repression of the African slave trade, to which the United States was a signatory party, this Government preferred not to be represented by a plenipotentiary, but reserved the right of accession to the result. Notable changes were made, those especially concerning this country being in the line of the increased restriction of the deleterious trade in spirituous liquors with the native tribes, which this Government has from the outset urgently advocated. The amended general act will be laid before the Senate, with a view to its advice and consent.

Early in the year the peace of Bolivia was disturbed by a successful insurrection. The United States minister remained at his post, attending to the American interests in that quarter, and using besides his good offices for the protection of the interests of British subjects in the absence of their national representative. On the establishment of the new Government our minister was directed to enter into relations therewith.

Gen. Pando was elected President of Bolivia on Oct. 23.

Our representative has been instructed to use all permissible friendly endeavors to induce the Government of Bolivia to amend its marriage laws

so as to give legal status to the non-Catholic and civil marriages of aliens within its jurisdiction, and strong hopes are entertained that the Bolivian law in this regard will be brought, as was that of Peru some years ago, into harmony with the general practice of modern states.

A convention of extradition with Brazil, signed May 14, 1897, has been ratified by the Brazilian Legislature.

During the past summer two national ships of the United States have visited Brazilian ports on a friendly mission and been cordially received. The voyage of the *Wilmington* up the Amazon river gave rise to a passing misunderstanding, owing to confusion in obtaining permission to visit the interior and make surveys in the general interest of navigation, but the incident found a ready adjustment in harmony with the close relations of amity which this Government has always sedulously sought to cultivate with the commonwealths of the Western Continent.

The claim growing out of the seizure of the American-owned newspaper *The Panama Star and Herald* by the authorities of Colombia has been settled, after a controversy of several years, by an agreement assessing at \$30,000 the indemnity to be paid by the Colombian Government, in three installments of \$10,000 each.

The good will of Colombia toward our country has been testified anew by the cordial extension of facilities to the Nicaraguan Canal Commission in their approaching investigation of the Panama Canal and other projected routes across the Isthmus of Darien.

Toward the end of October an insurrectionary disturbance developed in the Colombian Republic. This movement has thus far not attained any decisive result and is still in progress.

Discussion of the questions raised by the action of Denmark in imposing restrictions on the importation of American meats has continued without substantial result in our favor.

The neighboring island republic of Santo Domingo has lately been the scene of revolution, following a long period of tranquillity. It began with the killing of President Heurax in July last, and culminated in the relinquishment by the succeeding Vice-President of the reins of government to the insurgents. The first act of the Provisional Government was the calling of a presidential and constituent election. Juan Isidro Jimenez, having been elected President, was inaugurated on the 14th of November. Relations have been entered into with the newly established Government.

The experimental association of Nicaragua, Honduras, and Salvador, under the title of the Greater Republic of Central America, when apparently on the threshold of a complete federal organization by the adoption of a constitution and the formation of a national legislature, was disrupted in the last days of November, 1898, by the withdrawal of Salvador. Thereupon Nicaragua and Honduras abandoned the joint compact, each resuming its former independent sovereignty. This was followed by the reception of Minister Merry by the republics of Nicaragua and Salvador, while Minister Hunter in turn presented his credentials to the Government of Honduras, thus reverting to the old distribution of the diplomatic agencies of the United States in Central America for which our existing statutes provide. A Nicaraguan envoy has been accredited to the United States.

An insurrectionary movement, under Gen. Reyes, broke out at Bluefields in February last, and for a time exercised actual control in the Mosquito Territory. The Detroit was promptly

sent thither for the protection of American interests. After a few weeks the Reyes government renounced the conflict, giving place to the restored supremacy of Nicaragua. During the interregnum certain public dues accruing under Nicaraguan law were collected from American merchants by the authorities for the time being in effective administrative control. Upon the titular government regaining power a second payment of these dues was demanded. Controversy arose touching the validity of the original payment of the debt to the *de facto* regent of the territory. An arrangement was effected in April last by the United States minister and the Foreign Secretary of Nicaragua whereby the amounts of the duplicate payments were deposited with the British consul pending an adjustment of the matter by direct agreement between the governments of the United States and Nicaragua. The controversy is still unsettled.

The contract of the Maritime Canal Company of Nicaragua was declared forfeited by the Nicaraguan Government on the 10th of October, on the ground of nonfulfillment within the ten years' term stipulated in the contract. The Maritime Canal Company has lodged a protest against this action, alleging rights in the premises which appear worthy of consideration. This Government expects that Nicaragua will afford the protestants a full and fair hearing upon the merits of the case.

The Nicaragua Canal Commission, which had been engaged upon the work of examination and survey for a ship-canal route across Nicaragua, having completed its labors and made its report, was dissolved on May 31, and on June 10 a new commission, known as the Isthmian Canal Commission, was organized under the terms of the act approved March 3, 1899, for the purpose of examining the American isthmus with a view to determining the most practicable and feasible route for a ship canal across that isthmus, with its probable cost, and other essential details.

This commission, under the presidency of Rear-Admiral John G. Walker, U. S. N. (retired), entered promptly upon the work intrusted to it, and is now carrying on examinations in Nicaragua along the route of the Panama Canal, and in Darien from the Atlantic, in the neighborhood of the Atrato river, to the Bay of Panama, on the Pacific side. Good progress has been made, but under the law a comprehensive and complete investigation is called for, which will require much labor and considerable time for its accomplishment. The work will be prosecuted as expeditiously as possible and a report made at the earliest practicable date.

The great importance of this work can not be too often or too strongly pressed upon the attention of the Congress. In my message of a year ago I expressed my views of the necessity of a canal which would link the two great oceans, to which I again invite your consideration. The reasons then presented for early action are even stronger now.

A pleasing incident in the relations of this Government with that of Chili occurred in the generous assistance given to the war ship *Newark* when in distress in Chilean waters. Not alone in this way has the friendly disposition of Chili found expression. That country has acceded to the convention for the establishment of the Bureau of the American Republics, in which organization every independent state of the continent now shares.

The exchange of ratifications of a convention for the revival of the United States and Chilean

Claims Commission and for the adjudication of claims heretofore presented but not determined during the life of the previous commission has been delayed by reason of the necessity for fresh action by the Chilean Senate upon the amendments attached to the ratification of the treaty by the United States Senate. This formality is soon to be accomplished.

In view of disturbances in the populous provinces of northern China, where are many of our citizens, and of the imminence of disorder near the capital and toward the seaboard, a guard of marines was landed from the Boston and stationed during last winter in the legation compound at Peking. With the restoration of order this protection was withdrawn.

The interests of our citizens in that vast empire have not been neglected during the past year. Adequate protection has been secured for our missionaries and some injuries to their property have been redressed.

American capital has sought and found various opportunities of competing to carry out the internal improvements which the Imperial Government is wisely encouraging, and to develop the natural resources of the empire. Our trade with China has continued to grow, and our commercial rights under existing treaties have been everywhere maintained during the past year, as they will be in the future.

The extension of the area open to international foreign settlement at Shanghai and the opening of the ports at Nanking, Tsing-Tao (Kiao-Chao), and Ta-Lien-Wan to foreign trade and settlement will doubtless afford American enterprise additional facilities and new fields, of which it will not be slow to take advantage.

In my message to Congress of Dec. 5, 1898, I urged that the recommendation which had been made to the Speaker of the House of Representatives by the Secretary of the Treasury on the 14th of June, 1898, for an appropriation for a commission to study the commercial and industrial conditions in the Chinese Empire and report as to the opportunities for, and obstacles to, the enlargements of markets in China for the raw products and manufactures of the United States, should receive at your hands the consideration which its importance and timeliness merited, but the Congress failed to take action.

I now renew this recommendation, as the importance of the subject has steadily grown since it was first submitted to you, and no time should be lost in studying for ourselves the resources of this great field for American trade and enterprise.

The death of President Faure in February last called forth those sincere expressions of sympathy which befit the relations of two republics as closely allied by unbroken historic ties as are the United States and France.

Preparations for the representation of the industries, arts, and products of the United States at the World's Exposition to be held in Paris next year continue on an elaborate and comprehensive scale, thanks to the generous appropriation provided by Congress, and to the friendly interest the French Government has shown in furthering a typical exhibit of American progress.

There has been allotted to the United States a considerable addition of space, which, while placing our country in the first rank among exhibitors, does not suffice to meet the increasingly urgent demands of our manufacturers. The efforts of the commissioner general are ably directed toward a strictly representative display of all that most characteristically marks American achievement in the inventive arts, and most ade-

quately shows the excellence of our natural productions.

In this age of keen rivalry among nations for mastery in commerce, the doctrine of evolution and the rule of the survival of the fittest must be as inexorable in their operation as they are positive in the results they bring about. The place won in the struggle by an industrial people can only be held by unrelaxed endeavor and constant advance in achievement. The present extraordinary impetus in every line of American exportation and the astounding increase in the volume and value of our share in the world's markets may not be attributed to accidental conditions.

The reasons are not far to seek. They lie deep in our national character and find expression year by year in every branch of handicraft, in every new device whereby the materials we so abundantly produce are subdued to the artisan's will and made to yield the largest, most practical, and most beneficial return. The American exhibit at Paris should, and I am confident will, be an open volume, whose lessons of skillfully directed endeavor, unfaltering energy, and consummate performance may be read by all on every page, thus spreading abroad a clearer knowledge of the worth of our productions and the justice of our claim to an important place in the marts of the world. To accomplish this by judicious selection, by recognition of paramount merit in whatever walk of trade or manufacture it may appear, and by orderly classification and attractive installation is the task of our commission.

The United States Government building is approaching completion, and no effort will be spared to make it worthy, in beauty of architectural plan and in completeness of display, to represent our nation. It has been suggested that a permanent building of similar or appropriate design be erected on a convenient site, already given by the municipality, near the exposition grounds, to serve in commemoration of the part taken by this country in this great enterprise, as an American National Institute, for our countrymen resorting to Paris for study.

I am informed by our commissioner general that we shall have in the American sections at Paris over 7,000 exhibitors, from every State in our country, a number ten times as great as those which were represented at Vienna in 1873, six times as many as those in Paris in 1878, and four times as many as those who exhibited in Paris in 1889. This statement does not include the exhibits from either Cuba, Porto Rico, or Hawaii, for which arrangements have been made.

A number of important international congresses on special topics affecting public interests are proposed to be held in Paris next summer in connection with the exposition. Effort will be made to have the several technical branches of our administration efficiently represented at those conferences, each in its special line, and to procure the largest possible concourse of State representatives, particularly at the Congresses of Public Charity and of Medicine.

Our relations with Germany continue to be most cordial. The increasing intimacy of direct association has been marked during the year by the granting permission in April for the landing on our shores of a cable from Borkum Emden, on the North Sea, by way of the Azores, and also by the conclusion on Sept. 2 of a Parcels Post Convention with the German Empire. In all that promises closer relations of intercourse and commerce and a better understanding between two races having so many traits in common, Germany

can be assured of the most cordial co-operation of this Government and people. We may be rivals in many material paths, but our rivalry should be generous and open, ever aiming toward the attainment of larger results and the mutually beneficial advancement of each in the line of its especial adaptabilities.

The several governments of the empire seem reluctant to admit the natural excellence of our food productions and to accept the evidence we constantly tender of the care with which their purity is guarded by rigid inspection from the farm, through the slaughterhouse and the packing establishments, to the port of shipment. Our system of control over exported food staples invites examination from any quarter and challenges respect by its efficient thoroughness.

It is to be hoped that in time the two governments will act in common accord toward the realization of their common purpose to safeguard the public health and to insure the purity and wholesomeness of all food products imported by either country from the other. Were the Congress to authorize an invitation to Germany, in connection with the pending reciprocity negotiations, for the constitution of a joint commission of scientific experts and practical men of affairs to conduct a searching investigation of food production and exportation in both countries and report to their respective legislatures for the adoption of such remedial measures as they might recommend for either, the way might be opened for the desirable result indicated.

Efforts to obtain for American life insurance companies a full hearing as to their business operations in Prussia have, after several years of patient representation, happily succeeded, and one of the most important American companies has been granted a concession to continue business in that kingdom.

I am also glad to announce that the German insurance companies have been readmitted by the superintendent of insurance to do business in the State of New York.

Subsequent to the exchange of our peace treaty with Spain Germany acquired the Caroline Islands by purchase, paying therefor \$5,000,000. Assurances have been received from the German Government that the rights of American missionaries and traders there will be considerably observed.

In my last annual message I referred to the pending negotiations with Great Britain in respect to the Dominion of Canada. By means of an executive agreement a joint high commission had been created for the purpose of adjusting all unsettled questions between the United States and Canada, embracing twelve subjects, among which were the questions of the fur seals, the fisheries of the coast and contiguous inland waters, the Alaskan boundary, the transit of merchandise in bond, the alien labor laws, mining rights, reciprocity in trade, revision of the agreement respecting naval vessels in the Great Lakes, a more complete marking of parts of the boundary, provision for the conveyance of criminals, and for wrecking and salvage.

Much progress had been made by the commission toward the adjustment of many of these questions, when it became apparent that an irreconcilable difference of views was entertained respecting the delimitation of the Alaskan boundary. In the failure of an agreement as to the meaning of Articles III and IV of the treaty of 1825 between Russia and Great Britain, which defined the boundary between Alaska and Canada, the American commissioners proposed that the

subject of the boundary be laid aside and that the remaining questions of difference be proceeded with, some of which were so far advanced as to assure the probability of a settlement. This being declined by the British commissioners, an adjournment was taken until the boundary should be adjusted by the two governments. The subject has been receiving the careful attention which its importance demands, with the result that a *modus vivendi* for provisional demarcations in the region about the head of Lynn Canal has been agreed upon; and it is hoped that the negotiations now in progress between the two governments will end in an agreement for the establishment and delimitation of a permanent boundary.

Apart from these questions growing out of our relationship with our northern neighbor, the most friendly disposition and ready agreement have marked the discussion of numerous matters arising in the vast and intimate intercourse of the United States with Great Britain.

This Government has maintained an attitude of neutrality in the unfortunate contest between Great Britain and the Boer states of Africa. We have remained faithful to the precept of avoiding entangling alliances as to affairs not of our direct concern. Had circumstances suggested that the parties to the quarrel would have welcomed any kindly expression of the hope of the American people that war might be averted, good offices would have been gladly tendered. The United States representative at Pretoria was early instructed to see that all neutral American interests be respected by the combatants. This has been an easy task in view of the positive declarations of both British and Boer authorities that the personal and property rights of our citizens should be observed.

Upon the withdrawal of the British agent from Pretoria the United States consul was authorized, upon the request of the British Government and with the assent of the South African and Orange Free State governments, to exercise the customary good offices of a neutral for the care of British interests. In the discharge of this function I am happy to say that abundant opportunity has been afforded to show the impartiality of this Government toward both the combatants.

For the fourth time in the present decade question has arisen with the Government of Italy in regard to the lynching of Italian subjects. The latest of these deplorable events occurred at Talulah, La., whereby five unfortunates of Italian origin were taken from jail and hanged.

The authorities of the State and a representative of the Italian embassy having separately investigated the occurrence, with discrepant results, particularly as to the alleged citizenship of the victims, and it not appearing that the State had been able to discover and punish the violators of the law, an independent investigation has been set on foot, through the agency of the Department of State, and is still in progress. The result will enable the Executive to treat the question with the Government of Italy in a spirit of fairness and justice. A satisfactory solution will doubtless be reached.

The recurrence of these distressing manifestations of blind mob fury directed at dependents or natives of a foreign country suggests that the contingency has arisen for action by Congress in the direction of conferring upon the Federal courts jurisdiction in this class of international cases where the ultimate responsibility of the Federal Government may be involved. The suggestion is not new. In his annual message of Dec. 9, 1891, my predecessor, President Harrison, said:

"It would, I believe, be entirely competent for Congress to make offenses against the treaty rights of foreigners domiciled in the United States cognizable in the Federal courts. This has not, however, been done, and the Federal officers and courts have no power in such cases to intervene either for the protection of a foreign citizen or for the punishment of his slayers. It seems to me to follow, in this state of the law, that the officers of the State charged with police and judicial powers in such cases must, in the consideration of international questions growing out of such incidents, be regarded in such sense as Federal agents as to make this Government answerable for their acts in cases where it would be answerable if the United States had used its constitutional power to define and punish crimes against treaty rights."

A bill to provide for the punishment of violations of treaty rights of aliens was introduced in the Senate, March 1, 1892, and reported favorably March 30. Having doubtless in view the language of that part of Article III of the treaty of Feb. 26, 1871, between the United States and Italy which stipulates that "the citizens of each of the high contracting parties shall receive, in the States and Territories of the other, most constant protection and security for their persons and property, and shall enjoy in this respect the same rights and privileges as are or shall be granted to the natives, on their submitting themselves to the conditions imposed upon the natives," the bill so introduced and reported provided that any act committed in any State or Territory of the United States in violation of the rights of a citizen or subject of a foreign country secured to such citizen or subject by treaty between the United States and such foreign country and constituting a crime under the laws of the State or Territory shall constitute a like crime against the United States and be cognizable in the Federal courts. No action was taken by Congress in the matter.

I earnestly recommend that the subject be taken up anew and acted upon during the present session. The necessity for some such provision abundantly appears. Precedent for constituting a Federal jurisdiction in criminal cases where aliens are sufferers is rationally deducible from the existing statute, which gives to the district and circuit courts of the United States jurisdiction of civil suits brought by aliens where the amount involved exceeds a certain sum. If such jealous solicitude be shown for alien rights in cases of merely civil and pecuniary import, how much greater should be the public duty to take cognizance of matters affecting the life and the rights of aliens under the settled principles of international law no less than under treaty stipulation, in cases of such transcendent wrongdoing as mob murder, especially when experience has shown that local justice is too often helpless to punish the offenders.

After many years of endeavor on the part of this Government to that end the Italian Government has consented to enter into negotiations for a naturalization convention, having for one of its objects the regulation of the status of Italians (except those of an age for active military service) who, having been naturalized in the United States, may revisit Italy. It is hoped that with the mutually conciliatory spirit displayed a successful conclusion will be reached.

The treaty of commerce and navigation between the United States and Japan on Nov. 22, 1894, took effect in accordance with the terms of its nineteenth article on the 17th of July last, simul-

taneously with the enforcement of like treaties with the other powers, except France, whose convention did not go into operation until Aug. 4, the United States being, however, granted up to that date all the privileges and rights accorded to French citizens under the old French treaty. By this notable conventional reform Japan's position as a fully independent sovereign power is assured, control being gained of taxation, customs revenues, judicial administration, coasting trade, and all other domestic functions of government, and foreign extraterritorial rights being renounced.

Comprehensive codes of civil and criminal procedure according to Western methods, public instruction, patents and copyrights, municipal administration, including jurisdiction over the former foreign settlements, customs tariffs and procedure, public health, and other administrative measures have been proclaimed. The working of the new system has given rise to no material complaints on the part of the American citizens or interests, a circumstance which attests the ripe consideration with which the change has been prepared.

Valuable assistance was rendered by the Japanese authorities to the United States transport ship *Morgan City* while stranded at Kobe. Permission has been granted to land and pasture army horses at Japanese ports of call on the way to the Philippine Islands. These kindly evidences of good will are highly appreciated.

The Japanese Government has shown a lively interest in the proposition of the Pacific Cable Company to add to its projected cable lines to Hawaii, Guam, and the Philippines a branch connection with the coast of Japan. It would be a gratifying consummation were the utility of the contemplated scheme enhanced by bringing Japan and the United States into direct telegraphic relation.

Without repeating the observations of my special message of Feb. 10, 1899, concerning the necessity of a cable to Manila, I respectfully invite attention to it.

I recommend that, in case the Congress should not take measures to bring about this result by direct action of the Government, the Postmaster-General be authorized to invite competitive bids for the establishment of a cable; the company making the best responsible bid to be awarded the contract; the successful company to give ample bonds to insure the completion of the work within a reasonable time.

The year has been marked by constant increase in the intimacy of our relations with Mexico and in the magnitude of mutually advantageous interchanges. This Government has omitted no opportunity to show its strong desire to develop and perpetuate the ties of cordiality now so long happily unbroken.

Following the termination on Jan. 20, 1899, by Mexico of the convention of extradition of Dec. 11, 1861, a new treaty more in accordance with the ascertained needs of both countries was signed Feb. 22, 1899, and exchanged in the city of Mexico on the 22d of April last. Its operation thus far has been effective and satisfactory. A recent case has served to test the application of its fourth article, which provides that neither party shall be bound to deliver up its own citizens, but that the executive authority of each shall have the power to deliver them up if in its discretion it be deemed proper to do so.

The extradition of Mrs. Mattie Rich, a citizen of the United States, charged with homicide committed in Mexico, was after mature consideration

can be assured of the most cordial co-operation of this Government and people. We may be rivals in many material paths, but our rivalry should be generous and open, ever aiming toward the attainment of larger results and the mutually beneficial advancement of each in the line of its especial adaptabilities.

The several governments of the empire seem reluctant to admit the natural excellence of our food productions and to accept the evidence we constantly tender of the care with which their purity is guarded by rigid inspection from the farm, through the slaughterhouse and the packing establishments, to the port of shipment. Our system of control over exported food staples invites examination from any quarter and challenges respect by its efficient thoroughness.

It is to be hoped that in time the two governments will act in common accord toward the realization of their common purpose to safeguard the public health and to insure the purity and wholesomeness of all food products imported by either country from the other. Were the Congress to authorize an invitation to Germany, in connection with the pending reciprocity negotiations, for the constitution of a joint commission of scientific experts and practical men of affairs to conduct a searching investigation of food production and exportation in both countries and report to their respective legislatures for the adoption of such remedial measures as they might recommend for either, the way might be opened for the desirable result indicated.

Efforts to obtain for American life insurance companies a full hearing as to their business operations in Prussia have, after several years of patient representation, happily succeeded, and one of the most important American companies has been granted a concession to continue business in that kingdom.

I am also glad to announce that the German insurance companies have been readmitted by the superintendent of insurance to do business in the State of New York.

Subsequent to the exchange of our peace treaty with Spain Germany acquired the Caroline Islands by purchase, paying therefor \$5,000,000. Assurances have been received from the German Government that the rights of American missionaries and traders there will be considerably observed.

In my last annual message I referred to the pending negotiations with Great Britain in respect to the Dominion of Canada. By means of an executive agreement a joint high commission had been created for the purpose of adjusting all unsettled questions between the United States and Canada, embracing twelve subjects, among which were the questions of the fur seals, the fisheries of the coast and contiguous inland waters, the Alaskan boundary, the transit of merchandise in bond, the alien labor laws, mining rights, reciprocity in trade, revision of the agreement respecting naval vessels in the Great Lakes, a more complete marking of parts of the boundary, provision for the conveyance of criminals, and for wrecking and salvage.

It seems to me to follow, in this state of the law, that the officers of the State charged with police and judicial powers in such cases must, in the consideration of international questions growing out of such incidents, be regarded in such sense as Federal agents, and make this Government answerable for their acts in cases where it would be answerable if the United States had used its constitutional power to define and punish crimes against treaty rights."

A bill to provide for the punishment of violations of treaty rights of aliens was introduced in the Senate, March 1, 1892, and reported favorably March 30. Having doubtless in view the language of that part of Article III of the Constitution of Feb. 26, 1871, between the United States and Italy which stipulates that "the citizens of each of the high contracting parties shall receive constant protection and security for their persons and property, and shall enjoy in this respect the same rights and privileges as are or shall be granted to the natives, on their submitting themselves to the conditions imposed upon the natives," the bill so introduced and reported provided that any act committed in any State or Territory of the United States in violation of the rights of a citizen or subject of a foreign country secured to such citizen or subject by treaty between the United States and such foreign country and constituting a crime under the laws of the State or Territory shall constitute a like crime against the United States and be cognizable in the Federal courts. No action was taken by Congress in the matter.

I earnestly recommend that the subject be taken up anew and acted upon during the present session. The necessity for some such provision abundantly appears. Precedent for constituting a Federal jurisdiction in criminal cases where aliens are sufferers is rationally deducible from the existing statute, which gives to the district and circuit courts of the United States jurisdiction of civil suits brought by aliens where the amount involved exceeds a certain sum. If the jealous solicitude be shown for alien rights in cases of merely civil and pecuniary importances, much greater should be the public duty to take cognizance of matters affecting the life and rights of aliens under the settled principles of international law no less than under treaty stipulation, in cases of such transcendent wrongs, as mob murder, especially when experience has shown that local justice is too often helpless to punish the offenders.

After many years of endeavor on the part of this Government to that end the Italian Government has consented to enter into negotiations for a naturalization convention, having for one of its objects the regulation of the status of Italians (except those of an age for active military service) who, having been naturalized in the United States, may revisit Italy. It is hoped that the mutually conciliatory spirit displayed at the recent conference will lead to a successful conclusion will be reached.

The treaty of commerce and navigation between the United States and Japan on Nov. 22, 1858, took effect in accordance with the terms of its nineteenth article on the 17th of July last.

directed by me in the conviction that the ends of justice would be thereby subserved. Similar action, on appropriate occasion, by the Mexican Executive will not only tend to accomplish the desire of both governments that grave crimes go not unpunished, but also to repress lawlessness along the border of the two countries. The new treaty stipulates that neither government shall assume jurisdiction in the punishment of crimes committed exclusively within the territory of the other. This will obviate in future the embarrassing controversies which have heretofore arisen through Mexico's assertion of a claim to try and punish an American citizen for an offense committed within the jurisdiction of the United States.

The International Water Boundary Commission, organized by the convention of March 1, 1889, for the adjustment of questions affecting the Rio Grande frontier, has not yet completed its labors. A further extension of its term for one year, until Dec. 24, 1890, was effected by a convention signed Dec. 2, 1898, and exchanged and proclaimed in February last.

An invitation extended to the President of Mexico to visit Chicago in October, on the occasion of laying the corner stone of the United States Government building in that city, was cordially accepted by him, with the necessary consent of the Mexican Congress, but the illness of a member of his family prevented his attendance. The Minister of Foreign Relations, however, came as the personal representative of President Diaz, and in that high character was duly honored.

Claims growing out of the seizure of American sealing vessels in Bering Sea have been under discussion with the Government of Russia for several years, with the recent happy result of an agreement to submit them to the decision of a single arbitrator. By this act Russia affords proof of her adherence to the beneficent principle of arbitration which her plenipotentiaries conspicuously favored at The Hague Disarmament Conference when it was advocated by the representatives of the United States.

A suggestion for a permanent exposition of our products and manufactures in Russia, although not yet fully shaped, has been so cordially welcomed by the Imperial Government that it may not inaptly take a fitting place in whatever legislation the Congress may adopt looking to enlargement of our commercial opportunities abroad.

Important events have occurred in the Samoan Islands. The election, according to the laws and customs of Samoa, of a successor to the late King, Malietoa Laupepa, developed a contest as to the validity of the result, which issue, by the terms of the general act, was to be decided by the Chief Justice. Upon his rendering a judgment in favor of Malietoa Tanu, the rival chief, Mataafa, took up arms. The active intervention of American and British war ships became imperative to restore order, at the cost of sanguinary encounters. In this emergency a joint commission of representatives of the United States, Germany, and Great Britain was sent to Samoa to investigate the situation and provide a temporary remedy. By its active efforts a peaceful solution was reached for the time being, the kingship being abolished and a provisional government established. Recommendations unanimously made by the commission for a permanent adjustment of the Samoan question were taken under consideration by the three powers parties to the general act. But the more they were examined the more evident it became that a radical change was necessary in the relations of the powers to Samoa.

The inconveniences and possible perils of the tripartite scheme of supervision and control in the Samoan group by powers having little interest in common in that quarter beyond commercial rivalry had been once more emphasized by the recent events. The suggested remedy of the joint commission, like the scheme it aimed to replace, amounted to what has been styled a *tridominium*, being the exercise of the functions of sovereignty by a unanimous agreement of three powers. The situation had become far more intricate and embarrassing from every point of view than it was when my predecessor, in 1894, summed up its perplexities and condemned the participation in it of the United States.

The arrangement under which Samoa was administered had proved impracticable and unacceptable to all the powers concerned. To withdraw from the agreement and abandon the islands to Germany and Great Britain would not be compatible with our interests in the archipelago. To relinquish our rights in the harbor of Pago Pago, the best anchorage in the Pacific, the occupancy of which had been leased to the United States in 1878 by the first foreign treaty ever concluded by Samoa, was not to be thought of either as regards the needs of our navy or the interests of our growing commerce with the East. We could not have considered any proposition for the abrogation of the tripartite control which did not confirm us in all our rights and safeguard all our national interests in the islands.

Our views commended themselves to the other powers. A satisfactory arrangement was concluded between the governments of Germany and of England, by virtue of which England retired from Samoa in view of compensations in other directions, and both powers renounced in favor of the United States all their rights and claims over and in respect to that portion of the group lying to the east of the one hundred and seventy-first degree of west longitude, embracing the islands of Tutuila, Ofoo, Olosenga, and Manua. I transmit to the Senate, for its constitutional action thereon, a convention, which besides the provisions above mentioned also guarantees us the same privileges and conditions in respect to commerce and commercial vessels in all of the islands of Samoa as those possessed by Germany.

Claims have been preferred by white residents of Samoa on account of injuries alleged to have been suffered through the acts of the treaty governments in putting down the late disturbances. A convention has been made between the three powers for the investigation and settlement of these claims by a neutral arbitrator, to which the attention of the Senate will be invited.

My annual message of last year was necessarily devoted in great part to a consideration of the Spanish war and of the results it wrought and the conditions it imposed for the future. I am gratified to announce that the treaty of peace has restored friendly relations between the two powers. Effect has been given to its most important provisions. The evacuation of Porto Rico having already been accomplished on the 18th of October, 1898, nothing remained necessary there but to continue the provisional military control of the island until the Congress should enact a suitable government for the ceded territory. Of the character and scope of the measures to that end I shall treat in another part of this message.

The withdrawal of the authority of Spain from the island of Cuba was effected by the 1st of January, so that the full re-establishment of peace found the relinquished territory held by us in trust for the inhabitants, maintaining, under the

direction of the Executive, such government and control therein as should conserve public order, restore the productive conditions of peace so long disturbed by the instability and disorder which prevailed for the greater part of the preceding three decades, and build up that tranquil development of the domestic state whereby alone can be realized the high purpose, as proclaimed in the joint resolution adopted by the Congress on the 19th of April, 1898, by which the United States disclaimed any disposition or intention to exercise sovereignty, jurisdiction, or control over Cuba, except for the pacification thereof, and asserted its determination when that was accomplished to leave the government and control of the island to its people. The pledge contained in this resolution is of the highest honorable obligation and must be sacredly kept.

I believe that substantial progress has been made in this direction. All the administrative measures adopted in Cuba have aimed to fit it for a regenerated existence by enforcing the supremacy of law and justice; by placing wherever practicable the machinery of administration in the hands of the inhabitants; by instituting needed sanitary reforms; by spreading education; by fostering industry and trade; by inculcating public morality, and, in short, by taking every rational step to aid the Cuban people to attain to that plane of self-conscious respect and self-reliant unity which fits an enlightened community for self-government within its own sphere, while enabling it to fulfill all outward obligations.

This nation has assumed before the world a grave responsibility for the future good government of Cuba. We have accepted a trust the fulfillment of which calls for the sternest integrity of purpose and the exercise of the highest wisdom. The new Cuba yet to arise from the ashes of the past must needs be bound to us by ties of singular intimacy and strength if its enduring welfare is to be assured. Whether those ties shall be organic or conventional, the destinies of Cuba are in some rightful form and manner irrevocably linked with our own, but how and how far is for the future to determine in the ripeness of events. Whatever be the outcome, we must see to it that free Cuba be a reality, not a name; a perfect entity, not a hasty experiment bearing within itself the elements of failure. Our mission, to accomplish which we took up the wager of battle, is not to be fulfilled by turning adrift any loosely framed commonwealth to face the vicissitudes which too often attend weaker states whose natural wealth and abundant resources are offset by the incongruities of their political organization and the recurring occasions for internal rivalries to sap their strength and dissipate their energies. The greatest blessing which can come to Cuba is the restoration of her agricultural and industrial prosperity, which will give employment to idle men and re-establish the pursuits of peace. This is her chief and immediate need.

On the 19th of August last an order was made for the taking of the census in the island, to be completed on the 30th of November. By the treaty of peace the Spanish people on the island have until April 11, 1900, to elect whether they will remain citizens of Spain or become citizens of Cuba. Until then it can not be definitely ascertained who shall be entitled to participate in the formation of the government of Cuba. By that time the results of the census will have been tabulated and we shall proceed to provide for elections which will commit the municipal governments of the island to the officers elected by the people. The experience thus acquired will prove of great

value in the formation of a representative convention of the people to draft a constitution and establish a general system of independent government for the island. In the meantime and so long as we exercise control over the island the products of Cuba should have a market in the United States on as good terms and with as favorable rates of duty as are given to the West India Islands under treaties of reciprocity which shall be made.

For the relief of the distressed in the island of Cuba the War Department has issued supplies to destitute persons through the officers of the army, which have amounted to 5,493,000 rations, at a cost of \$1,417,554.07.

To promote the disarmament of the Cuban volunteer army, and in the interest of public peace and the welfare of the people, the sum of \$75 was paid to each Cuban soldier borne upon the authenticated rolls, on condition that he should deposit his arms with the authorities designated by the United States. The sum thus disbursed aggregated \$2,547,750, which was paid from the emergency fund provided by the act of Jan. 5, 1899, for that purpose.

Out of the Cuban island revenues during the six months ending June 30, 1899, \$1,712,014.20 was expended for sanitation, \$293,881.70 for charities and hospitals, and \$88,944.03 for aid to the destitute.

Following the exchange of ratifications of the treaty of peace the two governments accredited ministers to each other, Spain sending to Washington the Duke of Arcos, an eminent diplomatist, previously stationed in Mexico, while the United States transferred to Madrid Hon. Bellamy Storer, its minister at Brussels. This was followed by the respective appointment of consuls, thereby fully resuming the relations interrupted by the war. In addition to its consular representation in the United States, the Spanish Government has appointed consuls for Cuba, who have been provisionally recognized during the military administration of the affairs of that island.

Judicial intercourse between the courts of Cuba and Porto Rico and of Spain has been established, as provided by the treaty of peace. The Cuban political prisoners in Spanish penal stations have been and are being released and returned to their homes, in accordance with Article VI of the treaty. Negotiations are about to be had for defining the conventional relations between the two countries, which fell into abeyance by reason of the war. I trust that these will include a favorable arrangement for commercial reciprocity under the terms of sections 3 and 4 of the current tariff act. In these, as in all matters of international concern, no effort will be spared to respond to the good disposition of Spain, and to cultivate in all practicable ways the intimacy which should prevail between two nations whose past history has so often and in so many ways been marked by sincere friendship and by community of interests.

I would recommend appropriate legislation in order to carry into execution Article VII of the treaty of peace with Spain, by which the United States assured the payment of certain claims for indemnity of its citizens against Spain.

The United States minister to Turkey continues, under instructions, to press for a money payment in satisfaction of the just claims for injuries suffered by American citizens in the disorders of several years past and for wrongs done to them by the Ottoman authorities. Some of these claims are of many years' standing. This

Government is hopeful of a general agreement in this regard.

In the Turkish Empire the situation of our citizens remains unsatisfactory. Our efforts during nearly forty years to bring about a convention of naturalization seem to be on the brink of final failure through the announced policy of the Ottoman Porte to refuse recognition of the alien status of native Turkish subjects naturalized abroad since 1867. Our statutes do not allow this Government to admit any distinction between the treatment of native and naturalized Americans abroad, so that ceaseless controversy arises in cases where persons owing in the eye of international law a dual allegiance are prevented from entering Turkey or are expelled after entrance. Our law in this regard contrasts with that of the European states. The British act, for instance, does not claim effect for the naturalization of an alien in the event of his return to his native country, unless the change be recognized by the law of that country or stipulated by treaty between it and the naturalizing state.

The arbitrary treatment, in some instances, of American productions in Turkey has attracted attention of late, notably in regard to our flour. Large shipments by the recently opened direct steamship line to Turkish ports have been denied entrance on the score that, although of standard composition and unquestioned purity, the flour was pernicious to health because of deficient "elasticity," as indicated by antiquated and untrustworthy tests. Upon due protest by the American minister, and it appearing that the act was a virtual discrimination against our product, the shipments in question were admitted. In these, as in all instances, wherever occurring, when American products may be subjected in a foreign country, upon specious pretenses, to discrimination compared with the like products of another country, this Government will use its earnest efforts to secure fair and equal treatment for its citizens and their goods. Failing this, it will not hesitate to apply whatever corrective may be provided by the statutes.

The International Commission of Arbitration, appointed under the Anglo-Venezuelan treaty of 1897, rendered an award on Oct. 3 last, whereby the boundary line between Venezuela and British Guiana is determined, thus ending a controversy which has existed for the greater part of the century. The award, as to which the arbitrators were unanimous, while not meeting the extreme contention of either party, gives to Great Britain a large share of the interior territory in dispute and to Venezuela the entire mouth of the Orinoco, including Barima Point and the Caribbean littoral for some distance to the eastward. The decision appears to be equally satisfactory to both parties.

Venezuela has once more undergone a revolution. The insurgents, under General Castro, after a sanguinary engagement in which they suffered much loss, rallied in the mountainous interior and advanced toward the capital. The bulk of the army having sided with the movement, President Andrade quitted Caracas, where General Castro set up a provisional government with which our minister and the representatives of other powers entered into diplomatic relations on the 20th of November, 1899.

The fourth section of the tariff act approved July 24, 1897, appears to provide only for commercial treaties which should be entered into by the President and also ratified by the Senate within two years from its passage. Owing to delays inevitable in negotiations of this nature,

none of the treaties initiated under that section could be concluded in time for ratification by the Senate prior to its adjournment on the 4th of March last. Some of the pending negotiations, however, were near conclusion at that time, and the resulting conventions have since been signed by the plenipotentiaries. Others, within both the third and fourth sections of the act, are still under considerations. Acting under the constitutional power of the Executive in respect to treaties, I have deemed it my duty, while observing the limitations of concession provided by the fourth section, to bring to a conclusion all pending negotiations, and submit them to the Senate for its advice and consent.

Conventions of reciprocity have been signed during the congressional recess with Great Britain for the respective colonies of Guiana, Barbados, Bermuda, Jamaica, and Turks and Caicos islands, and with the republic of Nicaragua.

Important reciprocal conventions have also been concluded with France and with the Argentine Republic.

In my last annual message the progress noted in the work of the diplomatic and consular officers in collecting information as to the industries and commerce of other countries, and in the care and promptitude with which their reports are printed and distributed, has continued during the past year, with increasingly valuable results in suggesting new sources of demand for American products and in pointing out the obstacles still to be overcome in facilitating the remarkable expansion of our foreign trade. It will doubtless be gratifying to Congress to learn that the various agencies of the Department of State are co-operating in these endeavors with a zeal and effectiveness which are not only receiving the cordial recognition of our business interests, but are exciting the emulation of other governments. In any rearrangement of the great and complicated work of obtaining official data of an economic character which Congress may undertake it is most important, in my judgment, that the results already secured by the efforts of the Department of State should be carefully considered with a view to a judicious development and increased utility to our export trade.

The interest taken by the various states forming the International Union of American Republics in the work of its organic bureau is evidenced by the fact that for the first time since its creation in 1890 all the republics of South and Central America are now represented in it.

The unanimous recommendation of the International American Conference, providing for the International Union of American Republics, stated that it should continue in force during a term of ten years from the date of its organization, and no country becoming a member of the union should cease to be a member until the end of said period of ten years, and unless twelve months before the expiration of said period a majority of the members of the union had given to the Secretary of State of the United States official notice of their wish to terminate the union at the end of its first period, that the union should continue to be maintained for another period of ten years, and thereafter, under the same conditions, for successive periods of ten years each.

The period for notification expired on July 14, 1899, without any of the members having given the necessary notice of withdrawal. Its maintenance is therefore assured for the next ten years. In view of this fact and of the numerous questions of general interest and common benefit to all of the republics of America, some of which

were considered by the first International American Conference, but not finally settled, and others which have since then grown to importance, it would seem expedient that the various republics constituting the Union should be invited to hold at an early date another conference in the capital of one of the countries other than the United States, which has already enjoyed this honor.

The purely international character of the work being done by the bureau and the appreciation of its value are further emphasized by the active co-operation which the various governments of the Latin-American republics and their diplomatic representatives in this capital are now exhibiting and the zealous endeavors they are making to extend its field of usefulness, to promote through it commercial intercourse, and strengthen the bonds of amity and confidence between its various members and the nations of this continent.

The act to encourage the holding of the Pan-American Exposition on the Niagara frontier, within the county of Erie or Niagara, in the State of New York, in the year 1901, was approved on March 3, 1899.

This exposition, which will be held in the city of Buffalo, in the near vicinity of the great Niagara cataract, and within a day's journey of which reside 40,000,000 of our people, will be confined entirely to the Western Hemisphere. Satisfactory assurances have already been given by the diplomatic representatives of Great Britain, Mexico, the Central and South American republics, and most of the States of the United States that these countries and States will make an unique, interesting, and instructive exhibit, peculiarly illustrative of their material progress during the century which is about to close.

The law provides an appropriation of \$500,000 for the purpose of making an exhibit at the exposition by the Government of the United States from its executive departments and from the Smithsonian Institution and National Museum, the United States Commission of Fish and Fisheries, the Department of Labor, and the Bureau of the American Republics. To secure a complete and harmonious arrangement of this Government exhibit a board of management has already been created, and charged with the selection, purchase, preparation, transportation, arrangement, and safe-keeping of the articles and materials to be exhibited. This board has been organized and has already entered upon the performance of its duties, as provided for by the law.

I have every reason to hope and believe that this exposition will tend more firmly to cement the cordial relations between the nations on this continent.

In accordance with an act of Congress approved Dec. 21, 1898, and under the auspices of the Philadelphia Commercial Museum, a most interesting and valuable exposition of products and manufactures especially adapted to export trade was held in Philadelphia from the 14th of September to the 1st of December, 1899. The representative character of the exhibits and the widespread interest manifested in the special objects of the undertaking afford renewed encouragement to those who look confidently to the steady growth of our enlarged exportation of manufactured goods, which has been the most remarkable fact in the economic development of the United States in recent years. A feature of this exposition which is likely to become of permanent and increasing utility to our industries is the collection of samples of merchandise produced in various countries with special reference to particular markets, pro-

viding practical object lessons to United States manufacturers as to qualities, styles, and prices of goods such as meet the special demands of consumers and may be exported with advantage.

In connection with the exposition an International Commercial Congress was held, upon the invitation of the Philadelphia Commercial Museum, transmitted by the Department of State to the various foreign governments, for an exchange of information and opinions with the view to the promotion of international trade. This invitation met with general and cordial acceptance, and the Congress, which began its sessions at the exposition on the 13th of October, proved to be of great practical importance, from the fact that it developed a general recognition of the interdependence of nations in trade and a most gratifying spirit of accommodation with reference to the gradual removal of existing impediments to reciprocal relations, without injury to the industrial interests of either party.

In response to the invitation of his Majesty the Emperor of Russia, delegates from 26 countries were assembled at The Hague on the 18th of May, as members of a conference in the interest of peace. The commission from the United States consisted of the Hon. Andrew D. White, the Hon. Seth Low, the Hon. Stanford Newel, Capt. Alfred T. Mahan, of the United States navy, Capt. William Crozier, of the United States army, and the Hon. Frederick W. Holls, secretary. The occasion seemed to be opportune for the serious consideration of a plan for the pacific adjustment of international differences, a subject in which the American people have been deeply interested for many years, and a definite project for a permanent international tribunal was included in the instructions to the delegates of the United States.

The final act of the conference includes conventions upon the amelioration of the laws and customs of war on land, the adaptation to maritime warfare of the principles of the Geneva Convention of 1864, and the extension of judicial methods to international cases. The Convention for the Pacific Settlement of International Conflicts embodies the leading features of the American plan, with such modifications as were rendered necessary by the great diversity of views and interests represented by the delegates. The four titles of the convention provide for the maintenance of general peace, the exercise of good offices and mediation, the formation of commissions of inquiry, and international arbitration.

The mediation provided for by the convention is purely voluntary and advisory, and is intended to avoid any invasion or limitation of the sovereign rights of the adhering states. The commissions of inquiry proposed consist of delegations to be specifically constituted for particular purposes by means of conventions between the contesting parties, having for their object the clear understanding of international differences before resorting to the use of force. The provision for arbitration contemplates the formation of a permanent tribunal before which disputed cases may be brought for settlement by the mutual consent of the litigants in each separate case. The advantages of such a permanent tribunal over impromptu commissions of arbitration are conceived to be the actual existence of a competent court, prepared to administer justice, the greater economy resulting from a well-devised system, and the accumulated judicial skill and experience which such a tribunal would soon possess.

While earnestly promoting the idea of establishing a permanent international tribunal, the delegation of the United States was not unmindful of

the inconveniences which might arise from an obtrusive exercise of mediation, and in signing the convention carefully guarded the historic position of the United States by the following declaration:

"Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions or policy or internal administration of any foreign state; nor shall anything contained in the said convention be construed to imply a relinquishment by the United States of America of its traditional attitude toward purely American questions."

Thus interpreted, the Convention for the Pacific Settlement of International Conflicts may be regarded as realizing the earnest desire of great numbers of American citizens, whose deep sense of justice, expressed in numerous resolutions and memorials, has urged them to labor for this noble achievement. The general character of this convention, already signed by the delegates of more than 20 sovereign states, further commends it to the favorable action of the Senate of the United States, whose ratification it still awaits.

Since my last annual message, and in obedience to the acts of the Congress of April 22 and 26, 1898, the remaining volunteer force enlisted for the Spanish war, consisting of 34,834 regulars and 110,202 volunteers, with over 5,000 volunteer officers, has been discharged from the military service. Of the volunteers, 667 officers and 14,831 men were serving in the Philippines, and 1,650 of the regulars, who were entitled to be mustered out after the ratification of the treaty of peace. They voluntarily remained at the front until their places could be filled by new troops. They were returned home in the order in which they went to Manila, and are now all of them out of the service and in the ranks of citizenship. I recommend that the Congress provide a special medal of honor for the volunteers, regulars, sailors, and marines on duty in the Philippines who voluntarily remained in the service after their terms of enlistment had expired.

By the act of March 2, 1899, Congress gave authority to increase the regular army to a maximum not exceeding 65,000 enlisted men, and to enlist a force of 35,000 volunteers, to be recruited from the country at large. By virtue of this authority the regular army has been increased to the number of 61,999 enlisted men and 2,248 officers, and new volunteer regiments have been organized aggregating 33,050 enlisted men and 1,524 officers. Two of these volunteer regiments are made up of colored men, with colored line officers. The new troops to take the places of those returning from the Philippines have been transported to Manila to the number of 581 officers and 26,322 enlisted men of the regular army and 594 officers and 15,388 enlisted men of the new volunteer force, while 504 officers and 14,119 men of the volunteer force are on the ocean *en route* to Manila.

The force now in Manila consists of 905 officers and 30,578 regulars, and 594 officers and 15,388 of the volunteers, making an aggregate of 1,499 officers and 45,966 men. When the troops now under orders shall reach Manila the force in the archipelago will comprise 2,051 officers and 63,483 men. The muster out of the great volunteer army organized for the Spanish war and the creation of a new army, the transportation from Manila to San Francisco of those entitled to discharge, and the transportation of the new troops to take their places have been a work of great magnitude well and ably done, for which too much credit can not be given the War Department.

During the past year we have reduced our force

in Cuba and Porto Rico. In Cuba we now have 334 officers and 10,796 enlisted men; in Porto Rico, 87 officers and 2,855 enlisted men and a battalion of 400 men composed of native Porto Ricans; while stationed throughout the United States are 910 officers and 17,317 men, and in Hawaii 12 officers and 453 enlisted men.

The operations of the army are fully presented in the report of the Secretary of War. I can not withhold from officers and men the highest commendation for their soldierly conduct in trying situations, their willing sacrifices for their country, and the integrity and ability with which they have performed unusual and difficult duties in our island possessions.

In the organization of the volunteer regiments authorized by the act of March 2, 1899, it was found that no provision had been made for chaplains. This omission was doubtless from inadvertence. I recommend the early authorization for the appointment of one chaplain for each of said regiments. These regiments are now in the Philippines, and it is important that immediate action be had.

In restoring peaceful conditions, orderly rule, and civic progress in Cuba, Porto Rico, and, so far as practicable, in the Philippines, the rehabilitation of the postal service has been an essential and important part of the work. It became necessary to provide mail facilities both for our forces of occupation and for the native population. To meet this requirement has involved a substantial reconstruction. The existing systems were so fragmentary, defective, and inadequate that a new and comprehensive organization had to be created. American trained officials have been assigned to the directing and executive positions, while natives have been chiefly employed in making up the body of the force. In working out this plan the merit rule has been rigorously and faithfully applied.

The appointment of Director General of Posts of Cuba was given to an expert who had been Chief Post Office Inspector and Assistant Postmaster-General, and who united large experience with administrative capacity. For the postmastership at Havana the range of skilled and available men was scanned, and the choice fell upon one who had been twenty years in the service as deputy postmaster and postmaster of a large city. This principle governed and determined the selection of the American officials sent not only to Cuba, but to Porto Rico and the Philippines, and they were instructed to apply it so far as practicable in the employment of the natives as minor postmasters and clerks. The postal system in Cuba, though remaining under the general guidance of the Postmaster-General, was made essentially independent. It was felt that it should not be a burden upon the postal service of the United States, and provision was made that any deficit in the postal revenue should be a charge upon the general revenues of the island.

Though Porto Rico and the Philippines hold a different relation to the United States, yet, for convenience of administration, the same principle of an autonomous system has been extended to them. The development of the service in all of the islands has been rapid and successful. It has moved forward on American lines, with free delivery, money order, and registry systems, and has given the people mail facilities far greater and more reliable than any they have ever before enjoyed. It is thus not only a vital agency of industrial, social, and business progress, but an important influence in diffusing a just understanding of the true spirit and character of American administration.

The domestic postal service continues to grow with extraordinary rapidity. The expenditures and the revenues will each exceed \$100,000,000 during the current year. Fortunately, since the revival of prosperous times the revenues have grown much faster than the expenditures, and there is every indication that a short period will witness the obliteration of the annual deficit. In this connection the report of the Postmaster-General embodies a statement of some evils which have grown up outside of the contemplation of law in the treatment of some classes of mail matter which wrongly exercise the privilege of the pound rate, and shows that if this matter had been properly classified and had paid the rate which it should have paid, instead of a postal deficit for the last fiscal year of \$6,610,000, there would have been on one basis a surplus of \$17,637,570, and on another of \$5,733,836. The reform thus suggested, in the opinion of the Postmaster-General, would not only put the postal service at once on a self-sustaining basis, but would permit great and valuable improvements, and I commend the subject to the consideration of the Congress.

The navy has maintained the spirit and high efficiency which have always characterized that service, and has lost none of the gallantry in heroic action which has signalized its brilliant and glorious past. The nation has equal pride in its early and later achievements. Its habitual readiness for every emergency has won the confidence and admiration of the country. The people are interested in the continued preparation and prestige of the navy and will justify liberal appropriations for its maintenance and improvement. The officers have shown peculiar adaptation for the performance of new and delicate duties which our recent war has imposed.

It can not be doubted that Congress will at once make necessary provision for the armor plate for the vessels now under contract and building. Its attention is respectfully called to the report of the Secretary of the Navy, in which the subject is fully presented. I unite in his recommendation that the Congress enact such special legislation as may be necessary to enable the department to make contracts early in the coming year for armor of the best quality that can be obtained in this country for the Maine, Ohio, and Missouri, and that the provision of the act of March 3, 1890, limiting the price of armor to \$300 per ton be removed.

In the matter of naval construction Italy and Japan, of the great powers, laid down less tonnage in the year 1899 than this country, and Italy alone has less tonnage under construction. I heartily concur in the recommendations for the increase of the navy, as suggested by the Secretary.

Our future progress and prosperity depend upon our ability to equal, if not surpass, other nations in the enlargement and advance of science, industry, and commerce. To invention we must turn as one of the most powerful aids to the accomplishment of such a result. The attention of the Congress is directed to the report of the Commissioner of Patents, in which will be found valuable suggestions and recommendations.

On the 30th of June, 1899, the pension roll of the United States numbered 991,519. These include the pensioners of the army and navy in all our wars. The number added to the rolls during the year was 40,991. The number dropped by reason of death, remarriage, minors by legal limitation, failure to claim within three years, and other causes, was 43,186, and the number of claims disallowed was 107,910. During the year 89,054 pension certificates were issued, of which 37,077 were for new or original pensions. The amount

disbursed for army and navy pensions during the year was \$138,355,052.95, which was \$1,061,461.61 less than the sum of the appropriations.

The Grand Army of the Republic at its recent national encampment held in Philadelphia has brought to my attention and to that of the Congress the wisdom and justice of a modification of the third section of the act of June 27, 1890, which provides pensions for the widows of officers and enlisted men who served ninety days or more during the War of the Rebellion and were honorably discharged, provided that such widows are without other means of support than their daily labor and were married to the soldier, sailor, or marine on account of whose service they claim pension prior to the date of the act.

The present holding of the department is that if the widow's income aside from her daily labor does not exceed in amount what her pension would be, to wit, \$96 per annum, she would be deemed to be without other means of support than her daily labor, and would be entitled to a pension under this act; while if the widow's income independent of the amount received by her as the result of her daily labor exceeds \$96, she would not be pensionable under the act. I am advised by the Commissioner of Pensions that the amount of the income allowed before title to pension would be barred has varied widely under different administrations of the Pension Office, as well as during different periods of the same administration, and has been the cause of just complaint and criticism.

With the approval of the Secretary of the Interior the Commissioner of Pensions recommends that, in order to make the practice at all times uniform and to do justice to the dependent widow, the amount of income allowed independent of the proceeds of her daily labor should be not less than \$250 per annum, and he urges that the Congress shall so amend the act as to permit the Pension Office to grant pensionable status to widows under the terms of the third section of the act of June 27, 1890, whose income aside from the proceeds of daily labor is not in excess of \$250 per annum. I believe this to be a simple act of justice and heartily recommend it.

The Dawes Commission reports that gratifying progress has been made in its work during the preceding year. The field work of enrollment of four of the nations has been completed. I recommend that Congress at an early day make liberal appropriation for educational purposes in the Indian Territory.

In accordance with the act of Congress approved March 3, 1899, the preliminary work in connection with the twelfth census is now fully under way. The officers required for the proper administration of the duties imposed have been selected. The provision for securing a proper enumeration of the population, as well as to secure evidence of the industrial growth of the nation, is broader and more comprehensive than any similar legislation in the past. The director advises that every needful effort is being made to push this great work to completion in the time limited by the statute. It is believed that the twelfth census will emphasize our remarkable advance in all that pertains to national progress.

Under the authority of the act of Congress approved July 7, 1898, the commission consisting of the Secretary of the Treasury, the Attorney-General, and the Secretary of the Interior has made an agreement of settlement, which has had my approval, of the indebtedness to the Government growing out of the issue of bonds to aid in the construction of the Central Pacific and Western Pacific Railroads. The agreement secures to the

can be assured of the most cordial co-operation of this Government and people. We may be rivals in many material paths, but our rivalry should be generous and open, ever aiming toward the attainment of larger results and the mutually beneficial advancement of each in the line of its especial adaptabilities.

The several governments of the empire seem reluctant to admit the natural excellence of our food productions and to accept the evidence we constantly tender of the care with which their purity is guarded by rigid inspection from the farm, through the slaughterhouse and the packing establishments, to the port of shipment. Our system of control over exported food staples invites examination from any quarter and challenges respect by its efficient thoroughness.

It is to be hoped that in time the two governments will act in common accord toward the realization of their common purpose to safeguard the public health and to insure the purity and wholesomeness of all food products imported by either country from the other. Were the Congress to authorize an invitation to Germany, in connection with the pending reciprocity negotiations, for the constitution of a joint commission of scientific experts and practical men of affairs to conduct a searching investigation of food production and exportation in both countries and report to their respective legislatures for the adoption of such remedial measures as they might recommend for either, the way might be opened for the desirable result indicated.

Efforts to obtain for American life insurance companies a full hearing as to their business operations in Prussia have, after several years of patient representation, happily succeeded, and one of the most important American companies has been granted a concession to continue business in that kingdom.

I am also glad to announce that the German insurance companies have been readmitted by the superintendent of insurance to do business in the State of New York.

Subsequent to the exchange of our peace treaty with Spain Germany acquired the Caroline Islands by purchase, paying therefor \$5,000,000. Assurances have been received from the German Government that the rights of American missionaries and traders there will be considerably observed.

In my last annual message I referred to the pending negotiations with Great Britain in respect to the Dominion of Canada. By means of an executive agreement a joint high commission had been created for the purpose of adjusting all unsettled questions between the United States and Canada, embracing twelve subjects, among which were the questions of the fur seals, the fisheries of the coast and contiguous inland waters, the Alaskan boundary, the transit of merchandise in bond, the alien labor laws, mining rights, reciprocity in trade, revision of the agreement respecting naval vessels in the Great Lakes, a more complete marking of parts of the boundary, provision for the conveyance of criminals, and for wrecking and salvage.

Much progress had been made by the commission toward the adjustment of many of these questions, when it became apparent that an irreconcilable difference of views was entertained respecting the delimitation of the Alaskan boundary. In the failure of an agreement as to the meaning of Articles III and IV of the treaty of 1825 between Russia and Great Britain, which defined the boundary between Alaska and Canada, the American commissioners proposed that the

subject of the boundary be laid aside and that the remaining questions of difference be proceeded with, some of which were so far advanced as to assure the probability of a settlement. This being declined by the British commissioners, an adjournment was taken until the boundary should be adjusted by the two governments. The subject has been receiving the careful attention which its importance demands, with the result that a *modus vivendi* for provisional demarcations in the region about the head of Lynn Canal has been agreed upon; and it is hoped that the negotiations now in progress between the two governments will end in an agreement for the establishment and delimitation of a permanent boundary.

Apart from these questions growing out of our relationship with our northern neighbor, the most friendly disposition and ready agreement have marked the discussion of numerous matters arising in the vast and intimate intercourse of the United States with Great Britain.

This Government has maintained an attitude of neutrality in the unfortunate contest between Great Britain and the Boer states of Africa. We have remained faithful to the precept of avoiding entangling alliances as to affairs not of our direct concern. Had circumstances suggested that the parties to the quarrel would have welcomed any kindly expression of the hope of the American people that war might be averted, good offices would have been gladly tendered. The United States representative at Pretoria was early instructed to see that all neutral American interests be respected by the combatants. This has been an easy task in view of the positive declarations of both British and Boer authorities that the personal and property rights of our citizens should be observed.

Upon the withdrawal of the British agent from Pretoria the United States consul was authorized, upon the request of the British Government and with the assent of the South African and Orange Free State governments, to exercise the customary good offices of a neutral for the care of British interests. In the discharge of this function I am happy to say that abundant opportunity has been afforded to show the impartiality of this Government toward both the combatants.

For the fourth time in the present decade question has arisen with the Government of Italy in regard to the lynching of Italian subjects. The latest of these deplorable events occurred at Tallulah, La., whereby five unfortunates of Italian origin were taken from jail and hanged.

The authorities of the State and a representative of the Italian embassy having separately investigated the occurrence, with discrepant results, particularly as to the alleged citizenship of the victims, and it not appearing that the State had been able to discover and punish the violators of the law, an independent investigation has been set on foot, through the agency of the Department of State, and is still in progress. The result will enable the Executive to treat the question with the Government of Italy in a spirit of fairness and justice. A satisfactory solution will doubtless be reached.

The recurrence of these distressing manifestations of blind mob fury directed at dependents or natives of a foreign country suggests that the contingency has arisen for action by Congress in the direction of conferring upon the Federal courts jurisdiction in this class of international cases where the ultimate responsibility of the Federal Government may be involved. The suggestion is not new. In his annual message of Dec. 9, 1891, my predecessor, President Harrison, said:

"It would, I believe, be entirely competent for Congress to make offenses against the treaty rights of foreigners domiciled in the United States cognizable in the Federal courts. This has not, however, been done, and the Federal officers and courts have no power in such cases to intervene either for the protection of a foreign citizen or for the punishment of his slayers. It seems to me to follow, in this state of the law, that the officers of the State charged with police and judicial powers in such cases must, in the consideration of international questions growing out of such incidents, be regarded in such sense as Federal agents as to make this Government answerable for their acts in cases where it would be answerable if the United States had used its constitutional power to define and punish crimes against treaty rights."

A bill to provide for the punishment of violations of treaty rights of aliens was introduced in the Senate, March 1, 1892, and reported favorably March 30. Having doubtless in view the language of that part of Article III of the treaty of Feb. 26, 1871, between the United States and Italy which stipulates that "the citizens of each of the high contracting parties shall receive, in the States and Territories of the other, most constant protection and security for their persons and property, and shall enjoy in this respect the same rights and privileges as are or shall be granted to the natives, on their submitting themselves to the conditions imposed upon the natives," the bill so introduced and reported provided that any act committed in any State or Territory of the United States in violation of the rights of a citizen or subject of a foreign country secured to such citizen or subject by treaty between the United States and such foreign country and constituting a crime under the laws of the State or Territory shall constitute a like crime against the United States and be cognizable in the Federal courts. No action was taken by Congress in the matter.

I earnestly recommend that the subject be taken up anew and acted upon during the present session. The necessity for some such provision abundantly appears. Precedent for constituting a Federal jurisdiction in criminal cases where aliens are sufferers is rationally deducible from the existing statute, which gives to the district and circuit courts of the United States jurisdiction of civil suits brought by aliens where the amount involved exceeds a certain sum. If such jealous solicitude be shown for alien rights in cases of merely civil and pecuniary import, how much greater should be the public duty to take cognizance of matters affecting the life and the rights of aliens under the settled principles of international law no less than under treaty stipulation, in cases of such transcendent wrongdoing as mob murder, especially when experience has shown that local justice is too often helpless to punish the offenders.

After many years of endeavor on the part of this Government to that end the Italian Government has consented to enter into negotiations for a naturalization convention, having for one of its objects the regulation of the status of Italians (except those of an age for active military service) who, having been naturalized in the United States, may revisit Italy. It is hoped that with the mutually conciliatory spirit displayed a successful conclusion will be reached.

The treaty of commerce and navigation between the United States and Japan on Nov. 22, 1894, took effect in accordance with the terms of its nineteenth article on the 17th of July last, simul-

taneously with the enforcement of like treaties with the other powers, except France, whose convention did not go into operation until Aug. 4, the United States being, however, granted up to that date all the privileges and rights accorded to French citizens under the old French treaty. By this notable conventional reform Japan's position as a fully independent sovereign power is assured, control being gained of taxation, customs revenues, judicial administration, coasting trade, and all other domestic functions of government, and foreign extraterritorial rights being renounced.

Comprehensive codes of civil and criminal procedure according to Western methods, public instruction, patents and copyrights, municipal administration, including jurisdiction over the former foreign settlements, customs tariffs and procedure, public health, and other administrative measures have been proclaimed. The working of the new system has given rise to no material complaints on the part of the American citizens or interests, a circumstance which attests the ripe consideration with which the change has been prepared.

Valuable assistance was rendered by the Japanese authorities to the United States transport ship *Morgan City* while stranded at Kobe. Permission has been granted to land and pasture army horses at Japanese ports of call on the way to the Philippine Islands. These kindly evidences of good will are highly appreciated.

The Japanese Government has shown a lively interest in the proposition of the Pacific Cable Company to add to its projected cable lines to Hawaii, Guam, and the Philippines a branch connection with the coast of Japan. It would be a gratifying consummation were the utility of the contemplated scheme enhanced by bringing Japan and the United States into direct telegraphic relation.

Without repeating the observations of my special message of Feb. 10, 1899, concerning the necessity of a cable to Manila, I respectfully invite attention to it.

I recommend that, in case the Congress should not take measures to bring about this result by direct action of the Government, the Postmaster-General be authorized to invite competitive bids for the establishment of a cable; the company making the best responsible bid to be awarded the contract; the successful company to give ample bonds to insure the completion of the work within a reasonable time.

The year has been marked by constant increase in the intimacy of our relations with Mexico and in the magnitude of mutually advantageous interchanges. This Government has omitted no opportunity to show its strong desire to develop and perpetuate the ties of cordiality now so long happily unbroken.

Following the termination on Jan. 20, 1899, by Mexico of the convention of extradition of Dec. 11, 1861, a new treaty more in accordance with the ascertained needs of both countries was signed Feb. 22, 1899, and exchanged in the city of Mexico on the 22d of April last. Its operation thus far has been effective and satisfactory. A recent case has served to test the application of its fourth article, which provides that neither party shall be bound to deliver up its own citizens, but that the executive authority of each shall have the power to deliver them up if in its discretion it be deemed proper to do so.

The extradition of Mrs. Mattie Rich, a citizen of the United States, charged with homicide committed in Mexico, was after mature consideration

directed by me in the conviction that the ends of justice would be thereby subserved. Similar action, on appropriate occasion, by the Mexican Executive will not only tend to accomplish the desire of both governments that grave crimes go not unpunished, but also to repress lawlessness along the border of the two countries. The new treaty stipulates that neither government shall assume jurisdiction in the punishment of crimes committed exclusively within the territory of the other. This will obviate in future the embarrassing controversies which have heretofore arisen through Mexico's assertion of a claim to try and punish an American citizen for an offense committed within the jurisdiction of the United States.

The International Water Boundary Commission, organized by the convention of March 1, 1889, for the adjustment of questions affecting the Rio Grande frontier, has not yet completed its labors. A further extension of its term for one year, until Dec. 24, 1890, was effected by a convention signed Dec. 2, 1890, and exchanged and proclaimed in February last.

An invitation extended to the President of Mexico to visit Chicago in October, on the occasion of laying the corner stone of the United States Government building in that city, was cordially accepted by him, with the necessary consent of the Mexican Congress, but the illness of a member of his family prevented his attendance. The Minister of Foreign Relations, however, came as the personal representative of President Diaz, and in that high character was duly honored.

Claims growing out of the seizure of American sealing vessels in Bering Sea have been under discussion with the Government of Russia for several years, with the recent happy result of an agreement to submit them to the decision of a single arbitrator. By this act Russia affords proof of her adherence to the beneficent principle of arbitration which her plenipotentiaries conspicuously favored at The Hague Disarmament Conference when it was advocated by the representatives of the United States.

A suggestion for a permanent exposition of our products and manufactures in Russia, although not yet fully shaped, has been so cordially welcomed by the Imperial Government that it may not inaptly take a fitting place in whatever legislation the Congress may adopt looking to enlargement of our commercial opportunities abroad.

Important events have occurred in the Samoan Islands. The election, according to the laws and customs of Samoa, of a successor to the late King, Malietoa Laupepa, developed a contest as to the validity of the result, which issue, by the terms of the general act, was to be decided by the Chief Justice. Upon his rendering a judgment in favor of Malietoa Tanu, the rival chief, Mataafa, took up arms. The active intervention of American and British war ships became imperative to restore order, at the cost of sanguinary encounters. In this emergency a joint commission of representatives of the United States, Germany, and Great Britain was sent to Samoa to investigate the situation and provide a temporary remedy. By its active efforts a peaceful solution was reached for the time being, the kingship being abolished and a provisional government established. Recommendations unanimously made by the commission for a permanent adjustment of the Samoan question were taken under consideration by the three powers parties to the general act. But the more they were examined the more evident it became that a radical change was necessary in the relations of the powers to Samoa.

The inconveniences and possible perils of the tripartite scheme of supervision and control in the Samoan group by powers having little interest in common in that quarter beyond commercial rivalry had been once more emphasized by the recent events. The suggested remedy of the joint commission, like the scheme it aimed to replace, amounted to what has been styled a *tridominium*, being the exercise of the functions of sovereignty by a unanimous agreement of three powers. The situation had become far more intricate and embarrassing from every point of view than it was when my predecessor, in 1894, summed up its perplexities and condemned the participation in it of the United States.

The arrangement under which Samoa was administered had proved impracticable and unacceptable to all the powers concerned. To withdraw from the agreement and abandon the islands to Germany and Great Britain would not be compatible with our interests in the archipelago. To relinquish our rights in the harbor of Pago Pago, the best anchorage in the Pacific, the occupancy of which had been leased to the United States in 1878 by the first foreign treaty ever concluded by Samoa, was not to be thought of either as regards the needs of our navy or the interests of our growing commerce with the East. We could not have considered any proposition for the abrogation of the tripartite control which did not confirm us in all our rights and safeguard all our national interests in the islands.

Our views commended themselves to the other powers. A satisfactory arrangement was concluded between the governments of Germany and of England, by virtue of which England retired from Samoa in view of compensations in other directions, and both powers renounced in favor of the United States all their rights and claims over and in respect to that portion of the group lying to the east of the one hundred and seventy-first degree of west longitude, embracing the islands of Tutuila, Ofoo, Oloaenga, and Manua. I transmit to the Senate, for its constitutional action thereon, a convention, which besides the provisions above mentioned also guarantees us the same privileges and conditions in respect to commerce and commercial vessels in all of the islands of Samoa as those possessed by Germany.

Claims have been preferred by white residents of Samoa on account of injuries alleged to have been suffered through the acts of the treaty governments in putting down the late disturbances. A convention has been made between the three powers for the investigation and settlement of these claims by a neutral arbitrator, to which the attention of the Senate will be invited.

My annual message of last year was necessarily devoted in great part to a consideration of the Spanish war and of the results it wrought and the conditions it imposed for the future. I am gratified to announce that the treaty of peace has restored friendly relations between the two powers. Effect has been given to its most important provisions. The evacuation of Porto Rico having already been accomplished on the 18th of October, 1898, nothing remained necessary there but to continue the provisional military control of the island until the Congress should enact a suitable government for the ceded territory. Of the character and scope of the measures to that end I shall treat in another part of this message.

The withdrawal of the authority of Spain from the island of Cuba was effected by the 1st of January, so that the full re-establishment of peace found the relinquished territory held by us in trust for the inhabitants, maintaining, under the

direction of the Executive, such government and control therein as should conserve public order, restore the productive conditions of peace so long disturbed by the instability and disorder which prevailed for the greater part of the preceding three decades, and build up that tranquil development of the domestic state whereby alone can be realized the high purpose, as proclaimed in the joint resolution adopted by the Congress on the 19th of April, 1898, by which the United States disclaimed any disposition or intention to exercise sovereignty, jurisdiction, or control over Cuba, except for the pacification thereof, and asserted its determination when that was accomplished to leave the government and control of the island to its people. The pledge contained in this resolution is of the highest honorable obligation and must be sacredly kept.

I believe that substantial progress has been made in this direction. All the administrative measures adopted in Cuba have aimed to fit it for a regenerated existence by enforcing the supremacy of law and justice; by placing wherever practicable the machinery of administration in the hands of the inhabitants; by instituting needed sanitary reforms; by spreading education; by fostering industry and trade; by inculcating public morality, and, in short, by taking every rational step to aid the Cuban people to attain to that plane of self-conscious respect and self-reliant unity which fits an enlightened community for self-government within its own sphere, while enabling it to fulfill all outward obligations.

This nation has assumed before the world a grave responsibility for the future good government of Cuba. We have accepted a trust the fulfillment of which calls for the sternest integrity of purpose and the exercise of the highest wisdom. The new Cuba yet to arise from the ashes of the past must needs be bound to us by ties of singular intimacy and strength if its enduring welfare is to be assured. Whether those ties shall be organic or conventional, the destinies of Cuba are in some rightful form and manner irrevocably linked with our own, but how and how far is for the future to determine in the ripeness of events. Whatever be the outcome, we must see to it that free Cuba be a reality, not a name; a perfect entity, not a hasty experiment bearing within itself the elements of failure. Our mission, to accomplish which we took up the wager of battle, is not to be fulfilled by turning adrift any loosely framed commonwealth to face the vicissitudes which too often attend weaker states whose natural wealth and abundant resources are offset by the incongruities of their political organization and the recurring occasions for internal rivalries to sap their strength and dissipate their energies. The greatest blessing which can come to Cuba is the restoration of her agricultural and industrial prosperity, which will give employment to idle men and re-establish the pursuits of peace. This is her chief and immediate need.

On the 19th of August last an order was made for the taking of the census in the island, to be completed on the 30th of November. By the treaty of peace the Spanish people on the island have until April 11, 1900, to elect whether they will remain citizens of Spain or become citizens of Cuba. Until then it can not be definitely ascertained who shall be entitled to participate in the formation of the government of Cuba. By that time the results of the census will have been tabulated and we shall proceed to provide for elections which will commit the municipal governments of the island to the officers elected by the people. The experience thus acquired will prove of great

value in the formation of a representative convention of the people to draft a constitution and establish a general system of independent government for the island. In the meantime and so long as we exercise control over the island the products of Cuba should have a market in the United States on as good terms and with as favorable rates of duty as are given to the West India Islands under treaties of reciprocity which shall be made.

For the relief of the distressed in the island of Cuba the War Department has issued supplies to destitute persons through the officers of the army, which have amounted to 5,493,000 rations, at a cost of \$1,417,554.07.

To promote the disarmament of the Cuban volunteer army, and in the interest of public peace and the welfare of the people, the sum of \$75 was paid to each Cuban soldier borne upon the authenticated rolls, on condition that he should deposit his arms with the authorities designated by the United States. The sum thus disbursed aggregated \$2,547,750, which was paid from the emergency fund provided by the act of Jan. 5, 1899, for that purpose.

Out of the Cuban island revenues during the six months ending June 30, 1899, \$1,712,014.20 was expended for sanitation, \$293,881.70 for charities and hospitals, and \$88,944.03 for aid to the destitute.

Following the exchange of ratifications of the treaty of peace the two governments accredited ministers to each other, Spain sending to Washington the Duke of Arcos, an eminent diplomatist, previously stationed in Mexico, while the United States transferred to Madrid Hon. Bellamy Storer, its minister at Brussels. This was followed by the respective appointment of consuls, thereby fully resuming the relations interrupted by the war. In addition to its consular representation in the United States, the Spanish Government has appointed consuls for Cuba, who have been provisionally recognized during the military administration of the affairs of that island.

Judicial intercourse between the courts of Cuba and Porto Rico and of Spain has been established, as provided by the treaty of peace. The Cuban political prisoners in Spanish penal stations have been and are being released and returned to their homes, in accordance with Article VI of the treaty. Negotiations are about to be had for defining the conventional relations between the two countries, which fell into abeyance by reason of the war. I trust that these will include a favorable arrangement for commercial reciprocity under the terms of sections 3 and 4 of the current tariff act. In these, as in all matters of international concern, no effort will be spared to respond to the good disposition of Spain, and to cultivate in all practicable ways the intimacy which should prevail between two nations whose past history has so often and in so many ways been marked by sincere friendship and by community of interests.

I would recommend appropriate legislation in order to carry into execution Article VII of the treaty of peace with Spain, by which the United States assured the payment of certain claims for indemnity of its citizens against Spain.

The United States minister to Turkey continues, under instructions, to press for a money payment in satisfaction of the just claims for injuries suffered by American citizens in the disorders of several years past and for wrongs done to them by the Ottoman authorities. Some of these claims are of many years' standing. This

Government is hopeful of a general agreement in this regard.

In the Turkish Empire the situation of our citizens remains unsatisfactory. Our efforts during nearly forty years to bring about a convention of naturalization seem to be on the brink of final failure through the announced policy of the Ottoman Porte to refuse recognition of the alien status of native Turkish subjects naturalized abroad since 1807. Our statutes do not allow this Government to admit any distinction between the treatment of native and naturalized Americans abroad, so that ceaseless controversy arises in cases where persons owing in the eye of international law a dual allegiance are prevented from entering Turkey or are expelled after entrance. Our law in this regard contrasts with that of the European states. The British act, for instance, does not claim effect for the naturalization of an alien in the event of his return to his native country, unless the change be recognized by the law of that country or stipulated by treaty between it and the naturalizing state.

The arbitrary treatment, in some instances, of American productions in Turkey has attracted attention of late, notably in regard to our flour. Large shipments by the recently opened direct steamship line to Turkish ports have been denied entrance on the score that, although of standard composition and unquestioned purity, the flour was pernicious to health because of deficient "elasticity," as indicated by antiquated and untrustworthy tests. Upon due protest by the American minister, and it appearing that the act was a virtual discrimination against our product, the shipments in question were admitted. In these, as in all instances, wherever occurring, when American products may be subjected in a foreign country, upon specious pretexts, to discrimination compared with the like products of another country, this Government will use its earnest efforts to secure fair and equal treatment for its citizens and their goods. Failing this, it will not hesitate to apply whatever corrective may be provided by the statutes.

The International Commission of Arbitration, appointed under the Anglo-Venezuelan treaty of 1897, rendered an award on Oct. 3 last, whereby the boundary line between Venezuela and British Guiana is determined, thus ending a controversy which has existed for the greater part of the century. The award, as to which the arbitrators were unanimous, while not meeting the extreme contention of either party, gives to Great Britain a large share of the interior territory in dispute and to Venezuela the entire mouth of the Orinoco, including Barima Point and the Caribbean littoral for some distance to the eastward. The decision appears to be equally satisfactory to both parties.

Venezuela has once more undergone a revolution. The insurgents, under General Castro, after a sanguinary engagement in which they suffered much loss, rallied in the mountainous interior and advanced toward the capital. The bulk of the army having sided with the movement, President Andrade quitted Caracas, where General Castro set up a provisional government with which our minister and the representatives of other powers entered into diplomatic relations on the 20th of November, 1899.

The fourth section of the tariff act approved July 24, 1897, appears to provide only for commercial treaties which should be entered into by the President and also ratified by the Senate within two years from its passage. Owing to delays inevitable in negotiations of this nature,

none of the treaties initiated under that section could be concluded in time for ratification by the Senate prior to its adjournment on the 4th of March last. Some of the pending negotiations, however, were near conclusion at that time, and the resulting conventions have since been signed by the plenipotentiaries. Others, within both the third and fourth sections of the act, are still under considerations. Acting under the constitutional power of the Executive in respect to treaties, I have deemed it my duty, while observing the limitations of concession provided by the fourth section, to bring to a conclusion all pending negotiations, and submit them to the Senate for its advice and consent.

Conventions of reciprocity have been signed during the congressional recess with Great Britain for the respective colonies of Guiana, Barbados, Bermuda, Jamaica, and Turks and Caicos islands, and with the republic of Nicaragua.

Important reciprocal conventions have also been concluded with France and with the Argentine Republic.

In my last annual message the progress noted in the work of the diplomatic and consular officers in collecting information as to the industries and commerce of other countries, and in the care and promptitude with which their reports are printed and distributed, has continued during the past year, with increasingly valuable results in suggesting new sources of demand for American products and in pointing out the obstacles still to be overcome in facilitating the remarkable expansion of our foreign trade. It will doubtless be gratifying to Congress to learn that the various agencies of the Department of State are co-operating in these endeavors with a zeal and effectiveness which are not only receiving the cordial recognition of our business interests, but are exciting the emulation of other governments. In any rearrangement of the great and complicated work of obtaining official data of an economic character which Congress may undertake it is most important, in my judgment, that the results already secured by the efforts of the Department of State should be carefully considered with a view to a judicious development and increased utility to our export trade.

The interest taken by the various states forming the International Union of American Republics in the work of its organic bureau is evidenced by the fact that for the first time since its creation in 1890 all the republics of South and Central America are now represented in it.

The unanimous recommendation of the International American Conference, providing for the International Union of American Republics, stated that it should continue in force during a term of ten years from the date of its organization, and no country becoming a member of the union should cease to be a member until the end of said period of ten years, and unless twelve months before the expiration of said period a majority of the members of the union had given to the Secretary of State of the United States official notice of their wish to terminate the union at the end of its first period, that the union should continue to be maintained for another period of ten years, and thereafter, under the same conditions, for successive periods of ten years each.

The period for notification expired on July 14, 1899, without any of the members having given the necessary notice of withdrawal. Its maintenance is therefore assured for the next ten years. In view of this fact and of the numerous questions of general interest and common benefit to all of the republics of America, some of which

were considered by the first International American Conference, but not finally settled, and others which have since then grown to importance, it would seem expedient that the various republics constituting the Union should be invited to hold at an early date another conference in the capital of one of the countries other than the United States, which has already enjoyed this honor.

The purely international character of the work being done by the bureau and the appreciation of its value are further emphasized by the active co-operation which the various governments of the Latin-American republics and their diplomatic representatives in this capital are now exhibiting and the zealous endeavors they are making to extend its field of usefulness, to promote through it commercial intercourse, and strengthen the bonds of amity and confidence between its various members and the nations of this continent.

The act to encourage the holding of the Pan-American Exposition on the Niagara frontier, within the county of Erie or Niagara, in the State of New York, in the year 1901, was approved on March 3, 1899.

This exposition, which will be held in the city of Buffalo, in the near vicinity of the great Niagara cataract, and within a day's journey of which reside 40,000,000 of our people, will be confined entirely to the Western Hemisphere. Satisfactory assurances have already been given by the diplomatic representatives of Great Britain, Mexico, the Central and South American republics, and most of the States of the United States that these countries and States will make an unique, interesting, and instructive exhibit, peculiarly illustrative of their material progress during the century which is about to close.

The law provides an appropriation of \$500,000 for the purpose of making an exhibit at the exposition by the Government of the United States from its executive departments and from the Smithsonian Institution and National Museum, the United States Commission of Fish and Fisheries, the Department of Labor, and the Bureau of the American Republics. To secure a complete and harmonious arrangement of this Government exhibit a board of management has already been created, and charged with the selection, purchase, preparation, transportation, arrangement, and safe-keeping of the articles and materials to be exhibited. This board has been organized and has already entered upon the performance of its duties, as provided for by the law.

I have every reason to hope and believe that this exposition will tend more firmly to cement the cordial relations between the nations on this continent.

In accordance with an act of Congress approved Dec. 21, 1898, and under the auspices of the Philadelphia Commercial Museum, a most interesting and valuable exposition of products and manufactures especially adapted to export trade was held in Philadelphia from the 14th of September to the 1st of December, 1899. The representative character of the exhibits and the widespread interest manifested in the special objects of the undertaking afford renewed encouragement to those who look confidently to the steady growth of our enlarged exportation of manufactured goods, which has been the most remarkable fact in the economic development of the United States in recent years. A feature of this exposition which is likely to become of permanent and increasing utility to our industries is the collection of samples of merchandise produced in various countries with special reference to particular markets, pro-

viding practical object lessons to United States manufacturers as to qualities, styles, and prices of goods such as meet the special demands of consumers and may be exported with advantage.

In connection with the exposition an International Commercial Congress was held, upon the invitation of the Philadelphia Commercial Museum, transmitted by the Department of State to the various foreign governments, for an exchange of information and opinions with the view to the promotion of international trade. This invitation met with general and cordial acceptance, and the Congress, which began its sessions at the exposition on the 13th of October, proved to be of great practical importance, from the fact that it developed a general recognition of the interdependence of nations in trade and a most gratifying spirit of accommodation with reference to the gradual removal of existing impediments to reciprocal relations, without injury to the industrial interests of either party.

In response to the invitation of his Majesty the Emperor of Russia, delegates from 26 countries were assembled at The Hague on the 18th of May, as members of a conference in the interest of peace. The commission from the United States consisted of the Hon. Andrew D. White, the Hon. Seth Low, the Hon. Stanford Newel, Capt. Alfred T. Mahan, of the United States navy, Capt. William Crozier, of the United States army, and the Hon. Frederick W. Holla, secretary. The occasion seemed to be opportune for the serious consideration of a plan for the pacific adjustment of international differences, a subject in which the American people have been deeply interested for many years, and a definite project for a permanent international tribunal was included in the instructions to the delegates of the United States.

The final act of the conference includes conventions upon the amelioration of the laws and customs of war on land, the adaptation to maritime warfare of the principles of the Geneva Convention of 1864, and the extension of judicial methods to international cases. The Convention for the Pacific Settlement of International Conflicts embodies the leading features of the American plan, with such modifications as were rendered necessary by the great diversity of views and interests represented by the delegates. The four titles of the convention provide for the maintenance of general peace, the exercise of good offices and mediation, the formation of commissions of inquiry, and international arbitration.

The mediation provided for by the convention is purely voluntary and advisory, and is intended to avoid any invasion or limitation of the sovereign rights of the adhering states. The commissions of inquiry proposed consist of delegations to be specifically constituted for particular purposes by means of conventions between the contesting parties, having for their object the clear understanding of international differences before resorting to the use of force. The provision for arbitration contemplates the formation of a permanent tribunal before which disputed cases may be brought for settlement by the mutual consent of the litigants in each separate case. The advantages of such a permanent tribunal over impromptu commissions of arbitration are conceived to be the actual existence of a competent court, prepared to administer justice, the greater economy resulting from a well-devised system, and the accumulated judicial skill and experience which such a tribunal would soon possess.

While earnestly promoting the idea of establishing a permanent international tribunal, the delegation of the United States was not unmindful of

the inconveniences which might arise from an obtrusive exercise of mediation, and in signing the convention carefully guarded the historic position of the United States by the following declaration:

"Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions or policy or internal administration of any foreign state; nor shall anything contained in the said convention be construed to imply a relinquishment by the United States of America of its traditional attitude toward purely American questions."

Thus interpreted, the Convention for the Pacific Settlement of International Conflicts may be regarded as realizing the earnest desire of great numbers of American citizens, whose deep sense of justice, expressed in numerous resolutions and memorials, has urged them to labor for this noble achievement. The general character of this convention, already signed by the delegates of more than 20 sovereign states, further commends it to the favorable action of the Senate of the United States, whose ratification it still awaits.

Since my last annual message, and in obedience to the acts of the Congress of April 22 and 26, 1898, the remaining volunteer force enlisted for the Spanish war, consisting of 34,834 regulars and 110,202 volunteers, with over 5,000 volunteer officers, has been discharged from the military service. Of the volunteers, 667 officers and 14,831 men were serving in the Philippines, and 1,650 of the regulars, who were entitled to be mustered out after the ratification of the treaty of peace. They voluntarily remained at the front until their places could be filled by new troops. They were returned home in the order in which they went to Manila, and are now all of them out of the service and in the ranks of citizenship. I recommend that the Congress provide a special medal of honor for the volunteers, regulars, sailors, and marines on duty in the Philippines who voluntarily remained in the service after their terms of enlistment had expired.

By the act of March 2, 1899, Congress gave authority to increase the regular army to a maximum not exceeding 65,000 enlisted men, and to enlist a force of 35,000 volunteers, to be recruited from the country at large. By virtue of this authority the regular army has been increased to the number of 61,999 enlisted men and 2,248 officers, and new volunteer regiments have been organized aggregating 33,050 enlisted men and 1,524 officers. Two of these volunteer regiments are made up of colored men, with colored line officers. The new troops to take the places of those returning from the Philippines have been transported to Manila to the number of 581 officers and 26,322 enlisted men of the regular army and 594 officers and 15,388 enlisted men of the new volunteer force, while 504 officers and 14,119 men of the volunteer force are on the ocean *en route* to Manilla.

The force now in Manila consists of 905 officers and 30,578 regulars, and 594 officers and 15,388 of the volunteers, making an aggregate of 1,499 officers and 45,966 men. When the troops now under orders shall reach Manila the force in the archipelago will comprise 2,051 officers and 63,483 men. The muster out of the great volunteer army organized for the Spanish war and the creation of a new army, the transportation from Manila to San Francisco of those entitled to discharge, and the transportation of the new troops to take their places have been a work of great magnitude well and ably done, for which too much credit can not be given the War Department.

During the past year we have reduced our force

in Cuba and Porto Rico. In Cuba we now have 334 officers and 10,796 enlisted men; in Porto Rico, 87 officers and 2,855 enlisted men and a battalion of 400 men composed of native Porto Ricans; while stationed throughout the United States are 910 officers and 17,317 men, and in Hawaii 12 officers and 453 enlisted men.

The operations of the army are fully presented in the report of the Secretary of War. I can not withhold from officers and men the highest commendation for their soldierly conduct in trying situations, their willing sacrifices for their country, and the integrity and ability with which they have performed unusual and difficult duties in our island possessions.

In the organization of the volunteer regiments authorized by the act of March 2, 1899, it was found that no provision had been made for chaplains. This omission was doubtless from inadvertence. I recommend the early authorization for the appointment of one chaplain for each of said regiments. These regiments are now in the Philippines, and it is important that immediate action be had.

In restoring peaceful conditions, orderly rule, and civic progress in Cuba, Porto Rico, and, so far as practicable, in the Philippines, the rehabilitation of the postal service has been an essential and important part of the work. It became necessary to provide mail facilities both for our forces of occupation and for the native population. To meet this requirement has involved a substantial reconstruction. The existing systems were so fragmentary, defective, and inadequate that a new and comprehensive organization had to be created. American trained officials have been assigned to the directing and executive positions, while natives have been chiefly employed in making up the body of the force. In working out this plan the merit rule has been rigorously and faithfully applied.

The appointment of Director General of Posts of Cuba was given to an expert who had been Chief Post Office Inspector and Assistant Postmaster-General, and who united large experience with administrative capacity. For the postmastership at Havana the range of skilled and available men was scanned, and the choice fell upon one who had been twenty years in the service as deputy postmaster and postmaster of a large city. This principle governed and determined the selection of the American officials sent not only to Cuba, but to Porto Rico and the Philippines, and they were instructed to apply it so far as practicable in the employment of the natives as minor postmasters and clerks. The postal system in Cuba, though remaining under the general guidance of the Postmaster-General, was made essentially independent. It was felt that it should not be a burden upon the postal service of the United States, and provision was made that any deficit in the postal revenue should be a charge upon the general revenues of the island.

Though Porto Rico and the Philippines hold a different relation to the United States, yet, for convenience of administration, the same principle of an autonomous system has been extended to them. The development of the service in all of the islands has been rapid and successful. It has moved forward on American lines, with free delivery, money order, and registry systems, and has given the people mail facilities far greater and more reliable than any they have ever before enjoyed. It is thus not only a vital agency of industrial, social, and business progress, but an important influence in diffusing a just understanding of the true spirit and character of American administration.

The domestic postal service continues to grow with extraordinary rapidity. The expenditures and the revenues will each exceed \$100,000,000 during the current year. Fortunately, since the revival of prosperous times the revenues have grown much faster than the expenditures, and there is every indication that a short period will witness the obliteration of the annual deficit. In this connection the report of the Postmaster-General embodies a statement of some evils which have grown up outside of the contemplation of law in the treatment of some classes of mail matter which wrongly exercise the privilege of the pound rate, and shows that if this matter had been properly classified and had paid the rate which it should have paid, instead of a postal deficit for the last fiscal year of \$8,610,000, there would have been on one basis a surplus of \$17,637,570, and on another of \$5,733,836. The reform thus suggested, in the opinion of the Postmaster-General, would not only put the postal service at once on a self-sustaining basis, but would permit great and valuable improvements, and I commend the subject to the consideration of the Congress.

The navy has maintained the spirit and high efficiency which have always characterized that service, and has lost none of the gallantry in heroic action which has signalized its brilliant and glorious past. The nation has equal pride in its early and later achievements. Its habitual readiness for every emergency has won the confidence and admiration of the country. The people are interested in the continued preparation and prestige of the navy and will justify liberal appropriations for its maintenance and improvement. The officers have shown peculiar adaptation for the performance of new and delicate duties which our recent war has imposed.

It can not be doubted that Congress will at once make necessary provision for the armor plate for the vessels now under contract and building. Its attention is respectfully called to the report of the Secretary of the Navy, in which the subject is fully presented. I unite in his recommendation that the Congress enact such special legislation as may be necessary to enable the department to make contracts early in the coming year for armor of the best quality that can be obtained in this country for the Maine, Ohio, and Missouri, and that the provision of the act of March 3, 1890, limiting the price of armor to \$300 per ton be removed.

In the matter of naval construction Italy and Japan, of the great powers, laid down less tonnage in the year 1899 than this country, and Italy alone has less tonnage under construction. I heartily concur in the recommendations for the increase of the navy, as suggested by the Secretary.

Our future progress and prosperity depend upon our ability to equal, if not surpass, other nations in the enlargement and advance of science, industry, and commerce. To invention we must turn as one of the most powerful aids to the accomplishment of such a result. The attention of the Congress is directed to the report of the Commissioner of Patents, in which will be found valuable suggestions and recommendations.

On the 30th of June, 1899, the pension roll of the United States numbered 991,519. These include the pensioners of the army and navy in all our wars. The number added to the rolls during the year was 40,991. The number dropped by reason of death, remarriage, minors by legal limitation, failure to claim within three years, and other causes, was 43,186, and the number of claims disallowed was 107,919. During the year 89,054 pension certificates were issued, of which 37,077 were for new or original pensions. The amount

disbursed for army and navy pensions during the year was \$138,355,052.95, which was \$1,051,461.61 less than the sum of the appropriations.

The Grand Army of the Republic at its recent national encampment held in Philadelphia has brought to my attention and to that of the Congress the wisdom and justice of a modification of the third section of the act of June 27, 1890, which provides pensions for the widows of officers and enlisted men who served ninety days or more during the War of the Rebellion and were honorably discharged, provided that such widows are without other means of support than their daily labor and were married to the soldier, sailor, or marine on account of whose service they claim pension prior to the date of the act.

The present holding of the department is that if the widow's income aside from her daily labor does not exceed in amount what her pension would be, to wit, \$96 per annum, she would be deemed to be without other means of support than her daily labor, and would be entitled to a pension under this act; while if the widow's income independent of the amount received by her as the result of her daily labor exceeds \$96, she would not be pensionable under the act. I am advised by the Commissioner of Pensions that the amount of the income allowed before title to pension would be barred has varied widely under different administrations of the Pension Office, as well as during different periods of the same administration, and has been the cause of just complaint and criticism.

With the approval of the Secretary of the Interior the Commissioner of Pensions recommends that, in order to make the practice at all times uniform and to do justice to the dependent widow, the amount of income allowed independent of the proceeds of her daily labor should be not less than \$250 per annum, and he urges that the Congress shall so amend the act as to permit the Pension Office to grant pensionable status to widows under the terms of the third section of the act of June 27, 1890, whose income aside from the proceeds of daily labor is not in excess of \$250 per annum. I believe this to be a simple act of justice and heartily recommend it.

The Dawes Commission reports that gratifying progress has been made in its work during the preceding year. The field work of enrollment of four of the nations has been completed. I recommend that Congress at an early day make liberal appropriation for educational purposes in the Indian Territory.

In accordance with the act of Congress approved March 3, 1899, the preliminary work in connection with the twelfth census is now fully under way. The officers required for the proper administration of the duties imposed have been selected. The provision for securing a proper enumeration of the population, as well as to secure evidence of the industrial growth of the nation, is broader and more comprehensive than any similar legislation in the past. The director advises that every needful effort is being made to push this great work to completion in the time limited by the statute. It is believed that the twelfth census will emphasize our remarkable advance in all that pertains to national progress.

Under the authority of the act of Congress approved July 7, 1898, the commission consisting of the Secretary of the Treasury, the Attorney-General, and the Secretary of the Interior has made an agreement of settlement, which has had my approval, of the indebtedness to the Government growing out of the issue of bonds to aid in the construction of the Central Pacific and Western Pacific Railroads. The agreement secures to the

Government the principal and interest of said bonds, amounting to \$58,812,715.48. There has been paid thereon \$11,762,543.12, which has been covered into the Treasury, and the remainder, payable within ten years, with interest at the rate of 3 per cent. per annum, payable semiannually, is secured by the deposit of an equal amount of first-mortgage bonds of the Pacific Railway companies. The amounts paid and secured to be paid to the Government on account of the Pacific Railroad subsidy claims are:

Union Pacific, cash.....	\$58,448,223.75
Kansas Pacific, cash.....	6,303,000.00
Central and Western Pacific, cash.....	11,798,314.14
Notes, secured.....	47,060,172.86
Kansas Pacific—dividends for deficiency due United States, cash.....	821,897.70
Making a total of.....	\$134,421,607.95

The whole indebtedness was about \$130,000,000, more than half of which consisted of accrued interest, for which sum the Government has realized the entire amount less about \$6,000,000 within a period of two years.

On June 30, 1898, there were 30 forest reservations (exclusive of the Afognak Forest and Fish Culture Reserve in Alaska), embracing an estimated area of 40,719,474 acres. During the past year two of the existing forest reserves, the Trabuco Cañon (California) and Black Hills (South Dakota and Wyoming) have been considerably enlarged, the area of the Mount Rainier Reserve, in the State of Washington, has been somewhat reduced, and six additional reserves have been established, namely, the San Francisco Mountains (Arizona), the Black Mesa (Arizona), Lake Tahoe (California), Gallatin (Montana), Gila River (New Mexico), and Fish Lake (Utah), the total estimated area of which is 5,205,775 acres. This makes at the present time a total of 36 forest reservations, embracing an estimated area of 46,021,899 acres. This estimated area is the aggregated areas within the boundaries of the reserves. The lands actually reserved are, however, only the vacant public lands therein, and these have been set aside and reserved for sale or settlement in order that they may be of the greatest use to the people.

Protection of the national forests, inaugurated by the Department of the Interior in 1897, has been continued during the past year, and much has been accomplished in the way of preventing forest fires and the protection of the timber. There are now large tracts covered by forests which will eventually be reserved and set apart for forest uses. Until that can be done Congress should increase the appropriations for the work of protecting the forests.

The Department of Agriculture is constantly consulting the needs of producers in all the States and Territories. It is introducing seeds and plants of great value and promoting fuller diversification of crops. Grains, grasses, fruits, legumes, and vegetables are imported for all parts of the United States. Under this encouragement the sugar-beet factory multiplies in the North and far West, semitropical plants are sent to the South, and congenial climates are sought for the choice productions of the far East. The hybridizing of fruit trees and grains is conducted in the search for varieties adapted to exacting conditions. The introduction of tea gardens into the Southern States promises to provide employment for idle hands, as well as to supply the home market with tea. The subject of irrigation where it is of vital importance to the people is being carefully studied, steps are being taken to reclaim injured or abandoned lands,

and information for the people along these lines is being printed and distributed.

Markets are being sought and opened up for surplus farm and factory products in Europe and in Asia. The outlook for the education of the young farmer through agricultural college and experiment station, with opportunity given to specialize in the Department of Agriculture, is very promising. The people of Hawaii, Porto Rico, and the Philippine Islands should be helped, by the establishment of experiment stations, to a more scientific knowledge of the production of coffee, India rubber, and other tropical products, for which there is demand in the United States.

There is widespread interest in the improvement of our public highways at the present time, and the Department of Agriculture is co-operating with the people in each locality in making the best possible roads from local material and in experimenting with steel tracks. A more intelligent system of managing the forests of the country is being put in operation and a careful study of the whole forestry problem is being conducted throughout the United States. A very extensive and complete exhibit of the agricultural and horticultural products of the United States is being prepared for the Paris Exposition.

On the 10th of December, 1898, the treaty of peace between the United States and Spain was signed. It provided, among other things, that Spain should cede to the United States the archipelago known as the Philippine Islands, that the United States should pay to Spain the sum of \$20,000,000, and that the civil rights and political status of the native inhabitants of the territories thus ceded to the United States should be determined by the Congress. The treaty was ratified by the Senate on the 6th of February, 1899, and by the Government of Spain on the 19th of March following. The ratifications were exchanged on the 11th of April and the treaty publicly proclaimed. On the 2d of March the Congress voted the sum contemplated by the treaty, and the amount was paid over to the Spanish Government on the 1st of May.

In this manner the Philippines came to the United States. The islands were ceded by the Government of Spain, which had been in undisputed possession of them for centuries. They were accepted not merely by our authorized commissioners in Paris, under the direction of the Executive, but by the constitutional and well-considered action of the representatives of the people of the United States in both houses of Congress. I had every reason to believe, and I still believe, that this transfer of sovereignty was in accordance with the wishes and the aspirations of the great mass of the Filipino people.

From the earliest moment no opportunity was lost of assuring the people of the islands of our ardent desire for their welfare and of the intention of this Government to do everything possible to advance their interests. In my order of the 19th of May, 1898, the commander of the military expedition dispatched to the Philippines was instructed to declare that we came not to make war upon the people of that country, "nor upon any party or faction among them, but to protect them in their homes, in their employments, and in their personal and religious rights." That there should be no doubt as to the paramount authority there, on the 17th of August it was directed that "there must be no joint occupation with the insurgents"; that the United States must preserve the peace and protect persons and property within the territory occupied by their military and naval forces; that the insurgents and all others must recognize

the military occupation and authority of the United States. As early as Dec. 4, before the cession, and in anticipation of that event, the commander in Manila was urged to restore peace and tranquillity and to undertake the establishment of a beneficent government, which should afford the fullest security for life and property.

On the 21st of December, after the treaty was signed, the commander of the forces of occupation was instructed "to announce and proclaim in the most public manner that we come, not as invaders and conquerors, but as friends to protect the natives in their homes, in their employments, and in their personal and religious rights." On the same day, while ordering Gen. Otis to see that the peace should be preserved in Iloilo, he was admonished that "it is most important that there should be no conflict with the insurgents." On the 1st day of January, 1899, urgent orders were reiterated that the kindly intentions of this Government should be in every possible way communicated to the insurgents.

On the 21st of January I announced my intention of dispatching to Manila a commission composed of three gentlemen of the highest character and distinction, thoroughly acquainted with the Orient, who, in association with Admiral Dewey and Major-Gen. Otis, were instructed "to facilitate the most humane and effective extension of authority throughout the islands, and to secure with the least possible delay the benefits of a wise and generous protection of life and property to the inhabitants." These gentlemen were Dr. Jacob Gould Schurman, president of Cornell University; the Hon. Charles Denby, for many years minister to China; and Prof. Dean C. Worcester, of the University of Michigan, who had made a most careful study of life in the Philippines. While the treaty of peace was under consideration in the Senate these commissioners set out on their mission of good will and liberation. Their character was a sufficient guarantee of the beneficent purpose with which they went, even if they had not borne the positive instructions of this Government, which made their errand pre-eminently one of peace and friendship.

But before their arrival at Manila the sinister ambition of a few leaders of the Filipinos had created a situation full of embarrassment for us and most grievous in its consequences to themselves. The clear and impartial preliminary report of the commissioners, which I transmit herewith, gives so lucid and comprehensive a history of the present insurrectionary movement that the story need not be here repeated. It is enough to say that the claim of the rebel leader that he was promised independence by any officer of the United States in return for his assistance has no foundation in fact and is categorically denied by the very witnesses who were called to prove it. The most the insurgent leader hoped for when he came back to Manila was the liberation of the islands from the Spanish control, which they had been laboring for years without success to throw off.

The prompt accomplishment of this work by the American army and navy gave him other ideas and ambitions, and insidious suggestions from various quarters perverted the purposes and intentions with which he had taken up arms. No sooner had our army captured Manila than the Filipino forces began to assume an attitude of suspicion and hostility which the utmost efforts of our officers and troops were unable to disarm or modify. Their kindness and forbearance were taken as a proof of cowardice. The aggressions of the Filipinos continually increased until finally, just before the time set by the Senate of the United

States for a vote upon the treaty, an attack, evidently prepared in advance, was made all along the American lines, which resulted in a terribly destructive and sanguinary repulse of the insurgents.

Ten days later an order of the insurgent government was issued to its adherents who had remained in Manila, of which Gen. Otis justly observes that "for barbarous intent it is unequaled in modern times." It directs that at 8 o'clock on the night of the 15th of February the "territorial militia" shall come together in the streets of San Pedro armed with their *bolos*, with guns and ammunition where convenient; that Filipino families only shall be respected; but that all other individuals, of whatever race they may be, shall be exterminated without any compassion, after the extermination of the army of occupation, and adds: "Brothers, we must avenge ourselves on the Americans and exterminate them, that we may take our revenge for the infamies and treacheries which they have committed upon us. Have no compassion upon them; attack with vigor." A copy of this fell by good fortune into the hands of our officers, and they were able to take measures to control the rising, which was actually attempted on the night of Feb. 22, a week later than was originally contemplated. Considerable numbers of armed insurgents entered the city by water ways and swamps, and in concert with confederates inside attempted to destroy Manila by fire. They were kept in check during the night, and the next day driven out of the city with heavy loss.

This was the unhappy condition of affairs which confronted our commissioners on their arrival in Manila. They had come with the hope and intention of co-operating with Admiral Dewey and Major-Gen. Otis in establishing peace and order in the archipelago and the largest measure of self-government compatible with the true welfare of the people. What they actually found can best be set forth in their own words:

"Deplorable as war is, the one in which we are now engaged was unavoidable by us. We were attacked by a bold, adventurous, and enthusiastic army. No alternative was left to us except ignominious retreat.

"It is not to be conceived of that any American would have sanctioned the surrender of Manila to the insurgents. Our obligations to other nations and to the friendly Filipinos and to ourselves and our flag demanded that force should be met by force. Whatever the future of the Philippines may be, there is no course open to us now except the prosecution of the war until the insurgents are reduced to submission. The commission is of the opinion that there has been no time since the destruction of the Spanish squadron by Admiral Dewey when it was possible to withdraw our forces from the islands either with honor to ourselves or with safety to the inhabitants."

The course thus clearly indicated has been unflinchingly pursued. The rebellion must be put down. Civil government can not be thoroughly established until order is restored. With a devotion and gallantry worthy of its most brilliant history, the army, ably and loyally assisted by the navy, has carried on this unwelcome but most righteous campaign with richly deserved success. The noble self-sacrifice with which our soldiers and sailors whose terms of service had expired refused to avail themselves of their right to return home as long as they were needed at the front forms one of the brightest pages in our annals. Although their operations have been somewhat interrupted and checked by a rainy season of unusual violence and duration, they have gained ground steadily

in every direction, and now look forward confidently to a speedy completion of their task.

The unfavorable circumstances connected with an active campaign have not been permitted to interfere with the equally important work of reconstruction. Again I invite your attention to the report of the commissioners for the interesting and encouraging details of the work already accomplished in the establishment of peace and order and the inauguration of self-governing municipal life in many portions of the archipelago. A notable beginning has been made in the establishment of a government in the island of Negros which is deserving of special consideration. This was the first island to accept American sovereignty. Its people unreservedly proclaimed allegiance to the United States and adopted a constitution looking to the establishment of a popular government. It was impossible to guarantee to the people of Negros that the constitution so adopted should be the ultimate form of government. Such a question, under the treaty with Spain and in accordance with our own Constitution and laws, came exclusively within the jurisdiction of the Congress. The government actually set up by the inhabitants of Negros eventually proved unsatisfactory to the natives themselves. A new system was put into force by order of the major general commanding the department, of which the following are the most important elements:

It was ordered that the government of the island of Negros should consist of a military governor appointed by the United States military governor of the Philippines, and a civil governor and an advisory council elected by the people. The military governor was authorized to appoint secretaries of the treasury, interior, agriculture, public instruction, an attorney-general, and an auditor. The seat of government was fixed at Bacolod. The military governor exercises the supreme executive power. He is to see that the laws are executed, appoint to office and fill all vacancies in office not otherwise provided for, and may, with the approval of the military governor of the Philippines, remove any officer from office. The civil governor advises the military governor on all public civil questions and presides over the advisory council. He, in general, performs the duties which are performed by secretaries of state in our own system of government.

The advisory council consists of eight members elected by the people within territorial limits which are defined in the order of the commanding general.

The times and places of holding elections are to be fixed by the military governor of the island of Negros. The qualifications of voters are as follows:

(1) A voter must be a male citizen of the island of Negros. (2) Of the age of twenty-one years. (3) He shall be able to speak, read, and write the English, Spanish, or Visayan language, or he must own real property worth \$500, or pay a rental on real property of the value of \$1,000. (4) He must have resided in the island not less than one year preceding, and in the district in which he offers to register as a voter not less than three months immediately preceding the time he offers to register. (5) He must register at a time fixed by law before voting. (6) Prior to such registration he shall have paid all taxes due by him to the Government. Provided, that no insane person shall be allowed to register or vote.

The military governor has the right to veto all bills or resolutions adopted by the advisory council, and his veto is final if not disapproved by the military governor of the Philippines.

The advisory council discharges all the ordinary duties of a legislature. The usual duties pertaining to said offices are to be performed by the secretaries of the treasury, interior, agriculture, public instruction, the attorney-general, and the auditor.

The judicial power is vested in three judges, who are to be appointed by the military governor of the island. Inferior courts are to be established.

Free public schools are to be established throughout the populous districts of the island, in which the English language shall be taught, and this subject will receive the careful consideration of the advisory council.

The burden of government must be distributed equally and equitably among the people. The military authorities will collect and receive the customs revenue, and will control postal matters and Philippine interisland trade and commerce.

The military governor, subject to the approval of the military governor of the Philippines, determines all questions not specifically provided for and which do not come under the jurisdiction of the advisory council.

The authorities of the Sulu Islands have accepted the succession of the United States to the rights of Spain, and our flag floats over that territory. On the 10th of August, 1899, Brig.-Gen. J. C. Bates, United States Volunteers, negotiated an agreement with the Sultan and his principal chiefs, which I transmit herewith. By Article I the sovereignty of the United States over the whole archipelago of Jolo and its dependencies is declared and acknowledged.

The United States flag will be used in the archipelago and its dependencies, on land and sea. Piracy is to be suppressed, and the Sultan agrees to co-operate heartily with the United States authorities to that end and to make every possible effort to arrest and bring to justice all persons engaged in piracy. All trade in domestic products of the archipelago of Jolo when carried on with any part of the Philippine Islands and under the American flag shall be free, unlimited, and undisturbed. The United States will give full protection to the Sultan in case any foreign nation should attempt to impose upon him. The United States will not sell the island of Jolo or any other island of the Jolo archipelago to any foreign nation without the consent of the Sultan. Salaries for the Sultan and his associates in the administration of the islands have been agreed upon to the amount of \$760 monthly.

Article X provides that any slave in the archipelago of Jolo shall have the right to purchase freedom by paying to the master the usual market value. The agreement by Gen. Bates was made subject to confirmation by the President and to future modifications by the consent of the parties in interest. I have confirmed said agreement, subject to the action of the Congress, and with the reservation, which I have directed shall be communicated to the Sultan of Jolo, that this agreement is not to be deemed in any way to authorize or give the consent of the United States to the existence of slavery in the Sulu archipelago. I communicate these facts to the Congress for its information and action.

Everything indicates that with the speedy suppression of the Tagalo rebellion life in the archipelago will soon resume its ordinary course under the protection of our sovereignty, and the people of those favored islands will enjoy a prosperity and a freedom which they have never before known. Already hundreds of schools are open and filled with children. Religious freedom is sacredly assured and enjoyed. The courts are dispensing justice. Business is beginning to circulate in its

accustomed channels. Manila, whose inhabitants were fleeing to the country a few months ago, is now a populous and thriving mart of commerce. The earnest and unremitting endeavors of the commission and the admiral and major general commanding the Department of the Pacific to assure the people of the beneficent intentions of this Government have had their legitimate effect in convincing the great mass of them that peace and safety and prosperity and stable government can only be found in a loyal acceptance of the authority of the United States.

The future government of the Philippines rests with the Congress of the United States. Few graver responsibilities have ever been confided to us. If we accept them in a spirit worthy of our race and our traditions, a great opportunity comes with them. The islands lie under the shelter of our flag. They are ours by every title of law and equity. They can not be abandoned. If we desert them we leave them at once to anarchy and finally to barbarism. We fling them, a golden apple of discord, among the rival powers, no one of which could permit another to seize them unquestioned. Their rich plains and valleys would be the scene of endless strife and bloodshed. The advent of Dewey's fleet in Manila Bay instead of being, as we hope, the dawn of a new day of freedom and progress, will have been the beginning of an era of misery and violence worse than any which has darkened their unhappy past. The suggestion has been made that we could renounce our authority over the islands and, giving them independence, could retain a protectorate over them. This proposition will not be found, I am sure, worthy of your serious attention. Such an arrangement would involve at the outset a cruel breach of faith. It would place the peaceable and loyal majority, who ask nothing better than to accept our authority, at the mercy of the minority of armed insurgents. It would make us responsible for the acts of the insurgent leaders and give us no power to control them. It would charge us with the task of protecting them against each other and defending them against any foreign power with which they chose to quarrel. In short, it would take from the Congress of the United States the power of declaring war and vest that tremendous prerogative in the Tagal leader of the hour.

It does not seem desirable that I should recommend at this time a specific and final form of government for these islands. When peace shall be restored it will be the duty of Congress to construct a plan of government which shall establish and maintain freedom and order and peace in the Philippines. The insurrection is still existing, and when it terminates further information will be required as to the actual condition of affairs before inaugurating a permanent scheme of civil government. The full report of the commission, now in preparation, will contain information and suggestions which will be of value to Congress, and which I will transmit as soon as it is completed. As long as the insurrection continues the military arm must necessarily be supreme. But there is no reason why steps should not be taken from time to time to inaugurate governments essentially popular in their form as fast as territory is held and controlled by our troops. To this end I am considering the advisability of the return of the commission, or such of the members thereof as can be secured, to aid the existing authorities and facilitate this work throughout the islands. I have believed that reconstruction should not begin by the establishment of one central civil government for all the islands, with its seat at

Manila, but rather that the work should be commenced by building up from the bottom, first establishing municipal governments and then provincial governments, a central government at last to follow.

Until Congress shall have made known the formal expression of its will I shall use the authority vested in me by the Constitution and the statutes to uphold the sovereignty of the United States in those distant islands as in all other places where our flag rightfully floats. I shall put at the disposal of the army and navy all the means which the liberality of Congress and the people have provided to cause this unprovoked and wasteful insurrection to cease. If any orders of mine were required to insure the merciful conduct of military and naval operations, they would not be lacking; but every step of the progress of our troops has been marked by a humanity which has surprised even the misguided insurgents. The truest kindness to them will be a swift and effective defeat of their present leader. The hour of victory will be the hour of clemency and reconstruction.

No effort will be spared to build up the waste places desolated by war and by long years of misgovernment. We shall not wait for the end of strife to begin the beneficent work. We shall continue, as we have begun, to open the schools and the churches, to set the courts in operation, to foster industry and trade and agriculture, and in every way in our power to make these people whom Providence has brought within our jurisdiction feel that it is their liberty and not our power, their welfare and not our gain, we are seeking to enhance. Our flag has never waved over any community but in blessing. I believe the Filipinos will soon recognize the fact that it has not lost its gift of benediction in its worldwide journey to their shores.

Some embarrassment in administration has occurred by reason of the peculiar status which the Hawaiian Islands at present occupy under the joint resolution of annexation approved July 7, 1898. While by that resolution the republic of Hawaii as an independent nation was extinguished, its separate sovereignty destroyed, and its property and possessions vested in the United States, yet a complete establishment for its government under our system was not effected. While the municipal laws of the islands not enacted for the fulfillment of treaties and not inconsistent with the joint resolution or contrary to the Constitution of the United States or any of its treaties remain in force, yet these laws relate only to the social and internal affairs of the islands, and do not touch many subjects of importance which are of a broader national character. For example, the Hawaiian Republic was divested of all title to the public lands in the islands, and is not only unable to dispose of lands to settlers desiring to take up homestead sites, but is without power to give complete title in cases where lands have been entered upon under lease or other conditions which carry with them the right to the purchaser, lessee, or settler to have a full title granted to him upon compliance with the conditions prescribed by law or by his particular agreement of entry.

Questions of doubt and difficulty have also arisen with reference to the collection of tonnage tax on vessels coming from Hawaiian ports: with reference to the status of Chinese in the islands, their entrance and exit therefrom; as to patents and copyrights; as to the register of vessels under the navigation laws; as to the necessity of holding elections in accordance with the provisions of the Hawaiian statutes for the choice of various

officers; and as to several other matters of detail touching the interests both of the island and of the Federal Government.

By the resolution of annexation the President was directed to appoint five commissioners to recommend to Congress such legislation concerning the islands as they should deem necessary or proper. These commissioners were duly appointed, and after a careful investigation and study of the system of laws and government prevailing in the islands, and of the conditions existing there, they prepared a bill to provide a government under the title of "The Territory of Hawaii." The report of the commission, with the bill which they prepared, was transmitted by me to Congress on Dec. 6, 1898, but the bill still awaits final action.

The people of these islands are entitled to the benefits and privileges of our Constitution, but in the absence of any act of Congress providing for Federal courts in the islands, and for a procedure by which appeals, writs of error, and other judicial proceedings necessary for the enforcement of civil rights may be prosecuted, they are powerless to secure their enforcement by the judgment of the courts of the United States. It is manifestly important, therefore, that an act shall be passed as speedily as possible erecting these islands into a judicial district, providing for the appointment of a judge and other proper officers and methods of procedure in appellate proceedings, and that the government of this newly acquired territory under the Federal Constitution shall be fully defined and provided for.

A necessity for immediate legislative relief exists in the Territory of Alaska. Substantially the only law providing a civil government for this Territory is the act of May 17, 1884. This is meager in its provisions, and is fitted only for the administration of affairs in a country sparsely inhabited by civilized people and unimportant in trade and production, as was Alaska at the time this act was passed. The increase in population by immigration during the past few years, consequent upon the discovery of gold, has produced such a condition as calls for more ample facilities for local self-government and more numerous conveniences of civil and judicial administration. Settlements have grown up in various places, constituting in point of population and business cities of thousands of inhabitants, yet there is no provision of law under which a municipality can be organized or maintained.

In some localities the inhabitants have met together and voluntarily formed a municipal organization for the purpose of local government, adopting the form of a municipal constitution and charter, under which said officials have been appointed; and ordinances creating and regulating a police force, a fire department, a department of health, and making provision for the care of the insane and indigent poor and sick and for public schools, have been passed. These proceedings and the ordinances passed by such municipalities are without statutory authority and have no sanction except as they are maintained by the popular sentiment of the community. There is an entire absence of authority to provide the ordinary instruments of local police control and administration, the population consisting of the usual percentage of lawless adventurers of the class that always flock to new fields of enterprise or discovery, and under circumstances which require more than ordinary provision for the maintenance of peace, good order, and lawful conduct.

The whole vast area of Alaska comprises but one judicial district, with one judge, one marshal, and one district attorney, yet the civil and crim-

inal business has more than doubled within the past year, and is many times greater both in volume and importance than it was in 1884. The duties of the judge require him to travel thousands of miles to discharge his judicial duties at the various places designated for that purpose. The Territory should be divided into at least two districts, and an additional judge, district attorney, marshal, and other appropriate officers be provided.

There is practically no organized form of government in the Territory. There is no authority, except in Congress, to pass any law, no matter how local or trivial, and the difficulty of conveying to the Congress an adequate conception and understanding of the various needs of the people in the different communities is easily understood. I see no reason why a more complete form of Territorial organization should not be provided. Following the precedent established in the year 1805, when a temporary government was provided for the recently acquired territory, then known under the name of Louisiana, it seems to me that it would be advantageous to confer greater executive power upon the governor and to establish, as was done in the case of the Territory of Louisiana, a legislative council having power to adopt ordinances which shall extend to all the rightful subjects of local legislation, such ordinances not to take effect until reported to and approved by the Congress if in session, and if that body is not in session then by the President. In this manner a system of laws providing for the incorporation and government of towns and cities having a certain population, giving them the power to establish and maintain a system of education to be locally supported, and ordinances providing for police, sanitary, and other such purposes, could be speedily provided. I believe a provision of this kind would be satisfactory to the people of the Territory. It is probable that the area is too vast and the population too scattered and transitory to make it wise at the present time to provide for an elective legislative body, but the conditions calling for local self-government will undoubtedly very soon exist, and will be facilitated by the measures which I have recommended.

I recommend that legislation to the same end be had with reference to the government of Porto Rico. The time is ripe for the adoption of a temporary form of government for this island; and many suggestions made with reference to Alaska are applicable also to Porto Rico.

The system of civil jurisprudence now adopted by the people of this island is described by competent lawyers who are familiar with it as thoroughly modern and scientific, so far as it relates to matters of internal business, trade, production, and social and private right in general. The cities of the island are governed under charters which probably require very little or no change. So that with relation to matters of local concern and private right, it is not probable that much, if any, legislation is desirable; but with reference to public administration and the relations of the island to the Federal Government, there are many matters which are of pressing urgency. The same necessity exists for legislation on the part of Congress to establish Federal courts and Federal jurisdiction in the island as has been previously pointed out by me with reference to Hawaii. Besides the administration of justice, there are the subjects of the public lands; the control and improvement of rivers and harbors; the control of the waters or streams not navigable, which, under the Spanish law, belonged to the Crown of Spain, and have by the treaty of cession passed to the United

States; the immigration of people from foreign countries; the importation of contract labor; the imposition and collection of internal revenue; the application of the navigation laws; the regulation of the current money; the establishment of post offices and post roads; the regulation of tariff rates on merchandise imported from the island into the United States; the establishment of ports of entry and delivery; the regulation of patents and copyrights; these, with various other subjects which rest entirely within the power of the Congress, call for careful consideration and immediate action.

It must be borne in mind that since the cession Porto Rico has been denied the principal markets she had long enjoyed and our tariffs have been continued against her products as when she was under Spanish sovereignty. The markets of Spain are closed to her products except upon terms to which the commerce of all nations is subjected. The island of Cuba, which used to buy her cattle and tobacco without customs duties, now imposes the same duties upon these products as from any other country entering her ports. She has therefore lost her free intercourse with Spain and Cuba without any compensating benefits in this market. Her coffee was little known and not in use by our people, and therefore there was no demand here for this, one of her chief products. The markets of the United States should be opened up to her products. Our plain duty is to abolish all customs tariffs between the United States and Porto Rico and give her products free access to our markets.

As a result of the hurricane which swept over Porto Rico on the 8th of August, 1899, over 100,000 people were reduced to absolute destitution, without homes, and deprived of the necessaries of life. To the appeal of the War Department the people of the United States made prompt and generous response. In addition to the private charity of our people, the War Department has expended for the relief of the distressed \$392,342.63, which does not include the cost of transportation.

It is desirable that the government of the island under the law of belligerent right, now maintained through the Executive Department, should be superseded by an administration entirely civil in its nature. For present purposes I recommend that Congress pass a law for the organization of a temporary government, which shall provide for the appointment by the President, subject to confirmation by the Senate, of a governor and such other officers as the general administration of the island may require, and that for legislative purposes upon subjects of a local nature not partaking of a Federal character a legislative council, composed partly of Porto Ricans and partly of citizens of the United States, shall be nominated and appointed by the President, subject to confirmation by the Senate, their acts to be subject to the approval of the Congress or the President prior to going into effect. In the municipalities and other local subdivisions I recommend that the principle of local self-government be applied at once, so as to enable the intelligent citizens of the island to participate in their own government and to learn by practical experience the duties and requirements of a self-contained and self-governing people. I have not thought it wise to commit the entire government of the island to officers selected by the people, because I doubt whether in habits, training, and experience they are such as to fit them to exercise at once so large a degree of self-government; but it is my judgment and expectation that they will soon arrive at an attainment of experience and wisdom and self-control that will justify conferring upon them a much larger participation in the choice of their insular officers.

The fundamental requirements for these people, as for all people, is education. The free school-house is the best preceptor for citizenship. In the introduction of modern educational methods care, however, must be exercised that changes be not made too abruptly and that the history and racial peculiarities of the inhabitants shall be given due weight. Systems of education in these new possessions founded upon common-sense methods, adapted to existing conditions and looking to the future moral and industrial advancement of the people, will commend to them in a peculiarly effective manner the blessings of free government.

The love of law and the sense of obedience and submission to the lawfully constituted judicial tribunals are imbedded in the hearts of our people, and any violation of these sentiments and disregard of their obligations justly arouses public condemnation. The guarantees of life, liberty, and of civil rights should be faithfully upheld; the right of trial by jury respected and defended. The rule of the courts should assure the public of the prompt trial of those charged with criminal offenses, and upon conviction the punishment should be commensurate with the enormity of the crime.

Those who, in disregard of law and the public peace, unwilling to await the judgment of court and jury, constitute themselves judges and executioners, should not escape the severest penalties for their crimes.

What I said in my inaugural address of March 4, 1897, I now repeat:

"The constituted authorities must be cheerfully and vigorously upheld. Lynchings must not be tolerated in a great and civilized country like the United States. Courts, not mobs, must execute the penalties of the laws. The preservation of public order, the right of discussion, the integrity of courts, and the orderly administration of justice must continue forever the rock of safety upon which our Government securely rests."

In accordance with the act of Congress providing for an appropriate national celebration in the year 1900 of the establishment of the seat of Government in the District of Columbia, I have appointed a committee, consisting of the governors of all the States and Territories of the United States, who have been invited to assemble in the city of Washington on the 2d of December, 1899, which, with the committees of the Congress and the District of Columbia, are charged with the proper conduct of this celebration.

Congress at its last session appropriated \$5,000 "to enable the chief of engineers of the army to continue the examination of the subject and to make or secure designs, calculations, and estimates for a memorial bridge from the most convenient point of the Naval Observatory grounds, or adjacent thereto, across the Potomac river to the most convenient point of the Arlington estate property." In accordance with the provisions of this act the chief of engineers has selected four eminent bridge engineers to submit competitive designs for a bridge combining the elements of strength and durability and such architectural embellishment and ornamentation as will fitly apply to the dedication, "A memorial to American patriotism." The designs are now being prepared, and as soon as completed will be submitted to the Congress by the Secretary of War. The proposed bridge would be a convenience to all the people from every part of the country who visit the national cemetery, an ornament to the capital of the nation, and forever stand as a monument to American patriotism. I do not doubt that Congress will give to the enterprise still further proof of its favor and approval.

The Executive order of May 6, 1896, extending the limits of the classified service, brought within the operation of the civil service law and rules nearly all the executive civil service not previously classified.

Some of the inclusions were found wholly illogical and unsuited to the work of the several departments. The application of the rules to many of the places so included was found to result in friction and embarrassment. After long and very careful consideration it became evident to the heads of the departments responsible for their efficiency, that in order to remove these difficulties and promote an efficient and harmonious administration certain amendments were necessary. These amendments were promulgated by me in Executive order dated May 29, 1899.

The principal purpose of the order was to except from competitive examination certain places involving fiduciary responsibilities or duties of a strictly confidential, scientific, or executive character which it was thought might better be filled either by noncompetitive examination, or in the discretion of the appointing officer, than by open competition. These places were comparatively few in number. The order provides for the filling of a much larger number of places, mainly in the outside service of the War Department, by what is known as the registration system, under regulations to be approved by the President, similar to those which have produced such admirable results in the navy yard service.

All of the amendments had for their main object a more efficient and satisfactory administration of the system of appointment established by the civil service law. The results attained show that under their operation the public service has improved and that the civil service system is relieved of many objectionable features which heretofore subjected it to just criticism and the administrative officers to the charge of unbusiness-like methods in the conduct of public affairs. It is believed that the merit system has been greatly strengthened and its permanence assured. It will be my constant aim in the administration of government in our new possessions to make fitness, character, and merit essential to appointment to office, and to give to the capable and deserving inhabitants preference in appointments.

The 14th of December will be the one hundredth anniversary of the death of Washington. For a hundred years the republic has had the priceless advantage of the lofty standard of character and conduct which he bequeathed to the American people. It is an inheritance which time, instead of wasting, continually increases and enriches. We may justly hope that in the years to come the benignant influence of the Father of his Country may be even more potent for good than in the century which is drawing to a close. I have been glad to learn that in many parts of the country the people will fittingly observe this historic anniversary.

Presented to this Congress are great opportunities. With them come great responsibilities. The power confided to us increases the weight of our obligations to the people, and we must be profoundly sensible of them as we contemplate the new and grave problems which confront us. Aiming only at the public good, we can not err. A right interpretation of the people's will and of duty can not fail to insure wise measures for the welfare of the islands which have come under the authority of the United States, and inure to the common interest and lasting honor of our country. Never has this nation had more abundant cause than during the past year for thankfulness to God

for manifold blessings and mercies, for which we make reverent acknowledgment.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, Dec. 5, 1899.

The Financial Measure.—The most important legislation of the session was the passage of the bill "to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes." It was introduced in the House of Representatives on Dec. 4, 1899, and on Dec. 7 the member of the majority having it in charge proposed its immediate consideration by unanimous consent. In behalf of the minority objection was made that the measure had been prepared during vacation by a special Republican committee; that it had never been acted upon by a regular committee of the House; that the Democratic members had no knowledge of it; and that they wanted time to study it and discuss it. Dec. 8, the Committee on Rules reported a resolution shaped to provide for its rapid passage. The special rule ordered consideration in committee of the whole to begin on Monday, Dec. 11, general discussion to continue until Friday afternoon, then discussion under the five-minute rule until Saturday afternoon, when the bill was to be reported to the House with amendments. The vote on the final passage of the measure was set for Monday, Dec. 18, after the reading of the journal. The space of forty minutes allowed for the discussion of the proposed rule before a vote on it was spent—apart from the usual bickerings about inconsistency—by the minority in a protest against hurried action in a matter of such importance and by the majority in citing Democratic authority for this method of dealing with an emergency. The rule was adopted by a vote of 164 yeas to 144 nays, 46 members not voting.

The debate that followed covered points that have been discussed directly or indirectly in Congress year after year, and no summary of the long discussion in both branches of Congress would be feasible, or perhaps desirable, though many able speeches were made in the House and in the Senate, and a wealth of financial information is spread over the pages of the Record. It may be worth while to give, merely as suggesting various points of view, three illustrative extracts.

Mr. Overstreet, of Indiana, who was in charge of the measure in the House, in arguing for the necessity of a declaration in favor of the gold standard, reviewed briefly the national legislation, and maintained that we had already entered upon that policy and that it was essential to formulate it in the law. He said:

"The first effort in this country toward establishing a monetary standard was in 1786, when the Congress of the Confederation chose as the unit of value the 'Spanish milled dollar,' containing 375.64 grains of pure silver. There was then no mint in the United States, and the 'milled dollar' was never coined in America.

"The first coinage law under the republic was enacted April 2, 1792, and sought to establish a double standard of gold and silver at a ratio of 1 to 15. Whatever the result of the operation of the law, and the failure of the two metals to maintain the relative values fixed by statute, nevertheless it is quite clear that it was the intent and purpose of the lawmaking power to provide and legalize a double standard of value.

"The subsequent act of June 28, 1834, changing the ratio from 1 to 15 to 1 to 16, by reducing the weight of the eagle from 270 grains to 258 grains, was in the hope of maintaining the double stand-

ard by regulating the ratio to conform to the commercial values of the metals.

"Less than three years thereafter, by the act of Jan. 18, 1837, which changed the ratio from 1 to 16 to 1 to 15.988 by again modifying the quantity of metal in the coins, the effort to maintain the double standard was apparent. The remarkable discovery of gold in California in 1847 and 1848 and in Australia in 1851 had a material influence upon the relative value of gold and silver, and the bullion in the silver coins of the United States increased in value beyond the value noted by their face. This condition bore fruit in the act of Feb. 21, 1853, which provided for the reduction of the amount of metal in the silver half dollar, quarter, and dime, and prohibited the further coinage of subsidiary silver coins, except upon Government account. The bullion value of a silver dollar prior to 1853, and, indeed, prior to 1873, was, the great proportion of the time, in excess of the face value, and comparatively few were coined.

"The difference between the bullion and face value of silver coin accounted for their withdrawal from the channels of trade as a medium of exchange, and their conversion into commodities, regulated in value by the laws governing trade and commerce, irrespective of the statute making provision for their circulation as money at fixed valuations. The necessity for small change created the demand for the half dollars, quarters, and dimes, which remained in circulation because the bullion was reduced and circulated at par because of the guarantee of the Government. By the provision of the law these subdivisions of the dollar were 'paid out at the mint in exchange for gold coins at par,' and there has never been a doubt but that their redemption would be equally at par. The struggle of the Government to maintain the double standard by law continued for nearly sixty years. The shifting of the ratio between the two metals was met by the change of statute.

"The universal experience in business transactions marked the withdrawal from circulation of the undervalued coin. The debates in Congress just prior to the passage of the act of Feb. 21, 1853, clearly mark the change of sentiment against the further effort to maintain a double standard. It was plainly claimed upon the floor of the House that in practice the gold standard was in force, and that it was the clear purpose of the Government to accept the single gold standard. While no statute was made to this end, the operations of the laws of trade gave recognition to this basis of values. No effort was made to change this sentiment, and for twenty years the question of coinage commanded but little attention by the American people. The struggle of the Government through the civil war crippled the credit of the republic, and for a time specie payments were suspended and the Government degenerated to a paper basis.

"The act of March 18, 1869, 'to strengthen the public credit,' pledged the Government to the payment of its demand notes and obligations in coin. This was the dawn of a new day in American finance and marked the resurrection of Government credit from the abyss into which it had fallen. The only coin in circulation at the time of the passage of the act of March 18, 1869, was gold. The subsequent provision for the redemption of the demand notes, and the universal policy of the Government to make redemption in the best coin known at the time of redemption, demonstrates beyond doubt that this pledge of the Government has been faithfully kept. It was but

a short step, in principle as well as in time, to the provisions in the act of July 14, 1870, 'to authorize the refunding of the national debt,' which made the bonds of that issue 'redeemable in coin at the present standard of value.'

"The steps approaching the adoption of the gold standard became short and rapid. For five years prior to 1873 the question of legalizing the gold standard was under discussion in financial circles. As early as the winter of 1869 a bill was prepared in the Treasury Department containing provision for the discontinuance of the coinage of the silver dollar and the adoption of the gold dollar piece, at the standard weight of 25.8 grains, as the unit of value. This proposed measure was widely circulated among experts in finance, whose suggestions and criticisms were invited. On April 25, 1870, this bill, as S. 819, was introduced, and on Dec. 19 following was favorably reported.

"From the date of its preparation, in all of its forms, and throughout its discussions, covering several sessions, the provisions before mentioned remained intact. Not only that, but these two provisions were the only provisions relative to the standard of value and the silver dollar ever contained in the bill, either as it was originally drawn or throughout its entire consideration. The old standard silver dollar was never mentioned in the bill. The bill became a law Feb. 12, 1873. For more than a quarter of a century preceding that date the commercial world had treated gold as the standard of measurement of values. The 'act of 1873' was merely the policy and practice of our people crystallized into statute law. The change from the unwritten to the written law was simple and unattended by the slightest disturbance in trade.

"If there had been no further legislation concerning the coinage of silver, there would exist today no single doubt of the money standard of the United States. The law of Feb. 12, 1873, clearly adopts the gold one-dollar piece, at the standard weight of 25.8 grains of gold, as the unit of value. That statute has never been repealed nor directly amended, and by legal construction is in force to-day. Yet subsequent acts have so affected it that there is some doubt as to whether gold is fully recognized as our monetary standard. The act of Feb. 28, 1878, authorizing the coinage of the standard silver dollar, and the act of July 14, 1890, directing the purchase of silver bullion and the issue of Treasury notes thereon, brought into circulation such a tremendous quantity of silver guaranteed by the Government to circulate at par that the burden of the Government was so increased as to make doubtful the strength and stability of the standard.

"The fall in the price of silver gave courage to the advocates of cheap money, who sought, by restoring the silver dollar to circulation at less than its intrinsic value, to accomplish what they had failed to accomplish in their battle for cheap money at an earlier period. Public sentiment so suddenly changed upon this question that a free-coinage bill passed the House of Representatives on the 13th of December, 1870, by a vote of 167 to 53. Fortunately it was not acted upon by the Senate. A similar measure passed the House on Nov. 3, 1877, by a vote of 163 to 34. Early in the year 1878 this bill was considered by the Senate and a compromise effected, resulting in the passage of the so-called 'Bland-Allison act' on the 15th of February, 1878.

"With all the ills which this measure brought upon the country, it was far to be preferred to an absolute free-coinage bill which threatened the country at that date.

" President Hayes vetoed the bill, but on the 28th of February, 1878, it was passed over his veto by both houses, the vote in the House being 196 to 73, and in the Senate 40 to 19. The rapidity with which the silver dollars were coined and issued into circulation greatly stimulated the advocates of cheap money, who became restless at the delay occasioned by the mints, which were not able to turn out the money as rapidly as the people desired, and the law of July 14, 1890, providing for the immediate issue of Treasury notes based upon the bullion purchased, to be redeemed by the dollars as coined, enabled the issue of the money more rapidly than was provided by the capacity of the mints.

" By the act of Sept. 26, 1890, Congress discontinued the coinage of the one-dollar gold piece, which the law of Feb. 12, 1873, had declared to be the 'unit of value.' This act further confused the legal status of the standard. While the actual existence of the gold one-dollar piece is not essential, yet, it having been declared by law to be the 'unit of value,' its discontinuance cast doubt upon the character of the standard. The purchasing clause of the law of July 14, 1890, was repealed Nov. 1, 1893. So grievous had grown the burden upon the Government because of the vast issue of a depreciated coin that confidence in the Government's ability to maintain it was shaken. The same law which repealed the purchasing clause of the act of July 14, 1890, contained the provision declaring it to be the fixed purpose of the Government to maintain its gold and silver 'of equal intrinsic and exchangeable value.'

" But for this declaration the silver coins would have circulated only at their intrinsic value, which was less than par. With the declaration the pledge of the Government for the maintenance of their parity created an obligation as sacred as a national bond. By this pledge the Government made additional recognition of the standard of gold, in which by implication it proposed to measure the value of the silver dollar."

Mr. Bell, of Colorado, took the opposite view of the same topic. He said:

" The present legal standard of this nation is bimetallic, or based on both gold and silver, and \$18,000,000,000 of debts have been contracted under the bimetallic standard and \$1,300,000,000 of United States obligations are now outstanding made payable specifically in coin of the standard value of July 14, 1870, the time when the act was passed which embraced the present silver dollar as well as gold coin. The correctness of this version is proved not only by the decisions of the Attorney-General, but by the declaration of the Matthews resolution, which passed both houses of Congress with great unanimity in 1877.

" The second section of this bill provides—

" That all interest-bearing obligations of the United States for the payment of money now existing or hereafter to be entered into . . . shall be deemed and held to be payable in gold coin."

" What does the payment of these debts in gold which were contracted to be paid in gold and silver mean to the creditors of this nation?

" It means that after a struggle of over a quarter of a century the money changers and speculators have secured such a change of the money standard as to give them hundreds of millions of dollars in value more than they really lent.

" Sirs, this is not a matter of wild speculation; it is demonstrated through the actual offers of speculation for our bonds payable in coin or in gold alone. On Feb. 8, 1895, President Cleveland sold \$62,315,435 thirty-year coin bonds to August Belmont & Co., N. M. Rothschild & Sons, J. P.

Morgan & Co., and J. S. Morgan & Co., and obtained an offer at the same time that if he would have Congress provide that they should be payable specifically in gold coin that they would reduce the annual interest payment \$539,159, a saving in thirty years of \$16,174,770.

" President Cleveland upon this day in a special message to Congress said:

" The arrangement just completed . . . develops such a difference in the estimation of investors between bonds made payable in coin and those specifically made payable in gold in favor of the latter, as represented by three fourths of a cent in annual interest. In the agreement just concluded the annual saving in interest to the Government, if 3-per-cent. gold bonds should be substituted for 4-per-cent. coin bonds under the privilege reserved, would be \$539,159, amounting in thirty years, or at the maturity of the coin bonds, to \$16,174,770."

" And this sum was offered the Government to make them payable in gold alone. Now, the same men who made this advanced bid for bonds made specifically payable in gold hold largely our other coin bonds. If it was worth to them over \$500,000 a year to have \$62,000,000 made specifically payable in gold instead of in coin, then it was worth just as much in proportion to have the \$1,300,000,000 outstanding coin bonds made payable specifically in gold; or the market value of the annual interest on the \$1,300,000,000 coin bonds, if converted into gold bonds, would be enhanced in value over \$9,000,000 per annum.

" Now, sirs, there is no dodging the question. When this bill is passed, there is taken from the pockets of the people \$9,000,000 per annum by congressional legislation and without consideration, except love and affection, and which will be thrown into the opulent laps of the bondholders and national bankers of the country.

" The legislation of money from the pockets of the taxpayers into the pockets of the syndicates now controlling legislation has become so common and so enormous that it is appalling.

" The audacity of this move would be astonishing if Congress had not succeeded in the last few months in voting untold millions into the hands of these syndicates without arousing much public indignation.

" Do you not think that the national bank and bond syndicates have received enough through the vile popular loan scheme wherein there was voted them \$200,000,000 bonds at par, when they were worth in the market at least from 105½ to 106, or \$11,000,000 or \$12,000,000 more on the market than face value? And they were voted to them as a gift under the false pretense that they were to go to the poor people of this country, as though they had a right to vote any one these millions, whether rich or poor. Every one knows now, and they should have known then, that it was the speculators' scheme to have the \$11,000,000 or \$12,000,000 of the people's money voted into the pockets of the syndicates. The whole thing was so gauzy and cheap that a great many banks condemned it as a damnable theft. The banks used their customers to subscribe for the bonds, but the banks paid for them and owned them at all times. On the 9th of this month these bonds were worth on the market 109½, or \$19,500,000 above par, a gift voted into the pockets of the purchasers.

" The Speaker of this House, Mr. Henderson, Mr. Cannon, Mr. Hopkins, Mr. Hepburn, and many other leading Republicans refused to vote to put 'gold' in this issue, though we could save more than \$16,000,000 thereby, because, as said by Mr. Hopkins, the precedent would cost us

\$100,000,000. However, now these same men are supporting this bill, with its gift of \$100,000,000, under the pressure of a party caucus and a party pressure.

"One of the most essential attributes of a monetary system is to establish a stable standard of value, so that in case of deferred payments and long-time loans the creditor can not collect more than he lent or the debtor pay less than he received.

"This standard must be based on full legal-tender money.

"While a bank currency forms a good circulating medium when times are normal and confidence is unshaken, however it is credit money and it must be paid or redeemed in gold.

"It has been the experience of the financial world that as the standard of value contracts and as confidence is disturbed, instead of bank paper or other redeemable or credit money expanding it contracts in sympathy with the money in which it is to be redeemed as a standard and as a means of storing values.

"Because gold has been scarcer, it has generally been used for large payments and for storing great values; and silver, because more abundant, has been generally used for divisional coins and small payments and as a means of storing smaller values, and the two conjointly make an ideal currency for the masses of the people.

"If this bill passes, the 89,000,000 Treasury notes, the 346,000,000 greenbacks, and 482,000,000 silver dollars will circulate among the people or will be impounded as the whims of the dictatorship of some great banker at the head of our Treasury may direct."

In the discussion in the Senate, Mr. Vest, of Missouri, argued for a State banking system as against the national banking system, which the measure was designed to strengthen. He said:

"Let each State control its own banking system. Let its legislature determine what kind of security shall be held and how much currency can be issued and what kind of money it shall be redeemed in. Such action will furnish a domestic currency for the use of the people of that State among themselves.

"They only seek to have a medium for their own business. They do not care to have a currency that will go outside of their State. The object is not to have it go away from home. Whatever other pretenses may be made, this means will be antagonized by only one class of people, the money-owning and consequently the money-lending class, since it stands for the best interests and welfare of all others.

"Gen. M. C. Butler, who formerly represented in this body the State which I in part now represent, used the following strong language recently in an open letter to a friend in South Carolina:

"I regard the repeal of the 10-per-cent. tax of far more value to the welfare of the great masses of the people than the free coinage of silver. The present evil in our monetary system is the inadequacy in the volume of currency and the inequality of its distribution—the latter the greater of the two evils. This inequality of distribution would be corrected if we could have local State banks of issue, under proper safeguards, and just so much currency would be put out by them as the local demands required. It has always struck me as very absurd to suppose that any State would or could permit "wild-cat banking," which is about the only argument ever urged against State banks of issue. No State, under our modern methods of transacting business through quick correspondence by mail and wire and the

vigilance of the commercial and business agencies, could tolerate loose or "wild-cat banking" for forty-eight hours, and there is no good reason why State-bank currency could not be made as sound and safe as the present national bank currency.

"I have said the free coinage of silver would inevitably follow the reopening of State banks, and for this reason: These banks would absorb every dollar of coin, both gold and silver, as security for their circulation and to maintain whatever reserve the law might require. For domestic purposes, as a domestic currency, silver is to-day as good as gold. Silver only becomes embarrassing when transactions are had with foreign countries. Like gold, it passes only for its bullion value in foreign countries; but at home it is taken at par of its present weight and fineness. I say, therefore, for all domestic purposes, silver is as good as gold, and there is no reason why it should not be admitted to free coinage and used by local banks as a redemption and reserve fund.

"This scheme of circulation does not require the issuance of a single bond or the payment of a dollar by the United States Treasury in interest. The bonds issued during President Cleveland's administration amounted to \$262,315,400. There was received for the bonds the sum of \$293,454,286.74. The quotation of Fiske & Robinson shows that these bonds are worth to-day in the market \$349,753,866. This makes a profit to the banks of \$36,299,580. The last issue of bonds are now quoted at \$1.10, which gives the banks a profit of \$19,800,000 upon the issue. The bonds are now quoted in New York at \$1.10, at which figure the income is only 1½ per cent. They meet with ready sale, which shows that the Government can borrow money at that figure and that the banks who receive \$6,000,000 a year make a net profit of \$2,500,000 a year upon the last issue of bonds alone. Since 1892 the increase in interest paid annually by the United States has been \$17,000,000. It is now proposed to increase it still further.

"These enormous sums are direct subsidies to the Eastern banks. The total indebtedness of the United States is less than it was in 1892, while the interest charged is over 70 per cent. greater.

"During President Harrison's administration the interest-bearing debt of the United States was \$585,029,330. The noninterest-bearing debt was \$1,000,648,939.37. In the Treasury statement of the public debt for the month of November, 1899, the interest-bearing debt has been increased to \$1,037,049,690. The noninterest-bearing debt has been decreased to \$388,048,760.16. The proposition in this currency bill is to wipe out this noninterest-bearing debt by replacing it with interest-bearing debt. The interest paid by the United States Government in 1892 was \$22,893,883. The interest paid for the fiscal year ended June 30, 1899, was \$39,896,925.02."

The measure was passed by the House Dec. 18.

YEAS—Acheson, Adams, Alexander, Allen of Maine, Babcock, Bailey of Kansas, Baker, Barham, Barney, Bartholdt, Bingham, Boreing, Boutell of Illinois, Boutelle of Maine, Bowersock, Brick, Bromwell, Brosius, Brown, Brownlow, Bull, Burke of South Dakota, Burkett, Burleigh, Burton, Butler, Calderhead, Cannon, Capron, Chickering, Clarke of New Hampshire, Clayton of New York, Cochrane of New York, Connell, Cooper of Wisconsin, Corliss, Cousins, Cromer, Crump, Crumpacker, Curtis, Cushman, Dable of Wisconsin, Dalzell, S. C. Smith, Samuel W. Smith, William Alden Smith, Southard, Spalding, Sperry, Sprague, Steele, Stevens of Minnesota, Stewart of New Jersey, Stewart of New York, Stewart of Wisconsin, Suloway, Tawney, Taylor of Ohio, Thayer, Thomas of Iowa, Thropp, Tompkins, Tongue, Underhill, Van Voorhis, Wachter, Wadsworth, Wanger, Warner, Waters, Watson, Weaver, Weeks, Weymouth, White, Wilson of New York, Wright, Young of Pennsylvania—190.

YAYS—Adamson, Allen of Kentucky, Allen of Mississippi, Atwater, Bailey of Texas, Ball, Bankhead, Barber, Bartlett, Bell, Benton, Berry, Bradley, Brantley, Breazeale, Brenner, Brewer, Brundidge, Burke of Texas, Burleson, Burnett, Caldwell, Carmack, Chanler, Clark of Missouri, Clayton of Alabama, Cochran of Missouri, Cooney, Cooper of Texas, Cowherd, Cox, Crawford, Crowley, Cummings, Cusack, Daly of New Jersey, S. W. Davenport, Davis, De Armond, De Graffenreid, De Vries, Dinsmore, Dougherty, Elliott, Epes, Finley, Fitzgerald of Massachusetts, Fitzpatrick, Fleming, Foster, Fox, Gaines, Gaston, Gilbert, Glynn, Gordon, Green of Pennsylvania, Griffith, Griggs, Hall, Hay, Henry of Mississippi, Henry of Texas, Howard, Jett, Johnston, Jones of Virginia, Kitchin, Kleberg, Kluttz, Lamb, Lanham, Latimer, Lentz, Lester, Lewis, Little, Livingston, Lloyd, McClellan, McCulloch, McDowell, McLain, McRae, Maddox, May, Meekison, Meyer of Louisiana, Miers of Indiana, Moon, Muller, Napfen, Neville, Newlands, Noonan, Norton of Ohio, Norton of South Carolina, Otey, Pierce of Tennessee, Polk, Quarles, Ransdell, Rhea of Kentucky, Rhea of Virginia, Richardson, Ridgely, Riordon, Rixey, Robb, Robbins, Robinson of Indiana, Robinson of Nebraska, Rucker, Ryan of New York, Ryan of Pennsylvania, Salmon, Shackelford, Shafroth, Sheppard, Sibley, Sims, Slayden, Small, Smith of Kentucky, Snodgrass, Sparkman, Spight, Stark, Stephens of Texas, Stokes, Sulzer, Sutherland, Swanson, Talbert, Tate, Taylor of Alabama, Terry, Thomas of North Carolina, Turner, Underwood, Vandiver, Wheellet of Kentucky, J. R. Williams, W. E. Williams, Williams of Mississippi, Wilson of Idaho, Wilson of South Carolina, Young of Virginia, Zenor, Ziegler—150.

NOT VOTING—Bellamy, Bishop, Broussard, Campbell, Catchings, Davey, Gillet of New York, Harmer, Joy, Robertson of Louisiana, Smith of Maryland, Stallings, Vreeland, Wheeler of Alabama—14.

On Dec. 9 the bill was laid before the Senate, re-

ferred to the Committee on Finances, and reported with amendments. It was debated at great length, amended, and passed by that body Feb. 15, 1900, by the following vote:

YAYS—Aldrich, Allison, Beveridge, Burrows, Caffery, Carter, Clark of Wyoming, Cullom, Davis, Deboe, Depew, Elkins, Fairbanks, Foraker, Foster, Frye, Gear, Hale, Hanna, Hansbrough, Hawley, Hoar, Kean, Lindsay, Lodge, McBride, McComas, McCumber, McMillan, Mason, Nelson, Penrose, Perkins, Platt of Connecticut, Platt of New York, Pritchard, Quarles, Ross, Scott, Sewell, Shoup, Simon, Spooner, Thurston, Wetmore, Wolcott—46.

NAYS—Bate, Berry, Butler, Chandler, Chilton, Clark of Montana, Clay, Cockrell, Culberson, Daniel, Harris, Heitfeld, Jones of Arkansas, Jones of Nevada, Kenney, McEnery, McLaurin, Martin, Money, Morgan, Pettus, Rawlins, Stewart, Sullivan, Taliaferro, Teller, Tillman, Turley, Vest—29.

NOT VOTING—Allen, Bacon, Baker, Gallinger, Kyle, Mallory, Pettigrew, Proctor, Turner, Warren, Wellington—11.

The Senate substitute for the House measure was entitled "A bill to affirm the existing standard of value, to maintain the parity in value of all forms of money, to refund the public debt, and for other purposes," and it made various important changes. The House nonconcurred in the Senate amendments, a Committee of Conference was appointed and agreed upon a substitute, and the report was adopted March 13. The measure in its final recasting enacts as follows:

"That the dollar consisting of 25.8 grains of gold 0.9 fine, as established by section 3511 of the Revised Statutes of the United States, shall be the standard unit of value, and all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity.

"Sec. 2. That United States notes, and Treasury notes issued under the act of July 14, 1890, when presented to the Treasury for redemption, shall be redeemed in gold coin of the standard fixed in the first section of this act, and in order to secure the prompt and certain redemption of such notes as herein provided it shall be the duty of the Secretary of the Treasury to set apart in the Treasury a reserve fund of \$150,000,000 in gold coin and bullion, which fund shall be used for such redemption purposes only, and whenever and as often as any of said notes shall be redeemed from said fund it shall be the duty of the Secretary of the Treasury to use said notes so redeemed to restore and maintain such reserve fund in the manner following, to wit: First, by exchanging the notes so redeemed for any gold coin in the general fund of the Treasury; second, by accepting deposits of gold coin at the Treasury or at any subtreasury in exchange for the United States notes so redeemed; third, by procuring gold coin by the use of said notes, in accordance with the provisions of section 3700 of the Revised Statutes of the United States. If the Secretary of the Treasury is unable to restore and maintain the gold coin in the reserve fund by the foregoing methods, and the amount of such gold coin and bullion in said fund shall at any time fall below \$100,000,000, then it shall be his duty to restore the same to the maximum sum of \$150,000,000 by borrowing money on the credit of the United States, and for the debt thus incurred to issue and sell coupon or registered bonds of the United States, in such form as he may prescribe, in denominations of \$50 or any multiple thereof, bearing interest at the rate of not exceeding 3

per cent. per annum, payable quarterly, such bonds to be payable at the pleasure of the United States after one year from the date of their issue, and to be payable, principal and interest, in gold coin of the present standard value, and to be exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority; and the gold coin received from the sale of said bonds shall first be covered into the general fund of the Treasury and then exchanged, in the manner hereinbefore provided, for an equal amount of the notes redeemed and held for exchange, and the Secretary of the Treasury may, in his discretion, use said notes in exchange for gold, or to purchase or redeem any bonds of the United States, or for any other lawful purpose the public interests may require, except that they shall not be used to meet deficiencies in the current revenues. That United States notes when redeemed in accordance with the provisions of this section shall be reissued, but shall be held in the reserve fund until exchanged for gold, as herein provided; and the gold coin and bullion in the reserve fund, together with the redeemed notes held for use as provided in this section, shall at no time exceed the maximum sum of \$150,000,000.

"Sec. 3. That nothing contained in this act shall be construed to affect the legal-tender quality as now provided by law of the silver dollar, or of any other money coined or issued by the United States.

"Sec. 4. That there be established in the Treasury Department, as a part of the office of the Treasurer of the United States, divisions to be designated and known as the division of issue and the division of redemption, to which shall be assigned, respectively, under such regulations as the Secretary of the Treasury may approve, all records and accounts relating to the issue and redemption of United States notes, gold certificates, silver certificates, and currency certificates. There shall be transferred from the accounts of the general fund of the Treasury of the United States, and taken up on the books of said divisions, respectively, accounts relating to the reserve fund for the redemption of United States notes and Treasury notes, the gold coin held against outstanding gold certificates, the United States notes held against outstanding currency certificates, and the silver dollars held against outstanding silver certificates, and each of the funds represented by these accounts shall be used for the redemption of the notes and certificates for which they are respectively pledged, and shall be used for no other purpose, the same being held as trust funds.

"Sec. 5. That it shall be the duty of the Secretary of the Treasury, as fast as standard silver dollars are coined under the provisions of the acts of July 14, 1890, and June 13, 1898, from bullion purchased under the act of July 14, 1890, to retire and cancel an equal amount of Treasury notes whenever received into the Treasury, either by exchange in accordance with the provisions of this act or in the ordinary course of business, and upon the cancellation of Treasury notes silver certificates shall be issued against the silver dollars so coined.

"Sec. 6. That the Secretary of the Treasury is hereby authorized and directed to receive deposits of gold coin with the Treasurer or any Assistant Treasurer of the United States in sums of not less than \$20, and to issue gold certificates therefor in denominations of not less than \$20, and the coin so deposited shall be retained in the Treasury and held for the payment of such certificates on de-

mand, and used for no other purpose. Such certificates shall be receivable for customs, taxes, and all public dues, and when so received may be reissued, and when held by any national banking association may be counted as a part of its lawful reserve: *Provided*, That whenever and so long as the gold coin held in the reserve fund in the Treasury for the redemption of United States notes and Treasury notes shall fall and remain below \$100,000,000 the authority to issue certificates as herein provided shall be suspended: *And provided further*, That whenever and so long as the aggregate amount of United States notes and silver certificates in the general fund of the Treasury shall exceed \$80,000,000 the Secretary of the Treasury may, in his discretion, suspend the issue of the certificates herein provided for: *And provided further*, That of the amount of such outstanding certificates one fourth at least shall be in denominations of \$50 or less: *And provided further*, That the Secretary of the Treasury may, in his discretion, issue such certificates in denominations of \$10,000, payable to order. And section 5193 of the Revised Statutes of the United States is hereby repealed.

"Sec. 7. That hereafter silver certificates shall be issued only of denominations of \$10 and under, except that not exceeding in the aggregate 10 per cent. of the total volume of said certificates, in the discretion of the Secretary of the Treasury, may be issued in denominations of \$20, \$50, and \$100; and silver certificates of higher denomination than \$10, except as herein provided, shall, whenever received at the Treasury or redeemed, be retired and canceled, and certificates of denominations of \$10 or less shall be substituted therefor, and after such substitution, in whole or in part, a like volume of United States notes of less denomination than \$10 shall from time to time be retired and canceled, and notes of denominations of \$10 and upward shall be reissued in substitution therefor, with like qualities and restrictions as those retired and canceled.

"Sec. 8. That the Secretary of the Treasury is hereby authorized to use, at his discretion, any silver bullion in the Treasury of the United States purchased under the act of July 14, 1890, for coinage into such denominations of subsidiary silver coin as may be necessary to meet the public requirements for such coin: *Provided*, That the amount of subsidiary silver coin outstanding shall not at any time exceed in the aggregate \$100,000,000. Whenever any silver bullion purchased under the act of July 14, 1890, shall be used in the coinage of subsidiary silver coin, an amount of Treasury notes issued under said act equal to the cost of the bullion contained in such coin shall be canceled and not reissued.

"Sec. 9. That the Secretary of the Treasury is hereby authorized and directed to cause all worn and uncurrent subsidiary silver coin of the United States now in the Treasury, and hereafter received, to be recoined, and to reimburse the Treasurer of the United States for the difference between the nominal or face value of such coin and the amount the same will produce in new coin from any moneys in the Treasury not otherwise appropriated.

"Sec. 10. That section 5138 of the Revised Statutes is hereby amended so as to read as follows:

"SEC. 5138. No association shall be organized with a less capital than \$100,000, except that banks with a capital of not less than \$50,000 may, with the approval of the Secretary of the Treasury, be organized in any place the population of which does not exceed 6,000 inhabitants,

and except that banks with a capital of not less than \$25,000 may, with the sanction of the Secretary of the Treasury, be organized in any place the population of which does not exceed 3,000 inhabitants. No association shall be organized in a city the population of which exceeds 50,000 persons with a capital of less than \$200,000.

"SEC. 11. That the Secretary of the Treasury is hereby authorized to receive at the Treasury any of the outstanding bonds of the United States bearing interest at 5 per cent. per annum, payable February 1, 1904, and any bonds of the United States bearing interest at 4 per cent. per annum, payable July 1, 1907, and any bonds of the United States bearing interest at 3 per cent. per annum, payable Aug. 1, 1908, and to issue in exchange therefor an equal amount of coupon or registered bonds of the United States in such form as he may prescribe, in denominations of \$50 or any multiple thereof, bearing interest at the rate of 2 per cent. per annum, payable quarterly, such bonds to be payable at the pleasure of the United States after thirty years from the date of their issue, and said bonds to be payable, principal and interest, in gold coin of the present standard value, and to be exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority: *Provided*, That such outstanding bonds may be received in exchange at a valuation not greater than their present worth to yield an income of 2½ per cent. per annum; and in consideration of the reduction of interest effected, the Secretary of the Treasury is authorized to pay to the holders of the outstanding bonds surrendered for exchange, out of any money in the Treasury not otherwise appropriated, a sum not greater than the difference between their present worth, computed as aforesaid, and their par value, and the payments to be made hereunder shall be held to be payments on account of the sinking fund created by section 3694 of the Revised Statutes: *And provided further*, That the 2-per-cent. bonds to be issued under the provisions of this act shall be issued at not less than par, and they shall be numbered consecutively in the order of their issue, and when payment is made the last numbers issued shall be first paid, and this order shall be followed until all the bonds are paid, and whenever any of the outstanding bonds are called for payment interest thereon shall cease three months after such call; and there is hereby appropriated out of any money in the Treasury not otherwise appropriated, to effect the exchanges of bonds provided for in this act, a sum not exceeding one fifteenth of 1 per cent. of the face value of said bonds, to pay the expense of preparing and issuing the same and other expenses incident thereto.

"SEC. 12. That upon the deposit with the Treasurer of the United States, by any national banking association, of any bonds of the United States in the manner provided by existing law, such association shall be entitled to receive from the Comptroller of the Currency circulating notes in blank, registered and countersigned as provided by law, equal in amount to the par value of the bonds so deposited; and any national banking association now having bonds on deposit for the security of circulating notes, and upon which an amount of circulating notes has been issued less than the par value of the bonds, shall be entitled, upon due application to the Comptroller of the Currency, to receive additional circulating notes in blank to an amount which will increase the circulating notes held by such association to the par value of the bonds deposited, such additional

notes to be held and treated in the same way as circulating notes of national banking associations heretofore issued, and subject to all the provisions of law affecting such notes: *Provided*, That nothing herein contained shall be construed to modify or repeal the provisions of section 5167 of the Revised Statutes of the United States, authorizing the Comptroller of the Currency to require additional deposits of bonds or of lawful money in case the market value of the bonds held to secure the circulating notes shall fall below the par value of the circulating notes outstanding for which such bonds may be deposited as security: *And provided further*, That the circulating notes furnished to national banking associations under the provisions of this act shall be of the denominations prescribed by law, except that no national banking association shall, after the passage of this act, be entitled to receive from the Comptroller of the Currency, or to issue or reissue or place in circulation, more than one third in amount of its circulating notes of the denomination of \$5: *And provided further*, That the total amount of such notes issued to any such association may equal at any time but shall not exceed the amount at such time of its capital stock actually paid in: *And provided further*, That under regulations to be prescribed by the Secretary of the Treasury any national banking association may substitute the 2-per-cent. bonds issued under the provisions of this act for any of the bonds deposited with the Treasurer to secure circulation or to secure deposits of public money; and so much of an act entitled 'An act to enable national banking associations to extend their corporate existence, and for other purposes, approved July 12, 1882, as prohibits any national bank which makes any deposit of lawful money in order to withdraw its circulating notes from receiving any increase of its circulation for the period of six months from the time it made such deposit of lawful money for the purpose aforesaid, is hereby repealed, and all other acts or parts of acts inconsistent with the provisions of this section are hereby repealed.

"SEC. 13. That every national banking association having on deposit, as provided by law, bonds of the United States bearing interest at the rate of 2 per cent. per annum, issued under the provisions of this act, to secure its circulating notes, shall pay to the Treasurer of the United States, in the months of January and July, a tax of one fourth of 1 per cent. each half year upon the average amount of such of its notes in circulation as are based upon the deposit of said 2-per-cent. bonds; and such taxes shall be in lieu of existing taxes on its notes in circulation imposed by section 5214 of the Revised Statutes.

"SEC. 14. That the provisions of this act are not intended to preclude the accomplishment of international bimetallism whenever conditions shall make it expedient and practicable to secure the same by concurrent action of the leading commercial nations of the world and at a ratio which shall insure permanence of relative value between gold and silver."

The most compact statement of the changes in the measure is that of the House members of the Conference Committee. It is as follows:

"The effect of the conference agreement is a bill along similar lines adopted in the original House bill, with the exception that the plan for the refunding of the public debt, agreed to by the Senate, has been accepted as a part of the bill submitted by the Conference Committee. The bill as herewith submitted retains the same arrangement as to subjects as in the original House bill.

"The first change from the House bill is in phraseology and arrangement of section 1. While the House bill originally confined the first section to the definition of the standard of value, the new section embodies with the definition the declaration for the maintenance of parity of all forms of money issued or coined by the United States, and the duty of the Secretary of the Treasury to maintain such parity.

"The next change is in section 2, where the provision for payment of interest-bearing obligations is omitted, for the reason that the same result is obtained by the refunding of the public debt into gold-bearing bonds. The provision for the payment of private obligations, in conformity with the gold standard, is also omitted from section 2. The provision in the same section relative to the legal-tender quality of the silver dollar and other money coined or issued by the United States is placed in a new section, designated as section 3.

"The next change is the arrangement relative to the gold reserve fund for the redemption of United States notes and Treasury notes. This provision is found in section 4 of the House bill, but is changed to section 2 of the bill agreed upon, and is made a fixed amount of \$150,000,000, instead of one fourth of the outstanding United States notes and Treasury notes. Provision is also made for replenishing said fund whenever reduced below \$100,000,000. In this change the reserve fund is limited exclusively to the redemption of United States notes and Treasury notes, and the provisions for maintaining said reserve fund are modified by directing specifically that such fund may be replenished by exchange of redeemed notes for gold from the general fund of the Treasury, or by exchange for gold under section 3700, Revised Statutes. A further change in this same section permits the use of United States notes, when redeemed, for the purchase or redemption of any bonds of the United States, or for any other lawful purpose the public interest may require, except that they shall not be used to meet deficiencies in the current revenues.

"The next change is in the phraseology of section 3 of the House bill, which is made section 4 of the new bill, relative to divisions of issue and redemption, which changes specifically direct the use of the funds pledged for the redemption of outstanding notes and certificates to the sole purpose of such redemption, said funds being held as trust funds.

"The next change is the acceptance of the section in the Senate bill, being section 5 of the bill herewith submitted, providing for the retirement and cancellation of United States Treasury notes whenever received into the Treasury, such cancellation to take effect as standard silver dollars are coined, under the provisions of the acts of July 14, 1890, and June 13, 1898.

"The next change is the acceptance of the Senate provision, being section 6 of the bill herewith submitted, authorizing the issue of gold certificates for the deposit of gold coin. The provision in the Senate bill was modified by change of phraseology, limiting the issue of such gold certificates under certain directions of the Secretary of the Treasury. This section also contains provision for the cancellation of United States currency certificates.

"Sections 5 and 6 of the House bill are accepted and made sections 8 and 9 of the bill agreed upon, the only change being a limitation of issue of subsidiary coin to \$100,000,000, instead of an unlimited issue permitted by the repeal of the present statute, as was originally provided for in section 6 of the House bill.

"The next change is in section 7, which is also section 7 of the bill agreed upon. The original House bill provided for the issue of United States notes in such denominations, not less than \$1, as the Secretary of the Treasury might prescribe, and the issue of silver certificates in denominations only of \$1, \$2, and \$5, and the reconversion of silver certificates of denominations above \$5 into lower denominations. These provisions are so changed that silver certificates shall be issued in denominations of \$10 and under, except that not exceeding in the aggregate 10 per cent. of the total volume of silver certificates may be issued in denominations of \$20, \$50, and \$100. All silver certificates of denominations higher than \$10, except the proviso concerning 10 per cent. of the aggregate of certificates, shall, when received at the Treasury, be retired and canceled, and certificates of denominations of \$10 or less shall be substituted therefor, and a like volume of United States notes of less denomination than \$10 shall be retired and canceled and notes of denominations of \$10 and upward reissued in substitution therefor.

"The next change is the dropping out of sections 8 and 9 of the House bill. These two sections of the House bill made provision for the increase of bank-note circulation to the par value of the bonds deposited, not exceeding, however, the amount of the capital stock paid in, this principle having been embodied in section 12 of the bill agreed upon.

"The next change is the dropping out of section 10 of the House bill, which provided for the taxation of franchises of national banks and the repeal of the statute imposing a tax upon bank-note circulation.

"The next change is in section 11 of the House bill, whereby the limit of population in a place where a national bank of \$25,000 capital stock may be organized is fixed at 3,000 inhabitants, instead of 2,000 inhabitants, as specified by the House bill. This section becomes section 10 of the bill agreed upon.

"Sections 11, 12, and 13 of the bill agreed upon make provision for the refunding of the 5-per-cent. bonds of 1904, the 4-per-cent. bonds of 1907, and the 3-per-cent. bonds of 1908 into 2-per-cent. gold-bearing bonds. Permission is thereby given to all national banks exchanging any bonds of the above-mentioned classes for the 2-per-cent. bonds to increase their note circulation to the par value of the bonds, not in excess, however, of the capital stock paid in; and provides, further, that in case of such exchange the tax upon the bank-note circulation of such banks shall be one fourth of 1 per cent. each half year upon the average amount of such of its notes in circulation as are based upon the deposit of said 2-per-cent. bonds.

"Section 14 of the bill agreed upon provides that 'this act is not intended to preclude the accomplishment of international bimetallicism whenever conditions shall make it expedient and practicable to secure the same by concurrent action of the leading commercial nations of the world and at a ratio which shall insure the permanence of relative value between gold and silver.' This section has no legislative effect different from existing law, and is merely declaratory that any future effort in that direction shall not be foreclosed by the enactment of this act.

"The title of the bill remains the same as the title of the House bill, except that the words 'to refund the public debt' are made a part of the title."

The President approved the measure March 14, 1900.

The Porto Rico Measures.—Though of far less intrinsic importance than the financial measure, the bill "temporarily to provide revenues and a civil government for Porto Rico, and for other purposes," took up even more time for discussion, as it involved a constitutional issue as to the standing of our new possessions. Legislation began with a bill, introduced Jan. 19, 1900, by Mr. Payne, of New York, "to extend the laws relating to customs and internal revenue over the island of Porto Rico, ceded to the United States." The measure was referred to the Committee on Ways and Means, and, Feb. 8, Mr. Payne reported a substitute from that committee, recommending its passage. The purpose of the substitute was to prevent the policy of the original measure. It established the tariff of the United States in Porto Rico, so far as imports from foreign countries were concerned, but also provided for a duty of 25 per cent. of our regular tariff rates on trade between that island and the United States, and an additional duty on certain articles equal to the amount levied on them for internal revenue. The fund that should be raised in this way was to be kept separate, and put in the hands of the President, to be used for the government and the benefit of Porto Rico.

In supporting the bill, Mr. Payne made a statement as to the acquisition of the island, and gave statistics as to its inhabitants and their industries, and then put clearly the hardships that followed the political changes wrought by the recent war. He said:

"Spain collected in taxes from these people over 5,000,000 pesos annually. A peso is a Spanish or Porto Rican silver dollar, containing about 93½ per cent. as much silver as an American silver dollar. It is worth now in the market 41 cents; but by an Executive order it was made exchangeable in United States money at the rate of 60 cents for a peso. So it was worth 60 cents of our money. Spain collected these 5,000,000 pesos from these people. But instead of building schoolhouses or providing a school system, they took about half of this money to support the Spanish army and navy and to help out poor Spain from year to year.

"The exports of the island were about 17,000,000 pesos and the imports about the same amount. The three principal items of export were coffee, sugar, and tobacco, in the order named. About 60 per cent. of the total exports was coffee, about 20 per cent. sugar, and about 5 per cent. tobacco. The market for the coffee was found principally in Spain, and also in Cuba. That which went to Spain found its way to France and Germany, and some of it to the United States, where it is sold for the best Mocha and the best Java, and I am told by competent experts that the best grades of it are fully equal if not superior to any Mocha or Java coffee that can be bought anywhere in the world.

"When the war was over Spain put a prohibitive duty on coffee, as she did upon tobacco, and a corresponding duty upon sugar. Cuba, which we hold in trust, demanded of the United States that we put a duty upon Porto Rican coffee and Porto Rican tobacco. A large portion of the tobacco crop was brought to Cuba in the years gone by free of duty, and there it was made up into cigars, sometimes mixed with Havana tobacco and sometimes not, but most of it came to the United States in the shape of the best Havana tobacco. The better qualities of this were exported. There were some minor grades that went to Europe, principally to Germany, selling at 5 or 10 cents a pound.

"The export of tobacco was 4,000,000 pounds annually. One year it went up to 6,000,000 pounds,

but the normal average exports were 4,000,000 pounds. They raise a million or two pounds more, which are consumed in the island. These were made into cigars and cigarettes by the natives and sold there.

"Of sugar about three fifths came to the United States and two fifths went to Spain. That is about the proportion that has been exported to the two countries for the last ten years. Some of the time perhaps we got two thirds of it. So that a part of the sugar market was in Spain and the rest in the United States. Spain cut off the market for sugar, cut off the market for coffee, cut off the market for tobacco, which was 85 per cent. of their exports, and left the people without a market for these commodities, save that they had in the United States.

"In addition to that, Cuba demanded of the Government not only a duty on coffee which was prohibitory, but a duty of \$5 a pound on tobacco, which was also prohibitory, and under which not a pound could be exported to Cuba.

"Well, these Porto Ricans began to feel as though they had been made the victims of misplaced confidence. When they saw the flag go up and knew that 'prosperity followed the flag,' as a matter of course they expected to get a little of that prosperity themselves. Instead of that, the first result was to cut off these markets. More than that, on the 8th of August last there occurred there a storm, or hurricane, which swept that island from end to end; such a storm as had not been known there since 1867. This occurred at a time when they were just getting ready to harvest the crop of coffee, which then bade fair to be a great crop.

"One man, an extensive coffee planter, estimated that the entire output of coffee would exceed that of any previous year by 7,000,000 pesos in value. The normal crop is somewhere about 8,000,000 or 10,000,000 pesos. This crop, which was expected to be a double crop, was by the storm wiped out of existence, because the winds swept the berries from off the bushes, and then the rain descended, so that when the sun came out there was nothing left but the dry and shriveled part, of no use whatever. Not 10 per cent. of the ordinary crop was harvested in consequence of the effect of that storm. And that was not the worst of it. The market had been tied up for a year by these adverse tariff rates in Cuba and Spain; the coffee crop of the year before was sheltered in their little huts and in crudely constructed buildings all over the land. The wind razed those huts to the ground, destroying the greater portion of the crop of the previous year. So a double calamity came upon these people.

"The winds did great damage and created great desolation. In addition to the damage to the sugar crop and the tobacco crop, more than 2,000 people perished in the storm, while hundreds of thousands were turned out of their rude homes, shelterless to the blasts that beat upon them.

"This was the condition in August last. And these people, who had begun to despair under what had come to them from the loss of the markets, had still more reason to despair because of the devastation by this terrible storm.

"Mr. Chairman, after I had heard these representations from the gentlemen who appeared before the Committee on Insular Affairs, particularly the report of that honorable, able, and competent official, Brig.-Gen. Davis, who is now the military commander, it seems to me that Congress ought to afford some relief as quickly as possible to the people of these islands. The President had recommended that we give them free trade with the

United States. The Secretary of War had also recommended it in his report; and without consultation with any one, on my own individual motion, I introduced a bill and had it referred to the Committee on Ways and Means, establishing customs ports in Porto Rico, giving to the people of that island free trade with the United States, and between the United States and the ports of that island, and also extending the internal revenue laws to the island and the islands adjacent to Porto Rico. I wanted to relieve these people from the position in which they were placed.

"My own sympathies were entirely enlisted in their behalf. I sympathized with their distress then as I sympathize to-day. They have not rebelled; they have not raised their arms against the Government of the United States; they have submitted quietly, and I wanted to do something for their relief."

Mr. Payne then went on to state the considerations which led him to change his original scheme, and gave reasons why he thought the new one more benevolent:

"The first thing that was to be considered in devising a plan for the revenues of the island—because the money was to be expended there—was to provide a government for the island. Gen. Davis, a careful investigator, says that the expenditure would amount to \$1,943,878.71 next year. It would only allow about \$350,000 for the schools and about \$300,000 for the highways. We must meet this question, therefore, and provide revenue for the support of the island. If we are to provide for these necessities it must be done by taxation in some way, or else we can not help the island. Where would it be best, then, to direct our attention in placing that taxation? That was the nature of the question that confronted us, and that we had to consider.

"I sought Gen. Davis. I sought other men who were acquainted with the circumstances, knew the imports, knew the revenues, knew all the surroundings in Porto Rico, and I was assured that we could collect not exceeding \$500,000 from the tariff and \$500,000 from the internal revenue, in all \$1,000,000, to meet \$2,000,000 of expenditures. Then I began to look around me and saw what effect the internal revenue taxes would have upon the people of these islands.

"They manufacture there annually 1,500,000 gallons of rum. It is sold all over the island. It is a necessity of life, or they think so, for the poor people of that island. These 1,500,000 gallons retail at from 25 to 40 cents a gallon. The internal revenue tax upon that, under the law that we were about to extend, would amount to \$1.20 a gallon. The price to these people would be multiplied by four. How could they get their rum? We were cutting it off.

"Well, now, some gentlemen may say they would be better off without the rum. I think that myself; that constitutionally and in the matter of laying up money they would be better off without the rum, but they have been used to it all their lives. They are poor people, and when a government comes along and arbitrarily cuts off rum from a community that has been accustomed to it, every man of whom wants it, why there is bound to be trouble, and there would have been trouble with those Porto Ricans if we had passed that act in that way to cut off their supply of rum.

"In addition to that, Porto Rico has been importing from Cuba \$1,500,000 worth of cigars from year to year. The Porto Ricans have made 1,000,000 pounds of their own tobacco up into cigars and cigarettes and sold them over the island each year.

"Gen. Davis says it will be very difficult to collect this tax on tobacco. 'I suppose there are 2,000 or 3,000 shops in Porto Rico. A man has a hut in which he lives in one room, and in another sells a little rum, rolls cigarettes and sells them, and sells tobacco, and cigars, and fruits, and beans, and codfish, and has a general store, and he is in himself a tobacco manufacturer and retailer, saloon keeper and grocer.'

"Suppose we applied our internal revenue taxes to these items? This is the cheap tobacco, cheaply made up, thrown together into cigars for the poor people of the island, these people whose coffee crop has been annihilated, and hundreds of thousands of whom have depended upon the charity of the good people of the United States to keep them from starving and to furnish them shelter, the only relief that they have received thus far from becoming a part of the territory of the United States.

"Mr. Chairman, the taxation would simply have destroyed these industries and would not have given us any appreciable revenue, no money for schools, no money for highways, no money for anything except the hard, stern realities of governing those people. So as a revenue raiser the bill which I first introduced was a failure, and, as I understand it, the first and paramount thing in a tariff bill, under the idea of the Republican party, always has been to raise sufficient revenue to support the Government as we go along.

"Then the further question came along, Mr. Chairman, how much we were giving to these producers of sugar under the bill as first introduced. It would only benefit a moderate percentage of the people. They had been selling and sending abroad 58,000 tons of sugar, on an average, annually.

"According to the statistics, they have 70,000 acres in sugar plantations. Other gentlemen say that they average a production of a ton to an acre, and that it takes a man to cultivate an acre, or 60,000 people to cultivate this sugar during the season. These men would be benefited by free sugar, and the owners of the plantations, some of them small ones and some of them with 700 and the largest with 1,500 acre plantations, would receive the direct benefit. If the Porto Rican is the shrewd man that they say he is, and I hope and trust he may prove so, the laborers on those sugar plantations would get a part of this benefit, but largely, of course, as we all know, it would go to the planter and to the factory and to the merchant.

"I understand there are some 3,000,000 pounds of tobacco now in the hands of the merchants ready to be exported. Who will get the benefit of the reduction of the duty on tobacco? Why, the merchants in the first instance; afterward the planter. Would it not be fair that these people who get the greatest benefits should pay the expense of the government?

"Suppose we cut off 75 per cent. of the duty which they now have to pay to get into our markets and present it to them. How much does that mean to the producers of sugar and to the producers of tobacco in these islands?

"The estimate is that they will produce and sell and export 45,000 tons of sugar this year. It must all come to our market, because the Spanish market is absolutely cut off. Suppose we remit this duty. What does it mean?

"This will not injure our industries. We consumed 2,000,000 tons of sugar last year. We imported about 1,400,000 tons on which we paid duty. We also imported 300,000 tons from Hawaii, which came in free of duty. The balance was produced in this country. Our increased consumption amounts to from 50,000 to 100,000 tons annually.

If this 60,000 tons comes in from Porto Rico, it will be but a drop in the bucket. Even should it double in quantity it could have no influence on our market. Our sugar producers have nothing to fear if we stop with sugar from Porto Rico at the duty in this bill.

"Nor will this bill injure the tobacco industry. Their tobacco is quite different from ours. The best of it ranks with the Cuban or nearly so. Nearly all of it is filler tobacco and very little is fit for wrappers. My own impression is that it will add to the sale of wrappers in the United States and make a better market for our tobacco growers. I have yet to see the tobacco man who fears the introduction of the Porto Rican product.

"Their great fear is that if we should give free trade to Porto Rico we should follow it with free trade with the Philippine Islands, and ultimately with Cuba. Neither they nor the sugar producers fear anything from Porto Rico alone, and when Congress asserts its power under the Constitution to deal in the manner proposed by this bill with this territory, it gives them renewed confidence to believe that Congress has the power and can be trusted to care for their interests when we come to deal with the other islands.

"I find from the Bureau of Statistics that the sugar imported into this country in 1898 under 16 Dutch standard of color brought an average price of 2 cents, and in 1899 an average price of 2.2; that the average duty paid upon the sugar was 1.57 in 1898 and 1.63 in 1899—that is, \$1.63 a hundred pounds, an average of \$1.60 a hundred for the two years upon sugar such as these men would export to the United States. That makes a pretty figure if you remit all that duty of \$1.60 a hundred pounds, or \$35.84 for a long ton, a total of \$1,600,000 on the 45,000 tons that they will export to the United States this year. Suppose we take a quarter of that and give them three fourths.

"Suppose we take \$400,000, or rather give it into the hands of the President of the United States, in order to carry out the benevolent object of building roads and building schoolhouses for these Porto Ricans; are we not dealing more generously with these whole people to do that—that is, to provide schools on the mountains and on the mountain sides, where the poor coffee planters are struggling along for an existence—than to give the whole of it to the sugar planters and let the schools go?

"So with tobacco. I find that the whole duty on their 4,000,000 pounds of tobacco, at 35 cents a pound, would amount to \$1,400,000. We might give this to the tobacco planters, because on all these articles, gentlemen, make no mistake, the price of sugar and the price of tobacco is made in the United States, and they have to pay these duties to get into our markets. And if we remit the duty, we remit for them. Suppose we say, then, we will divide with these people; that we will give them \$1,000,000 out of their duty on tobacco, and take \$350,000 and add it to the revenues to come from these islands."

Anticipating that the opposition to the measure would rest mainly on the denial of its constitutionality, Mr. Payne made an argument for the authority of Congress, saying in conclusion:

"I want to make this further suggestion. Gentlemen who are lawyers are honestly divided on this question—this constitutional question. We believe that the United States means the United States, in the Constitution, and that the words that are added, giving us power to dispose of and make rules and regulations respecting the territory and other property belonging to the United States, refer to a different subject from the United States itself—to territory belonging to the United States.

We believe that there is that plain distinction. Some gentlemen profess to believe otherwise.

"If this bill is passed it will give the Supreme Court of the United States the first opportunity it has ever had to meet that question fairly and squarely and say whether the limitation for uniform taxation in the United States refers to the United States or to the United States and the territory belonging to the United States. It may be an important question to be considered in the future when we come to legislate for the Philippine Islands, when we come to legislate, if we have to, with respect to Cuba, and I think it would be a good proposition to submit that question now to the Supreme Court. If you are right, gentlemen, in your contention we shall have difficulty when we come to legislate for our other islands. We shall have difficulty in protecting the interests of the people, the manufacturers, the farmers of the United States. If we are right in our contention, our way is more simple.

"As for the people of Porto Rico, I would move as fast as their own good will warrant. Pass this bill, which even the gentleman from Massachusetts admits is a well-considered measure from a fiscal standpoint, and give them better markets and abundant revenue. Do not tie down their destinies to the whim of the 88 per cent. illiterate or to the caprice of the 12 per cent. of the educated, who have known no government except Spanish misrule. Keep them all in leading strings until you have educated them up to the full stature of American manhood, and then crown them with the glory of American citizenship. In the meantime give them all the rights accorded to our own people under the Constitution, consistent with their best interest and well-being.

"Our duty now, Mr. Chairman, is, in the first place, to restore, nay, to give law and order in the Philippine Islands, then to investigate, then to legislate, remembering that these people are uneducated, remembering that it would be unsafe to give the full power of government to the illiterates or to those who can read and write.

"The rights of neither would be preserved. The rights of either would be unsafe.

"We can proceed as did the fathers a hundred years ago, who had no scruples on that question, but believed that Congress had the absolute power over the territory of the United States.

"It is our duty to take these poor people and educate them and lift them up and give them the privileges of the Constitution and the privileges of government as they shall grow in education and in knowledge.

"And finally, whether we send them forth among the nations of the earth or annex them as States in this Union, we will bring them up to the full level and stature of American manhood. Wherever the flag is raised it shall not go down until it covers beneath its folds a people enjoying the blessings of civilization, of freedom, and of sovereign citizenship."

Opening the discussion in opposition to the measure, Mr. Richardson, of Tennessee, said:

"Mr. Chairman, I am not an alarmist. Those on this floor who know me and have done me the honor to listen to what I have had to say on former occasions when speaking of pending measures will bear me witness that I have not been accustomed to indulge in extravagant statement or vehement denunciation. I endeavor at all times to be conservative, and I may add I am naturally inclined to optimism. With this much of preface of a personal character, I begin by saying that in my judgment the pending bill is more dangerous to the liberties of the people of this republic than any

measure ever before seriously presented to the American Congress. It will prove more far-reaching in its provisions and disastrous in the results that must of necessity follow if it should be enacted into law than any act ever passed by Congress."

He went on to declare that the ground of opposition would be constitutional:

"Those of us who oppose this measure, I believe without exception, maintain that the bill can not be enacted into law without a total disregard and violation of not simply the spirit but the express letter of the Constitution. In the report the majority of the committee say:

"Upon the whole we conclude:

"First. That upon reason and authority the term "United States," as used in the Constitution, has reference only to the States that constitute the Federal Union and does not include Territories.

"Second. That the power of Congress with respect to legislation for the Territories is plenary.

"Third. That under that power Congress may prescribe different rates of duty for Porto Rico from those prescribed for the United States."

"The claim or contention thus made was never before set up on the floor of Congress in so far as I know. This country has grown from a small and feeble territory on the Atlantic Ocean, with about 827,000 square miles, to the mightiest republic of this earth, with an area of 3,500,000 square miles. It has increased in population from 3,000,000 to over 70,000,000. This marvelous expansion to continental growth and grandeur has all taken place within about one hundred years. The Louisiana territory, Florida, Texas, California, New Mexico, Oregon, and Alaska have all been acquired under our Constitution without a jar or strain to any of its wise and beneficent provisions and without any demand for its amendment. This growth was natural expansion. Then these acquisitions were of desirable lands without people, but we should beware of the acquisition of undesirable people without lands. I am partisan enough to stop here a sufficient time to call attention to the fact that every foot of this vast domain was acquired and annexed under Democratic Presidents.

"An exception to this statement may possibly be taken by some so far as it applies to Alaska; yet it will not be denied that Alaska was acquired while Andrew Johnson, a Democrat, was President. These acquisitions of territory were wise and proper to be made. The Democratic party has always favored proper expansion. Here permit me to say with great emphasis that those of us opposing this measure are not basing our opposition to it on the ground that it is a measure for expansion. This is not a measure of expansion. Whether the Constitution of the United States is extended to the island of Porto Rico, *ex proprio vigore*, or not, it must be admitted that when we enter upon legislation for the island, as Congress will do if it passes this bill, that question will be put at rest and the territory will then be a part of the United States.

"The control of the President and of the military will have ceased and the expansion as to the island will have been completed. Legislation by Congress for the island at once makes it a part of the United States. If this bill passes, it must follow that it is then a part of the United States. This being true, the proposition which this bill carries for unequal taxation of the island as a portion of the United States is the baldest form of imperialism.

"The opposition to this bill plants itself upon this ground. The measure is imperialism itself. In the former acquisitions to which I have referred no such measure as the pending one was ever pro-

posed or deemed necessary. When the Louisiana territory was acquired, when Texas was annexed, when California and Arizona and New Mexico and other Territories were acquired, did any man rise in this House or the other body of this Congress and offer such a legislative proposition as the pending one? This effort, therefore, clearly marks the dividing line between all former acquisitions and that of Porto Rico, if it be conceded that the enactment of the proposed bill into law is required."

The bill passed the House, Feb. 28, by a vote of 172 yeas to 160 nays; not voting, 21. It had been amended so as to reduce the tariff on Porto Rico goods from 25 per cent. of the regular rates to 15 per cent. The full text of the measure was as follows:

"Whereas, The people of Porto Rico have been deprived of markets for a large portion of their products, and have lost property and crops by severe and unusual storms, whereby they are impoverished and are unable to pay internal revenue and direct taxes; and

"Whereas, Temporary revenue is necessary for their schools, their roads, and their internal improvements, and the administration of their government; now, therefore,

"Be it enacted, etc., That the provisions of this act shall apply to the island of Porto Rico and to the adjacent islands and waters of the islands lying east of the seventy-fourth meridian of longitude west of Greenwich, which was ceded to the United States by the Government of Spain by treaty concluded April 11, 1899; and the name Porto Rico, as used in this act, shall be held to include not only the island of that name, but all the adjacent islands as aforesaid,

"SEC. 2. That on and after the passage of this act the same tariffs, customs, and duties shall be levied, collected, and paid upon all articles imported into Porto Rico from ports other than those of the United States which are required by law to be collected upon articles imported into the United States from foreign countries.

"SEC. 3. That on and after the passage of this act all merchandise coming into the United States from Porto Rico and coming into Porto Rico from the United States shall be entered at the several ports of entry upon payment of 15 per cent. of the duties which are required to be levied, collected, and paid upon like articles of merchandise imported from foreign countries; and in addition thereto upon articles of merchandise of Porto Rican manufacture coming into the United States and withdrawn for consumption or sale upon payment of a tax equal to the internal revenue tax imposed in the United States upon the like articles of merchandise of domestic manufacture; such tax to be paid by internal revenue stamp or stamps to be purchased and provided by the Commissioner of Internal Revenue and to be procured from the collector of internal revenue at or most convenient to the port of entry of said merchandise in the United States, and to be affixed under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and on all articles of merchandise of United States manufacture coming into Porto Rico in addition to the duty above provided upon payment of a tax equal in rate and amount to the internal revenue tax imposed in Porto Rico upon the like articles of Porto Rican manufacture.

"SEC. 4. That the duties and taxes collected in Porto Rico in pursuance of this act, less the cost of collecting the same, and the gross amount of all collections of duties and taxes in the United States upon articles of merchandise coming from Porto Rico, shall not be covered into the general fund

of the Treasury, but shall be held as a separate fund, and shall be placed at the disposal of the President to be used for the government and benefit of Porto Rico until otherwise provided by law.

"SEC. 5. This act shall be taken and held to be provisional in its purposes and intended to meet a pressing present need for revenue for the island of Porto Rico, and shall not continue in force after the 1st day of March, 1902."

In the Senate a bill had been introduced early in the session "to provide for the government of Porto Rico and other purposes," and when the House bill came up for consideration it was referred to the Committee on Pacific Islands and Porto Rico, and that committee reported it with an amendment in the form of a substitute, which was the Senate bill for the government of the island slightly modified. This measure defined the term Porto Rico as including that island and those adjacent, and made San Juan the capital. It declared the political status of the people; continued existing laws in force excepting those in which religion was an element; extended the laws of commerce and navigation over the islands; provided for quarantine stations; established the value of the silver coins, and made United States coins legal tender; adopted the rate of duty in the House bill on trade between the United States and Porto Rico, to be collected until March 2, 1902; made the island an internal revenue district; and declared the authority of all United States statutes not locally inapplicable.

The measure provided also for a governor, to be appointed by the President, by and with the advice and consent of the Senate, and having the usual powers of a territorial executive. It established also an executive council, consisting of a secretary, attorney-general, auditor, treasurer, and commissioner of education, with the usual authority of such officials, and five other members, all to be appointed by the President, and at least five to be natives of Porto Rico. It created a body, to be called the House of Delegates, the members to be elected by the people, and constituting, with the Executive Council as an upper house, the local Legislature of the island. It provided for a local supreme court and district courts, and made the island a judicial district of the United States.

The measure was passed by the Senate, April 3, by a vote of 40 yeas to 31 nays; not voting, 16.

April 11 the House concurred in the Senate amendments, in gross, by a vote of 161 yeas to 153 nays; not voting, 37.

Outside of Congress there was no little Republican opposition to the measure, and that element of hostile opinion was represented in the speech of Congressman H. C. Smith, of Michigan. He said:

"This bill puts it upon the statute books, where it may be read of all men, for all the days of coming time, that the general in command of our armies, appointed by the commander in chief of the armies of the republic, may not have his promises carried out—promises ratified by two years of silence, ratified by the opinion and report of the Secretary of War, ratified by the public speeches of the President, and ratified by the President's message, written in unfading ink, on parchment that will outlast time.

"We can not, as a nation, afford to say to the world and to the people of the earth that such promises may be repudiated and are only to be used to stimulate false hopes in the throbbing bosoms of oppressed subjects.

"And we are told that the plain duty to give to the Porto Ricans free trade did not mean a pres-

ent duty, but that we were to do this by and by, at some more convenient season.

"I can not bring my judgment and my conscience to the support of such shuffling and bad faith.

"To my mind, our obligations are moral, not constitutional. The people of Porto Rico, civilized as well as barbarous, are to be, under the new dispensation, cut off from every benefit supposed to be bestowed by the American system of government.

"They are not to be represented in the American Congress. The tariff is a tariff against our own territory. They are left nothing but a dead market. This is the Roman method, 'Make a solitude and call it peace.' It is simply despotism with no regard for the rights of man.

"The bill ignores the great principle that government is for the benefit of the governed. This is a time for candor.

"General Miles, when first landing American forces on the island, promised the Porto Ricans that they should enjoy the same rights and privileges and immunities as the people of the United States. With this understanding did the Porto Ricans accept American sovereignty not only without opposition, but with joyful trust and confidence.

"This great republic can not afford to break faith with the little island of Porto Rico. If we break the pledge of General Miles, we ought to give up the fruit which called forth that promise.

"The people are therefore opposed to this measure, and the national heart and the national conscience has been stirred to the deepest depths.

"There is nothing in the language of the Constitution, in my judgment, which makes the bill unconstitutional.

"I believe that the power of Congress over all territory outside the boundary lines of the States is coextensive with the power of the English Parliament.

"The power to govern such territory is found, necessarily, under our system somewhere. It certainly has not been reserved to the States. The jurisdiction of a State is confined strictly to its own territory.

"But this act violates the common law of England and America, which requires that taxation shall be uniform.

"This is not a new question. The old stamp act and the duties on tea of George III and his Parliament are in point.

"Every single argument that can be made in favor of the Porto Rico bill was advanced in favor of those acts. We all know how they were regarded in this country—what Adams, Otis, and Jefferson thought of them.

"A certain cargo of tea was thrown into Boston Harbor. Is there any particular reason why another cargo should not be dumped into the Gulf of Mexico?

"In my judgment, the Republican party can not afford to follow the example of George III now or hereafter.

"I am an expansionist, but I am unconditionally in favor of treating the inhabitants of all our territories, at home and abroad, with simple justice. Equality is equity, and equality is the soul of liberty.

"The question involved is not protection, but equal taxation. Abraham Lincoln freed 4,000,000 physical slaves. Are we going to emulate this example in the islands of the sea, or are we, for the sake of selfish interest, and in spite of the pledge of the President, going to fasten commercial slavery upon them?

"The provision of our Constitution—'The taxes, duties, and imposts shall be uniform throughout the United States'—was placed there for a purpose, and the purpose was to insure the absolute equality and sisterhood of the States.

"The framers of the Constitution saw with prophetic vision that the differing soil, climate, waterways, and circumstances of one part might naturally lead to the advantage of one part and the disadvantage to another, of our great domain. That it would breed rivalry, strife, and discontent; that one part would become more valuable and influential than another.

"That the money gathered from tariff might be more beneficial and useful to one portion of the country than another, as the pensions are now paid largely in the North.

"To prevent this strife and turmoil and contest, and that we might really become one family—a sisterhood of States—it was determined in the beginning that no State should be discriminated against or in favor of, as concerning duties and imposts.

"This bill is taxation without representation. It is idle and childlike that we should gather money from them, turn it over to them, expend it for them and for their advancement, instead of permitting them to raise the money themselves, for themselves, and expend it as they see fit.

"In this land of equity and equality it can not be right that they should be taxed without having any voice as to the method of taxation or the use that shall be made of the money.

"To my mind the amount of the taxes cuts little figure. King George III offered to strike from the stamp act all but the title. He only required that the colonists should recognize the principle that they were slaves and not free—that the king was the master and they were to serve.

"The advocates of this bill seem to be the King George of this century. Willing to accept any amount so that the principle may be saved; that it may be established; that different taxation may obtain in one territory from that of another."

The measure was approved by the President, April 12, 1900.

March 2 the President sent to Congress this brief message:

"Since the evacuation of Porto Rico by the Spanish forces on the 18th day of October, 1898, the United States has collected on products coming from that island to the ports of the United States the duties fixed by the Dingley act and amounting to \$2,095,455.88, and will continue to collect under said law until Congress shall otherwise direct. Although I had the power, and having in mind the best interests of the people of the island used it to modify duties on goods and products entering into Porto Rico, I did not have the power to remit or modify duties on Porto Rican products coming into the ports of the United States. In view of the pressing necessity for immediate revenue in Porto Rico for conducting the government there and for the extension of public education, and in view also of the provisional legislation just inaugurated by the House of Representatives, and for the purpose of making the principle embodied in that legislation applicable to the immediate past as well as to the immediate future, I recommend that the above sum so collected and the sums hereafter collected under existing law shall, without waiting for the enactment of the general legislation now pending, be appropriated for the use and benefit of the island."

A bill was at once introduced in the House and

passed the same day. It was amended and passed the Senate, March 16, and after a conference of the two houses it was finally passed in this form:

"That the sum of \$2,095,455.88, being the amount of customs revenue received on importations by the United States from Porto Rico since the evacuation of Porto Rico by the Spanish forces on the 18th of October, 1898, to the 1st of January, 1900, together with any further customs revenue collected on importations from Porto Rico since the 1st of January, 1900, or that shall hereafter be collected under existing law, shall be placed at the disposal of the President, to be used for the government now existing and which may hereafter be established in Porto Rico, and for the aid and relief of the people thereof, and for public education, public works, and other governmental and public purposes therein until otherwise provided by law; and the revenues herein referred to, already collected and to be collected under existing law, are hereby appropriated for the purposes herein specified, out of any moneys in the Treasury not otherwise appropriated."

It was approved by the President, March 24, 1900.

The Nicaragua Canal.—Dec. 7, 1899, a bill was introduced in the House of Representatives "to provide for the construction of a canal connecting the waters of the Atlantic and the Pacific Oceans." It authorized the President to acquire from Costa Rica and Nicaragua control of territory necessary for the construction and defense of a ship canal from Greytown on the Caribbean Sea, by way of Lake Nicaragua, to Breto on the Pacific Ocean, and it appropriated the money needed to secure such control. It then authorized the President to direct the Secretary of War to construct the canal, make safe harbors at the terminal points, and erect fortifications for defense and for the safety and protection of the vessels using it. Among other details it was provided that the Secretary of War might have the work done by contract, and the limit of expenditure was set at \$140,000,000. The measure passed the House, May 2, 1900, by a vote of 224 yeas to 36 nays; not voting, 92.

It was reported in the Senate, but consideration of it was put over to the next session of the Congress, as the Senate had not taken action on the Hay-Pauncefote treaty. That treaty was made at Washington, Feb. 5, 1900, and it has been commonly regarded as a renewal of the policy of the Clayton-Bulwer treaty. It is as follows:

"The United States of America and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, and to that end remove any objection which may arise out of the convention of April 10, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in Article VIII of that convention, have for that purpose appointed as their plenipotentiaries:

"The President of the United States, John Hay, Secretary of State of the United States, and her Majesty the Queen of Great Britain and Ireland, Empress of India; the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., her Majesty's ambassador extraordinary and plenipotentiary to the United States; who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

"ARTICLE I. It is agreed that the canal may

be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares; and that, subject to the provisions of the present convention, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"ART. II. The high contracting parties desiring to preserve and maintain the "general principle" of neutralization established in Article VIII of the Clayton-Bulwer convention, adopt, as the basis of such neutralization, the following rules, substantially as embodied in the convention between Great Britain and certain other powers, signed at Constantinople, Oct. 29, 1888, for the free navigation of the Suez Maritime Canal—that is to say:

"1. The canal shall be free and open, in time of war as in time of peace, to vessels of commerce and of war of all nations, on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it.

"3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay, in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent.

"6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this convention, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

"7. No fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"ART. III. The high contracting parties will, immediately upon the exchange of the ratifications of this convention, bring it to the notice of the other powers and invite them to adhere to it.

"ART. IV. The present convention shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by her Britannic Majesty; and the ratifications shall be exchanged at Washington or

at London within six months from the date hereof, or earlier if possible.

"In faith whereof the respective plenipotentiaries have signed this convention and thereunto affixed their seals."

The House bill was introduced before the negotiation of this treaty, but passed after its terms had been made known, and it was urged in the face of the policy which the treaty was designed to carry out. Mr. Hepburn, of Iowa, who was in charge of the measure, said in his speech, May 1:

"We are met by another class of gentlemen who say that while this route is practicable, while the canal is needed, while it should be an object of solicitude and fostering care and speedy completion by the Government, yet there are certain difficulties of a diplomatic nature that absolutely prevent us from doing anything.

"They say truthfully that in 1850 a treaty was negotiated between Great Britain and our country, popularly known as the Clayton-Bulwer treaty, and that one of its provisions declares that neither party alone, except in conjunction with the other, will secure this water route, or will attempt in any way to defend it without the consent of the other, and they say these provisions are a barrier, and until that is removed the Government of the United States can not in good faith undertake this work.

"I would not be an authority upon a grave question like this, but I want to call your attention to names of a long list of statesmen who have declared that that instrument—the Clayton-Bulwer treaty—is not now of operative force against us; that it either had been violated by Great Britain in such degree as to justify us in no longer recognizing its potency, or that it had become obsolete because of the object stated by that treaty having been abandoned by both parties, or that both parties had themselves abandoned it by making no effort to carry out its provisions.

"In that list of statesmen that have taken one or the other of those positions all insist that at most or at the worst we had the right to declare it void and no longer binding. All of them have gone to that extent. I name Secretary Marcy and President Pierce, Secretary Cass, and every President from Pierce down to the present incumbent, excepting Presidents Lincoln and Johnson, Douglas, Marcy, Frelinghuysen, Blaine, and others, all of them have united in saying that we stood to-day in the position, from the acts of other parties, that entitle us to declare that we would no longer be bound by its provisions.

"But, Mr. Chairman, if this is not true, I insist that we occupy that position now before the world that justifies us in caring for our own; in the pursuit of our own supreme interests, to say that that obligation undertaken fifty years ago will no longer bind us. I want to call attention to this fact that while writers upon the subject of international law tell us that in the letter of the law treaties, without there is a limitation as to time stated within them, or without they are carried out and completed, they are irrevocable and are to exist forever. That is the letter of the law, but never its spirit.

"Look where you can in all the diplomacy of the world, and how many treaties do you find to-day which are fifty years old? All writers say that the right of a nation to determine a treaty is always dependent upon the circumstances and environment; that no general law or rule can be established, and that it becomes a question of morals rather than of law, a question of whether the circumstances are such as justify the nation

in saying that it will no longer be bound by the long-time agreement made under other conditions, and made desirable by other surroundings or made by other generations of men.

"Look at this case in 1850, and what is the situation? We were then a weak nation of 23,000,000 people. Only two years before we had acquired our Pacific coast, or the California portion of it. We owned nothing beyond. There was no Alaska for us; we had no coastwise trade. Now our coastwise traffic is measured by millions of tonnage. Then 10,000 families would have been all that could be found in all that Pacific region. Now we have three great States. Then there was poverty there; now their wealth is enumerated by billions of dollars. Then there was no commerce except the trader in hides and furs; now the commerce of that coast reaches hundreds of millions of dollars annually. I say that the conditions have so changed, I say that our necessities have so changed, I say that our interests are so great as to demand that the people of this generation will not longer be bound by the barrier that was interposed by another generation half a century ago."

Noteworthy Election Cases.—Probably nothing connected with the session was of such sensational interest as the contest over the admission of Brigham H. Roberts as a Representative from Utah. The matter had been discussed throughout the country long before the Congress met, and public opinion was strongly against admitting him to the House—or at least strongly in favor of expelling him, as a polygamist, from membership. The main difference of opinion in Congress was as to the method of excluding him—whether he should be allowed a seat at all, or admitted and then expelled. The special committee appointed to consider his case reported two resolutions, Jan. 23, 1900. The majority resolution was in favor of refusal to admit:

"*Resolved*, That under the facts and circumstances of this case, Brigham H. Roberts, Representative-elect from the State of Utah, ought not to have or hold a seat in the House of Representatives, and that the seat to which he was elected is hereby declared vacant."

The minority resolution was in favor of admission and subsequent expulsion:

"*Resolved*, That Brigham H. Roberts, having been duly elected a Representative in the Fifty-sixth Congress from the State of Utah, with the qualifications requisite for admission to the House as such, is entitled, as a constitutional right, to take the oath of office prescribed for members-elect, his status as a polygamist, unlawfully cohabiting with plural wives, affording constitutional ground for expulsion, but not for exclusion from the House.

"And if the House shall hold with us and swear in Mr. Roberts as a member, we shall, as soon as recognition can be had, offer a resolution to expel him as a polygamist, unlawfully cohabiting with plural wives."

The contest of opinion on the course to be taken was very sharp, as a constitutional question was involved. In advocating exclusion, Mr. Taylor, of Ohio, who was in charge of the majority resolution, argued that Mr. Roberts was ineligible to membership, on the ground that Utah had been admitted into the Union with a condition against polygamy; that the Edmunds law denied not only the right of suffrage, but even the title to hold office, to a polygamist; and that, as the claimant was a notorious violator of the law of the land, the House might of its own inherent authority declare him ineligible. In answer to the

plea made in behalf of Roberts, that he come within the constitutional qualification—to wit, "No person shall be a Representative who shall not have attained the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen"—Mr. Taylor argued that the constitutional clause was not complete, and aimed only at stating certain grounds of ineligibility that required legal definition, whereas other and graver objections might be taken for granted as in their nature disqualifying. He stated the case in his opening speech as follows:

"The majority of the committee are fixed in their conviction that in view of the status of Brigham H. Roberts, not because of any moral question that may be involved, but because of the question of governmental right involved, in view of his defiant violation of law, in view of his denial of the validity and supremacy of the law of the land, has no right to take his seat in this body, and should be excluded therefrom.

"The minority, on the other hand, attaching more value to the husk than to the ear, seeming to conceive that the shadow is to be more taken care of than the substance, declare that we must let him go through the hollow form, the sacred form of taking an oath, and then expel him; to rob him of that which is substantial, but that we must not deprive him of that which is a mere shadow. They say, 'You may come up and enter our front door, in order that we may kick you out of the back door; but we cheerfully declare, with the Constitution before us, that we can not kick you down the front steps.'

"We believe that that is absolutely untenable as a proposition of law and absolutely unsupported by precedents.

"I want to make these preliminary statements respecting that. First, upon the doctrine of exclusion.

"The language of the constitutional provision, the history of its framing in the Constitutional Convention, and the context clearly show, whatever else may have been true, that it did not intend to prevent this disqualification for crime or for defiance of the Constitution and the laws. The overwhelming authority of text-book writers on the Constitution and of judicial declarations on the subject harmonizes with this view. The House of Representatives, in all the years of its existence, has never denied that it had the power and the right to exclude.

"In many instances it has excluded for disloyalty and for crime. In 1862 Congress passed the test oath act, which in effect disqualified hundreds of thousands of American citizens, and thousands of Representatives in this body went to the bar of the House under a disqualification that was not removed until they took the test oath, an oath substantial in its character and superadded to the constitutional oath. And this very House in 1869 adopted a general rule of order providing that no person should be sworn in as a member against whom the objection was made that he was not entitled to take the test oath.

"On the proposition of expulsion I present these general observations: That the ablest lawyers from the beginning of the Government down to this case, but of course not including it, have insisted that neither the House of Representatives nor the Senate has the right to expel a man unless the thing for which he was expelled occurred in connection with his election or while he was a member, and was inconsistent with his trust or duty as a member.

"I lay that proposition down as absolutely sound and as not contradicted anywhere; and both Houses of Congress have in many instances refused to expel members where the proof of guilt was absolutely clear, because the acts complained of were unrelated to the members as such, because the acts complained of were not inconsistent with the trust and duty of the member as such.

"Neither House has ever expelled a member for any other cause. So I say this here and now: To exclude is to be in harmony with principle and precedent; to expel is to do violence to principle and precedent. There is no precedent in the House against exclusion. There is no precedent in the American Congress for expulsion under such circumstances as exist here.

"Three reasons are asserted why this man should not be permitted to enter the House of Representatives:

"First, because of his violation of the Edmunds law and the disqualification created thereby.

"Second, independent of any statutory ineligibility, independent of any joint action of the two Houses in the passage of a law, but because of the inherent power of the House, by that inherent power which in all cases of exclusion has been invoked—and the House has never excluded for any other reason except for that which it itself declared, independent of any statute law—that this man was a defiant violator of law; his declarations, words, and acts that he was above the law, that the law did not speak to him, in the very necessity of things, made him ineligible; and

"Third, because the State of Utah was admitted into the Union under the express understanding that polygamous practices were at an end and would not be renewed. And now it sends as its Representative the most conspicuous example, the most conspicuous practitioner of the very thing the abandonment of which was the condition precedent to its admission into the Union."

Mr. Littlefield, of Maine, in charge of the minority resolution, while holding that the Edmunds act, made for a Territory, could not bind a State, and that a condition imposed on the admission of a Territory to statehood could not limit its equality of rights in the sisterhood of States, nevertheless made his main argument on constitutional grounds. He said:

"We believe that the House of Representatives is now sitting under the clause of the Constitution which makes it the judge of the election, the return, and the 'qualifications of' the gentleman from Utah. We believe that it is the duty of the House of Representatives to now sit as a judge, to determine what qualifications are required and whether or not the gentleman from Utah possesses those qualifications. We do not believe, when this House sits as this great constitutional court, that it sits here to legislate and create disqualifications. We believe it sits here to ascertain and determine, to ascertain what qualifications are prescribed by the Constitution, to determine whether or not the gentleman from Utah possesses these qualifications.

"The qualifications prescribed by the Constitution are age, citizenship, and inhabitancy.

"No person shall be a Representative who shall not have attained to the age of twenty-five years and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen."—(Constitution, Article I, section 2.)

"The report of the committee finds that the gentleman from Utah possesses these qualifications. Here the majority and the minority part company. The majority hold that this House

sitting here, alone, of its independent action, can add to the qualifications mentioned in the Constitution. The minority hold that they can not add to them. The minority hold that when this House sits as this great constitutional court and ascertains the qualifications required, and ascertains that the gentleman from Utah possesses these qualifications, that it is its duty under the Constitution to render a judgment in accordance therewith, no matter what the consequences may be, because we believe the Constitution to be 'the supreme law of the land.'

"I call attention to the several propositions relied upon by the majority, in order that we may understand at the outset the questions which divide us.

"The majority state, first, that they propose to exclude the gentleman from Utah—

"By reason of his violation of the Edmunds law."

"Second—and this is the main ground—

"By reason of his notorious and defiant violation of the law of the land, of the decisions of the Supreme Court, and of the proclamations of the Presidents, holding himself above the law and not amenable to it. No government could possibly exist in the face of such practices. He is in open war against the laws and institutions of the country whose Congress he seeks to enter."

"This proposition, stripped of its verbiage and rhetoric, simply means that this House of Representatives, here and now, can create and impose qualifications or disqualifications not mentioned in the Constitution, by its own independent, individual action.

"This is the proposition of which, as I understand, the majority are principally enamored.

"They say, on page 40 of their report:

"The principles underlying the second main ground of disqualification, hereinbefore asserted, have already been fully discussed, but the ground is appropriately restated at this point.

"We assert before the House, the country, and history that it is absolutely and impregnably sound, not to be effectively attacked, consonant with every legislative precedent, in harmony with the law and with the text-books on the subject."

"This is the first proposition to which I propose to address myself. It involves the construction of the Constitution and transcends in gravity and importance all other questions. Reflect for a moment. Let us see what the proposition is. This House by its own independent action can add a disqualification or a qualification not mentioned in the Constitution.

"At this time it is proposed to add the disqualification of polygamy. At a future time it may be proposed to add the disqualification of adultery, of fornication. At another time it may be proposed to add the disqualification of membership in a trust or an octopus, or the attorney of a trust or an octopus, or any misdemeanor or obnoxious conduct, and so on *ad infinitum*.

"No man when he is elected to this House under this proposition, suggested by the majority, can ever tell whether he possesses the qualifications, or is affected by the disqualifications, that are thus to be asserted. It is only when he stands at the threshold of the House and knocks at the door, that he discovers that the House of Representatives, in the exercise of its wisdom, deeming him obnoxious, then creates and declares the disqualification that may exclude him. No constituency can know whether its choice is eligible: in fact, between the election and organization popular excitement may demand the imposition of a disqualification, before unthought of, and their

choice, though qualified when elected, would be ineligible when he presented himself for admission. And inasmuch as the action of this House does not conclude the action of another, the man who is admitted to-day may be excluded to-morrow."

Mr. Roberts agreed with neither the majority nor the minority resolution. His contention was that either exclusion or expulsion would be unconstitutional. He said:

"We may know from the history of the past that there is a power above that 'rules the harmonious destiny of this world even better than prime ministers,' and that if nations indulge in constitutional immorality the result must be just what the indulgence in immorality with the individual is. Its end is death. And so I call your attention to the seriousness of departing from the Constitution to respond to the clamor of misled people. What is it that is invoked as an excuse for this proposed action?

"What mighty emergency has arisen that demands this disregard of constitutional limitations? What vital force or principle of our Government is threatened? Who is in arms against our institutions, that you should resort to methods that never were resorted to except in the midst of civil war and when the life of the nation was at stake? It is alleged that a man guilty of having married under the sanction of his church a plurality of wives has been elected to the House of Representatives, and hence that the American home is in danger and these extraordinary proceedings must be invoked against it. His crime and the circumstances under which it was committed is supposed to make his a more direful offense than murder or robbery, and hence you must be rid of him. The report says:

"The case of a bribe taker or of a burglar or of a murderer is trivial, is a mere ripple on the surface of things, compared with this far-reaching, deep-rooted, audacious lawlessness."

"It seems to me that that is rather strange language to be employed in a sober presentation of facts before the House of Representatives and breathes too much of rhetoric and passion. Just for a few moments I want to pay attention to the nature of this crime of polygamy, not with a view of showing that the American people have not the right to establish monogamy as a system of marriage that shall prevail, and not for the purpose of defending polygamy either. In the early debate that took place with reference to this case on the floor of the House I then said that I was not here to represent polygamy, that I was not here to defend it; that we had long ago passed that stage of the case; that the thing itself was taken out of the realm of discussion. So I do not wish my remarks to be construed as any defense of the doctrine of polygamy; but I do want to call attention to the nature of this crime, in order that we may ascertain whether it is as awful as the description of it in the committee's report, and if it warrants a more lawless act than polygamy itself in order to rebuke a man supposed to be guilty of it who has been elected to the House of Representatives.

"The Jewish people were made the depository of God's revelation to humanity. You will not find the crime of polygamy referred to regarded among that people as of the character that it is described here in the report of the committee. Evidently it is not from its nature a sin or a crime. If it were, you would not find the Jewish law enforcing it under some circumstances, regulating it under other circumstances, and men after God's own heart sustaining those relations which are now

supposed to justify you in closing the doors against the member from Utah. If you go to the teachings of the great Master, whom, I take it, we all revere, although he denounced every crime, every sin that man can commit, you shall find no word of his in condemnation of the conduct of the patriarchs or of the law relating to this matter as it was given by Moses to ancient Israel.

"Last evening, while walking in the resident portion of this city, I passed a magnificent, heroic statue of stern old Martin Luther, than whom the nations of western Europe and America owe no man more than they do to him for the religious and civil liberty that they now possess, the founder of Protestant Christendom; and that man upon this subject that is here so much denounced declared in the early days of Protestant Christendom, when he was informed that his disciple Carlstadt was teaching polygamy, said in his letter to Chancellor Bruecke:

"I indeed must confess that I can not protest when one takes many wives, for it does not contradict the Scriptures."

"And again, in his letter to Philip, the Landgrave of Hesse, remarking upon the fact that Philip had taken a second wife, his first wife being still living, he said:

"In matters of matrimony the laws of Moses are not revoked or contradicted by the gospels."

"Yet we build monuments to Luther, notwithstanding his toleration and defense of that form of marriage. Now, I say all these things not for the purpose of arguing here upon the rightfulness of polygamy, but I do say what I have here remarked for the purpose of fixing it in the minds of members that it is merely a crime because prohibited by law, and not by its nature a crime."

He maintained that the question of polygamy had been settled under the law in Utah, and that the Constitution of the State, as adopted, had fulfilled the condition which required the abolition of plural marriage before admission to the Union. He declared that he accepted that settlement, though he had been taught that polygamy was a sacred institution, and though he held himself bound by every principle of honor and humanity to the women he had already married. He asserted that he was chosen to represent all classes in Utah:

"And I stand here to-day elected by the gentile votes of Utah, rather than by the Mormon votes, and that, too, as reported here by your committee, after they knew all about Roberts in Utah. Yes, and knowing him, and knowing the conditions that had prevailed in Utah, I take it that they were better judges of the man they would have represent them here upon the floor of this House than you gentlemen can be, who do not know Roberts and who do not know the conditions that have prevailed in Utah.

"They knew Roberts. Yes; perhaps many of them knew of his struggles from boyhood; knew how he came of an obscure family, without prestige, without property, himself bareheaded and barefooted when he came into the State; of his boyhood home that never consisted of more than two small log rooms. They knew how, late in his boyhood, he made every effort at acquiring something of book knowledge. They knew of him in mining camps and by the flaming forge, where upon the anvil he earned by the sweat of his brow the bread that he ate, and all the while making efforts in the midst of untoward circumstances to acquire an education. They knew how he persisted in his efforts until his anvil was left behind and he found his way into the forum of the people, becoming the editor of newspapers and of magazines.

"They knew him as an advocate of his religious faith and the defender of his political principles, until every platform in the State rang with his voice in the maintenance of what he believed to be the right. You knew him, also, as a member of the constitutional convention which helped settle this vexed question of polygamy upon the basis of its settlement under that Constitution.

"What do you propose in the rejection of the member from Utah? Why, you propose to teach the inhabitants of the State of Utah a lesson! You propose to discipline them. You propose to summon them before the bar of this House and administer a rebuke.

"These people, however, to whom you have proposed to administer this reproof are worthy of better treatment. They are the pioneers pre-eminent of the western half of the United States; they have redeemed a desert and given a State to civilization."

Mr. Roberts closed with the charge that religious animosity was responsible for the attempt to exclude him from Congress:

"At whose behest are you called upon to administer this rebuke? What is the source of it? Why, three sectarian preachers from the State of Utah made a formal protest before the last Congress, and, I understand, before this House, against the admission of the member from Utah, and then took it upon themselves to run throughout the land and stir up religious prejudice against the Mormons, until a wonderful petition is rolled in on the floor of this House that makes members quake and tremble with fear in its presence—a petition gathered from Sabbath schools, sectarian churches, and societies. Much has been said about interference between Church and state.

"Suppose that the Mormon Church undertook to defeat the will of the people of a sovereign State, or that the Catholic Church undertook to do the same thing? There would be such warnings uttered, there would be such protests pronounced, against such interference of the Church with the state in a purely political matter that we would be made to believe that the very foundation of the Government was in danger. But here, without protest, you permit the Church to interfere with the state when the case of a Mormon is involved. I do not, however, refer to the worthiness of my people and the unworthiness of the assault that is made upon them for the purpose of influencing your action in the matter now pending before you. As I said in the commencement of this discussion, when last speaking upon the floor of this House, I am not here begging the question; I am not here asking for favors; I am not here on my own behalf, but on behalf of my people, to demand for myself and for them our constitutional rights. Clear your vision; look to the charter that should guide your action; find warrant in it for your proposed action of exclusion or expulsion if you can; and if you find it, I will walk out without complaint. You can not find it without adding qualifications for membership in this House not enumerated in the Constitution, and that you have no right to do.

"If you can not find warrant in the Constitution for either of the proposed methods of unseating the member from Utah, then it becomes your duty under the oath that you have taken and in order to be law-abiding people yourselves, to show respect for the highest law of the land, to say that the protecting ægis of the Constitution overshadows this man, and you can neither exclude him nor expel him without doing such violence to the Constitution as would menace representative government.

"Some of the papers in discussing the Roberts

case have said, 'Brand this man with shame and send him back to his people.' Mr. Speaker, I thank God that the power to brand me with shame is something quite beyond the power of this House, great as that power is. The power to brand with shame rests with each man and nowhere else. The Almighty God has conferred it upon no one else. I have lived up to this day in all good conscience in harmony with the moral teachings of the community in which I was reared and am sensible of no act of shame in my life. Brand me with shame! Why, if you finally determine either to exclude or expel me, I shall leave this august chamber with head erect and brow undaunted and walk God's earth as the angels walk the clouds, with no sense of shame upon me. And, if in response to the sectarian clamor that has been invoked against the member from Utah, you violate the Constitution of your country, either in excluding or expelling me, all the shame that there is in this case will be left behind me and rest with this House."

The resolutions, majority and minority, came to vote Jan. 25, 1900. The minority resolution, declaring Mr. Roberts eligible to admission but open to expulsion on constitutional grounds, was rejected by a vote of 81 yeas to 244 nays; not voting, 29. The majority resolution, refusing admission, was adopted by a vote of 268 yeas to 50 nays; not voting, 36. A majority of two thirds would have been required to expel Mr. Roberts had he been admitted to membership, but the divisions on these resolutions show that such a vote would have been given in case of the adoption of the minority resolution.

The case of Matthew S. Quay, who claimed to be a Senator from Pennsylvania by the appointment of the Governor of the State, involved an old issue of constitutional interpretation: but it commanded unusual interest because of the political opposition to Mr. Quay, who had been made the object of bitter attack by influential members of his own party. He had been appointed after the adjournment of the Pennsylvania Legislature, but the senatorship fell vacant during the legislative session; and so the point to be considered was whether the Governor had power to appoint when the Legislature had refused to elect. The Constitution gives the Governor power to appoint only when a vacancy occurs during a recess of the Legislature, and the Senate has decided in a succession of cases that no appointment is valid when made after a Legislature adjourns without electing. It was natural, therefore, to expect that Mr. Quay would not be admitted to the Senate, as the precedents were strongly against him; but certain circumstances not dwelt upon in the discussion gave him unusual sympathy. He had been personally popular in the Senate; he was a leader of his party in a great State; he had been fiercely attacked and accused of political rascalities and even crimes; and an indictment against him for conspiracy to defraud had been brought to trial during the legislative session, in which the prosecution went to pieces. Without touching on this point, Senator Penrose, of Pennsylvania, in his preliminary statement of facts, suggested the peculiar party conditions that prevailed. He said:

"The full term of the Hon. Matthew Stanley Quay, senior United States Senator from Pennsylvania, expired on the 3d day of March, 1899, while the Legislature was still in session. By the provisions of Article II, section 4, of the Constitution of Pennsylvania the General Assembly shall meet at 12 o'clock on the first Tuesday of January every second year, and accordingly the Legislature met upon the first Tuesday of January, 1899. At

the beginning of the session, in order to expedite the legislative business and to economize in the expenditure of public funds, a concurrent resolution was offered in the Senate fixing the time for final adjournment on the 20th day of April following. This resolution unanimously passed both houses. It then became a standing rule of the Legislature, and, under our parliamentary practice, could not be changed except by a two-thirds vote. Pursuant to a published call, signed by the chairman of the Republican caucuses of the Senate and the House of Representatives, respectively, the same having been issued at the customary time and place and by the officials and in the manner prescribed by the party regulations, a joint caucus of the Republican members of the Senate and House of Representatives was held Jan. 3, 1899, for the purpose of nominating a person to be voted for as the Republican candidate for the office of United States Senator.

"At this caucus several candidates were voted for, but Senator Quay, having received 98 out of the 109 Republican votes present, was unanimously declared the caucus nominee of the Republican party. Under the act of Assembly of Jan. 11, 1867, reaffirming the similar act of Congress of July 25, 1866, regulating the election of United States Senators, the Legislature proceeded to ballot on the third Tuesday of January, 1899. Upon the following day the members of the two houses convened in joint Assembly, and it appearing upon the reading of the journal of each house that the same person had not received a majority of the votes in each house, as required by the act of Assembly aforesaid, the joint Assembly then proceeded to choose a person for the office of United States Senator, and continued to ballot each succeeding day until the Legislature adjourned on the 20th day of April, as required by the resolution aforesaid. Inasmuch as none of the candidates received a majority of the votes cast, no election resulted. On the first ballot taken in the joint Assembly, Quay, Republican, received 112 votes; Jenks, Democrat, 82; leaving scattering and absent, 60.

"On account of members and Senators absent and not sworn in, it required 126 votes to make the majority necessary to elect. In this manner the balloting proceeded day after day until the close of the session, Quay receiving the support of the regular Republicans, Jenks of all the Democrats, and the other Senators and members dividing their strength among the various candidates. Seventy-nine ballots had been taken when the Legislature adjourned without day on the date above mentioned. On the 21st day of April, 1899, the Legislature having adjourned and a vacancy in the office of United States Senator existing by reason of the failure of the Legislature to elect, the Governor, believing that the State was entitled to a full representation in the Senate under the provisions of section 2 of Article II of the Federal Constitution, appointed Mr. Quay to fill the vacancy until the next meeting of the Legislature."

The debate was long and learned, and the decision of the case singularly close. The Senate committee to which Mr. Quay's credentials had been referred reported a resolution that he was not entitled to take his seat as a Senator, and, April 24, 1900, a motion to amend by striking "not" out of the resolution was lost by a vote of 32 yeas to 33 nays; not voting, 22. The resolution refusing to admit him was then passed by a vote of 33 yeas to 32 nays; not voting, 22. The Senate preserved its consistency by a majority of 1.

Another sensational case was that of William A. Clark, who had been elected a Senator from Montana. Charges of bribery and corruption were

brought against him, and the Senate ordered an investigation. The report of the committee was against him, and a resolution was submitted declaring that he was not duly and legally elected to a seat in the Senate of the United States. May 15, 1900, Mr. Clark rose in the Senate to a question of personal privilege, and, after a statement in his own defense, submitted a letter of resignation, sent to the Governor of Montana. The resolution in his case was then passed over. In the meanwhile, during the absence of the Governor of Montana in California, the Lieutenant Governor appointed Mr. Clark to fill the vacancy caused by his own resignation; and the Governor, on his return, appointed Mr. Maginnis.

Miscellaneous.—The most elaborate piece of legislation perfected during the session was "an act making further provision for a civil government for Alaska, and other purposes." It covers 231 pages of the volume of statutes.

Of more political importance was the act "to provide a government for the Territory of Hawaii," though, in the nature of the case, it dealt far less with mere details. It established the new Territory and created a Territorial government.

The measure for a civil government in the Philippine Islands, introduced in the Senate, was not acted upon.

An important pension measure was approved May 9, 1900. It is an amendment to the act of June 27, 1890, and provides for the aggregation of disabilities in granting pensions for incapacity to earn a living, and also fixes the basis and the limit of a widow's claim. It is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 2 and 3 of an act entitled "an act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents," be and the same are hereby amended so as to read as follows:

"SEC. 2. That all persons who served ninety days or more in the military or naval service of the United States during the late war of the rebellion and who have been honorably discharged therefrom, and who are now or who may hereafter be suffering from any mental or physical disability or disabilities of a permanent character, not the result of their own vicious habits, which so incapacitates them from the performance of manual labor as to render them unable to earn a support, shall, upon making due proof of the fact, according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive a pension not exceeding \$12 per month and not less than \$6 per month, proportioned to the degree of inability to earn a support; and in determining such inability each and every infirmity shall be duly considered, and the aggregate of the disabilities shown be rated, and such pension shall commence from the date of the filing of the application in the Bureau of Pensions, after the passage of this act, upon proof that the disability or disabilities then existed, and shall continue during the existence of the same: *Provided,* That persons who are now receiving pensions under existing laws, or whose claims are pending in the Bureau of Pensions, may, by application to the Commissioner of Pensions, in such form as he may prescribe, showing themselves entitled thereto, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general

or special act: *Provided, however*, That no person shall receive more than one pension for the same period: *And provided further*, That rank in the service shall not be considered in applications filed under this act.

"SEC. 3. That if any officer or enlisted man who served ninety days or more in the army or navy of the United States during the late war of the rebellion, and who was honorably discharged has died, or shall hereafter die, leaving a widow without means of support other than her daily labor, and an actual net income not exceeding \$250 per year, or minor children under the age of sixteen years, such widow shall, upon due proof of her husband's death, without proving his death to be the result of his army service, be placed on the pension roll from the date of the application therefor under this act, at the rate of \$8 per month during her widowhood, and shall also be paid \$2 per month for each child of such officer or enlisted man under sixteen years of age; and in case of the death or remarriage of the widow, leaving a child or children of such officer or enlisted man under the age of sixteen years, such pension shall be paid such child or children until the age of sixteen: *Provided*, That in case a minor child is insane, idiotic, or otherwise physically or mentally helpless, the pension shall continue during the life of said child, or during the period of such disability; and this proviso shall apply to all pensions heretofore granted or hereafter to be granted under this or any former statute; and such pensions shall commence from the date of application therefor after the passage of this act: *And provided further*, That said widow shall have married said soldier prior to the passage of the said act of June 27, 1890."

Another general act of interest was that providing "for free homesteads for actual and *bona fide* settlers, and reserving the public lands for that purpose," approved May 17, 1900. The text of it is as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all settlers under the homestead laws of the United States upon the agricultural public lands, which have already been opened to settlement, acquired prior to the passage of this act by treaty or agreement from the various Indian tribes, who have resided or shall hereafter reside upon the tract entered in good faith for the period required by existing law, shall be entitled to a patent for the land so entered upon the payment to the local land officers of the usual and customary fees, and no other or further charge of any kind whatsoever shall be required from such settler to entitle him to a patent for the land covered by his entry: *Provided*, That the right to commute any such entry and pay for said lands in the option of any such settler and in the time and at the prices now fixed by existing laws shall remain in full force and effect: *Provided, however*, That all sums of money so released which if not released would belong to any Indian tribe shall be paid to such Indian tribe by the United States, and that in the event that the proceeds of the annual sales of the public lands shall not be sufficient to meet the payments heretofore provided for agricultural colleges and experimental stations by an act of Congress, approved Aug. 30, 1890, for the more complete endowment and support of the colleges for the benefit of agriculture and mechanic arts, established under the provisions of an act of Congress, approved July 2, 1862, such deficiency shall be paid by the United States: *And provided further*, That no lands shall be herein included on which the United States Government had made

valuable improvements, or lands that have been sold at public auction by said Government.

"SEC. 2. That all acts or parts of acts inconsistent with the provisions of this act are hereby repealed."

The Senate passed a bill for the reorganization of the army, on which the House failed to act; and the House passed a bill for the restriction of trusts, which the Senate failed to reach.

Bills, in moderate number, for public buildings, bridges, and right of way, were passed.

The Appropriations.—The appropriations made by the Congress at its first session, for the fiscal year 1900–1901, were as follows: Agriculture, \$4,023,500; army, \$114,220,096; diplomatic, \$1,771,169; District of Columbia, \$7,576,869; fortifications, \$7,383,628; Indian, \$8,198,089; legislative, \$24,176,532; Military Academy, \$653,590; navy, \$65,080,917; pension, \$145,245,230; post office, \$113,648,239; river and harbor, \$561,000; sundry civil, \$65,298,886; deficiencies, \$15,679,512; miscellaneous, \$3,500,000; total regular, \$577,017,257; permanent, \$132,712,220; grand total, \$709,729,477.

CONNECTICUT, a New England State, one of the original thirteen, ratified the Constitution Jan. 9, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; 746,258 in 1890; and 908,355 in 1900. Capital, Hartford.

Government.—The following were the State officers in 1899: Governor, George E. Lounsbury; Lieutenant Governor, Lyman A. Mills; Secretary of State, Huber Clark; Treasurer, Charles S. Merstick; Comptroller, Thompson S. Grant; Attorney-General, Charles Phelps; Adjutant General, Louis N. Van Keuren; Insurance Commissioner, Edwin L. Scofield—all Republicans; Factory Inspector, George L. McLean; Building and Loan Commissioner, George F. Kendall, succeeded in March by Edward E. Fuller; Dairy Commissioner, John B. Noble; Commissioner on Domestic Animals, Heman O. Averill; State Auditors, Walter A. Riley and D. Ward Northrop; Board of Arbitration, George A. Parsons, Franklin T. Ives, Gilbert L. Smith; Railroad Commissioners, O. R. Fyler, Washington F. Willcox; Highway Commissioner, James H. MacDonald; Bank Commissioners, Charles H. Noble, Sidney W. Crofut, resigned Jan. 31, succeeded by George F. Kendall; Chief Justice of the Supreme Court of Errors, Charles B. Andrews, Republican; Associate Justices, David Torrance and Frederic B. Hall, Republicans, and Simeon E. Baldwin and William Hamersley, Democrats; Clerk, George A. Conant.

Population.—The census returns give the population by counties as follow:

COUNTIES.	1900.	Increase since 1899.
Hartford.....	195,415	48,235
New Haven.....	269,163	60,106
New London.....	82,758	6,134
Fairfield.....	184,208	34,122
Windham.....	46,861	1,705
Litchfield.....	69,672	10,130
Middlesex.....	41,760	2,296
Tolland.....	24,523	(decrease) 566
Total.....	908,355	162,097

The population of Hartford is 79,850; in 1890 it was 53,230; taken with the cities and towns connected with it by the trolley system—viz., New Britain, Manchester, Bristol, Vernon, East Hartford, Glastonbury, Windsor, Farmington, Berlin, West Hartford, Wethersfield, South Windsor,

Plainville, and Newington—the total is about 170,000, against 120,000 in 1890. The larger towns and their populations are: New Haven, 108,827; Hartford, 79,850; Bridgeport, 70,996; Waterbury, 51,139; Meriden, 28,695; New Britain, 28,202; Norwich, 24,637; Norwalk, 19,932; Danbury, 19,474; Stamford, 18,830; New London, 17,548; Middletown, 17,486; Ansonia, 12,681; Torrington, 12,453; Greenwich, 12,172; Manchester, 10,601; Naugatuck, 10,541; Windham, 10,137; Bristol, 9,643; Wallingford, 9,001; Stonington, 8,540; Vernon, 8,483; Derby, 7,930; Winchester, 7,763; Putnam, 7,348; Orange, 6,995; Killingly, 6,835; Enfield, 6,699; Thompson, 6,442; East Hartford, 6,406; Groton, 5,962; Branford, 5,706; Huntington, 5,572. Of the 39 incorporated cities and boroughs, only 6 have fewer than 2,000 inhabitants in 1900.

Finances.—The Treasurer's statement, showing the condition of the treasury Sept. 30, is as follows: The receipts increased from \$2,749,273.20 in 1899, to \$2,876,856.83, a gain of \$127,583.63. The principal items of increase were: Military commutation tax, from \$150,598 to \$154,711; mutual life insurance companies, from \$283,817 to \$291,066; steam railroads, from \$965,502 to \$975,143; street railroads, from \$138,502 to \$157,450; savings banks, from \$392,782 to \$418,780; avails of courts, from \$31,418 to \$54,223; insurance department, from \$77,946 to \$87,114; and succession tax, from \$115,195 to \$165,930.

The expenditures were \$2,528,514.13, a decrease of \$1,766.20. The receipts for the year exceeded the expenses by \$384,342.70, and as there is included in the expenditures \$100,000 paid for the redemption of State bonds, the treasury, as compared with its condition a year ago, is \$448,000 better off.

The balance in the treasury to the credit of the civil list funds was \$682,884.

The funded debt less the civil list fund in the treasury is now \$2,108,873.29, as compared with \$2,557,215.99 a year ago.

The State has claims against the United States Government growing out of the Spanish war, now in process of collection. These claims will be about \$150,000. The State also has unsettled claims on account of the civil war.

The principal items of expenditure were: Expenses of the General Assembly, \$148,355.08; common schools, \$440,415.93; judicial expenses, \$339,424.55; humane institutions, \$314,943.58; National Guard, \$215,330.32; normal schools, \$88,747.97; board of prisoners in county jails, \$112,682.62; salaries and expenses in executive offices, \$38,417.23; State Capitol and grounds, \$45,294.16; State Board of Education, \$28,865.88; State Prison, \$64,917.30; School for Boys, \$68,195.10; School for Girls, \$42,240.82; sick and wounded soldiers, \$75,246; agricultural affairs, \$48,767.14; printing and circulating documents, \$43,973.92; Highway Commissioner, \$117,973.56; Insurance Commissioner, \$32,459.31; interest on State bonds, \$104,700.

Education.—The annual report of the State Board of Education, submitted in July, contains in its opening pages a review of the work of education in Connecticut for the past twenty-five years, from 1875 to 1899. The report says: "The total expenditure from all sources on public education in Connecticut, including maintenance of normal schools during the period under review, is \$52,145,677.78; or, if we leave out of account the indebtedness at the end of the period, the amount is \$48,965,217.83. In the twenty-five years ending Sept. 1, 1899, \$5,789,064.72 had been paid for completion or enlargement of schoolhouses. The value of all school property, including buildings and

sites, increased from \$4,284,401.35 in 1884 to \$10,192,747.35 in 1899. The value of school property per capita of the population is \$11.62. The number of pupils on the enumeration lists increased from 134,976 to 189,717; the number on the registers increased from 119,489 to 151,325, and the number in average attendance increased from 68,593 to 109,951. The number of public kindergartens has increased from 5 in 1890 to 77 in 1900, and the number of children from 628 to 6,895.

"An increasing interest in the providing of school libraries is attested by the fact that the number has increased from 240 in 1884 to 771 in 1898-'99. The number of books is reported to be 158,073, compared with 28,035 in 1885. Since 1875 the State has contributed to these libraries \$113,105, and districts and individuals have added \$244,060.99. The total expenditure for libraries has been \$357,165.99.

"The number of teachers has increased from 2,613 to 4,085. There has been a great increase in the number of women, compared with the number of men, engaged as teachers. The average monthly salary of men rose from \$70.05 in 1875 to \$89.87 in 1899, and that of women from \$37.35 to \$43.61."

By the enumeration this year, the children of school age were 194,817, a gain in one year of 5,100. The cost for each was \$24.20.

The State Normal School at New Britain celebrated its fiftieth anniversary June 21. It was the sixth in date of establishment in the United States. New Britain, then a parish of Berlin, appropriated \$16,250 for a building, and the school opened with 67 pupils for its first term. Only one of its first graduating class of 5 in 1851 is now living. The graduates number about 1,720. Of these about 1,500 are living, about 700 being engaged in educational work. The number of scholars registered in 1899 was 250 and the number in attendance in June, 1900, was 225.

There were 18 graduates from the Agricultural College in June, 10 of whom were women. The whole number previously graduated since the opening is 166, of whom only 12 were women.

The enrollment of undergraduates at Wesleyan University in October was 332. The alumni considered majority and minority reports, and submitted one to the trustees in the summer in regard to woman students. The trustees referred the first minority report, after one change, to a special committee, to be reported upon in six months. This declared Wesleyan to be a man's college, but as women had been admitted it agreed that the college should continue open to them to the extent of admitting 15 girls to each 100 young men, and that these chosen few should have privileges in all respects equivalent to those accorded to men. The majority and the first minority reports, however, agreed in many provisions for keeping the work of the man and woman students separate, including careful provision against their competing in public. The only change made in the

GEORGE P. McLEAN,
GOVERNOR OF CONNECTICUT.

report by the trustees was to increase the percentage of woman students from 15 to 20.

The one hundred and ninety-ninth commencement of Yale University took place June 27. The number of graduates in each department was: Academic, 324; scientific, 132; medical, 28; law, 52; music, 12; candidates for doctorate, 36. The president's address reported changes in the courses of study, notably an increase of elective work. The entire work of the senior year is now elective. The study which has most generally grown in favor is English. At the Sheffield Scientific School an independent course in sanitary engineering has been established, and a special course preliminary to the study of forestry. The Peabody Museum has received from London a collection of Egyptian antiquities presented by the Connecticut members of the American Archaeological Association. The treasurer's report to the corporation in November showed that for the fiscal year ending July 31, 1900, the permanent funds of the university have been increased by \$427,336.59. Salaries to professors, instructors, and others for tuition amounted to \$361,395.15; salaries and wages other than for tuition were in amount \$114,742.82. Assistance paid to students amounted to \$58,411.82.

The enrollment at Hartford Theological Seminary in September was as follows: Senior class, 22; middle class, 22; junior class, 18; special mission class, 3; post-graduates, 3; fellows, 3; candidates for degree of Ph. D., 1; special, 1; total, 73.

Corrections.—The report of the State Prison for the year ending Sept. 30, 1899, showed 503 inmates. The average for the year was 507.38. Of the \$95,000 appropriation granted the institution by the Legislature of 1897, there remained an unexpended balance in the State treasury of \$10,585.45. The average number of officers and employees is 53. The total earnings from all sources for the year ending at this date were \$48,088.63.

Insurance.—The premium receipts increased in 1899 over 1898 as follow: Connecticut companies, \$1,365,430.73; companies of other States, \$19,420,051.28; industrial companies, \$6,802,517.99; a total increase in 1899 of \$27,588,000. Receipts of interest on mortgages and collateral loans of Connecticut companies decreased in 1899 \$433,203.45, while companies of other States increased \$392,052.66, and industrial companies received \$201,648.86 more than in 1898. Receipts of interest and dividends on bonds and stocks increased in 1899 over 1898 \$2,632,051.44. Income exceeded disbursements in 1899 \$110,937,969.64, an increase over 1898 of \$13,283,946.64. The Connecticut companies reduced their loans on bond and mortgage during 1899 \$1,823,611.44, while companies of other States increased their loans on the same security \$9,679,362.50, and the industrial companies \$3,435,890.65.

Banks.—The number of institutions in the State under the supervision of the Bank Commissioners is 117. These include the savings banks, the State banks, and the trust companies. The amount of deposits in the Connecticut savings banks Jan. 1, 1900, was \$176,275,463.60. There was an increase of \$10,228,336.75 in deposits in 1899. The assets of the banks at the beginning of the year were in round numbers \$185,000,000.

Railroads.—The length of main line and branches in the State is 1,013.35 miles, an increase of 5.10 miles, and a total, including sidings, etc., of 1,819.21 miles. The property accounts of all the companies amount to \$174,688,387.44, a decrease of \$1,040,481.79. The funded debt per mile of road is \$26,801.09. The current liabilities of the companies show a net increase of \$2,299,138.48, and now amount to \$8,002,023.36, being \$5,471.13 per mile of road. The gross earnings of the com-

panies were \$38,663,732.27, an increase of \$1,169,987.17. The operating expenses of the year were \$26,069,115.65, an increase of \$403,331.04.

The total length of street railways is 26,351 miles. The total amount of capital stock authorized is \$23,328,000, and the amount issued is \$12,715,948, an increase of \$2,264,908 during the year. The net earnings for the year were \$1,121,508.59. The total number of passengers carried was 59,084,702. The number of passengers carried by the steam railroads during this same period was 50,269,468.

Labor.—The thirteenth annual report of the Factory Inspector, covering the year ending Sept. 30, 1899, says that 1,466 factories, employing 151,152 persons, and 214 bakeshops were visited by agents of the department, besides many places where the manufacture of clothing, cigars, and artificial flowers is carried on, the inspection of which was added to the duties of this department by the General Assembly of 1899. At that session a law was passed regulating the manufacture of coats, vests, trousers, knee pants, overalls, skirts, shirts, ladies' waists, artificial flowers, purses, cigars, cigarettes, or any articles of wearing apparel intended for sale. This law was intended to regulate manufacturing of such goods in tenements. It was said that the sweatshops located in New York city were being moved into Connecticut and practicing the same system of sweating as was carried on in New York city. Careful inquiry failed to substantiate these statements. The law of 1897 requiring bakeshops to be properly drained, plumbed, lighted, and ventilated, and kept in sanitary condition, with proper regard to the health of operatives and the production of wholesome food, has had the effect of bringing many former cellar bakeshops above ground. No new ones are allowed to start in underground rooms.

Building and Loan Associations.—At the date of the last report, for the year closing Sept. 30, 1899, there were 15 associations, all of the State, the foreign associations having withdrawn. There were 7 mortgage investment companies, all but 2 of which are closing up their business. One went out of business in the year. The total assets of the 15 associations for the year ending Sept. 30, 1899, are \$3,774,526.40, which shows an increase over Sept. 30, 1898, of \$245,452.11. The liabilities in installments paid and earnings credited of domestic associations show an increase of \$187,611.05, and a decrease of liability on single payment shares of \$83,478.32. Estimates from returns received indicate that 2,000 homes have been built with the assistance of the associations since their organization.

Historical.—Anniversaries of some of the old towns of the State were celebrated this year. Middletown is two hundred and fifty years old. The date of its settlement is given as 1650, although a gravestone in the cemetery is marked 1648. It was first called Mattabeseck, but in 1853 the name was changed to Middletown.

East Haddam celebrated its bi-centennial June 6, and also the birthday of Nathan Hale, who was born June 6, 1755. After his graduation at Yale he taught in East Haddam in a little schoolhouse, which was presented on this anniversary to the Connecticut Society, Sons of the Revolution, by the Sons of the Revolution of New York. It was purchased by Richard H. Greene and moved to a plot of ground on a bluff overlooking the town and the Connecticut river. Ex-Gov. Bulkeley bought some of the surrounding land, the whole to be known as Nathan Hale Memorial Park.

The Sons of the Revolution of New York State have since relieved Mr. Greene of his personal responsibility in the matter.

On Nov. 12 Bridgeport commemorated the one hundredth anniversary of its creation as a borough with a parade of 20,000 men, a display of fireworks, and a banquet.

Nov. 22, Trinity Parish (Episcopal), of Southport, town of Fairfield, observed the one hundred and seventy-fifth anniversary of the dedication of its first house of worship and the one hundred and ninety-ninth of the founding, in London, England, of "the Venerable Society for the Propagation of the Gospel in Foreign Parts," to which the parish was largely indebted in the first half century of its existence.

Camp Field and a soldiers' monument built upon it were presented to the city of Hartford, and dedicated Oct. 4. The field, which was given by John C. Barker, is the site of the encampment of 7 regiments that were enlisted for the civil war. Of these men, 394 were killed in action, 230 died of wounds, and 834 died of disease. The monument is a statue of Gen. Griffin A. Stedman.

Political.—At the town elections, Oct. 1, 125 went Republican and 37 Democratic, the same as in 1899, though the lists were not wholly identical. One more town voted for no license—90 in 1900 against 89 in 1899; 78 were for license.

The State Republican Convention was held Sept. 5-6, at New Haven. Following were the candidates; For Governor, George P. McLean; Lieutenant Governor, Edwin O. Keeler; Secretary of State, Charles G. R. Vinal; Treasurer, Henry H. Gallup; Comptroller, Abiram Chamberlain.

The candidates chosen at the Democratic convention at Hartford, Sept. 20-21, were: For Governor, Samuel L. Bronson; Lieutenant Governor, Cyrus G. Beckwith; Secretary, James P. Woodruff; Treasurer, Edwin C. Pinney; Comptroller, William L. Huntting.

The Prohibitionists made the following nominations, July 27, at Hartford; For Governor, Charles E. Steele; Lieutenant Governor, John J. Copp; Secretary of State, Robert N. Stanley; Treasurer, Oliver G. Beard; Comptroller, William Ingalls.

The ticket of the Socialist-Labor party was: For Governor, Adam Marx; Lieutenant Governor, James M. Parker; Secretary, Faustin Serrer; Treasurer, Edward Laphorn; Comptroller, Henry Mathern.

The Social Democratic party named: For Governor, G. A. Sweetland; Lieutenant Governor, W. E. White; Secretary, I. G. Chatfield; Treasurer, William Bartels; Comptroller, W. J. Sansoucy.

The election resulted in favor of the Republican ticket. The vote on the presidential electors stood: McKinley, 102,572; Bryan, 74,014. For Governor: McLean, 95,822; Bronson, 81,420; Steele, 1,548. The Socialist vote on Governor was 1,932. The Senate will have 22 Republicans and 2 Democrats. The House will be composed of 201 Republicans and 54 Democrats.

COSTA RICA, a republic in Central America. The legislative power is vested in the Congress or House of Representatives, 32 in number, elected for four years, one half being replaced every two years, in the proportion of 1 to 8,000 of population, by electoral colleges, for which every male citizen who is self-supporting has a vote. The President, who is elected for four years, is Rafael Iglesias, re-elected for the term beginning May 8, 1898. The Vice-President is Iglesias Llorente. The Cabinet at the beginning of 1900 was composed as follows: Secretary of State for Foreign Affairs, Worship, Education, Charities, and Justice, J. A. Facio; Secretary of the Interior, Police, and Public Works, Ricardo Pacheco; Secretary of the Treasury, Juan B. Quiros; Secretary of War and the Navy, José Astúa Aquilar.

Area and Population.—The area of the republic is about 23,000 square miles. The population was reckoned at 294,940 in March, 1897. Since 1894 the net immigration has been about 1,000 a year. In 1892 there were 6,289 foreigners, of whom 831 were Spanish, 634 Jamaican, 622 Italian, 342 German, 246 English, and 204 from the United States. The Government has made liberal concessions for the purpose of attracting colonists. The descendants of Spanish settlers live in and around the towns, chief of which is San José, the seat of government, with about 25,000 inhabitants. The public schools number 327. There are also 5 institutions for superior education. Education is free and compulsory, and the law is strictly enforced. A regular military force of 600 men is maintained, and there is a militia of 12,000 men kept in training, which can be increased in war to 34,000 by calling out all males between eighteen and fifty years of age. The naval force consists of a gunboat and a torpedo boat.

Finances.—The revenue for 1899 was 8,413,199 pesos, of which 2,735,974 pesos were derived from customs and 2,300,000 pesos from excise. The expenditure was 8,069,748 pesos, of which 5,232,168 pesos were spent for government and 1,377,525 pesos for debt. The foreign debt, incurred mainly for an interoceanic railroad that was not built, has been scaled down on the ground of the depreciation of silver, the Government having failed to pay interest until the arrears amounted to nearly as much as the principal. Of the new bonds, £1,475,000 pay 2½ per cent. and £525,000 pay 3 per cent. Besides these the Government owes £90,000 of foreign debt and 2,922,221 pesos of internal debt. The adoption of the gold standard was voted in 1896, and the ratio of gold to silver was fixed at 26½ to 1. The project has not yet been carried out. The silver coinage in circulation is 350,000 pesos, and there is no gold, the principal currency being bank notes, 3,300,000 pesos in 1896, protected by a specie reserve of 1,250,000 pesos, but worth only 46 per cent. of their nominal value in exchange.

Commerce and Production.—Coffee is the most profitable product, and bananas come next. Corn, rice, yams, and potatoes are the principal food crops. Cacao culture is not of long standing, and is rapidly extending. The live stock, mostly cattle, was valued in 1897 at 12,695,000 pesos. The working of gold and silver mines has nearly ceased. The value of imports in 1898 was 4,258,896 pesos in gold, compared with 5,460,944 pesos in 1897; value of exports, 5,474,774 pesos in 1897 and 5,659,219 pesos in 1898. The export of coffee in 1899 was 19,486,125 kilogrammes, valued at 4,209,570 pesos. Of bananas, 2,331,036 bunches were exported. Other exports are cedar wood, various cabinet woods, and hides. The number of vessels that called at Limon and Punta Arenas in 1898 was 449. The shipping of Costa Rica consists of 3 steamers, of 600 tons, and 2 sailing vessels, of 551 tons.

Railroads, Posts, and Telegraphs.—The section of the long projected transisthmian railroad that runs from Port Limon inland stops at Alajuela, 117 miles from the Gulf coast. The Pacific section, from Punta Arenas to Esparza, is only 14 miles long. There are 917 miles of telegraph lines. The number of messages in 1897 was 382,116. The number of letters and other pieces carried in the mails in 1896 was 1,164,807 in the internal and 822,190 in the foreign service.

The Colombian Boundary.—An old frontier dispute between Costa Rica and Colombia was referred to the decision of the President of the French Republic. This was rendered in September, 1900. The award makes the cordillera of the

mountains the frontier line, which starts from Punta Mona, on the Atlantic coast, crosses northward the valleys of the Tarina and Sixola rivers, then follows a line drawn about 9° of north latitude, bends so as to correspond with the water parting between the Chiriqui Viejo and the streams falling into the Gulf of Dulce, and ends on the Pacific at Punta Burica. All the islands near the coast east of Punta Mona belong to Colombia, and those farther away from the continent lying between the Mosquito coast and the Isthmus of Panama. In the Pacific, the Burica Islands and all islands to the eastward of them are Colombian; all those west of that point are assigned to Costa Rica.

CRETE, an island in the Mediterranean, formerly a Turkish vilayet, now an autonomous province under the suzerainty of the Sultan. Insurrections of the Christian part of the population have occurred at frequent intervals since the Hellenes won their independence. When the people again rose in 1896, aided by volunteers from Greece, the great powers intervened. The naval forces of England, Austria, France, Germany, Italy, and Russia blockaded the coast to prevent the arrival of re-enforcements and the landing of arms, either for the insurgents or the Turkish garrison, and detachments of marines occupied the ports to preserve order. The powers intervened also in the war between Greece and Turkey that grew out of the Cretan insurrection. The Sultan granted autonomous government to Crete in the final settlement, and at the suggestion of the powers nominated as Commissary General of Crete Prince Georgios of Greece, born June 24, 1869, the second son of the King of the Hellenes. He assumed office on Dec. 21, 1898.

Crete is a mountainous island with patches of exceeding fertility in the valleys and lowlands. The products are olives, grapes, citrus fruits, tobacco, cotton, silk, grain, etc. The area is 3,326 square miles, with 294,192 inhabitants in 1896, of whom 88,487 were Mohammedans. Canea, the present capital, has, according to a census taken on June 17, 1900, 21,475 inhabitants; Candia, the former capital, 22,026; Retimo, 8,354. The number of Mohammedans in the three cities was ascertained to be 26,177, which is practically the total Mussulman population remaining on the island, as few of the Mohammedans returned to their homes in the country after the installation of the Christian government, and a large proportion of those who did were obliged to emigrate. About 2,000 Mohammedans lost their lives during the insurrections of 1896 and 1897, and 60,000 have since emigrated.

Germany and Austria withdrew from the occupation of Crete and from the concert of guaranteeing powers. A constitution was adopted in April, 1899, by which the legislative power is vested in a National Assembly of 188 members, of whom 50 are Mohammedans, elected for three years by the adult males. The executive power is vested in the Commissary General, advised by a Council of 5 members presiding over various branches of the administration, one of whom must be a Mohammedan. The island is divided into 5 prefectures. Greek is the official language. A militia has been organized, service in which is compulsory. The Government was authorized by the Constituent Assembly to contract a loan of 9,000,000 francs at 3 per cent., 4,000,000 francs to indemnify the powers for the expenses of the occupation and 5,000,000 francs to compensate Cretans for their losses suffered during the insurrection and enable them to resume agricultural production and to found a national bank. The establishment of the

bank with a capital of 10,000,000 drachmai and an exclusive right to emit bank notes was approved in May, 1899. The Council of Ministers, constituted Feb. 20, 1899, is composed as follows: Minister of Justice, C. Venezelos; Minister of Finance, M. Fomis; Minister of Public Instruction and Worship, Nicolas Giamalakis; Minister of the Interior and Public Works, Hussein Jenitzarakis. A conference at Rome of the representatives of England, France, and Russia, and the Italian Minister of Foreign Affairs agreed, in May, 1900, to the issue of a long loan with a sinking fund, besides a special loan for the settlement of indemnities for losses suffered by foreigners, and decided that the question of the share of revenues of the island to be assigned to the Ottoman public debt should be submitted to arbitration.

CUBA, an island of the West Indies, formerly a Spanish colony; since December, 1898, in the military occupation of the United States. The treaty of peace between the United States and Spain, whereby Spain relinquished all authority over the island, was signed at Paris, on Dec. 10, 1898, and ratified by the United States Senate on Feb. 6 and by the Queen Regent of Spain on March 17, 1899. The United States Government assumed the responsibility of preserving order and protecting life and property until such time as the Cuban people should organize a stable government capable of maintaining internal order and fulfilling international obligations. Under Gen. John R. Brooke, the first military Governor General, who had control of the civil administration as well as of military affairs, Cuban mayors and aldermen were appointed in every municipality and a Supreme Court was established. The post office was organized on the model of that of the United States. A new and more general system of public education was introduced. There were 843 public schools in 1899. Gen. Leonard Wood was appointed Governor General late in 1899.

Area and Population.—The area of Cuba is estimated at 45,872 square miles. The population enumerated at the census of 1887 was 1,631,687, comprising 882,600 males and 749,087 females. The colored population was 528,798. Havana, the capital, contained 200,448 inhabitants. The total population in 1895 was estimated at 2,018,000. In 1899, in consequence of the war of liberation, it had diminished to 1,572,797, according to a census taken under the direction of the United States military authorities, showing a decrease of 58,840 in twelve years, attributable to the war of liberation, especially the starvation and exposure incident to Gen. Weyler's reconcentration policy. The census was taken by Cubans under Cuban supervisors, who were instructed for their work in Washington. The enumerators were women, it being the first time that Cuban women were employed in the public service. In 79 districts of the 4 western provinces—viz., Santa Clara, Matanzas, Havana, and Pinar del Rio—there was a diminution of population compared with 1887. In the remaining 16 districts there were slight gains, and in the 47 districts of Santiago and Puerto Principe, the eastern provinces, the population increased considerably. The districts of the western provinces that showed gains were those in which the *reconcentrados* were collected or those in which there was little or no reconcentration. There are 96 towns of more than 1,000 inhabitants, 16 of which have more than 8,000, 5 more than 25,000, and 1 more than 200,000. The population of Havana was 235,981. The center of population is in Santa Clara province, 8 miles northeast of Cienfuegos, having moved 24 miles to the southeast since 1887. The native whites constitute 57.8 per cent. of the total

population, foreign whites about 9 per cent., colored 32 per cent., and Chinese less than 1 per cent. The foreign-born live mostly in the cities, nearly one third of them in Havana. Of the total population, 83 per cent. are Cubans, 1 per cent. claimed Spanish citizenship, and 11 per cent. had not declared their intentions when the census was taken. There were 1,004,884 persons, 63.9 per cent. of the total, who could neither read nor write; 33,003, or 2.1 per cent., who could read but not write; 514,340, or 32.7 per cent., who could read and write, but had no superior education; and 19,158, or 1.2 per cent., who had superior education. The persons born out of wedlock constitute 13½ per cent. of the population.

Finances.—The revenue for 1899 was estimated at \$26,359,650, of which \$14,705,000 came from customs, \$6,142,500 from taxation, \$1,900,000 from the lottery, \$1,640,650 from stamps, etc., \$435,000 from national property, and \$1,536,000 from other sources. The expenditures were estimated at \$26,356,731, including \$12,574,709 for the debt, \$2,645,150 for the executive, \$1,941,932 for the national church and justice, \$5,896,741 for war, \$1,055,136 for marine, \$1,036,582 for agriculture, industry, and commerce, \$708,979 for finance, \$247,033 for education, and \$142,290 for other expenses. The approximate amount of the funded debt when the Spaniards left Cuba was \$253,800,000, none of which was assumed as a charge on the Cuban people, who were released also from the additional debt of about \$100,000,000 incurred by Spain in attempting to suppress the last insurrection.

Commerce and Production.—There were 90,960 plantations in Cuba in 1891, having an estimated value of \$220,000,000, or \$17,000,000 a year. The live stock consisted of 584,725 horses and mules, 2,485,766 horned cattle, 78,494 sheep, and 570,194 hogs. In the course of the war of independence the animals were consumed and almost disappeared, not more than 25,000 cattle, 5,500 horses, 2,150 mules, 8,500 hogs, and 4,500 sheep remaining, according to an estimate made in 1899. The sugar and tobacco plantations were devastated, of the former not more than 526 being worked in 1899 out of 1,369 that existed in 1895, of the latter not more than 1,250 out of 9,487, and of coffee plantations only 115 out of 998. Fruit and vegetable cultivation as well as stock farming was practically abandoned, and 120,000 plantations that were in existence in 1895 relapsed into the wild state. Against 22,156 commercial houses and manufacturing businesses in 1895 there were only about 13,500 in 1899. The exports, amounting to \$100,000,000 before the war, were reduced by four years of guerrilla warfare to a fifth of that sum. The sugar crop receded from 1,004,264 tons in 1895 to 225,221 tons in 1896, 212,051 tons in 1897, 204,123 tons in 1898, and 25,098 tons in 1899. The average tobacco crop has been 560,000 bales of 110 pounds, of which 338,000 bales were exported and 222,000 bales were made up into cigars and cigarettes in the factories of Havana. There were 185,914,000 cigars exported in 1896 and 123,417,000 in 1897, but only 91,812,000 in 1898. The export of cigarettes in 1895 was 48,163,846 packages. The leaf tobacco exported goes mostly to the United

States, and about half of the exports of cigars. Minor exports from Cuba are mahogany and other woods, oranges and other fruits, and beeswax and honey. Mining is carried on in the province of Santiago de Cuba. There are two American companies, which ship from 30,000 to 50,000 tons of ore to the United States every month. In 1891 there were 138 iron, 88 manganese, and 53 copper mines.

The total value of imports in 1895 was \$61,443,335. The value of exports was \$110,235,020. The value of the sugar exported was \$76,596,617; cigars, \$24,047,841; rum and liquors, \$1,034,470; timber, \$884,601; other articles, \$7,721,491. The exports in 1892 were \$92,752,000 in value and the imports were \$63,764,265. In 1899 the imports were about the same, the value being \$64,343,210, but the exports were only \$43,880,740. British and other foreign capital was invested in Cuba in the purchase of railroads, cigar factories, sugar plantations, etc., but very few new enterprises were started. The imports consisted mainly of food substances, clothing, liquors, and other articles of consumption, while of tools, machinery, or other material for productive enterprise or for public works the imports were small. The value of food products amounted to half the total value of the imports of Havana, which receives 75 per cent. of the imports of the island. The mortgage indebtedness in Cuba as reported in the census of 1899 constitutes 58 per cent. of the value of the rural real estate and 79 per cent. of that of the urban real estate according to the valuation on the registers of property made before the American occupation began.

Railroads and Telegraphs.—There are 1,135 miles of railroad, besides private branches running to the larger sugar plantations.

The telegraphs have a total length of 2,301 miles, with 3,450 miles of wire. The number of messages in 1894 was 357,914.

Constitutional Convention.—A convention to frame a constitution for the Cuban republic was elected by the people and opened on Nov. 6 by Gov.-Gen. Wood, who said that it would be the duty of the delegates to draft and adopt a constitution adequate to secure stable, orderly, and free government and to formulate what ought to be the relations between Cuba and the United States in their opinion, after which the Government of the United States would doubtless take such action as should lead to a final agreement between the peoples of the two countries to the promotion of their common interests. The convention, consisting of 31 delegates, elected as temporary chairman Señor Llorente, Justice of the Supreme Court. The delegates took an oath renouncing any allegiance to or compact with any state or nation, swearing to uphold the sovereignty of the free and independent people of Cuba, and to respect the solution that the convention should adopt as well as the government to be established by the constitution. Mendez Capote, who was Vice-President of the revolutionary government and Secretary of State under Major-Gen. Brooke's administration, was elected on Nov. 24 to be president of the Cuban Constitutional Convention, receiving 17 votes from the Radical Republicans against 11 cast by the Nationals for Eudaldo Tamayo.

D

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The popu-

lation, according to each decennial census, was 50,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840;

91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; 168,493 in 1890; and 184,735 in 1900. Capital, Dover.

Government.—The following were the State officers in 1900: Governor, Ebe W. Tunnell; Secretary of State, James H. Hughes; Treasurer, L. Heisler Ball; Auditor, John A. Lingo, who died Jan. 26, and was succeeded by Isaac N. Fooks; Attorney-General, Robert C. White; Commissioner of Insurance, Edward Fowler; Adjutant General, Garrett J. Hart; Inspector of Agriculture, E. H. Bancroft; Chancellor, John R. Nicholson; Chief Justice, Charles B. Lore; Associate Justices, Ignatius C. Grubb, W. C. Spruance, James Pennewill, and William H. Boyce; Clerk, William Viridin. All are Democrats except Messrs. Ball and Lingo and Justices Spruance and Pennewill, who are Republicans.

Population.—The population of counties in 1890 and in 1900 was as follows:

COUNTIES.	1900.	1890.
Kent.....	32,762	32,667
New Castle.....	109,697	97,184
Sussex.....	42,276	38,642

The population of the principal cities in 1900 was: Wilmington, 76,558; New Castle, 3,380; Dover, 3,329; Milford, 2,500; Lewes, 2,259; Smyrna, 2,168; Laurel, 1,825; Seaford, 1,724; Georgetown, 1,658; Middletown, 1,567; Harrington, 1,242; Newark, 1,213; Delaware City, 1,132.

Finances.—The joint committee of the Legislature to settle with State officers found that the Secretary of State had received from incorporation fees \$69,739.89 since March 13, 1899, and that 396 companies had been incorporated under the general corporation act. The accounts of the State Treasurer for the year ending Jan. 9 showed the following figures in recapitulation: Balance in general fund, \$65,152.33; Delaware General Electric Railroad Company (guarantee fund), \$17,500; New Castle and Delaware City Railroad Company (guarantee fund), \$4,500; total, \$43,152.33. Balance in school fund, Jan. 9, 1900, \$34,035.90; balance in sinking fund, Jan. 9, 1900, \$4,483.73; total, \$81,671.96; guarantee fund, \$22,000; grand total, \$103,671.96. There was practically no money at the beginning of 1899, as there were debts amounting to more than was in the treasury. Two notes amounting to \$85,000 were paid in the year.

The amount of State licenses of all kinds for the year ending Sept. 29 is given as \$114,359.23, an increase of \$5,280 over the amount of the year preceding. The revenue from taxation of railroads, according to the Treasurer's report, was \$68,653.30. The Adams law for taxation of investments has been attacked as unconstitutional.

Wilmington had a bonded debt of \$1,965,100 at the beginning of the year.

Militia.—The National Guard, which was somewhat broken up by enlistments for the Spanish war, is improving, companies being refilled. The Government appropriation under the new law is \$5,175 a year, to be drawn in clothing, arms, and camp and garrison equipage.

Education.—The reports of the public schools of the State, outside of Wilmington, give the following statistics: Total enrollment in all schools (white), 22,254; monthly attendance, 15,938; number in graded schools (those having more than one teacher), 10,280; in rural districts—white, 11,974; colored, 4,677; amount paid in salaries in white schools, \$141,059; colored, \$18,627.94; for text-books—white, \$8,277.18; colored,

\$1,459; total expenditures for white schools, \$194,300.63; for colored, \$22,826.94; number of graded schools having libraries—New Castle County, 4; Kent, 7; Sussex, 1; number of schools in rural districts having libraries—Kent County, 2, where are good circulating libraries under the control of the State Federation of Women's Clubs; average monthly salary of principals in New Castle County, \$53; Kent, \$50; Sussex, \$53.50; assistants, New Castle County, \$35; Kent, \$32.75; Sussex, \$29.25.

There are 22 Delaware students in the State Normal School at Westchester, Pa.

Delaware College granted diplomas to 14 students, June 20. The class that entered in September numbered 25, of whom 19 are in the agricultural and engineering courses. A new curriculum went into effect this year, giving more freedom for elective studies. The college and the experiment station have about 10,000 books, of which 3,000 are in the general library.

The Wilmington Military Academy graduated 4 in the scientific course and 1 in a special course in June.

Attention was called this year to a so-called "University of Delaware," which was offering inducements to residents of Europe and parts of the United States who desire the degree of doctor of philosophy. The incorporators were found to be a dentist, a saloon keeper, and a trimmer for a car company. The two latter knew very little about the institution, but had signed because they were asked to. The dentist could not be found. Under its charter the "university" can teach dental surgery and the science of philosophy, and confer degrees for these courses, and also confer honorary degrees. The charter is perpetual, and the "university" can operate in any part of the world.

Public Institutions.—The Hospital for the Insane, at Farnhurst, had 320 patients in August. The expenses for the first four months of the year were \$9,176.46.

The Ferris Industrial School for Boys had 70 inmates at the opening of the year. The receipts, including a balance of \$1,207.31, were \$17,447.07; the balance remaining, \$2,846.59. A farm of 200 acres is cultivated by the boys.

The Industrial School for Girls is supported in part by the State and in part by voluntary subscriptions. There were 19 girls present in May; accommodations are provided for 50.

The Delaware Orphan Home and Industrial School for Colored Boys was opened at Wilmington in November. It is maintained by colored residents.

Business.—From statistics of failures in 1899 it is learned that there were 30 in Delaware, with liabilities amounting to \$95,954 and assets to \$47,431. In 1898 there were 21, with \$136,450 liabilities and \$71,700 assets; and in 1897, 45, with \$210,800 liabilities and \$91,950 assets.

The clearings at Wilmington banks for one week of April, 1900, were \$1,139,314.52, as against \$876,957.87 for the corresponding period of 1899. The clearings for 1898 were about \$37,000,000, and for 1899 \$42,000,000. For the six months ending April 1 they were \$24,353,054.

Railroads.—The report of the Delaware Railroad Company for the year ending Oct. 31, 1899, shows the following figures: Freight earnings, \$895,833.92; passenger, \$404,575.54; mails, express, rents, and miscellaneous, \$91,127; total gross earnings, \$1,391,536.46; operating expenses, \$988,743.52; net earnings, \$402,792.94; interest and premiums on securities matured, \$14,110.54; gross income, \$416,903.48; interest, taxes, and sundry charges,

\$84,513.32; net income, \$332,390.16. The figures show an increase in freight receipts of \$104,246.85; in passenger receipts, of \$67,060.56; in receipts from mail, express, rents, and miscellaneous, of \$8,752.30; total increase, \$180,059.71.

The report of the Wilmington and New Castle Railway Company for the year ending June 30 shows: Gross receipts, railway and electric light, \$42,158.52; operating expenses, including insurance, accidents, and damages, \$23,003.90; earnings over operating expenses, \$19,154.62; sale of capital stock, 400 shares at \$10 par, \$4,000; income, \$23,154.62.

Wilmington Harbor.—The amount expended for the improvement of Christiana river and Wilmington harbor to June 30, 1899, was \$453,552.62, of which \$51,357.84 was expended on the present project.

Political.—State officers were chosen at the November election.

Two conventions were held by the Republicans early in the year to choose delegates to the national convention. The Union, or "Addicks," Republicans had proposed to the regular Republicans that a joint call should be issued for a common primary on the basis of equality of representation in the 35 legislative districts, but the proposition was rejected. The regular convention was called for Feb. 27, and the Union call followed for the same day. Later, the former faction changed to March 21, on account of a rule adopted by the national committee, requiring thirty days' notice instead of twenty. It was then too late for the other convention to be called for the same day, as only thirty days intervened between the call of the regulars and the date they had fixed, and the Union Republicans met April 3. The Credentials Committee of the Republican National Convention, by a vote of 38 to 9, reported in favor of seating the Union delegation. The regular Republicans refused to accept a half vote in the convention.

The regular Republicans called a convention for nominating State officers for Aug. 21. The Union Republicans assembled Aug. 6, having changed their first date of Aug. 23. They made nominations at the former date, and then held another convention, Aug. 23, at which time they accepted the presidential electors nominated by the regulars. The ticket of the regulars differed except as to the electors, the Attorney-General, and the candidate for the unexpired term in Congress of Mr. Hoffecker, deceased, for which both factions nominated his son. But in October the two factions agreed upon a ticket, which was: For Governor, John Hunn; Lieutenant Governor, Philip L. Cannon; Attorney-General, Herbert H. Ward; Insurance Commissioner, George W. Marshall; Treasurer, Martin B. Burris; Auditor, Purnal B. Norton; Representative in Congress—short term, Walter O. Hoffecker; long term, L. Heisler Ball.

The Democratic convention was held Sept. 11. The ticket follows: For Governor, Peter J. Ford; Lieutenant Governor, William F. Hoey; Attorney-General, Peter L. Cooper, Jr.; Insurance Commissioner, Francis D. Baldwin; Treasurer, William L. Sirman; Auditor, Waller Donoho; Representative in Congress—short term, Edward Fowler; long term, Alexander M. Daly.

The Prohibitionists nominated: For Governor, Richard M. Cooper; Lieutenant Governor, John Hutton; Insurance Commissioner, Charles H. Mason; Treasurer, W. H. Ridgeway; Auditor, Daniel B. Maloney; Representative in Congress—short term, Lewis M. Price; long term, L. W. Brosius.

The Social Democratic candidates were: For

Governor, Gustav E. Reinicke; Lieutenant Governor, Paul Scheuler; Representative in Congress—short term, John J. Mettler; long term, Nathan Shtofman.

The Republicans carried the State. On presidential electors the vote stood: Average Republican, 22,529; Democratic, 18,858; Prohibitionist, 538; Social Democratic, 57. For Governor: Republican, 22,421; Democratic, 18,808; Prohibitionist, 574; Social Democratic, 59.

The Legislature will stand: Republicans, 9; Democrats, 8. House: Republicans, 20; Democrats, 15.

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, consists of an upper house, the Landsting, containing 66 members, 12 appointed for life by the Crown and 54 elected for eight years by indirect suffrage, and a popular assembly, the Folkething, containing 114 members elected by the direct suffrage of all male citizens thirty years of age, excepting criminals, paupers, and servants, for three years, one member for every 16,000 inhabitants. The reigning King is Christian IX, born April 18, 1818, son of the Duke of Schleswig-Holstein-Sonderburg-Glücksburg, appointed by the treaty signed at London on May 8, 1852, heir to Frederik VII, the last sovereign of the house Oldenburg, whom he succeeded on Nov. 15, 1863. The heir apparent is Prince Frederik, born June 3, 1843. The Cabinet of Ministers at the beginning of 1900 was composed of the following members: President of the Council and Minister of Finance, H. E. Hörring, appointed May 25, 1897; Minister of the Interior, V. de Ludvig Bramsen, appointed Aug. 28, 1899; Minister of Justice and for Iceland, H. E. Hörring, *ad interim*; Minister of Foreign Affairs, N. F. Ravn, *ad interim*; Minister of War, Col. J. G. F. Schnack, appointed Aug. 28, 1899; Minister of Marine, Vice-Admiral N. F. Ravn, appointed Jan. 4, 1879; Minister of Education and Worship, Bishop H. V. Sthyr, appointed May 25, 1897; Minister of Agriculture, Alfred Hage, appointed May 25, 1897.

Area and Population.—Denmark has an area of 15,289 square miles, and in 1890 had 2,185,335 inhabitants, of whom 1,059,322 were males and 1,126,013 females. The annual increase since 1870 had averaged 1 per cent. Of the total population 882,000 depended on agriculture, 534,000 on industries, and 208,000 were day laborers or of no fixed occupation. The number of marriages in 1898 was 17,872; of births, 71,677; of deaths, 36,669; excess of births, 35,008. The number of emigrants, nearly all destined for the United States, was 2,340 in 1898 and the same number in 1899.

Finances.—The revenue in 1899 was 71,193,060 kroner, and expenditure 76,259,212 kroner. The estimated revenue for 1900 was 67,672,188 kroner; estimated expenditure, 69,494,095 kroner. For 1901 the revenue was estimated at 72,875,070 kroner, and expenditure at 72,178,455 kroner. Of the revenue indirect taxes give 51,389,100 kroner, mainly customs and excise receipts; direct taxes, 10,638,700 kroner; interest on state assets, 4,443,043 kroner; revenue from capital and funding of debt, 3,659,905 kroner; balance from lotteries, 1,000,000 kroner; balance from domains, 893,424 kroner; separate revenues, 538,317 kroner; posts and telegraphs, 222,581 kroner. The expenditures were allotted as follow: Ministry of War, 11,022,419 kroner; Ministry of Marine, 7,787,316 kroner; interest and management of state debt, 7,059,300 kroner; Ministry of Public Worship and Instruction, 6,344,134 kroner; Ministry of Finance, 4,784,848 kroner; pensions, civil and military, 3,349,541 kroner; Ministry of Agriculture, 3,223,082 kroner;

improvement of state property and reduction of debt, 1,802,731 kroner; civil list and appanages, 1,203,200 kroner; Ministry of Foreign Affairs, 707,956 kroner; Rigsdag and Council of State, 319,016 kroner; Iceland, 76,564 kroner. The reserve fund which is kept in order to provide funds to meet any sudden emergency amounted on March 31, 1899, to 17,890,925 kroner. The amount of the state debt on March 31, 1898, was 208,193,351 kroner. The foreign debt, most of which pays 3 per cent., amounted in 1899 to 138,512,250 kroner. The interest on public debts after deducting productive investments is only a little over 2 kroner per capita. The invested funds amount to 73,069,425 kroner, not including the railroads, valued at 228,661,820 kroner, nor the domains.

The Army.—All able-bodied Danes are liable to serve in the army, the period of service being eight years in the regular army and reserve and eight years more in the extra reserve. Conscripts receive six months of training for the infantry, eight for the cavalry, four for siege artillery, and three for field artillery and engineers. A second course of training for the less intelligent and diligent recruits lasts eight months for the infantry, eleven for the cavalry, and twelve for the artillery and engineers. The peace strength of the regular army in 1899 was 824 officers and 8,945 men. The war strength was 1,448 officers and 60,138 men.

The Navy.—The Danish war fleet, intended only for the defense of the coasts, contains 5 armor clads of various sizes and designs, from the Tordenskjold, torpedo ship, of 2,530 tons, carrying a 52-ton gun in an armored barbette, to the Helgoland, of 5,370 tons, armed with a 36-ton, 4 22-ton, and quick-firing guns. The new Herluf Trolle and an uncompleted sister ship carry a pair of 26-ton guns and have 9 inches of side armor. Three old ironclads are kept in commission for coast defense. There are 5 deck-protected cruisers of various classes, 8 old gunboats, a torpedo vessel, and 13 first-class and 12 second-class torpedo boats. The navy is manned by 285 officers and 1,337 sailors, gunners, miners, mechanics, and workmen.

Commerce and Production.—The production of wheat in 1898 was 1,054,000 hectolitres; barley, 7,705,000; oats, 14,620,000; rye, 5,684,000; potatoes, 5,838,000; beet root, etc., 46,770,000. The live stock in 1898 comprised 1,743,440 cattle, 449,264 horses, 1,074,413 sheep, 31,803 goats, and 1,178,514 hogs. The export of horses in 1898 was 15,423 in number; of cattle, 36,066; of sheep, 2,644. There were 75 distilleries in 1898, and they produced spirits containing 3,514,000 gallons of pure alcohol. The production of taxed beer was 21,090,000 gallons; of light beer, 30,070,000 gallons. The beet sugar, produced in 7 factories, amounted to 35,080 tons. The value of fish caught in 1897 was 6,415,148 kroner.

The total value of imports in 1898 was 462,219,000 kroner; of exports, 326,361,000 kroner. The exports of domestic products were 238,525,000 kroner in value, in which sum 204,200,000 kroner represent food substances, 25,400,000 kroner raw materials, 6,500,000 kroner articles of personal and household consumption, and 2,400,000 kroner seeds, fodder, and fertilizers. The special imports were 367,300,000 kroner in value, in which sum food substances came to 87,300,000 kroner, personal and domestic articles to 72,800,000 kroner, fuel to 27,900,000 kroner, fodder, manure, and seeds to 56,700,000 kroner, and raw products to 122,600,000 kroner. The imports of colonial products were 36,605,000 kroner in value: beverages, 7,269,000 kroner; textile manufactures, 55,211,000 kroner; metals and metal manufactures, 38,107,000

kroner; wood and wood manufactures, 27,619,000 kroner; coal, 30,197,000 kroner; animals, 2,445,000 kroner; pork, butter, eggs, and lard, 35,875,000 kroner; cereals, 69,281,000 kroner. The domestic exports of colonial goods were 1,013,000 kroner; beverages, 685,000 kroner; textiles, 630,000 kroner; metals and hardware, 2,369,000 kroner; wood and wood manufactures, 632,000 kroner; coal, 5,000 kroner; animals, 15,417,000 kroner; butter, eggs, lard, etc., 171,409,000 kroner; cereals, 9,394,000 kroner. In the general exports colonial goods came to 13,198,000 kroner; beverages, 3,352,000 kroner; textiles, 6,585,000 kroner; metals and hardware, 7,239,000 kroner; wood and manufactures 1,575,000 kroner; coal, 2,947,000 kroner; animals, 15,437,000 kroner; butter, eggs, and pork products, 194,115,000 kroner; cereals, 17,351,000 kroner. The general commerce with different countries in 1898 was in kroner as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	97,187,000	199,922,000
Germany.....	133,701,000	56,401,000
Sweden and Norway.....	60,984,000	43,349,000
United States.....	64,022,000	2,417,000
Russia and Finland.....	37,919,000	13,833,000
France.....	9,144,000	863,000
Netherlands.....	8,564,000	894,000

Rest of America.....	6,466,000	18,000

Navigation.—The number of vessels in the foreign trade entered at Danish ports during 1898 was 32,166, with 2,884,441 tons of cargo; cleared, 32,716, with 725,657 tons of cargo. The number of coasting vessels entered was 36,298; cleared, 36,932. The merchant navy on Jan. 1, 1899, consisted of 3,774 vessels, of 394,685 tons, counting all of or above 4 tons, and of the total number 510, of 225,422 tons, were steamers.

Railroads, Posts, and Telegraphs.—The railroads in 1898 had a total length of 1,568 miles, of which 1,108 miles belonged to the state.

The postal traffic for 1898 was 84,877,838 letters and post cards, and 79,613,655 newspapers, samples, etc.

The length of telegraphs in the Government network in 1898 was 3,029 miles, with 8,733 miles of wire. There were dispatched during that year 2,106,376 messages, of which 573,656 were internal and 1,379,444 foreign private messages, and 153,276 were meteorological and official messages. The telephone lines had a length of 596 miles, with 1,476 miles of double wire.

Change of Ministry.—The Hørring ministry took office in May, 1897, in the face of a strong adverse majority in the popular chamber, where 25 Moderate Liberals, 55 Radicals, and 9 Socialists were united in the Opposition, and only 24 Conservatives supported the Government. The ministry was appointed to carry on the old conflict which hinges on the question whether the King shall choose his advisers or whether the ministers shall represent the popular majority. The retention of the minority party in power provoked the conflict which caused a stoppage in normal constitutional government, so that from 1885 to 1894 no budget was voted in Denmark, and the Government promulgated provisional finance laws by royal decree. Baron Reetz-Thott, Hørring's predecessor, endeavored to win the Opposition in the Folkething by concessions, and in this policy went further than the Conservatives of the Landsting approved, and so fell between two stools. The Hørring ministry was a continuation of the former one, in which Hørring held the post of Minister of the Interior, and it therefore encoun-

tered from the beginning the same difficulties. The Opposition resisted particularly the military policy of the Government, which demanded the completion of the coast fortifications of Copenhagen. In 1898, declaring that the country was in danger, the Government, on its own authority, having failed to carry the project through the Rigsdag, appropriated 500,000 kroner for the fortification of the capital on the seaward side. The Opposition was highly indignant at this new act of arbitrary government, recalling the policy of the Estrup ministry, which ruled without Parliament. Hörring, however, had not undertaken to revive the constitutional conflict. When he saw that his ministry was doomed he sought to postpone the evil day by making changes in the Cabinet, replacing the Minister of War, Col. Tuxen, with an officer esteemed by the Opposition, putting Bramsen into the Ministry of the Interior, and removing another obnoxious member of the Cabinet. This did not avert the storm, however, and as soon as the Rigsdag assembled, on Oct. 2, 1899, it broke out. The war budget, in which the 500,000 crowns spent arbitrarily on the defenses of Copenhagen, appeared, and four tax bills that had been discussed in previous sessions afforded the chief points of attack. These tax bills provided for the conversion of certain Government taxes into communal taxes, a new tax on capital and incomes, the alteration of the customs tariff, and an increase in the tax on spirits. The Government demanded that the four should be dealt with as a whole. The brandy tax was intended to make up the deficiency caused by a lowering of customs duties. The Opposition was willing enough to reduce import duties, but not to make brandy dearer, although the Government had considerably moderated the spirit duty proposed in the bill submitted in the previous year. The Folkething decided that it would not discuss the brandy tax at all, but that the three other measures should be the subject of a compromise to be arranged with the Right. The Government could not agree to this because the tariff reduction without the substituted brandy duty would cut down the revenue. The Left in the Folkething appointed a committee to discuss the lowering of the communal taxes in connection with the introduction of an income and property tax. When the Folkething rejected the project of augmenting the brandy tax the ministry resigned. The elections of 1899 increased the Radicals in the lower chamber to 63 and the Socialists to 12, and reduced the Moderate Liberals to 23 and the Ministerialists to 15. Even in the Landsting the ministerial majority was not large, including the members nominated by the King. Still it was a lasting one, which would oppose a Radical Cabinet as vigorously and uncompromisingly as the Radicals formerly opposed the Conservative Estrup Cabinet. If the King could overcome his repugnance to the Left sufficiently to accept a radical ministry it would only lead to a renewal of the constitutional conflict with the position of the parties reversed, and probably would result in a fresh deadlock. The successor chosen for H. Hörring was therefore a Conservative of the same stripe as himself, H. Scheested, the vice-president of the Landsting, whose hope of success depended on his evolving an agrarian policy that would attract both the Conservative Agrarians in the Landsting and the Radical Agrarians in the Folkething. The Rigsdag session was closed by royal decree on April 26, and on April 27 the new ministry was announced as follows: President of the Council and Minister of Foreign Affairs, Hannibal Scheested; Minister of the Interior, V. de Ludvig Bramsen; Minister of Public Works, Railroads,

Posts, and Telegraphs, Baron Juul Rysensteen; Minister of Marine, Commander Middelboe; Minister of Justice, Dr. Goos; Minister of War, Col. J. G. F. Schnack; Minister of Agriculture, Herr Friis.

DISCIPLES OF CHRIST. The report of the General Statistician to the General Missionary Convention of the Disciples gave the whole number of churches as 10,528, and of members as 1,149,982, showing gains for the year of 127 churches and 31,982 members; and the amount raised for all benevolent and educational purposes as \$5,714,638, an increase of \$244,043. The number of Christian Endeavor Societies was 5,001, or 10 more than in the previous year. The schools for ministers, including the Bible chairs at the University of Virginia and Ann Arbor, Mich., the Disciples' Divinity House, Chicago, and two other schools, returned 442 students; while more than 1,300 students were taking the Bible Extension course of the Ann Arbor school.

The annual meeting of the American Christian Missionary Convention began at Kansas City, Mo., Oct. 11, with that of the Christian Woman's Board of Missions. This society had received during the year \$106,723, and had co-operated in expenditure and labor with the work of the other societies represented in the convention. Arrangements were made with the American Christian Missionary Society for the transfer of the work of the Board of Negro Evangelization and Education to its care. The American Christian Missionary Society, whose work is in the United States and Canada, met Oct. 13, 15, and 16. It had employed during the year 168 missionaries, together with 27 laborers of the Board of Negro Evangelization and Education, in 37 States and Territories, and had engaged in city evangelization or city missions in 16 large cities. The missionaries reported 6,028 additions to the churches, 53 churches organized, and 23 houses of worship completed during the year. The total receipts of the board had been \$63,027, while the various State and district societies had raised and expended \$114,368 for mission work in their respective fields, and the Woman's Board of Missions had expended \$30,000 for home missions. The aggregate results of all the three agencies showed 1,363 places helped, 202 churches organized, and 16,009 additions to the churches. The society had begun the year with a balance of \$3,460 in the treasury and no indebtedness, but, the appropriations having been larger than ever before, had closed it with a debt of about \$3,000. A committee was appointed at the meeting to confer with a like committee of the Free Baptists with reference to union.

The meeting of the Foreign Christian Missionary Society was held Oct. 16. The report represented that the past year had been the most prosperous in its history. The receipts from all sources had amounted to \$180,016, showing a gain of \$27,289 over those of the previous year. The offerings of the 3,067 contributing churches, as churches—\$65,964 in all—showed an average of \$21.50 per church, a gain of 40 per cent. over the average four years before. Four churches had been added to the number of those supporting one missionary each. The Sunday schools had contributed \$42,705, and the Christian Endeavor Societies \$2,966. Twenty-two hundred and twenty-nine dollars had been received from bequests, and \$30,425 on the annuity plan. Twelve missionaries had been sent out during the year, 2 had resigned, and 1 had united with another mission. Reports were made from missions in India, where 65 converts had been added and 1,831 children were enrolled

in the Sunday schools and 515 in the day schools, and more than \$35,000 had been sent by and through the society for the relief of sufferers by famine; Japan, where 95 converts, 706 members, 738 children in Sunday schools and 138 in day schools were returned; China, where 183 members had been added, making the present membership 565, and the missions had escaped damage from the disturbances; Turkey, where the converts numbered 65 and the present membership was 529; England, where the prevalence of the war spirit had prevented advance, and a small loss was returned; and Scandinavia, where 81 converts and a present membership of 1,209 were returned, but emigration had helped to thin the ranks. A new mission had been begun in the Sandwich Islands. Missionaries had been laboring during the year at Bolengi, on the Congo river, where friendly relations were maintained with the Baptist missions. A mission had been opened in Havana, Cuba, in December, 1899, where 11 persons had been baptized and the Sunday school had an attendance of from 20 to 45. The report of the Board of Church Extension began with a reference to the fact that the last three national conventions had recommended efforts to make the fund for that work

\$250,000 by the close of the year 1900. The fund had now actually reached \$252,129, more than realizing the hope implied in the recommendation. The new receipts of the year, including interest, had been \$57,119, exceeding those of the previous year by \$9,454; further, \$23,997 had been collected on loans, making the total receipts of the board for the year \$81,116, and showing a gain of \$16,839. Sixty loans, aggregating \$50,925, had been closed during the year, and 56 loans, aggregating \$47,900, granted but not closed. From the beginning of the fund 505 churches had been aided, and 166 churches had returned their loans in full, and 339 loans were still outstanding. The annuity fund had received \$18,050 during the year, and amounted now to \$36,251. Bequests amounting to \$6,621 had been received. Two new-named loan funds had been founded, making the whole number of such funds (of \$5,000 each) 9.

The Conference of the Churches of Christ in Great Britain and Ireland met at Mount Pleasant, Liverpool, July 31. Mr. David Drummond, of Glasgow, presided. One hundred and seventy-three churches, having 12,000 members, were represented. Reports were made on missions and Sunday schools.

E

EAST AFRICA. The strip of coast over which the Sultan of Zanzibar formerly exercised sovereign rights was leased by him to Germany, Great Britain, and Italy, and by agreements made by these three powers among themselves the whole Hinterland has been divided between them. German East Africa, embracing about 380,000 square miles with a population officially estimated at over 6,000,000, is divided from the Portuguese colony of Mozambique on the south by the river Rovuma, from British Central Africa on the southwest by Lake Nyasa and a line from the northern end of this lake to the southern end of Lake Tanganyika, from the Independent State of the Congo on the west by Lake Tanganyika and a conventional line drawn from its northern end, and from British East Africa on the north by a conventional boundary starting from the extremity of that line in 1° of south longitude, running due east to Victoria Nyanza, and from its eastern shore running southeastward to the Umbe river and the sea, with a deflection that leaves Kilimanjaro in German territory. The British protectorate of East Africa extends northward from this boundary to the line agreed with Italy in 1891, which is 6° of north latitude from 35° of east longitude eastward to the Juba river, and the course of that river down to the Indian Ocean, the boundary on the west being the agreed boundary of the Congo State, which is the water parting between the Congo and the Nile. To the northwest of the protectorate the basin of the Nile as far north as 10° of north latitude, formerly subject to Egypt, is claimed as a British sphere of influence, and the Egyptian Soudan farther north is under an Anglo-Egyptian condominium. British East Africa includes the territory acquired from the Sultan of Zanzibar and its back country as far as the Victoria Nyanza, the country formerly administered by the British East Africa Company, having an estimated area of 270,000 square miles, with 5,000,000 inhabitants, and the native kingdom of Uganda, the conquest of which exhausted the resources of that company, having an area of about 58,000 square miles and 1,000,000 inhabitants; also the islands forming the sultanate of Zanzibar, which have an area of 988

square miles and 210,000 inhabitants. The northern limit separating the British from what was recognized as the Italian sphere is no longer respected since Italy resigned to Abyssinia her claim to Gallaland and other countries of the interior, and the boundaries separating both the British sphere and the Egyptian Soudan from Abyssinia are indefinite. The Italian sphere in East Africa is now restricted to the Gonaali coast from Cape Guardafui southward to the Juba river, which has an area of about 100,000 square miles and a population estimated at 400,000. British Somaliland extends westward from the Italian sphere along the shore of the Gulf of Aden, and is 68,000 square miles in extent. At the head of the gulf, between British Somaliland and the Italian colony of Eritrea, bounded on the west by Abyssinia proper, is French Somaliland. Beyond the bounds of the Italian sphere, which has a breadth of about 150 miles, according to the treaty of peace made between Italy and Abyssinia in 1896, the British have endeavored to extend their East Africa protectorate northward by successive expeditions into the countries over which the Negus of Abyssinia holds an uncertain and precarious dominion, and the Negus, aided unofficially by the French and the Russians, has sent counter-expeditions to establish his rule southward as far as the shores of Lake Rudolf and westward toward the banks of the Nile, laying claim to wide regions that in the Anglo-Italian agreement were recognized as lying within the British and the Egyptian spheres. British military explorers have made treaties with native chiefs west of Uganda as far as the shores of Albert Nyanza, and with Somali and other tribes northeast of Uganda, and have sought commercial access to the Galla country. The total extent of the British sphere is asserted to be over 1,000,000 square miles.

Zanzibar.—The Seyyid, or Sultan, Hamud bin Mohammed bin Said, born in 1858, is still the nominal ruler of Zanzibar, though not only the political control but the civil administration has passed to the British agent and consul general, Sir Arthur H. Hardinge at present, whose sanction is necessary for any new law or decree and for

the expenditure of the public revenue, while the Sultan has the function of administering the existing Mohammedan laws under the control of the British agent, who receives his instructions from the Foreign Office in London. The Seyyid now reigning owes his throne to the British, who set aside the claimant favored by the Arab population. He receives an allowance out of the revenue of 120,000 rupees a year, and all the rest is devoted to the police, about 900 men under an English officer, the harbor works and other public improvements, and the general purposes of government. The port of Zanzibar, which has about 30,000 inhabitants, is the chief distributing point for the trade of all East Africa, and it is mostly in the hands of East Indians, whose connections are in Bombay and who for centuries have been the principal merchants of East Africa. There are about 7,000 of these Banyan traders in Zanzibar. The landowners are Arabs who have clove plantations in Pemba, and who grow rice, copra, and other products in Zanzibar and on the mainland and deal in ivory, rubber, and sometimes slaves. The imports of Zanzibar in 1898 amounted to £1,555,070 and the exports to £1,497,883. These figures include not only the foreign trade, but that between the port of Zanzibar and the other ports of the sultanate. Imports of cloves were valued at £158,507 and exports at £143,730; imports of rice at £197,160 and exports at £147,320; imports of cloth at £376,966 and exports at £361,875; imports of ivory at £113,164 and exports at £112,914; imports of coal at £32,801; imports of copra at £59,315 and exports at £105,114; imports of groceries at £58,006; imports of rubber at £30,853 and exports at £34,622. The trade was divided among different countries as follows:

COUNTRIES.	Imports.	Exports.
German East Africa.....	£914,100	£476,680
British India.....	467,852	140,984
Zanzibar and Pemba.....	217,843	158,880
British East Africa.....	59,544	202,581
Great Britain.....	121,211	114,716
France.....	26,631	114,417
Germany.....	93,516	41,141
America.....	78,991	57,092

The year 1898 was one of great prosperity, resulting from an enormous clove crop, which reached 21,000,000 pounds, and the money put into circulation by the building and opening of the railroad from Mombasa. This was followed by a year of dearth caused by the Boer war and the failure of rains. Countries that usually export grain became buyers at famine rates. The clove crop was only 6,965,000 pounds—the smallest on record. The only export that increased was hides, for cattle could not be fed, and died or were killed, the largest quantity of the hides and of goatskins going to the United States. The supply of ivory does not diminish, although the elephants are being killed off. It is kept up by the finding of old hoards and by pushing the caravans farther inland each year. Imports from the United States are gray sheetings and shirtings and kerosene.

The number of vessels entered at the port of Zanzibar during 1898, excluding coasting vessels, was 183, of 286,209 tons. The unit of value is the Maria Theresa dollar, though the Indian rupee is universally current at the exchange value of 47 cents. Justice between the Sultan's subjects is administered by the Mohammedan *kazis*. Civil cases are usually brought before the British court, from which an appeal lies to the High Court of Bombay. There is an admiralty court which condemns captured slave dhows. The British court

has jurisdiction over slaves freed by the British agent, but usually if a slave wants freedom he must go before a *kazi*. The legal status of slavery was abolished by the decree of April 6, 1897. Many were emancipated in the beginning, and then there was a pause, due mainly to the interpretation put by the British authorities on a clause of the emancipation decree which says that any person whose right to freedom may have been formally recognized is bound to show that he possesses a regular domicile and means of subsistence on pain of being declared a vagrant. Slaves who applied to the British authorities for emancipation were refused unless the owner or some other responsible person undertook to give them land and to be responsible for their future. Under this interpretation a slave to obtain freedom must leave his master's *shamba*, running the risk of arrest for vagrancy while endeavoring to find an employer. None will employ him until he has obtained his certificate of freedom, and this the courts will not grant unless the prospective employer will appear or send a letter guaranteeing his future good behavior. The Foreign Office in London has repudiated the interpretation put upon the emancipation by the local authorities. However slow the progress of emancipation, the decree has altered the position of the slave, who is now paid for his labor the same as a freeman.

British East Africa Protectorate.—The country between the Juba and the Uмба rivers and the border of Uganda and the sea was proclaimed a British protectorate on Aug. 31, 1896, and placed under the control of the Foreign Office, with the British agent and consul general at Zanzibar as head of the administration. It is divided into the administrative divisions of the coast province, called the Seyyiddieh, Ukamba, Tanaland, which includes Witu and Jubaland. The estimated population of 2,500,000 includes 25,000 Asiatics and 450 Europeans and Eurasians. Mombasa, the capital of the protectorate and the sea terminus of the Uganda Railroad, has two good harbors, which are being improved by the construction of jetties and wharves. Its present population is about 30,000. Lines of telegraph and a submarine cable connect it with Lamu and Zanzibar, the land lines having a length of 140 miles. The revenue in 1898 was £43,841, and in 1899 was £50,000. The imports in 1898 were 4,464,827 rupees in value, and in 1899 they amounted to 7,025,000 rupees. The exports in 1898 were valued at 1,087,266 rupees, and in 1899 at 1,067,000 rupees. The tonnage entered in 1898 was 196,630 tons, and in 1899 it was 321,480 tons. A duty of 5 per cent. is levied at the ports under the Brussels act. The principal exports are ivory, rubber, cattle, goats, hides and horns, copra, grain, and gum copal. Cotton cloth is imported from Bombay and Manchester, and recently American cloth also. Provisions are imported, and beads and brass wire for trade. The Banyan merchants have control of the trade. Mangrove timber is brought for building purposes from other parts of the coast. A severe drought in 1898 and 1899 caused a general famine. The highlands in the interior are believed to be well adapted to cattle growing by Europeans. The Massai tribes formerly rendered the country dangerous to live or travel in, but punitive measures have taught them to respect British authority.

The Uganda Railroad has cost already more than the original estimate, and the final cost is more problematical than it seemed when that estimate was made because the route has not yet been accurately surveyed. The British Government having undertaken the work, Parliament will supply the money to complete it, and before 1903 it will

probably reach the shore of Victoria Nyanza. Parliament in 1896 voted £3,000,000, the sum then deemed sufficient, and in 1900 the additional contribution of £2,000,000 was voted by a large majority without any assurance that the larger sum will not be exceeded, for both parties in England are committed to the project. Instead of a light, unballasted line, with temporary timber bridges to be replaced with iron ones after the line was in operation, it was found necessary to ballast the line throughout and to build more substantial bridges than the surveyors planned who went over the country in the dry season. The expectation that the tribes would furnish the labor at the current rate of 4d. or 6d. a day was disappointed. Out of 16,000 laborers, only 2,000 were found in the country, and 14,000 were brought from India, costing 14d. a day. The original estimate of cost was £3,000 a mile, and after a good part of the railroad had been laid and it was found that it had to be rebuilt this was increased to £5,500 a mile. The present estimate is £8,500. Of 580 miles, the total distance from the coast to the lake, 362 miles were completed and open to traffic in the spring of 1900. The estimates of the future profitability of the line have all been discarded since the estimates of cost and running expenses have been doubled. The present traffic affords no basis for calculation, consisting as it does to a large extent in taking supplies up for the coolie workmen. The full equipment for the line has been already provided. American locomotives are used, and have been found satisfactory. Even the water for the boilers must be brought from Mombasa, because the river water of the interior is corrosive. Jetties have been built at the terminus on the lake, and when the railroad is completed the Government will probably have to provide the steamboat service. The prospect of profitable private enterprises dwindles with a better knowledge of the conditions of the country. The railroad will be carried out as an imperial undertaking, with the object of consolidating British power and influence in Africa and extending civilization. Already as far as the railroad has been opened, the slave trade and cannibalism are believed to have died out. Whatever chance there is of securing a paying traffic for a long time to come lies in the hope of diverting the trade that now passes through German East Africa and the Congo State. If this can be drawn to the new railroad Mombasa will supplant Zanzibar as the chief port of East Africa.

After the decree was issued abolishing the legal status of slavery in the islands of Zanzibar and Pemba Mr. Balfour pledged the Government to take similar steps on the 10-mile strip of the mainland where British sovereignty succeeded that of the Sultan of Zanzibar. On this coast strip the Arab planters have about 200,000 slaves. In the rest of the protectorate slavery is not recognized by law, and slaves within the coast strip can obtain their freedom by running away over the border. In February, 1899, Mr. Brodrick renewed Mr. Balfour's pledge, and said that the Government hoped to extend to the mainland the process carried out in the islands at the earliest opportunity; but in February, 1900, he said that the reason the Government had not and could not interfere with the status of slavery was due to an undertaking given when the British administration was proclaimed. This undertaking was contained in a speech of Sir Lloyd Matthews, who told the Arabs at Mombasa, on July 1, 1895, that all affairs connected with the faith of Islam would be conducted to the honor and benefit of religion, and all ancient customs would be allowed to continue, and the wish of the head of the new administra-

tion, the consul general at Zanzibar, who would issue all orders under the sovereignty of the Sultan, was that everything should be done in accordance with justice and law.

Uganda.—A British protectorate was declared over the kingdom of Uganda on June 19, 1894, the British East Africa Company, which attempted to establish a control over the administration of the country in 1892, having withdrawn in March, 1893, in consequence of a war with the natives, which was brought to a conclusion by Indian troops under British officers. The protectorate was extended in July, 1896, so as to take in Unyoro and other newly conquered countries to the westward of Uganda as far as the boundary of the Congo State, as well as Usoga on the east. The infant son of King Mwanga was proclaimed King of Uganda after the suppression of the rebellion, and regents were appointed to act in his name, but the actual administration was assumed wholly by the British commissioner, who has a force of 300 Indian troops and 2,000 Soudanese under British officers to uphold his authority. The British fort of Kampala is close to the native capital, Mengo. The seat of administration is Port Alice, on Victoria Nyanza. A chain of forts extends along the borders of Uganda, and these are garrisoned by Soudanese soldiers, who live there with their large families and cultivate land for themselves while overawing the people of Unyoro and the other neighboring countries and thus securing respect for British dominion. Owing to the great extent of high table-land Uganda is believed to be as healthful for Europeans as the best parts of north or south Africa. The plateau extends 300 miles in a northwesterly direction and has an average width of 100 miles. The only markedly unhealthy places are the banks of the Nile and the shores of Victoria Nyanza. The total population within the limits of the protectorate is estimated at 4,000,000, which is considerably less than the former population, civil wars, invasions, and famines having brought about a decrease in recent years. The Baganda are of all the races inhabiting this region the most capable of a high state of civilization, toward which they have already made much progress. Sir Harry H. Johnston, as special commissioner, proposes to raise a local revenue by imposing a hut tax of 4s., which should bring in an annual income of £160,000. A license tax for the privilege of shooting elephants would increase the revenue and have a good effect in restricting the slaughter of elephants. The banana is the principal food of the people, and they can grow it so easily that there is little incentive to industry. The soil is capable of producing many food crops and commercial products and would amply repay better cultivation. It is said to be especially suitable for growing coffee. Such trade as there is in the country is in the hands of German firms, owing to the fact that portorage in German East Africa is far cheaper and better organized than on the routes through British territory. When the Uganda Railroad is completed the conditions of transportation will be changed, and it is expected that British trade will reap the benefit. By an arrangement made by Sir H. H. Johnston with the regents and chiefs of the kingdom of Uganda, the King receives a stated allowance from the Government, and salaries are paid to the *Katkiro*, or Prime Minister, the Chief Justice, and the Treasurer of the King's revenues. A new native council has been appointed and a definite system of taxation was drawn up, which includes the proposed hut and gun taxes. Although the new taxes are heavier than those hitherto in force, the chiefs raised no serious ob-

jections to the proposed changes. Some commerce has been developed since the end of the last internal disturbance, the mutiny of Soudanese troops, who were chased out of the country in the spring of 1899. The articles of export are wild coffee, ivory, cattle, and rubber. The inhabitants, three fourths of whom are of Bantu stock, are expert in working iron, making pottery, and other native crafts. The revenue raised locally is about £23,000 a year. Church of England missionaries are very active among the natives, and two Roman Catholic missionary societies have long been at work in Uganda.

German East Africa.—The German protectorate is under the administration of an imperial governor, at present Major-Gen. Liebert, residing at Dar-es-Salam. The population consists of tribes of mixed Bantu race, with a strong admixture of Arab and Indian blood near the coast. The European residents on July 1, 1899, numbered 1,000, of whom 881 were Germans, 38 English, and 34 Greeks. There are 7 Protestant and 3 Roman Catholic missionary societies working among the natives. The military force in 1899 consisted of 176 Germans and 1,572 colored troops, besides a military police numbering 15 Germans and 482 Askaris. The Government has several experimental stations to test methods of tropical agriculture and the breeding of animals. A scientific investigation of the forests has been begun. Near the coast the forests contain mangroves, cocoanut palms, baobabs, and tamarind trees, and those of the higher lands in the interior consist of the acacia, cotton tree, sycamore, banyan, and many other species. The minerals already discovered include iron, coal, malachite, and salt. Gold is known to exist, whether in paying quantities it has not been determined. German planters raise cocoanuts, vanilla, tobacco, rubber, and cacao in the coast region, and on higher ground coffee. They have displayed great enterprise in these undertakings, looking far ahead for the profits of their investments, and some are already obtaining satisfactory results. The authorities are trying to create a thorough system of roads throughout the protectorate. Mules have been introduced as transport animals because they resist the tsetse fly better than horses or asses. The native planters have large groves of banana trees and cultivate maize and pulse. Their common domestic animal is the goat, though cattle and sheep are also reared. The chief seaports are Dar-es-Salam and Bagamoyo, with about 13,000 inhabitants each; Saadani, Pangani, and Kilwa, with 10,000; and Lindi, Mikindani, and Tanga, with 5,000. Their harbors are too shallow for large ocean steamers, and therefore the trade centers in Zanzibar, as it has for centuries. Indian merchants carry on a great part of the commerce of the German as well as of the English possessions, and they complain of the heaviness of German taxation, not appreciating that the attention given by the German authorities to police, navigation, industry, commerce, agriculture, roads, transport, schools, and public health enables them to carry on a larger, safer, and more profitable trade than they did before the advent of the German administration. The imports and exports increase year by year. In 1898 imports amounted to 16,852,656 marks and exports to 5,995,929 marks. Cotton goods amount to nearly half the imports, foodstuffs coming next. The main exports are ivory, rubber, copra, gum copal, sesame, and coffee. Ivory is decreasing, as Congo ivory goes now to the west coast, and that from Uganda is exported through Mombasa. The German authorities take elaborate measures to counteract the effects of the climate, including sub-

stantial stone houses, hospitals, an ample medical staff, inspection of meat, covered wells, vaccination, inspection of native houses in the towns, drainage, and a study of the blackwater fever and other endemic diseases by medical investigators. Steps have been taken to check the spread of Texas fever among cattle. The smallpox has caused great mortality among the natives, and the plague and leprosy have appeared. The drought which occurred in the winter of 1898 brought the people to the verge of famine, and their distress was prolonged by the ravages of locusts. The revenue for 1900 amounted to 8,495,000 marks, including the imperial contribution of 5,985,000 marks. A hut tax was introduced which yielded 300,000 marks where only 100,000 marks were expected. For 1901 the imperial contribution was fixed at 6,830,000 marks. The Government encourages the building of railroads by granting subsidies, which are given also to steamship companies. A railroad from Tanga, of which 10 miles were completed in 1899, is being built to Karagwe and Nomba, and one from Dar-es-Salam to Norogo. A telegraph line is being built from Dar-es-Salam to Kilossa. The coast stations are connected with one another by telegraph and with Zanzibar by a cable.

ECUADOR, a republic in South America. The Constitution, amended last in 1897, vests the legislative power in the Congress, consisting of a Senate of 32 members, 2 from each province, elected for two years, and a House of Representatives containing at present 33 members, 1 for every 15,000 of population, elected likewise for two years by the suffrage of all adult male citizens who can read and write. The President is elected for four years by direct vote of the people, and the Vice-President, who in certain cases is called upon to act as President, is elected in the same manner after an interval of two years. The President elected for the term beginning Feb. 6, 1897, is Gen. Eloy Alfaro. The Vice-President is Freila Zaldumbide. The Cabinet at the beginning of 1900 was composed as follows: President *ex-officio*, Vice-President Zaldumbide; Minister of the Interior, Police, Public Works, Agriculture, and Public Charity, Gomez de la Torre; Minister of Foreign Affairs and Justice, José Peralta; Minister of War and Marine, Gen. Nicolo Arellano; Minister of Finance, Public Instruction, and Immigration, Abelardo Monscayo.

Area and Population.—The area of Ecuador is about 120,000 square miles. The Peruvian boundary has not been determined, and the treaty arranged on May 2, 1890, having been altered by the Peruvian Government in 1893, was revoked altogether by the Ecuadorian Congress in the following year. Ecuador also disputes with Colombia the territories on the left bank of the Napo river. The population of the republic is 1,271,861, of whom about 100,000 are whites of Spanish descent, 300,000 are of mixed race, and the rest are Indians. Quito, the capital, has about 80,000 inhabitants; Guayaquil, the seaport, 50,000. Public education is provided free and is compulsory. There are 9 superior, 35 intermediate, and 1,088 primary schools, with 1,498 teachers and 68,380 pupils.

Finances.—The revenue for 1897 was 6,760,545 sucres, of which 5,358,629 sucres came from customs, and the expenditure was 5,600,220 sucres. The estimate of revenue for that year and for 1898 was 9,003,551 sucres, and that of expenditure at 11,005,141 sucres, and the same estimates were officially adopted for 1899, except that military and naval appropriations were omitted, reducing the expenditure to about 7,000,000 sucres. The foreign debt of Ecuador was inherited from the

original republic of Colombia when it split up in 1830. This debt, originally £1,824,000 in amount, has been at different times repudiated and recognized, and various compromises have been made with the bondholders. The arrangement of 1892, reducing the capital to £750,000, was revised in 1895, and in the following year payments were again suspended and negotiations were begun for one more advantageous. The bonds outstanding in 1899 amounted to £693,160. Arrangements were completed in 1900 for the redemption of these bonds by the Guayaquil and Quito Railroad Company, which assumes the debt and agrees to redeem at par the outstanding bonds, reduced to £500,000, issuing \$1,014,000 of its own bonds to be given in exchange for part and applying to the payment of others in half-yearly drawings an extraordinary sinking fund of £12,500 per annum, while for the amortization of another part is provided the ordinary sinking fund of \$5,070 per annum.

The internal debt in 1897 amounted to 7,500,000 sucres. The notes of the two banks of issue, 5,660,000 sucres on Jan. 1, 1899, are protected by gold and silver reserves considerably above the legal requirement of one third. A law of 1897 provides that half the reserve shall be in gold, and in 1898 a law was passed for the establishment of the gold standard in 1901 and the redemption of 2,000,000 sucres at their nominal value. This is about two thirds of the silver coin in circulation, about the proportion that is held by the banks in their metallic reserves. The gold condor, the unit of the new coinage, will contain the same quantity of gold as the English sovereign and will exchange for 10 silver sucres.

Commerce and Production.—The chief exportable product is cacao, which is grown in the coast districts, where there are 47,200,000 trees. The export of cacao from Guayaquil in 1898 was 425,883 quintals, against 331,045 quintals in 1897. The export of coffee was 26,126 quintals in 1897 and 28,157 quintals in 1898. Of sugar 15,300 quintals were exported in 1898. The export of ivory nuts was 115,400 quintals. Other commercial products are rubber, cotton, hides, Panama hats, cinchona, orchilla, and sarsaparilla. Gold is obtained by crushing at Oro and by hydraulic machinery from the gravel at Esmeraldas. Indians wash gold from the beds of many streams. Silver is mined in Cañan province, and in other parts of the country copper, lead, iron, and coal are present in quantities, and also petroleum. The total value of the imports in 1897 was 18,004,048 sucres, and the value of the exports was stated by the President to have been 31,025,382 sucres.

Navigation.—The number of vessels entered at the port of Guayaquil during 1898 was 206, of 298,805 tons; cleared, 200, of 290,855 tons. About 45 per cent. of the vessels and of the tonnage is British.

Railroads and Telegraphs.—An American company acquired the railroad from Duran, opposite Guayaquil, to Chimbo, 58 miles, and signed a contract on June 14, 1897, to rebuild this section, changing it to the standard gauge, and to continue it 292 miles to Quito. The route passes through a productive region where coffee, cacao, and sugar cane are grown. Work was begun in May, 1899. There are 1,242 miles of telegraph connecting Quito with Guayaquil and with Colombian ports and the ocean cable.

EGYPT, a principality in northern Africa, tributary to Turkey, and under the military occupation and political and financial control of Great Britain. The Government is an absolute monarchy of the Mohammedan type, though the

throne passes by the European law of primogeniture, and the Khedive, or Viceroy, is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded his father, Mehemet Tewfik, on Jan. 7, 1892. The British occupation has lasted since the suppression of the military revolt led by Arabi Pasha in 1882, and since Jan. 18, 1883, an English financial adviser has possessed the right of veto over financial measures, and has generally exercised a decisive voice in all important measures, imposing such as he and his Government consider expedient and desirable, and preventing the enactment of others that they disapprove. A conference of representatives of the powers that was held at Constantinople to consider the situation caused by the bankruptcy of the Egyptian treasury dissolved when England, after the signature of a self-denying protocol, intervened single-handed in Egypt, and France, having refused to join in the intervention, was excluded from the dual control, leaving England alone in control of the finances. The assurance was given at that time that Great Britain would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly government, and this pledge was afterward reiterated by successive governments in England.

The Cabinet of the Khedive, constituted on April 16, 1894, consisted in the beginning of 1900 of the following members: President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and of Education, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha. The British diplomatic agent is Viscount Cromer; financial adviser, J. L. Gorst; commander in chief of the army of occupation, Major-Gen. R. A. J. Talbot.

Area and Population.—Egypt proper has a total area of about 400,000 square miles, of which only 12,976 square miles, comprising the narrow valley of the Nile and the delta, are fertile and inhabited by a settled population. The census of June 1, 1897, makes the total population 9,734,405, of whom 9,047,905 are sedentary Egyptians, 673,974 nomads, and 112,574 foreigners. Of the Egyptian population 3,198,524, including 1,585,826 females, were under ten years of age, and 6,423,307, including 3,152,404 females, were above that age. Of the total number above that age 142,089 males and 3,088,673 females had no declared occupation; 2,049,258 males were employed in agriculture; 532,322 males and 21,496 females were engaged in industries and trades; 184,096 males were laborers and 61,577 clerks, and 4,801 females followed one or the other of these occupations; 4,072 males and 2,553 females depended on the liberal professions; 156,623 males and 2,218 females were engaged in religion and instruction, including 2,171 Christian ecclesiastics and Jewish rabbis, 113,438 readers of the Koran, 4,934 school-teachers, and 40,441 pupils above ten years of age; 29,201 males were in the public force; and 111,665 males and 32,663 females were domestics. Of the foreign population 21,632, comprising 10,976 males and 10,656 females, were under and 90,942, comprising 53,273 males and 37,669 females, were over ten years of age. Of the latter total 385 males were agriculturists, 25,494 males and 2,371 females in industrial pursuits and trades, 1,172 males laborers and 6,031 clerks, and also 148 females, 1,959 males and 189 females in liberal professions, 4,361 males and 2,049 females in religious or educational calling, 6,850 males in the public force, and 1,712 males and 2,683 females domestics, while 5,309 males and 30,229 females

were without stated occupation. Only 5.8 per cent. of the sedentary population over seven years of age could read and write, in lower Egypt 7.02 per cent., and in upper Egypt 4.07 per cent. Of the foreign population 74 per cent. could read and write. There were 107 Government, national, and Wakf schools, with 789 teachers and 10,859 pupils, on Dec. 31, 1898; 187 mission schools, with 792 teachers and 20,089 pupils; and 9,703 other schools, with 14,590 teachers and 180,573 pupils. The European schools number 43, with 285 teachers and 4,869 pupils, besides 34 schools for girls, with 170 teachers and 3,345 pupils. In the Government schools the pupils are obliged to learn a foreign language, either French or English, whichever their parents or guardians select. French is being gradually displaced by English, which was taken by 78 per cent. of the pupils in 1899, and French by only 22 per cent. The population of Egypt in 1897 was divided as to religion into 8,978,775 Mussulmans, 608,446 Copts, 56,343 Roman Catholics, 53,479 Greek Orthodox, 25,200 Jews, 11,894 Protestants, and 268 undeclared—Mussulmans thus forming 92.23 per cent., Christians 7.5 per cent., and Jews 0.26 per cent. of the total.

Finances.—The revenue in 1899 amounted to £ E. 11,415,000, and expenditure to £ E. 10,254,000, leaving a surplus of £ E. 1,161,000, of which £ E. 759,000 were paid into the economics fund and £ E. 402,000 were left at the disposal of the Government. The budget estimate of revenue for 1900 was £ E. 10,380,000, of which the land tax produces £ E. 4,423,000, various direct taxes £ E. 137,000, the tobacco monopoly £ E. 1,000,000, customs £ E. 900,000, *octrois* and salt £ E. 400,000, various indirect taxes £ E. 193,000, railroads and telegraphs £ E. 1,877,000, port dues £ E. 152,400, the post office £ E. 125,000, various services £ E. 81,000, law courts £ E. 562,000, military service exemption £ E. 100,000, various other sources £ E. 214,000, and £ E. 215,600 is taken from the reserve fund. The expenditure for 1900 was estimated in the budget at £ E. 10,380,000, of which £ E. 4,366,018 were required for the consolidated debt, £ E. 301,358 for various other debts, £ E. 417,179 to cover the Soudan deficit, £ E. 665,041 for the Turkish tribute, £ E. 437,000 for pensions, £ E. 253,861 for the civil list, £ E. 12,578 for the Ministerial and Legislative Councils, £ E. 1,764,927 for the ministries, £ E. 298,837 for provincial administration, £ E. 204,743 for cost of collection, £ E. 959,412 for railroads and telegraphs, £ E. 36,165 for the ports, £ E. 108,159 for the post office, £ E. 30,327 for various services, £ E. 439,570 for the Egyptian army, and £ E. 84,825 for the army of occupation.

The foreign debt of Egypt had its inception in the issue of £4,292,800 sterling of bonds in 1862 by Ismail Pasha to extinguish floating obligations that he had incurred in carrying out schemes for irrigation, the reclamation of lands, the establishment of sugar factories, the extension of cotton cultivation, and various other public and economic improvements. Other loans followed in quick succession, as the enterprises were extended with feverish haste during the American civil war, when Egyptian cotton brought an enormous price. Reckless extravagance and official corruption consumed a great deal of the money that Ismail obtained, which through mismanagement of the public credit and the machinations of the European houses that financed the operations was only a part of the nominal amount of the obligations. The amount of the foreign loans had risen to £38,307,000 in 1870, and in 1873 a new loan of

£32,000,000 was raised to pay off £28,000,000 of floating debt. In 1875 the Khedive became embarrassed, and a decree was issued to consolidate the debts into one of £91,000,000. When he was unable to pay the interest on a part of the bonds in 1877 an arrangement was made with the English and French bondholders to issue a preference loan of £17,000,000 paying 5 per cent. and a unified loan of £59,000,000 paying 7 per cent. in lieu of the outstanding bonds. The separate loans secured on the Khedive's Daira estates were converted at the time into the Daira Sanieh debt of £8,815,430, paying 5 per cent. In 1878 bonds were issued for £8,500,000 at 5 per cent., with the khedivial estates as security, and a commission was appointed to administer the estates. In the following year the dual control of the public finances by France and Great Britain was instituted. The Comptroller General announced in 1880 that Egypt could not meet the obligations in full, and after examination by a commission appointed by the great powers, and on the recommendation of that commission, a liquidation law was promulgated reducing the interest of the unified debt to 4 per cent., the amount of this debt being in preference debt to £22,743,800, and that of the Daira Sanieh debt, the interest of which was fixed at 4 per cent., to £9,512,880. In 1885 a new loan of £9,424,000 was contracted, the capital and interest at 3 per cent. guaranteed by the great powers. A loan of £2,330,000 was contracted at 4½ per cent. in 1888, and in 1890 this was consolidated with the preference debt into a new preference loan of the nominal amount of £29,400,000, bearing 3 per cent. interest, £ E. 1,300,000 being borrowed in connection with the operation for irrigation works and the commutation of pensions. The Daira Sanieh debt was converted at this time into new bonds for £7,299,360, paying 4 per cent. In 1893 the domain bonds were converted into new ones for £8,500,000, paying 4½ per cent. In the beginning of 1899 the guaranteed 3-per-cent. loan amounted to £8,558,100, the annual charge for interest and sinking fund being £256,743; privileged 3½-per-cent. bonds, £29,393,580, with an annual charge of £1,028,775; unified 4-per-cent. bonds, £55,971,960, with an annual charge of £2,238,378; Daira Sanieh 4-per-cent. bonds, £55,971,960, with an annual charge of £2,238,378; domains 4½-per-cent. bonds, £3,214,440, with an annual charge of £149,124; total debt, £103,444,580, of which £7,048,000 was held by the commissioners of the debt; total annual charge, £3,930,280. On Dec. 31, 1899, the total amount of the debt was £103,049,000, including £7,494,000 held by the commissioners of the debt, leaving £95,555,000 in the hands of the bondholders. The interest charge was £3,862,000. Reserve funds were established in 1887 which amounted on Jan. 1, 1899, to £ E. 7,111,032, made up of a fund from economies made by conversions amounting to £ E. 3,617,000 and a general reserve fund of £ E. 3,893,134. A special reserve fund was depleted by extraordinary expenditure entailed by the reconquest of the Soudan, and at the beginning of 1899 showed a deficit of £ E. 92,439, but on Jan. 1, 1900, there was a credit balance of £ E. 243,000. The general fund on Jan. 1, 1900, stood at £ E. 3,523,000, but of this £ E. 2,182,000 were pledged to expenditure of various descriptions, leaving an unpledged balance of £ E. 1,341,000.

The Army.—The Egyptian army, trained and commanded by about 100 British officers, with Col. Sir Reginald Wingate in supreme command with the title of sirdar, has a total strength of 18,395 men, with 1,610 horses and mules, 1,700 camels,

and 150 field guns. The British army of occupation, which has remained in Egypt since 1882, has a present strength of 5,553 men.

Commerce and Production.—The production of cotton in 1899 was 5,888,816 kantars of 99 pounds, compared with 6,543,128 kantars in 1898 and 5,879,750 kantars in 1897. The area under cotton in 1899 was 906,000 acres; under sugar cane, 67,120 acres; under wheat, 1,262,000 acres; under maize, 1,592,000 acres. The total value of merchandise imports in 1899 was £ E. 11,216,405, against £ E. 11,033,219 in 1898; value of exports, £ E. 15,351,908, against £ E. 11,805,179. The specie imports were £ E. 4,515,917 in 1899, against £ E. 2,730,116 in 1898; exports of specie, £ E. 1,502,485, against £ E. 1,891,513. The imports of animals and animal food products in 1899 were £ E. 389,243, against £ E. 389,011 in 1898; exports, £ E. 69,556, against £ E. 59,585; imports of skins and leather manufactures, £ E. 166,588, against £ E. 179,287; exports, £ E. 68,666, against £ E. 79,005; imports of other animal products, £ E. 64,953, against £ E. 66,763; exports, £ E. 40,050, against £ E. 38,797; imports of cereals and vegetables, £ E. 1,021,507, against £ E. 1,273,212; exports, £ E. 2,070,098, against £ E. 2,422,449; imports of provisions and drugs, £ E. 321,481, against £ E. 284,021; exports, £ E. 702,588, against £ E. 556,667; imports of spirits and oils, £ E. 620,864, against £ E. 649,699; exports, £ E. 15,397, against £ E. 21,104; imports of rags, paper, and books, £ E. 164,934, against £ E. 145,074; exports, £ E. 15,521, against £ E. 17,854; imports of coal, wood, and manufactures of wood, £ E. 1,771,750, against £ E. 1,178,953; exports, £ E. 18,791, against £ E. 21,839; imports of glass, stone, lime, etc., £ E. 331,018, against £ E. 240,031; exports, £ E. 1,388, against £ E. 1,280; imports of dyes, etc., £ E. 240,059, against £ E. 254,247; exports, £ E. 18,443, against £ E. 16,533; imports of chemicals, £ E. 267,433, against £ E. 224,552; exports, £ E. 19,287, against £ E. 18,400; imports of textiles, mainly cotton, £ E. 3,332,213, against £ E. 3,289,274; exports, £ E. 11,669,337, against £ E. 8,512,867; imports of metals and metal manufactures, £ E. 1,607,014, against £ E. 1,423,760; exports, £ E. 18,159, against £ E. 13,975; imports of tobacco, £ E. 532,984, against £ E. 539,929; imports of miscellaneous articles, £ E. 337,795, against £ E. 596,255; exports, £ E. 15,213, against £ E. 24,824. Of the total imports in 1899 the value of £ E. 9,945,165, and of the exports £ E. 15,068,722, passed through the port of Alexandria.

The distribution of the commerce is shown in the table below.

A national bank that was established in 1898 made advances as an experiment to fellahin of

a number of villages at 10 per cent. per annum to enable them to pay money lenders who charge 40 per cent. or more. The result was satisfactory, and all the loans were repaid before the end of the year. The incidence of the land tax has been very unequal, but the Government decided to postpone the consideration of the subject until British officials become familiar with local conditions. The first steps toward equalization were taken in 1895, and since then substantial progress has been made toward a reassessment. Progress has been made also in reforming the administration of the Wakfs, or charitable and religious trusts, precautions being taken that there shall be no infringement of the law of Islam. In 1899 there was an unprecedentedly low Nile, and while this caused a shortage of crops it facilitated the construction of the Nile reservoirs, which were pushed on with great rapidity. Drainage works that have been carried out in lower Egypt have been successful. The great dam at Assouan, 130 feet high and 80 feet broad at bottom, for the storage of the superfluous water that comes down during the five winter months, is expected to raise the water level at the first cataract 50 feet above the present low-water level and to fill a reservoir extending 140 miles southward into Nubia. About 12,000 laborers were employed on the dam in 1899, which is built of granite laid in cement, and has a length of 1½ mile. The water will be drawn out of the reservoir through 160 steel sluice gates, each 22 feet high and 7 feet wide.

Navigation.—The number of vessels entered at the port of Alexandria during 1898 was 2,454, of 2,555,396 tons; cleared, 2,428, of 2,559,876 tons. Of the total number entered 729, of 111,481 tons, and of those cleared 734, of 1,117,161 tons, were British; French vessels entered numbered 125, of 263,778 tons, and 126 French vessels, of 265,314 tons, were cleared; 153 Italian vessels, of 281,373 tons, were entered and 153, of 279,426 tons, cleared; 139 Austrian vessels, of 254,703 tons, were entered and 140, of 261,125 tons, cleared; 847 Turkish vessels, of 151,461 tons, were entered and 95, of 188,971 tons, cleared; of Greek vessels 163, of 66,781 tons, were entered and 155, of 63,755 tons, were cleared; of Swedish and Norwegian vessels 36, of 59,221 tons, were entered and 34, of 57,909 tons, were cleared; of German vessels 27, of 52,230 tons, were entered and 27, of 54,754 tons, cleared; of Egyptian vessels 82, of 85,547 tons, were entered and 79, of 82,566 tons, were cleared; belonging to other countries were 58 vessels, of 43,881 tons, entered and 58, of 41,508 tons, cleared. The number of steamers entered in 1898 was 1,522; in 1899 the number was 1,342. Since the completion of docks, wharves, and quays and the opening in 1894 of a new pass 300 feet wide and 30

feet deep, steamers and other vessels of deep draught that formerly were unable to enter the port in rough weather can run in at all times and can load and unload without lightering.

Railroads, Posts, and Telegraphs.—The railroads belonging to the state system that were completed and in operation on Jan. 1, 1899, were 1,166 miles long, besides which were 72 miles of lines belonging to companies, making a total length of 1,238 miles, of which 825 miles were in the delta and 413 miles in upper Egypt. The Government had in process of construction 290 miles, and companies had 64 miles. Besides these there were 390 miles of agricultural railroads in the Daira Sanieh estates; neither is the military railroad in the Soudan included. Concessions had been granted for 230 miles of narrow-gauge railroads in the delta. During 1899 there were 209 miles of new standard-gauge railroads opened to traffic, making 430 miles constructed since 1897. The construction of agricultural railroads progresses steadily, and on Jan. 1, 1900, there were 1,400 miles of these. Locomotives, cars, bridge work, and other material have recently been obtained largely from the United States, where the manufacturers were able to furnish rolling stock made after their own standard designs in less time and at lower prices than British manufacturers could tender. The railroad traffic in 1898 on 1,214 miles completed was 11,312,400 passengers and 2,786,780 tons of freight; gross receipts, £ E. 2,031,869; working expenses, £ E. 917,536; net receipts, £ E. 1,114,033; equal to 55 per cent. of the gross receipts.

The number of letters and postal cards carried in the mails during 1898 was 14,733,000, of which 12,260,000 were domestic and 2,473,000 foreign; newspapers, 8,040,000, of which 7,100,000 were domestic and 940,000 foreign; parcels, 563,800, of which 274,000 were domestic and 289,800 foreign; postal orders and remittances, 563,800, amounting to £ E. 16,437,000.

The telegraph lines are the property of the Government. On Jan. 1, 1899, they had a total length of 2,105 miles, with 9,364 miles of wire. The number of messages in 1898 was 2,743,788.

The Suez Canal.—The number of vessels that passed through the Suez Canal during 1898 was 3,503, of 12,902,632 tons, of which 2,295, of 8,691,093 tons, were British; 356, of 1,353,161 tons, German; 221, of 891,642 tons, French; 193, of 526,478 tons, Dutch; 85, of 300,251 tons, Austro-Hungarian; 46, of 261,602 tons, Japanese; 48, of 243,381 tons, Russian; 49, of 232,358 tons, Spanish; 74, of 208,418 tons, Italian; 47, of 109,709 tons, Norwegian; 54, of 83,541 tons, Turkish; 8, of 30,228 tons, Danish; 10, of 15,705 tons, Egyptian; 4, of 6,181 tons, Chinese; 4, of 3,162 tons, American; 2, of 1,941 tons, Greek; 1, of 1,703 tons, Roumanian; 2, of 1,021 tons, Swedish; 3, of 606 tons, Portuguese; and 1, of 451 tons, Argentinian. The receipts for the year were £3,411,791. The number of passengers taken through was 219,671. The share and loan capital of the company amounts to 464,100,827 francs, including about 50,000,000 francs redeemed. There are besides 100,000 founders' shares which receive dividends when the profits exceed a certain percentage. The net profits in 1898 were 48,780,818 francs, of which 46,618,028 francs were divided among shareholders. The amount that has been expended on improvements to the canal out of revenues was 151,174,307 francs up to Dec. 31, 1898. The receipts of 1899 exceeded those of 1898 by 6,500,000 francs. The dividend was 108 francs a share instead of 97 francs. The number of vessels that passed through in 1899 was 3,503, of which 2,310

were British, 387 German, 226 French, 206 Dutch, 101 Austrian, 69 Italian, 65 Japanese, 61 Norwegian and Swedish, 55 Russian, 39 Spanish, 26 American, 26 Turkish, 21 Danish, 5 Belgian, 4 Greek, 3 Portuguese, 2 Egyptian, and 1 Siamese. The passengers numbered 221,332, of whom about 88,000 were civilians and 24,000 pilgrims or emigrants.

Political Events.—The British project of abolishing the mixed tribunals and replacing them with an Egyptian court was abandoned when the other powers showed no disposition to relinquish their treaty rights. Lord Cromer lays down as the conditions on which these courts may continue to exercise their functions free from the apprehension that their existence is threatened, first, that the judges shall adhere strictly, not merely to the text, but to the spirit of the law which regulates their attributes and not encroach on functions of the Government; second, that everything that is possible shall be done to avoid political lawsuits. The attempt that was made in the direction of Mohammedan law reform was also abandoned for the time on account of the resistance of the Mufti, who was removed, however, and another one appointed who may prove more amenable to British influence. The Mehkemeh Sheriah, or courts which deal with questions of personal status, such as marriage, divorce, and succession, were considered to be in an unsatisfactory condition. The particular reform that was proposed was that two Mohammedan members of the native Court of Appeals should be added to the appellate court over which the Grand Cadi presides. The judges of the secular courts are lawyers by profession, and only exceptionally of the ulema class from which cadis are chosen. On the matter being submitted to the Legislative Council the Mufti, whose special functions consist in interpreting the sacred law, declared himself strongly averse to the proposed change on the ground that it constituted an infraction of the immutable law of Islam. The Mufti having been dismissed, a commission was appointed under the presidency of the Minister of Justice to consider anew the whole question of the reform of the Mehkemehs. The archives of the religious courts, in which deeds and titles dating back hundreds of years in many cases were in utter confusion, were set in order with the aid of the Ministry of Justice. The number of suits in the civil native courts increased in 1899 over the number in 1898 by 20 per cent., while crime continued to diminish. The experiment of intrusting the decision of petty cases to the village authorities was successful. More slave dealers and kidnapers were prosecuted and convicted in 1899 than during the five previous years.

The Soudan.—The death of the Khalifa Abdullahi on Nov. 24, 1899, was followed by the opening to Europeans of the Soudan after an embargo that lasted sixteen years. Previously the White Nile country, south of Omdurman, was in a state of war. The Khalifa with his family and followers, numbering about 10,000, roamed on the left side of the river out of the range of the patrolling gunboats which kept supplies from being brought across the White Nile or the Blue Nile. After the dervish camp was finally captured and the Khalifa killed, the relations of the Mahdi and the principal emirs who survived were sent down to Egypt and imprisoned at Rosetta. The blacks of the Khalifa's army were freely enlisted in the Egyptian army. The Arabs were made to work in cultivating land or rebuilding Omdurman, or were taken on Major Peake's expedition to cut the *sudd* and open the whole course of the White Nile to

navigation. A general disarmament was carried out as thoroughly as possible, and only the Kinana-tribe remained at large in the Ghezireh between the Blue and White Niles and an emir with 3,000 warriors in the Bahr el Ghazal. When Lord Kitchener was summoned to South Africa Sir Reginald Wingate succeeded him as sirdar and as Governor General of the Soudan, the post which at present goes with the supreme command of the Egyptian army. The Anglo-Egyptian rule was strictly and severely military. The arrest of decay and the restoration of productive activity in this country made little progress because the first aim of the new authorities was to impress the inhabitants with their power, and they had too little money for military purposes. The work they set before themselves after the establishment of law and order was to increase the revenue, settle the frontiers, redistribute the population, register lands, rebuild the cities, and establish communications. The encouragement of European commercial enterprise, the readmission of missionaries, the establishment of a system of education, and the ultimate substitution of a civil for a military administration were objects less immediate and pressing. The British authorities concluded that it was impossible to abolish slavery, but kidnaping and buying or selling slaves were made punishable with seven years' imprisonment as a maximum. Attempts were made to check the importation of black slaves from the south, especially girls, and decrees were issued against ill treating or overworking slaves, but if slaves ran away the authorities restored them to their masters, although the status of slavery was not officially recognized. Greek traders came in when the embargo was removed, and the export of gum arabic was renewed. A caravan trade sprang up between the Blue Nile and Abyssinia. Besides the land and date taxes imposed early in 1899, taxes were placed on houses in towns, boats, and herds; 20 per cent. royalty was collected on gum, ivory, tobacco, ostrich feathers, and rhinoceros horns; and license dues were required for carrying firearms, selling liquor, ferrying, selling at auction, peddling, weighing, slaughtering, and selling in the markets. The Soudan military railroad, which was begun at Wady Halfa on Jan. 1, 1897, reached Halfaya, on the bank of the Blue Nile opposite Khartoum, on Dec. 31, 1899. The extension eastward to Abu Harraz was postponed for a year. If the line is carried on by way of Gedarif and Kassala to a port on the Red Sea it will probably divert the bulk of the trade of the Soudan, and it will strengthen the hold of England on the Soudan and tend to detach from Egypt its dependency in case of the withdrawal of the British from Egypt. A telegraph has been erected along the Blue Nile and by way of Lake Rudolph to Uganda. The project of cutting the *sudd* in the White Nile was undertaken in order to establish military communication between the Soudan and Uganda. It was expected, moreover, to increase the water supply of Egypt by making dikes where the river overflows at Shambe, and thus save a vast quantity of water that is lost by evaporation. Major Peake's expedition, comprising 4 British officers with 4 steamers and 700 men, mostly dervish prisoners, to be increased later to 2,000, left Omdurman in December, 1899. The work was completed according to the plans of Sir William Garstin in April, 1900. A navigable passage was cut in the Bahr el Jebel through 4 *sudd* barriers.

The Anglo-Egyptian authorities set to work to rebuild Khartoum, with the intention of abandoning and destroying Omdurman and transferring

the trade as well as the seat of government to the old capital. The Khalifa's city was healthier, because its site is higher and drier, but the prestige of England and Egyptian sentiment seemed to demand a return to the place in which Gordon died and from which Egypt ruled, and the destruction of the Mahdist city in retaliation for the destruction of the Egyptian city by the Mahdists. A consideration of great weight was also the fact that Khartoum could be better fortified. The city was laid out on a metropolitan scale, 3 miles long along the river front, and a mile and a half deep. The Gordon Memorial College was erected at the southeast end and the new palace of the Governor General in the center, on the exact site of Gordon's palace. Farther northwest were built the Government offices and the supply and ordnance stores. A large hotel was built with British capital. Near the center was placed the bazaar, surrounded by shops, and a covered market was constructed on Indian models. A mosque and an English church were built at Government expense. At the margin of the city, fronting the desert and reaching from the White to the Blue Nile, is a line of barracks and redoubts. The broad streets have tramways running through them and are illuminated by electric lights. In order to compel the inhabitants of Omdurman to remove to Khartoum a law was made requiring owners of lots to erect buildings of brick conforming to the regulations within two years on pain of forfeiture of their land. Most of the land of the restored capital, which no person valued while it remained desert, was bought up by wealthy Greek speculators. Whether the people are to be forcibly removed if they cling to their present abodes and Omdurman razed to the ground, has not been decided. Almost the only labor at present available for any purpose in the Soudan is the forced labor of soldiers, prisoners of war, and convicts employed by the Government.

The immense forest stretching from Gallabat to the Beni Shangul and from the Blue Nile to the Abyssinian hills is the home of vast herds of elephants, and abounds in giraffes, buffaloes, lions, leopards, warthogs, and many species of antelope. The Sobat region east of Fashoda and most of the country south of El Duem is also full of game, and is more accessible. Indeed, the whole region round the upper waters of the Blue Nile, as well as the White Nile and its tributaries beginning about 100 miles south of Omdurman, is the most attractive part of Africa for hunters of big game. The Government has issued regulations forbidding the killing of zebras and ostriches, and allowing only a limited number of the elephants, buffaloes, hippopotamuses, rhinoceroses, and giraffes to be killed, no limit being placed on the killing of warthogs or antelopes. For this privilege a license fee of £25 must be paid and a separate fee for every animal killed, ranging from £24 for an elephant down. For a lower fee one may shoot warthogs and antelopes, and all animals on which no restrictions are placed. Natives require no license except for buffaloes, elephants, and the other big game. The Governor General has reserved the right to declare a game reserve and to grant leases of the sporting rights over the whole or any part of such reserve.

Immediately after the opening of the Soudan missionaries rushed up to Omdurman—English Church missionaries, American missionaries, a Coptic bishop, and the Roman Catholic bishop who formerly presided over the Austrian mission at Khartoum. Other Catholic and Protestant missionaries followed. The military authorities did not welcome them, and would not let them settle

except on the condition that they would confine their religious ministrations to persons of their own faith and to the conversion of pagans, and undertake no propaganda among Mohammedans. Gen. Kitchener proposed to send them on to Fashoda, where they could proselyte the pagan negroes of the equatorial provinces freely, but they declined to go. In Omdurman and Khartoum they were allowed to establish schools and hospitals, and the Roman Catholics to minister to the native Christians converted before the Mahdist conquest, and to found an establishment for missionary expeditions to the negro countries of the south.

El Obeid was occupied by an Anglo-Egyptian force under Col. Mahon on Dec. 17, 1899, the town having been deserted and left in ruins by the dervishes. The reoccupation of Kordofan by the Egyptians gave general satisfaction to the people. The Government of the Soudan established friendly relations with the Sheikh Ali Dinar, grandson of the Sultan Hussein, who was left to rule Darfour. From the moment of the Khalifa's crushing defeat at Omdurman the desert and Kordofan tribes, with the exception of the section of the Baggaras, who still adhered to the cause of their chief, threw in their lot with the Government, though they rendered no assistance to the Government forces in the subsequent operations against the Khalifa. Omdurman and the Ghezireh were found to be full of Arabs belonging to Kordofan and to far western tribes who had been brought away from their homes by the Khalifa and were left without any regular means of subsistence. It was impossible in the existing state of insecurity for them to return to their homes, and their numbers were constantly augmented by the arrival of deserters from the Khalifa's army, most of them Baggaras. Arabs whose pasture lands were far enough north to be safe returned gradually to their own districts, but their places were taken by inhabitants of the districts that were raided by the Khalifa's army. Thus the situation remained practically unchanged until the overthrow and death of the Khalifa. After that the main task of the Government was to send back to their homes the inhabitants of the gum-producing region and to rid the Ghezireh of its useless stranger population. Many thousands belonging to tribes of Kordofan and Darfour could not be got rid of until the road to Bara and El Obeid was thoroughly opened up and the water supply improved. The Nubas and other tribes of central and southern Kordofan were willing to render the Government active assistance in the final operations against the dervishes, but their efforts did not go beyond petty raids. After the death of the Khalifa they sent deputations to the Government and expressed their willingness to obey its commands. The Arabs had a large supply of firearms, and most of these remained in their possession after the final defeat of the Khalifa. Some of these firearms were issued by the Government to be used as a means of defense against the dervishes; others were procured from the dervishes themselves. After the overthrow of the Khalifa these arms were often employed in raids by one tribe upon another. The first step the Government took was to call in all the firearms, and from the Bayuda tribe and the riverain population south of Berber a large number was recovered. In those districts raiding quickly ceased, and wherever the Government was able to extend its direct administration the same results followed. In the remoter districts, in which the people still retained their arms, the intertribal raids went on without abatement. Much time must elapse

before prosperity can return to the tribes of the Soudan. The population wasted away under dervish rule. The important Kabbabish and Shukurih tribes suffered most and were left mere shadows of what once they were. The Baggaras suffered almost as much. Instead of being possessors of large herds of cattle, many of them, even of their chief men, were obliged to pick up a precarious living in the Ghezireh or in Gadaref by working for hire or turning their hands to occupations that were new to them. The budget estimate of revenue from the Soudan for 1899 was £ E. 51,500, of which £ E. 38,500 came from the land tax and other taxes collected in the mudiriehs, £ E. 5,000 from the post office, £ E. 3,000 from telegraphs, and £ E. 5,000 from railroads. The expenses were estimated at £ E. 185,500, of which £ E. 123,000 were for administration, £ E. 5,000 for public buildings, £ E. 3,000 for the post office, £ E. 4,500 for telegraphs, and £ E. 55,000 for railroads. The deficit was made good by the Egyptian Government. The problem of taxation in the Soudan is a serious one for the Government, which feels bound to apply rigorous methods of collection usual in the Western countries, whereas the dervishes, if they exacted heavy taxes in prosperous seasons, did not attempt to collect taxes when the crops failed. Slavery is another problem hard to deal with. The frontier between the Soudan and the Italian colony of Erythrea was delimited in 1899 from Ras Kasar, on the Red Sea, to Sabderat, east of Kassala. The further delimitation up to the point where the line strikes Abyssinian territory was the subject of negotiations in 1900. The general basis of a frontier arrangement in respect to the country west of the Blue Nile was settled with the Negus Menelek, and commissioners were dispatched to survey the ground in dispute. An endeavor was made to cut through the *sudd*, the accumulation of vegetable growths and floating matter that obstructs the White Nile, the removal of which will enable steam craft to ascend the river and open up communication with Uganda. A party of British, French, and Belgian officers succeeded in penetrating from the south to the point where Major Peake with his party of Egyptians was engaged in cutting the *sudd*. Osman Digna was captured near Tokar on Jan. 19 with the help of the local sheikhs. Darfur has not been reconquered, and there the influence of the Senussi Mahdi has succeeded that of the Khalifa. The Senussi sect flourishes within the French sphere and is strongest in Wadai and Bornu. They obtain arms and ammunition from Europe by way of Benghazi, in Tripoli, and their Mahdi threatened to declare a jihad against England and to invade Egypt, but from his oasis in the desert south of Kafra it was impossible for him to carry out his threat, the absence of roads and water forbidding the movement of any considerable force. An abortive mutiny of the black troops in the Soudan against their British commanders was planned after the departure of Gen. Kitchener by some of the junior Egyptian officers, whose disaffection was partly the result of grievances about pay. Without incitement from above or sympathy from their fellow-officers they failed of their purpose, and were deserted by the troops whom they misled.

EXPLOSIVES. In the Annual Cyclopædia for 1885 (page 342) the subject of explosives was treated quite fully, and descriptions of gunpowder, gun cotton, nitroglycerin, dynamite, explosive gelatin, potassium chlorate powders, picric acid compounds, and liquid explosives, with their many varieties, were given. Since that time experts of different nations, in their efforts to surpass one

another, have invented new and more powerful explosives, the most important of which are here-with described.

In 1873 Dr. Hermann Sprengel outlined a series of explosives, among which was a class consisting of two bodies—one a liquid, the other a solid—which were harmless by themselves, but when mixed formed a substance that was capable of violent detonation. The safety with which such preparations could be transported to the place of action was an important consideration. This announcement led to the patenting of similar compounds in France by Turpin, under the name of *pan-clastite*, and in Germany by Hellhoff, under the name of *hellhoffite*. These attracted considerable attention, especially in consequence of the controversy as to their discovery, priority for which was naturally claimed by Sprengel. The *hellhoffite* consists of 47 parts of meta-dinitrobenzene and 53 parts of nitric acid with a specific gravity of 1.50. It requires a powerful detonator to explode it, and its intensity is greater than nitroglycerin. The difficulties of using an explosive in liquid form for blasting have prevented its application in that direction to any great extent, but its employment by Gruson for use in shells has given it some importance.

Jovite is an important high explosive invented by J. E. Blomer in 1892, and sold at prices competing with dynamite. It consists of 8 to 6 per cent. of nitronaphthalenes, 16 to 30 per cent. of nitrophenol, and 76 to 64 per cent. of sodium nitrate. It can not be exploded by friction, shock, exposure, fire, lightning, or electric sparks, and it is only by using such denotators as are employed with dynamite that it can be exploded. It is not sensitive to atmospheric influences, and can be used at all normal temperatures. When exploded it does not generate noxious gases, and therefore it can be satisfactorily used in underground work. It is not dangerous to make, and its properties seem to indicate that it is most valuable.

The explosive character of picric acid has long been known, and it has been used as an ingredient of several explosives, as was shown in the Annual Cyclopædia for 1885, page 346; but in 1886 Eugène Turpin announced the possibility of detonating picric acid by itself. At first Turpin mixed this with collodion cotton and dissolved the mixture in ether, which he then formed into cartridges. This explosive became the property of the French Government, and received the name *melinite*. Later Turpin showed that molten picric acid by itself explodes much more violently than when in combination. The ordnance departments of many European nations at once began experimenting with picric acid, and it has resulted in the production of *melinite* in France, *lyddite* in England, and *ecrasite* in Austria, each of which is slightly different from the others but represents the working out of an identical problem by three different individuals. The processes of manufacture are Government secrets, and therefore they can only be surmised. Of *lyddite* it is said that the explosive is "simply picric acid brought into a dense state by fusion," while in the case of *melinite* it is said that the picric acid is "melted at a carefully regulated temperature in an iron or earthenware vessel standing in an oil bath." In both cases the picric acid is used as a filler, and is cast direct from the melting pot into the projectiles, although in *lyddite* the shells are said to be coated inside with "a special kind of varnish." For *melinite* a primer of gun cotton is used, whereas for *lyddite* the primer is said to be a mixture of 2 parts ammonium picrate and 3 parts

sodium nitrate. It was found that picric salts of an unstable nature were formed in the projectile in consequence of the contact of the picric acid with the metal walls of the shell, and experiments were made for the purpose of finding more stable compounds of that acid. Picric acid is chemically trinitrophenol, and is derived from phenol. It was found that trinitrocresol, derived from cresol, possessed the desired qualities, and that compound has been used similarly to picric acid for filling shells and torpedoes. In France, where it has been largely employed for that purpose, it is called *cresylite*.

In Austria the ammonium salt of trinitrocresol is used under the name of *ecrasite*. It is unaffected by moisture or differences of temperature, and its effect is said to be about double that of dynamite. These explosives, which are necessarily described together, are remarkable for their stability, remaining permanent under the influence of both cold and heat, and therefore they can be safely transported. When they are exploded the effects of their influence is six or seven times as great as those of black powder on compact rock or masonry, and one and a half to two times as great in earth. A shell filled with one of these picric compounds will rend the most solid and resisting plates of steel. The use of *lyddite* in South Africa caused some criticism in consequence of the dense fumes of yellowish-green gas resulting from the decomposition of the picric compound, which suffocated those who came in contact with them; but the latest announcements from England show that *lyddite* shells are to be supplied to the guns in the forts along the sea front of England, in place of shrapnel shells, which have been discontinued.

The most important recent advance in explosives is the successful manufacture and employment of smokeless powders. The history of their development was given in Charles E. Munroe's presidential address before the Washington section of the American Chemical Society in 1896. He showed that the earliest experiments that were made with smokeless powders were in 1800, when Howard discovered mercuric fulminate. Six years later Grindel carried on a series of experiments for the purpose of ascertaining the possibility of substituting ammonium nitrate for potassium nitrate as the oxidizing agent in gunpowder mixtures. Notwithstanding the deliquescent character of the ammonium salt, smokeless powders of that nature have been put on the market, as, for example, the amide powder patented by F. Gaens in 1885, which consisted of ammonium nitrate 80 parts, potassium nitrate 101 parts, and charcoal 40 parts. Subsequent to the discovery of gun cotton in 1845 experiments were made in Germany, France, and England, and also in Washington, with the new explosive; but the results were unsatisfactory, especially so as the powder was unstable and rapidly decomposed when stored. Capt. von Lenck, of the Austrian army, persisted in experimenting with it, and he has the credit of making the first attempt to use as a propelling agent an explosive that burns without developing smoke. This was in 1862, but an unfortunate explosion in the gun-cotton factory at Hirtenberg led to the abandonment of its use in Austria. In England, Abel continued studying gun cotton, and was successful in obtaining pulped, purified gun cotton, which he compressed into such forms as were desirable, with which he obtained some very promising results with field guns in 1867 and 1868. The next advances were the inventions, in 1882, of the *E. C. powder* by Reid and Johnson, and of the *J. B. powder* by Judson and Borland, both of which contain gun cotton in an unaltered state. But it was

not until the invention of *Poudre B*, in France, by Vielle in 1886, and that of *ballistite* by Nobel two years later, that the present smokeless-powder industry began. According to Gutman, the smokeless powders at present known can be divided broadly into three classes:

1. Powders in which gun cotton, either the so-called insoluble or the soluble variety, alone is used, which by the aid of a solvent has been converted into a horny substance and then is formed into flakes or cords.

2. Powders in which a mixture of nitroglycerin and either dinitro- or trinitrocellulose is transformed into a similar hornlike substance, either with or without the aid of a solvent.

3. Powders that contain nitro derivatives of the aromatic hydrocarbons, either by themselves or in connection with nitrocellulose.

E. C. powder, patented in 1882 by Reid and Johnson, is a gunpowder made by revolving pulped nitrocellulose and nitrates (barium, sodium, and potassium) in barrels, drying the grains, moistening with ether to harden them, and then adding durine to produce a reddish-brown color. It has the following composition: Nitro-cotton, 53.57; gun cotton, 1.86; barium nitrate, 34.26; potassium nitrate, 1.48; sodium nitrate, 3.07; volatile matters, 1.17; cellulose, 3.12; and aurine, 0.55. This powder is used in Great Britain and in the British colonies by sportsmen.

J. B. powder, invented by Judson and Borland in 1885, was prepared by mixing nitro-cotton with barium nitrate, with or without charcoal, and granulated in a revolving drum while water was admitted in a fine spray. The grains were dried and then moistened with a solution of one part of camphor in five parts of petroleum spirit, which hardened them and made them more slowly inflammable. It had a silver-gray color, and was used as a sporting powder.

In the class of gun-cotton powders, including both the flake variety and the granulated powder, is the original smokeless powder invented by Vielle in 1886, which consisted of picric acid and gun cotton, but later the picric acid was omitted and *Poudre B* was made of gun cotton alone. The flake powders consist of gun cotton mixed with barium nitrate and potassium nitrate as oxidants, and sodium carbonate as a neutralizer. These ingredients are condensed and hardened to a celluloidlike mass by means of a solvent like ether-alcohol, ethyl acetate, or acetone. The flaking is done by cutting machines. The exact composition of the more important flake powders is as follows: *Poudre B*, nitro-cotton 32.86, gun cotton 66, and volatile substances 1.14; *Poudre B. N.*, nitro-cotton 31.38, gun cotton 49.89, barium nitrate 17.92, potassium nitrate 3.43, sodium carbonate 2.82, and volatile matter 0.82; *Wetteren powder* nitro-cotton 48.15, gun cotton 30.73, volatile matter 8.22, charcoal 12.12, and humus 0.77. The *Troisdorf* and *Van Förster* powders are of analogous composition.

The foregoing are military powders, while for sporting a granulated powder is made in Walsrode, Hanover, by mixing the nitrocellulose with acetic ether and treating these ingredients in a kneading machine to effect complete solution. Water is then added and the kneading continued while steam is introduced, which results in the gelatin breaking up into fine grains, which are then freed from water by pressing, centrifuging, and drying. Similar to the foregoing is the nitrocellulose powder invented by Lieut. John B. Bernadou and used by the United States navy. It is made by steeping cellulose in nitric acid, and the resulting nitrocellulose is brought into

the colloid condition by treating with ether-alcohol and acetone. The solvent varies according to the special powder desired, as those made with the ether-alcohol colloid show a tendency to produce some smoke and deposit soot, while on the other hand the acetone colloid develops irregular pressures. In some cases certain oxidizing agents, as nitrates of metallic bases, are added to increase the velocity of the explosive; and when the action of the explosive is too violent, a substance rich in carbon, called a deterrent, may be added.

The powders made from nitroglycerin and nitrocellulose include ballistite, cordite, and amberite. *Ballistite* was invented by Alfred Nobel in 1888, and as made in England consists of 40 per cent. of gun cotton dissolved in 60 per cent. of nitroglycerin, with 1 or 2 per cent. of aniline added to the mixture as a neutralizing agent to insure stability. This mixture, when stirred up by compressed air in warm water, gelatinizes, and the solution may be completed by pressing out the water and working in a grinder. The resulting flexible, transparent, rubberlike sheets constitute ballistite, which may then be cut into flakes by machines. In Italy the sheets are forced through spaghetti machines, and the cord-shaped explosive is then called *flite*. According to analysis, ballistite consists of nitro-cotton 44.58, sodium carbonate 2.44, and nitroglycerin 52.99.

Cordite, which was patented in 1889 by Sir Frederick Abel and Prof. James Dewar, has the following composition: Nitroglycerin 58 parts, gun cotton 37 parts, with vaselin 5 parts (used as a restrainer), dissolved in 19.2 parts of acetone. The nitroglycerin is mixed by hand with the gun cotton and then put into a kneading machine and the acetone added. The latter gradually penetrates the mixtures of nitroglycerin and gun cotton and dissolves them both. When the mixture becomes uniform it is washed in cold water, and the paste is then dried to an elastic brown rubberlike mass, which is cut into suitable length for cartridges.

Amberite was patented by Curtis and André, and is said to consist of 44 parts of trinitrocellulose, 12 parts dinitrocellulose, and 40 parts nitroglycerin. This mixture is formed into grains, which are then treated with a solvent consisting of sulphuric ether with a little alcohol, which dissolves the dinitrocellulose and forms a kind of cement, which binds the gun-cotton fibers together and hardens the surface.

The principal explosive powders that consist of nitrocellulose and nitro derivatives of aromatic hydrocarbons are the following:

Indurite. In 1889 Dr. Charles E. Munroe, chemist at the United States torpedo station in Newport, R. I., "determined to attempt to produce a powder that should consist of a single substance in a state of chemical purity." He began by purifying the dried pulped military gun cotton, which he accomplished by extracting it with hot methyl alcohol in a continuous extractor, after which the insoluble cellulose nitrate was again exposed in the drying room. The highly nitrated cellulose thus obtained was then mixed with a quantity of mononitrobenzene, which scarcely affected its appearance and did not alter its powdered form. The powder was then incorporated upon a grinder, by which it was colloidized and converted into a dark translucent mass resembling India rubber. The sheet was then stripped off and cut into flat grains or strips, or it was pressed through a spaghetti machine and formed into cords, either solid or perforated, of the desired dimensions, which were cut into grains. "Then the granulated explosive was immersed in water boiling under the

atmospheric pressure by which the nitrobenzene was carried off and the cellulose nitrate was indurated so that the mass became light yellow to gray and as dense and hard as ivory, and it was

DIE AND PERFORATED CYLINDER OF SMOKELESS POWDER. (HUDSON MAXIM PATENT.)

by this physical change in state, which could be varied within limits by the press, that I modified the material from a *brisant* rupturing explosive to a slow-burning propellant." This explosive is also known as the naval smokeless powder, and in his report for 1892 Secretary of the Navy Tracy says: "It is a gratifying fact to be able to show that what we could not accomplish through the assistance of others we succeeded in accomplishing ourselves, and that the results are considerably in advance of those hitherto attained in foreign countries." Experiments made with indurite showed that in two successive rounds in the 6-inch rapid-firing gun, using 26 pounds of the powder and a 100-pound projectile, the pressures were 13.96 and 13.93 tons and the velocities 2,460 and 2,456 feet per second respectively.

Du Pont powder. In 1893 F. C. and P. S. Du Pont, of Wilmington, Del., patented a smokeless powder consisting of nitrocellulose and nitrobenzene or another suitable solvent, which they granulated by a special process. Into a convenient holder fitted with stirring paddles water (containing in some cases niter) is poured, and then a quantity of finely divided gun cotton is added. By means of the paddles the mixture is stirred until the gun cotton is evenly suspended in the liquid, when nitrobenzene is added. A plastic flocculent mass is formed by the action of the solvent on the suspended gun cotton, which by slow stirring gradually becomes granular. The stirring is continued and steam is added until the solvent is entirely removed and the powder made dense and solid.

Rifflite, S. S., S. R., S. K., S. V., and S. B. powder are varieties of smokeless powder made by the Smokeless Powder Company of Warwick, England, for sporting. They are not patented, and their composition is secret, but from analysis they are believed to be soluble wood nitrocellulose mixed with niter and nitrobenzene, granulated in a manner similar to the process used in the manufacture of the E. C. powder.

Plastomenite, invented by Hermann Güttler, of Reichenstein, is made by melting dinitrotoluene over a water bath and gradually adding one fifth part of nitrocellulose. The resulting mass is formed into fine grains that are of different shades of brown. It finds its chief use for sporting.

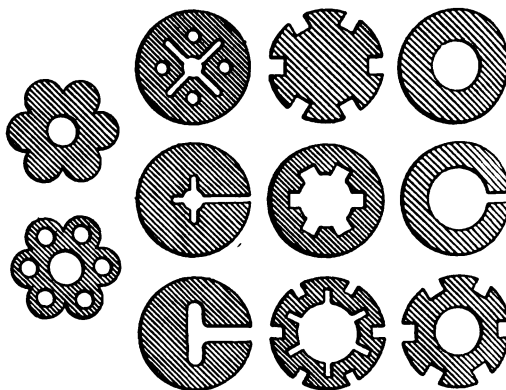

In addition to the foregoing there are several smokeless powders that deserve mention, but do not readily fall into the classification above. Among them are:

Kallivoda von Falkenstein powder, invented by J. K. von Falkenstein, is made by dissolving finely divided cellulose in a 10-per-cent. solution of potassium permanganate, and mixing the resulting amorphous cellulose with manganese dioxide, form-

ing a brown mass. This product is then mixed with nitric acid, and after standing for twelve hours is heated over a water bath until all the manganese dioxide is converted into manganese nitrate, while the amorphous cellulose separates as a white precipitate and is pressed into a cake, which, after drying, is ground into powder. This powder is next nitrated with a mixture of nitric and sulphuric acids, and the nitrocellulose washed and placed in solution of potassium permanganate, to which nitric acid is added and the mixture heated. The resulting nitrocellulose is washed, ground, and made into a paste with gum tragacanth, which is finally pulverized, and the grains are sifted, to be glazed in a drum.

Kolflite is a smokeless powder invented by Herbert Kolf, of Bonn, Germany, and is made by nitrating vegetable waste—such as malt grains and beet-root cuttings—and sulphonating the resulting cellulose with alkaline sulphates under a pressure of 5 atmospheres. The product is then mixed with niter and soaked in a solution of dinitrobenzene.

Poudre pyroxylic. A smokeless powder with this name has been issued by the French Government for sporting. Its composition is as follows: Soluble gun cotton 28 parts, insoluble gun cotton 37 parts, barium nitrate 29 parts, and potassium nitrate 6 parts. The ingredients are first mixed by hand and then in incorporating mills, with the addition of 40 per cent. of water. The mass is then pressed through a sieve with $\frac{1}{16}$ -inch mesh, and dried in drying house till it has less than 1 per cent. of moisture. After the drying, ether is added to the mixture and the paste is granulated, after which it is revolved in a wooden drum, moistened with water, and again dried. The grains are then sorted and glazed, and the finished product consists of regular and hard yellowish grains.

PERFORATED POWDER GRAINS. (HIRAM S. MAXIM PATENT.)

Poudre J. This explosive was invented by M. Bruneauand, and is made by the French Government for sporting. It is brown, much harder than black powder, and is produced in four sizes. The process by which it is made has not been published, but its composition is said to be 83 parts of gun cotton and 17 of potassium bichromate.

Literature.—In addition to the Explosive Notes issued by Dr. Charles E. Munroe at irregular intervals from Columbian University, Washington, D. C., there is published from time to time Notes on the Construction of Ordnance, from the Ordnance Department of the United States Navy Department. A periodical entitled *Arms and Explosives* is issued regularly in London, and besides the foregoing the following works may be con-

THE GRAND PALACE, PARIS EXPOSITION.

sulted: *Explosives and their Composition*, by Wolcott C. Foster (New York, 1888); *A Dictionary of Explosives*, by J. P. Cundill (London, 1889); *A Handbook on Modern Explosives*, by Manuel Eissler (London, 1890); *Smokeless Powder and its Influence on Gun Construction*, by J. A. Longridge (London, 1890); *The Modern High Explosives*, by Manuel Eissler (New York, 1893); *Index to the Literature of Explosives* (American periodicals, by Charles E. Munroe, Baltimore, 1893); *The Manufacture of Explosives*, by Oscar Guttman (2 vols., London, 1895); and *Manual of Explosives*, by Courtenay De Kalb (Toronto, 1900).

EXPOSITION, PARIS UNIVERSAL. International world's fairs may be said to have begun with that held in London in 1851. This was followed by those held in Dublin and New York in 1853, in Paris in 1855, in London in 1862, in Paris in 1867, in Vienna in 1873, in Philadelphia in 1876, in Paris in 1878, in Paris in 1889, and in Chicago in 1893. It had become an established custom to hold expositions in Paris every eleven years, and accordingly, before the close of the fair in Chicago in 1893, preparations were begun for holding an exposition in Paris in 1900.

Origin.—By a decree of July 13, 1892, President Carnot charged the Minister of Commerce and Industry with the preparation of a universal exposition of works of art and of industrial and agricultural products, to be held in Paris during six months of 1900. On Sept. 9, 1893, a second decree was issued, placing the administration of the exposition under the authority of the Minister of Commerce, Industry, and the Colonies, to be directed by a commissioner general. It further established the list of the departments. After other preliminary measures, on June 13, 1896, the Senate and the Chamber of Deputies enacted the complete law that provided for the exposition. In accordance with this law, the state contributed 20,000,000 francs toward the expenses of the exposition. The city of Paris agreed to raise a like amount, which was to represent one fifth of the total expenses, while the remainder of the amount required was obtained through financial establishments by the issue of 3,250,000 bonds, having a face value of 20 francs each and comprising 20 admission tickets with numbers for various lottery drawings. Besides this, 30,000,000 francs was advanced by the Bank of France, and the sale of concessions and materials provided an additional 5,000,000 francs, making a total of 140,000,000 (\$27,020,000) that was raised for the exposition fund.

Administration.—The general supervision of the exposition was under the direction of the Minister of Commerce, Industry, Posts, and Telegraphs, who was at first Paul Delombre and later M. Millerand. The immediate direction of the exposition was intrusted by the minister to the following staff: Commissioner General of the Exposition, Alfred Picard, President of the Council of State; Director General of Exploitation, Delaunay-Belleville, Honorary President of the Chamber of Commerce of Paris; Adjunct Director General of Exploitation, Stephanie Derville, former President of the Tribunal of Commerce of the Seine; Director of Architecture, Parks, and Gardens, M. Bouvard, Director of the Department of Architecture and Landscape Gardening of the City of Paris; Director of Roads, M. Defrance, Administrative Director of the Department of Public Ways, Waters, Sewers, and Lighting of the City of Paris; Director of Finances, M. Grison; Secretary General, Henry Chardon, Member of the Council of State; Chief of Department of Bridges of the Seine, Jean Resal, Engineer in Chief of Bridges and Roads; Chief of Department of Law, Edmond Moreau, former

President of the Company of Administrators before the Tribunal of Commerce of the Seine; Delegate to the Section of Fine Art, M. Roujon, Director of Fine Arts; Delegate to the Section of Agriculture, M. Vassillière, Director of Agriculture; and Delegate to the Section of Colonies and Countries under Protectorate, M. Dislere, Councilor of State.

Location.—The site occupied by the exposition was similar to that of previous expositions in Paris. Beginning at the southwest angle of the Place de la Concorde, the grounds of the exposition extended along two narrow strips on the banks of the Seine for a mile and a half to the Avenue de Suffren, which forms the western boundary of the Champ-de-Mars. The principal exhibition spaces were four, arranged in pairs—the park of the Art Palaces and the Esplanade des Invalides at the east, the Champ-de-Mars and the Trocadéro on the west. On the south side of the river the Esplanade des Invalides was united with the Champ-de-Mars by the Quai d'Orsay. On the north side the park of the Art Palaces was connected with the Trocadéro by the Quai de la Conférence, the Cours-la-Reine, and the Quai Debilly. The total surface of the four areas and the connecting links along the Seine was 336 acres. In addition to the space just mentioned, an area was secured in the Bois de Vincennes on the eastern border of the city as an annex, which was devoted to transportation and sports. Convenient access was had to the various parts of the exposition by means of an electric railway and a moving sidewalk.

Grounds and Buildings.—The grounds, which had long been park areas, were well provided with trees and shrubs, which had been carefully nurtured, so that artificial gardening to any extent was unnecessary to increase the beauty of the site. The main entrance to the exposition was at the southwest corner of the Place de la Concorde, where stood the Port Monumentale, designed by the architect Binet. This led to the new Avenue Nicholas II, which extended from the Champs-Élysées to the Pont Alexandre III. On the west side of this avenue was the Grand Palace of Art, while facing it on the east was the Petit Palais. These two buildings were permanent structures, and were erected to take the place of the old Palais de l'Industrie, which formed the principal building of the exposition in 1855. The Grand Palace had a façade 500 feet long, and in the perfection of its design and the profusion of its ornamentation was intended to be the noblest exponent of contemporary French architecture and sculpture. The exterior was elaborately decorated with ornamental and sculptural designs, which added greatly to its imposing appearance and massive grandeur. A splendid colonnade of Corinthian pillars was an attractive feature of the façade. Extending along the front were several groups of statuary depicting art in different eras of the world's history, while on the wings and colonnades were eight seated figures of similar representative character. Along the main façade, under the grand colonnade, was a frieze 240 feet long by 10 high, divided into ten sections, five representative of modern art and five of ancient. In the building were exhibited examples of contemporary art, both French and foreign. The Petit Palais was of similar character. A bas-relief above the entrance represented the city of Paris protecting art. On either side of the entrance were groups of statuary, that on the right being emblematic of the four seasons, while that on the left represented the Seine and its tributary rivers. On top, to the right and left of the entrance, were groups representing the genius of sculpture and the genius of painting. The building contained the centennial

exposition which was illustrative of the history of French art. Connecting the Avenue Nicholas II with the Esplanade des Invalides was the Pont Alexandre III, which is likewise to remain as a permanent memorial of the exposition. The foundation stone of this bridge was laid in October, 1896, by the Czar Nicholas II and President Faure, who named it in honor of Alexander III, father of the present Czar, to whose efforts, it is said, the alliance of

west, along the river, were the following special buildings: Italy, Turkey, United States, Austria, Portugal, Bosnia and Herzegovina, Peru, Hungary, Persia, Great Britain, Belgium, Luxembourg, Norway, Finland, Germany, Bulgaria, Spain, Monaco, Roumania, Sweden, Greece, and Servia. Beyond the Street of Nations were the buildings devoted to the military exhibits and the naval exhibits. Along the Esplanade of the Champ-de-Mars were the

ALEXANDER III BRIDGE.

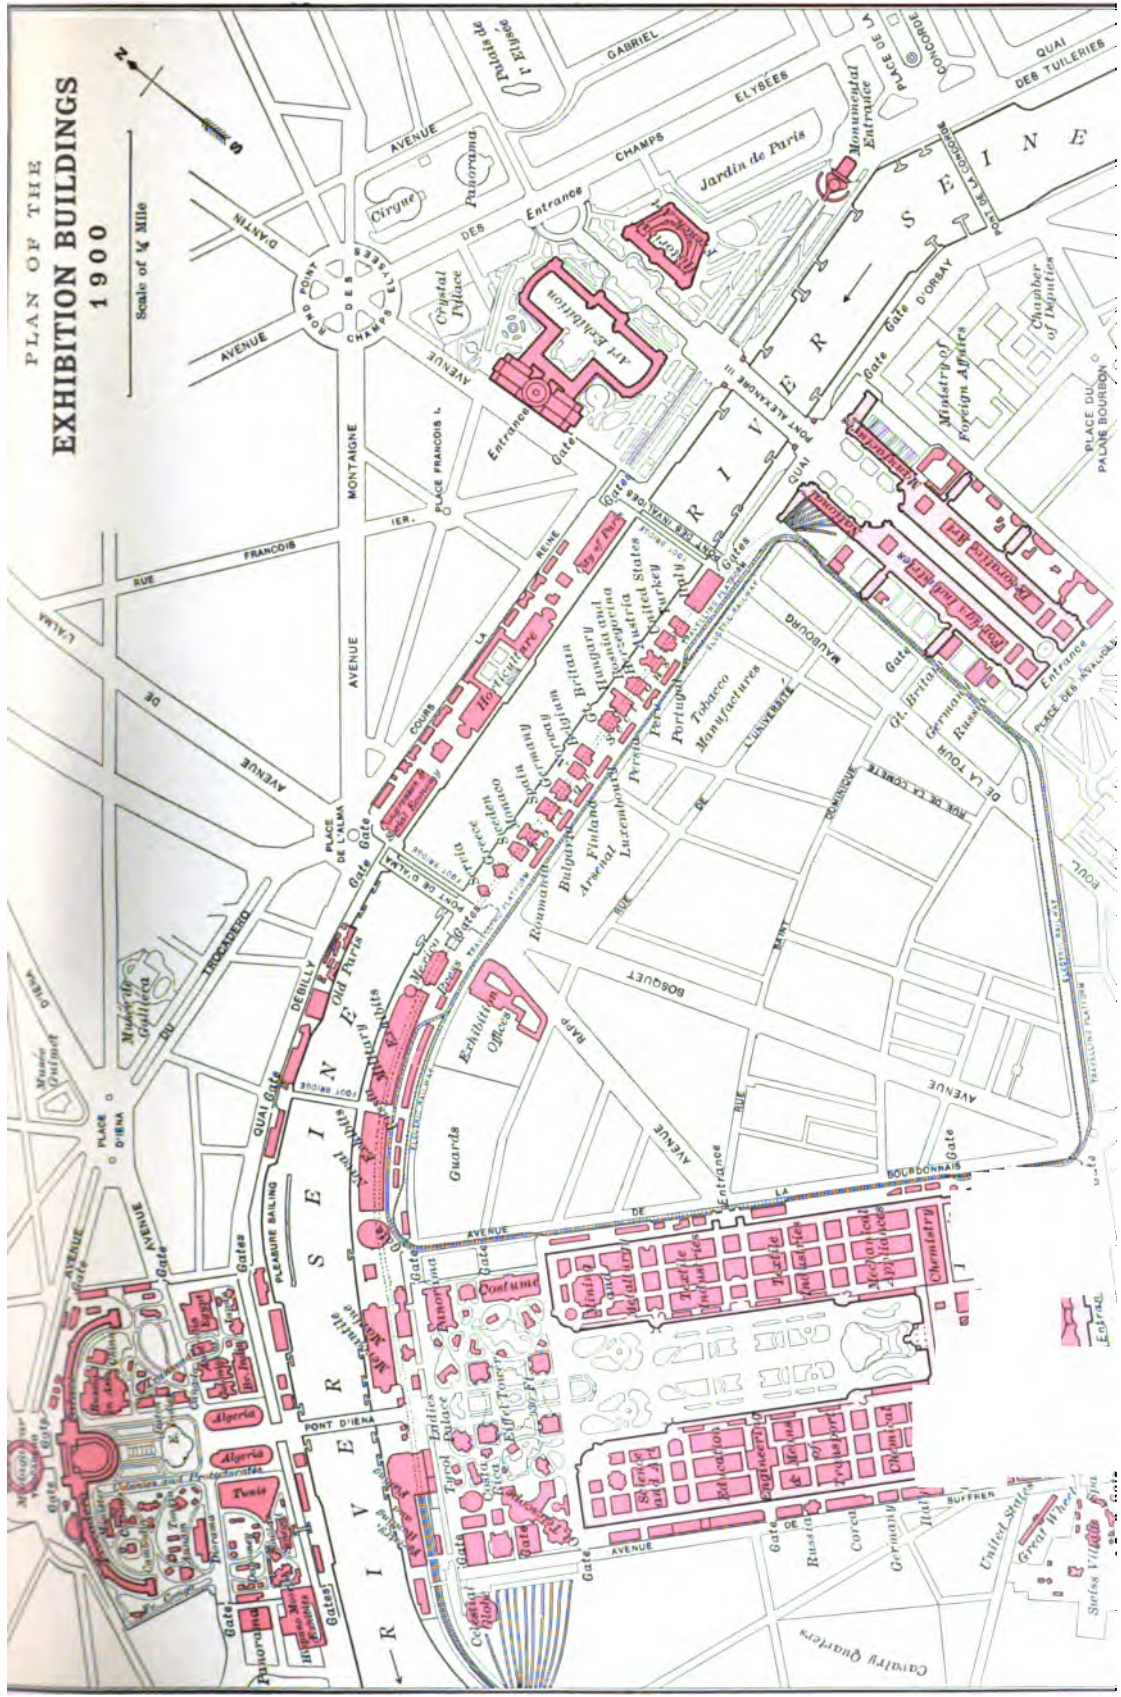

friendship between the two nations is mainly due. The total length of the bridge is 257 feet, and the width 130 feet. The roadway occupies a space 70 feet in width, and the sidewalk on either side is 30 feet wide. At both entrances are two pylons in white marble, each 70 feet high, surmounted by gilt-bronze statuary representing Pegasus with Fame about to take her flight. At the lower part of the pylons are four fine pieces of statuary representing France at various epochs. Two groups of massive lions guard the approach to the bridge. Broad flights of stone steps lead from the lower quays to the floor of the bridge at each abutment, and at the top of these steps are groups of statuary representing the Children of the Vases. The cost of the bridge was estimated at \$400,000, and it is said to be the finest of its type in existence. Extending along the Cours-la-Reine were the pavilion of the city of Paris, which contained the special exhibits of the Paris municipality, the two buildings devoted to the horticultural exhibit, and the building in which the congresses were held. Still farther along the river was Old Paris, an archaeological restoration of mediæval, seventeenth and eighteenth century quarters of the city, with inns and restaurants along the river side. On the Esplanade des Invalides were the buildings devoted to foreign industries and decorative arts. To the

special structures occupied by Mining and Metallurgy, Textile Industries, Mechanical Appliances, Chemistry, Electricity, Agriculture and Food, Chemical Industries, Engineering and Means of Transport, Education, and Science and Art. These buildings were white, varied with colored ornamentation of yellow, terra cotta, and blue, while there were many imposing stained-glass windows, a great deal of gilding, and everywhere floral sculpture. On both sides were terraces, arches, and arcades, while on the left, looking from the Eiffel Tower, was a continuous line of restaurants. In the immediate vicinity of the Eiffel Tower were the buildings of Costume, Panorama, Great Telescope, Celestial Globe, and similar features, while on the banks of the Seine were the buildings devoted to the Mercantile Marine, Forestry, Hunting, and Fishing. The Trocadéro on the north bank of the Seine was devoted to French and foreign colonies, including the buildings erected by the United States for the exhibits of Porto Rico, the Philippines, the Hawaiian Islands, and Alaska, as well as Cuba.

Classification.—The systematic grouping of the objects to be exhibited was arranged along educational lines into 18 groups, with subdivisions into 121 classes. These were as follows:

Group I, Education and Instruction—Class 1,

PLAN OF THE
EXHIBITION BUILDINGS
1900

Education of the Child, Elementary Instruction, Instruction of Adults; 2, Secondary Education; 3, Higher Education, Scientific Institutions; 4, Special Education in Fine Arts; 5, Special Education in Agriculture; 6, Special Industrial and Commercial Education.

Group II, Works of Art—Class 7, Paintings, Cartoons, Drawings; 8, Engraving and Lithography; 9, Sculpture and Engraving on Medals and Gems; 10, Architecture.

Group III, Appliances and General Processes relating to Literature, Science, and Art—Class 11, Typography, Various Printing Processes; 12, Photography; 13, Books, Musical Publications, Book-binding (equipments and products), Newspapers, Posters; 14, Maps and Apparatus for Geography and Cosmography, Topography; 15, Instruments of Precision, Coins and Medals; 16, Medicine and Surgery; 17, Musical Instruments; 18, Theatrical Appliances and Equipment.

Group IV, Machinery—Class 19, Steam Engines; 20, Various Motors; 21, General Machinery; 22, Machine Tools.

Group V, Electricity—Class 23, Machines for Generating and Using Electricity; 24, Electro-Chemistry; 25, Electric Lighting; 26, Telegraphy and Telephony; 27, Various Applications of Electricity.

Group VI, Civil Engineering, Transportation—Class 28, Materials, Equipment and Process relating to Civil Engineering; 29, Models, Plans, and Designs for Public Works; 30, Carriages and Wheelwright's Work, Automobiles and Cycles; 31, Saddlery and Harness; 32, Equipment for Railways and Street Railways; 33, Material and Equipment used in the Mercantile Marine; 34, Aërial Navigation.

Group VII, Agriculture—Class 35, Farm Equipment and the Methods of Improving Land; 36, Appliances and Methods of Viticulture; 37, Appliances and Methods used in Agricultural Industries; 38, Theory of Agriculture, Agricultural Statistics; 39, Vegetable Food Products; 40, Animal Food Products; 41, Inedible Agricultural Products; 42, Useful Insects and their Products, Injurious Insects and Plant Diseases.

Group VIII, Horticulture and Arboriculture—Class 43, Appliances and Methods of Horticulture and Arboriculture; 44, Vegetables; 45, Fruit Trees and Fruits; 46, Trees, Shrubs, Ornamental Plants, and Flowers; 47, Plants of the Conservatory; 48, Seeds and Plants for Gardens and Nurseries.

Group IX, Forestry, Hunting, Fishing, Gathering Wild Crops—Class 49, Appliances and Processes used in Forestry; 50, Products of the Cultivation of Forests and of Forest Industries; 51, Hunting Equipments; 52, Products of Hunting; 53, Fishing Equipments and Products, Fish Culture; 54, Appliances for Gathering Wild Crops and products obtained.

Group X, Foodstuffs—Class 55, Equipment and Methods employed in the Preparation of Foods; 56, Farinaceous Products and their Derivatives; 57, Bread and Pastry; 58, Preserved Meat, Fish, Vegetables, and Fruit; 59, Sugar and Confectionery, Condiments and Relishes; 60, Wines and Brandies; 61, Sirups and Liqueurs, Distilled Spirits, Commercial Alcohol; 62, Various Beverages.

Group XI, Mining and Metallurgy—Class 63, Working of Mines, Ore Beds, and Stone Quarries; 64, Metallurgy; 65, Metal Working.

Group XII, Decoration and Furniture of Public Buildings and Dwellings—Class 66, Permanent Decoration of Public Buildings and Dwellings; 67, Stained Glass; 68, Paper Hangings; 69, Household and Artistic Furniture; 70, Carpets, Tapestries, and Fabrics for Upholstery; 71, Upholsterers' Dec-

orations; 72, Ceramics; 73, Glass and Crystal; 74, Apparatus and Processes for Heating and Ventilation; 75, Apparatus and Methods, not Electrical, for Lighting.

Group XIII, Threads and Yarns, Fabrics, Garments—Class 76, Materials and Processes for Spinning and Rope Making; 77, Equipment and Processes used in the Manufacture of Textile Fabrics; 78, Equipment and Processes used in Bleaching, Dyeing, Printing, and Finishing Textiles in their Various Stages; 79, Equipment and Processes used in Sewing and making Wearing Apparel; 80, Threads and Fabrics of Cotton; 81, Threads and Fabrics of Flax, Hemp, etc.; Cordage; 82, Yarns and Fabrics of Wool; 83, Silk and Fabrics of Silk; 84, Laces, Embroideries, and Trimmings; 85, Industries producing Wearing Apparel for Men, Women, and Children; 86, Various Industries connected with Clothing.

Group XIV, Chemical Industries—Class 87, Chemical and Pharmaceutical Arts; 88, Manufacture of Paper; 89, Leather and Skins; 90, Perfumery; 91, Tobacco and Matches.

Group XV, Diversified Industries—Class 92, Stationery; 93, Cutlery; 94, Silversmith's and Goldsmith's Ware; 95, Jewelry; 96, Clock and Watch Making; 97, Works of Art in Bronze, Cast Iron, and Wrought Iron, Repoussé Work; 98, Brushes, Fine Leather Articles, Fancy Articles, and Basket Work; 99, India-Rubber and Gutta-Percha Industries, Articles for Traveling and for Encamping; 100, Toys.

Group XVI, Social Economy, Hygiene, Public Charities—Class 101, Apprenticeship, Protection of Child Labor; 102, Wages, Industrial Remuneration, Profit Sharing; 103, Large or Small Industries, Co-operative Associations for Production or for obtaining Credit, Trade Unions; 104, Farming on a Large or Small Scale, Agricultural Unions and Banks; 105, Protection of Workers in Factories, Regulation of Work; 106, Workmen's Dwellings; 107, Co-operative Stores; 108, Institutions for the Mental and Moral Improvement of Workingmen; 109, Provident Institutions; 110, Public or Private Movements for the Welfare of the People; 111, Hygiene; 112, Public Charities.

Group XVII, Colonization—Class 113, Methods of Colonization; 114, Colonial Resources; 115, Special Merchandise suitable for export to Colonies.

Group XVIII, Military and Naval—Class 116, Ordnance and Equipment for Artillery; 117, Military Engineering and Accessories; 118, Naval Construction, Hydraulics, Torpedoes; 119, Cartography, Hydrography, Various Instruments; 120, Administrative Departments; and, 121, Hygienic and Sanitary Equipment.

Opening Exercises.—It was originally provided that the exposition should open on May 5 and close on Oct. 31, but these dates were changed to April 15 and Nov. 11. The official opening took place on April 14, on which occasion the members of the diplomatic corps, Senators and Deputies, and 14,000 other invited guests were present. The cold, cheerless, almost winter weather that had prevailed up to that time gave place to a bright, warm, and perfect day. At the Salle des Fêtes, the farthest extremity of the Champ-de-Mars, the inauguration ceremony took place. At 2.30 P. M. President Loubet arrived, escorted by M. Millebrand, Minister of Commerce; M. Picard, the Commissioner General; and the chief officials of the exposition. As he entered the grounds a great chorus greeted him by singing the Marseillaise, and as he entered the building the orchestra and military bands played a Marche Solennelle, by Massenet. The scene within the building was remarkably brilliant. Since the jubilee of Queen

THE EIFFEL TOWER, WITH VIEW OF THE CHAMP DE MARS.

Victoria or the coronation of the Czar, no such congress of strange and gorgeous costumes had been seen. President Loubet took his stand in front of the dais, and was briefly addressed by M. Millerand, who said, "The persevering efforts and the patient energy of M. Picard and of his colleagues made possible the prodigious work which I present to you to-day." He spoke eloquently of the various races of mankind as of one brotherhood. He eulogized the marvels of the economic revolution that had produced steam and electricity, which was gradually relieving flesh and blood. "Machinery," he said, "was destined to become the queen of the world." In response, President Loubet said: "This work of harmony, peace, and progress, however ephemeral its outward show, will not have been in vain; the present meeting of the governments of the world will not remain sterile. I am convinced that, thanks to the persevering affirmation of certain geniuses, thoughts with which the expiring century has resounded, the twentieth century will witness a little more fraternity and less misery of all kinds, and that ere long, perhaps, we shall have accomplished an important step in the slow evolution of the work toward happiness and of man toward humanity. Under these auspices, and with this hope, I declare the exposition of 1900 open." The chorus then sang a Hymn to Victor Hugo, by Saint-Saens, and the orchestra and bands played a Marche Heroique, by Theodore Dubois. This concluded the opening ceremony, and the official party proceeded to an adjoining room, where the diplomatic corps and the chief commissioners of the exposition were presented to the President. A tour of the grounds followed. As they passed the pavilion of the United States the Stars and Stripes were

dipped from the flagstaff, and two American marines, stationed one on each side of the Washington statue, waved a tricolor, while a group of Americans gathered on the bank in front of the pavilion gave President Loubet a ringing cheer.

Among all the rulers and royalties that visited Paris during the exhibition the Shah of Persia alone was the object of a murderous anarchistic assault. He took no precautions, having no fear of political enemies in Europe, and so offered an opportunity to a young French anarchist of disordered mind, who was prevented from shooting him only by the Shah's own quickness and that of his Grand Vizier.

International Jury.—Three classes of juries were organized to judge exhibits at the exposition: first, the class juries, whose function was to examine and report on entries; second, the group juries, who superintended and carried forward the work of the class juries; and, third, the superior juries, by whom alleged mistakes and injustices were considered and finally adjudged. As is customary, the judges were selected from among the various nations exhibiting, and the number of jurors taken from the United States was 95, who were appointed by Commissioner-General Peck, and were distributed among the groups as follows: Education and Instruction, Miss A. T. Smith, J. N. Norton, H. L. Taylor, and S. P. Tuck; Art, F. D. Millet, Alexander Harrison, J. B. Cauldwell, Augustus St. Gaudens, and Thomas Hastings; Letters, Sciences, and Arts, Claude M. Johnson, A. S. Capehart, Edgar Cameron, D. O. Haynes, J. K. Rees, C. H. Beard, S. P. Veit, Milward Adams, and W. R. Hoag; General Mechanics, Charles Le Blanc, Storm Bull, H. O. Berg, Francis E. Drake, W. D. Ball, G. R. Ostheimer,

THE STREET OF NATIONS, PARIS EXPOSITION.

G. R. Hering, J. S. Anthony, R. C. Lewis, and C. T. Malcomson; Civil Engineering, J. A. Ockerson, I. A. Risse, J. W. Howard, W. Renshaw, G. S. Wilkins, and C. T. Purdy; Agriculture, C. C. Denson, Sylvain Bloch, H. E. Alford, Charles R. Dodge, M. L. Floyd, J. I. Schulte, C. W. Dabney, and J. A. Leclere; Horticulture and Arboriculture, J. M. Francis, W. A. Taylor, H. N. Dunlap, and G. B. Brackett; Forests, Hunting, and Fishing, Richard Wiener, A. C. Baker, and Morton Mitchell; Provisions, N. A. Carleton, Alfred Schweizer, L. S. Ware, H. W. Wiley, Julius Schuler, J. P. Smith, and L. J. Vance; Mines and Metallurgy, George Chartier, F. W. Clarke, H. M. Howe, E. W. Johnson, and F. M. Head; Decorative Art and Furniture, A. G. Wilkinson, Roger Riordan, C. E. Spratt, Goodman King, Lazard Kahn, W. S. Ward, and W. F. Wolfe; Chemical Industries, Joseph Leidy, F. Alvarez, A. Legallet, G. R. Lorenz, E. W. Dayton, A. J. G. Hodenpyl, C. F. Greene, and A. G. Stein; Textures and Clothing, J. F. Bancroft, William Harper, Franklin Allen, H. A. Flurschein, Henrietta Olberg, and J. S. Griffin; Diversified Industries, M. H. Hulbert, A. Vignos, Paul Bartlett, E. D. Jones, W. F. Willoughby, Miss Jane Addams, and Percy Peixotto; Social Economy and Hygiene, W. H. Tolman, N. P. Gilman, J. P. McKeehan, and C. A. Rosell.

Exhibits.—According to the official catalogues, there were 79,712 entries, distributed among the 18 groups as follows: Group I, 7,142; Group II, 8,620; Group III, 4,779; Group IV, 1,317; Group V, 1,051; Group VI, 3,378; Group VII, 8,739; Group VIII, 1,361; Group IX, 2,315; Group X, 14,308; Group XI, 3,735; Group XII, 3,928; Group XIII, 5,256; Group XIV, 2,942; Group XV, 3,948; Group XVI, 5,380; Group XVII, 888; Group XVIII, 657. Of these exhibits, 6,674 were from the United States. The number of exhibits from France was 31,946, which alone exceeded the United States. It is impossible to summarize the exhibits shown, but the number of awards received by exhibitors from the United States demonstrates the superiority and remarkable advances that have been made in this country since the Columbian Exposition, held in Chicago in 1893. The following extracts from a series of articles by experts will serve to show something of the character of what was done for the United States by its exhibitors in Paris. The fine arts exhibit constituted unquestionably the finest collection of works by American artists that had "ever been brought together." The mining exhibit was described as comprising representative specimens of all of the commercial mineral products of the United States, a general collection of systematic mineralogy, a reference library, and a collective exhibit of metallurgical processes and products. The army and navy of the United States were represented by a collection of exhibits sent by the War and Navy Departments, or the various bureaus thereof, by private individuals and by firms who contracted for the work under the Government, or to furnish the military and naval service with war materials, apparatus, and appliances.

Awards.—The work of the Jury of Awards, notwithstanding the enormous number of exhibits to be examined and the intense heat prevalent in Paris, proceeded with remarkable celerity, and on Aug. 18 the announcement of the awards was made by President Loubet. According to the official bulletin, 42,790 awards were made, which were distributed as follows: Grand prizes, 2,827; gold medals, 8,166; silver medals, 12,244; bronze medals, 11,615; and honorable mentions, 7,938. In addition to the foregoing, about 50,000 commemorative diplomas will be issued to collaborators. Of the

awards made, the United States received: Grand prizes, 240; gold medals, 597; silver medals, 776; bronze medals, 540; honorable mentions, 322; total, 2,476, or more awards than any other nation exhibiting except France. The official comment has been made that these figures "indisputably demonstrate that not only did the United States have many more exhibitors at the exposition than any other foreign nation, but that the extent and quality also of the exhibits have been approved by the ablest international jury ever organized, which has granted the exhibitors of our nation the largest number of awards of all of the visiting nations." Germany received 1,826 awards; England, 1,727; and Russia, 1,493.

Congresses.—Preliminary announcements were issued showing the following list of proposed congresses to be held during the exposition:

I. Art, which was again subdivided into the following subjects, to each of which several days were devoted—Music, Photography, Dramatic Art, Architecture, Municipal Art, Teaching of Art.

II. Mining, Engineering, and Applied Science, subdivided into Gold and Silver Assaying, Mines and Metallurgy, Automobiles, Testing of Materials, Steam Engines, etc., Applied Mechanics, Applied Chemistry, Fire Brigades, Thread Numbering, Gas, Tramways, Aëronautics, Railroads, Acetylene.

III. Maritime Affairs, subdivided into Naval Architecture and Construction, Navigation, Chronometry, Merchant Marine, Maritime Law.

IV. Mathematical, Physical, and Chemical Science, subdivided into Applied Mechanics, Applied Chemistry, Chemistry, Mathematics, Physics, Electricity.

V. Natural Science, subdivided into Ornithology, Alpinists, Geology, Meteorology, Botany.

VI. Agriculture and Forestry, subdivided into Horticulture, Forestry, Agricultural Stations, Viticulture, Cattle Feeding, Agriculture, Agricultural Co-operation, Apiculture, Fruit Culture and Arboriculture, Aquiculture and Fisheries, Wine and Cider Making.

VII. Medicine, Hygiene, etc., subdivided into Homœopathy, Professional Medicine, Medical Press, Electrology and Medical Radiology, Pharmacy, Medicine, Dermatology, Dentistry, Hygiene, Hypnotism, Physical Education, Pharmacy Specialties.

VIII. Anthropology, Archæology, and History, subdivided into Numismatics, Comparative History, Anthropology, and Prehistoric Archæology, Ethnography, Basque Studies, History of Religion, Folklore, Americanists.

IX. Education, subdivided into Fencing, Music, Modern Language Teaching, Higher Education, Secondary Education, Primary Education, Philosophy, Educational Press, Stenography, Bibliography, Psychology, Teaching of Art, Physical Education, Popular Education.

X. Technical, Social, and Commercial Education, subdivided into Agricultural Education, Teaching of Social Science, Technical and Industrial Education, Social Education.

XI. Geographical and Colonial Questions, subdivided into Colonies, Colonial Sociology, Economic and Social Geography.

XII. Industry and Commerce, subdivided into Grocery Trade, Ramie, Commercial Travelers and Agents, Baking Trade, Wine and Spirit Trade, Commerce and Industry, Tariff Regulations, Milling Trade.

XIII. Property and Finance, subdivided into House Property, Movable Property, Joint-Stock Companies, Landed Property, Insurance, Actuaries, Copyright (Literary and Artistic), Indus-

trial Property and Copyright, Comparative Law, Inventors' Associations.

XIV. Literature and the Press, subdivided into Press Associations, Medical Press, Educational Press, Stenography, Librarians.

XV. Labor and Co-operation, subdivided into Friendly Societies, Young Workmen's Aid Societies, Housing, Workmen's Protection and Compensation, People's Credit Banks, Workmen's Co-operative Productive Associations, Co-operative Societies, Profit Sharing, International Co-operative Alliance.

XVI. Women, subdivided into Women's Work and Institutions, Women's Rights.

XVII. Philanthropy, subdivided into Housing, Vegetarian, Discharged Prisoners' Aid, Life Saving and First Aid, Poor Relief, Blind, Deaf-Mutes, Antislavery, Red Cross, Abuse of Tobacco, Sunday Rest.

XVIII. Peace.

THE UNITED STATES PAVILION.

The Miners' International Congress chose Paris for its meeting near the end of June. From English miners came the proposal for a legal eight-hour day from bank to bank for workers underground and on the surface. The fact that the Northumberland miners, after having obtained a shorter day for the boys in their mines, had been compelled to give up this advantage in a period of depression, showed that if the miners could gain the eight-hour day without legislation it could not be preserved. The miners of South Wales, who were formerly divided on the question, were

now unanimous in favor of eight hours established by law. From England also came a resolution that all nationalities should seek a minimum wage, which would vary in amount according to local circumstances, but should suffice always for decent existence, the education of the children, and a provision for old age. A minimum wage would further be useful, as a Belgian delegate explained, in preventing miners from competing against each other or mine owners from competing at the expense of their workmen. A Scotch delegate moved that employers should be held responsible for all accidents to workmen in their employment, and should be compelled to compensate them from the date of injury. The new English law on accidents had not worked as well as had been anticipated. There were about as many accidents as formerly because the employers insured themselves against risks and were as careless as before. A French delegate, who seconded the motion, declared the

French law, which had at last been adopted after traveling back and forth between the Senate and Chamber for seventeen years, was also unsatisfactory, although better than the English law, inasmuch as compensation was given after four days of disability instead of two weeks. A German delegate explained the German law, under which a workman receives when disabled a pension equal to two thirds of his usual wages without being called upon to contribute to the accident fund, which is collected from the employers by the state, and carelessness is not recognized as a valid excuse for withholding compensation. A representative of the Yorkshire miners moved that all governments should provide pensions for the poor and aged and for those unfit to work from the age of fifty-five. All existing pension schemes were condemned as coming too late into operation and giving too little. The French delegate who seconded the motion explained that pensions were given in France from the age of fifty-five by the law of 1894, but the amount was not fixed, and varied from 1 franc to 2 francs. A Belgian delegate mentioned that the Belgian miner gets only 10 francs a month, and this only after the age of sixty-five, although a third of the miners of the Charleroi coal fields had need of pensions from the age of fifty. Compulsory insurance was

praised by the German delegates as having saved German workmen from the beggary that too often prevails in other countries. The congress was attended by 52 delegates from Great Britain, representing 641,500 miners; 2 German delegates, representing 200,000 miners; 11 French delegates representing 160,000 miners; and 8 Belgian delegates, representing 132,000 miners; making a total of 73 delegates speaking on behalf of 1,133,500 miners.

The annual session of the Inter-Parliamentary Conference was held at the beginning of August. In addition to proposals for the more practical

adoption of the convention agreed to at the conference at The Hague several matters for international concord were submitted, notably the creation of a press union for the purpose of influencing public opinion in favor of the pacific settlement of international disputes. In Hungary newspaper groups were already organized for the promotion of peace and arbitration. The South African war could not be discussed because it had previously been so decided, and the English members threatened to withdraw if the subject were introduced. The congress expressed a hope that the just repression of the Chinese massacres would not lead to conquests entailing a general war or to enterprises contrary to the economical, social, and political future of Europe.

The nineteenth conference of the International Law Association met at Rouen on Aug. 21. A question raised at the Buffalo conference of 1899, that was referred for fuller consideration to committees in the United States and in England, was whether private property at sea should be free from capture during war. In the reports of the committees and in the discussion of them in the conference the opposition of the views of European statesmen, both British and Continental, to those of the statesmen of the United States was as decided as when the subject was considered at the international conference of maritime powers at Paris in 1857. The accession of the United States was withheld from the declaration of Paris that enemies' goods in neutral bottoms and neutral goods in enemies' bottoms are free from capture, not because the United States clung to the right of privateering, which the signatory powers renounced, but because the representatives of the European powers would not carry the principle further by adding to the declaration the words "and that the private property of the subjects or citizens of a belligerent on the high seas shall be exempted from seizure by public armed vessels of the other, except it be contraband." At The Hague convention of 1899 the Government of the United States brought forward the question again and endeavored to obtain a decision in favor of the proposition that private property, with the exception of contraband of war, shall be exempt from capture or seizure on the high seas or elsewhere by armed vessels or by military forces, but the exemption shall not extend to vessels and their cargoes attempting to enter a blockaded port. The convention declined to take up the question, as the majority of the delegates of the powers held that it did not come within the scope of their instructions. The American committee of the International Law Association reported in favor of a resolution that there should be a modification of the present rules of naval warfare so far as the right to capture peaceful and nonoffending maritime property is concerned, and that such result can best be obtained by a conference of representatives of all the maritime powers empowered to consider the question in all its aspects. The proposition found support from Italian representatives, and a French delegate suggested an alternate resolution that it was desirable to have the same rules apply to private property on the sea as to private property on land, contending, however, that there is no rule against seizure of private property on land. American delegates held that the law of nations does not justify the seizure of private property on land except contraband of war, unless it be necessary for the belligerent operations or required for military purposes, and they argued that the right to seize at sea non-combatant property not useful for the belligerent's purposes is of little value, as the real method of

destroying an enemy's commerce lies in the right and power of blockading his ports. The British view was that the liability to capture of private property afloat deters nations from going to war and impels them to bring wars to a close, and that its deterrent effect is felt by the most powerful maritime powers as well as the weaker ones. The conference resolved not to advocate a congress of maritime powers to consider the matter and decided not to pass any resolution on the subject. A committee of American and English lawyers appointed at Buffalo to draw up a code of international marine insurance rules adopted, in regard to the test for constructive total loss and the effect of unseaworthiness of the ship on sailing upon her voyage, which are the two most important matters upon which the laws of different nations are divergent, the rules accepted in Continental Europe in preference to the English and American rules. The loss by perils insured against of three fourths of the value of the ship or cargo would, by the rule approved by the committee, be treated as a total loss entitling the insured to payment of the amount of the insurance on abandoning the thing insured to the underwriter. As to unseaworthiness, instead of following the English law, which in a voyage policy infers a warranty of absolute seaworthiness of the ship on sailing, but in a time policy infers no undertaking by the assured even of care to make the ship seaworthy, or the American law, which imposes the strict condition of seaworthiness on the assured whether the policy be for the voyage or for a specified time, the committee recommended the general rule adopted by Continental nations that due care must be taken to have the ship staunch and fit at the beginning of every voyage under the policy. The adoption of the committee's code of rules in the laws of the various maritime states would have the effect of putting all policies, wherever made, on the same legal basis and would remove the obstacles now existing to insuring a ship or cargo by several policies in two or more countries or to reinsuring in other countries. The French members were unwilling to vote on the proposed rules until they could study them in a French version, and therefore action was postponed till the next conference, at which any amendments or substitutions that may be suggested will also be considered.

The Socialist congress was disturbed by the dissensions between the two branches of the French Socialists, the followers of Jules Guesde, the chief organizer of the party, who condemns co-operation with other parties, and especially the acceptance of office by M. Millerand, and the Independent Socialists, among whom are the parliamentary orators Rouanet, Jaurès, Millerand, and Viviani. The challenge was given in the eighteenth annual congress of the French Labor party, which met on Sept. 20. The cleft between the factions was widened by a difference of opinion on the Dreyfus case, which led the Guesdists to join the Anti-Semites. The International Socialist Congress was the successor of the congresses of London in 1896 and of Zurich in 1893, which followed the united Trade Unionist and Socialist Congress of Brussels in 1891, in which the division that led to rival congresses at Paris in 1889 was healed, this division having been caused by the preponderance in the London congress of 1888 of English trade unionists, who made their views prevail over those of the Continental Socialists that planned the international gathering in the conference held at Paris in 1886 and organized the Paris congress of 1886. The congress of 1900 assembled in Paris on Sept. 23. When the French section elected M.

INTERIOR OF THE MANUFACTURES PAVILION, UNITED STATES SECTION.

Jaurès for its president the Guesdists left the hall, but returned and attempted to rescind the action at a moment when the temporary absence of many of their antagonists left them in the majority. The German Socialists told how they had healed such differences twenty-five years before and had become the strongest Socialist party in Europe; the English delegation appealed to the Frenchmen to unite for the purpose of combating colonial expansion, jingoism, and imperialism, just as the British Socialists were unanimous in condemning the Transvaal war; a member of the Italian Chamber of Deputies related how the Socialists of Italy had successfully resisted the reaction which led to the Milan massacre, and after using the weapon of parliamentary obstruction for a year returned to the Chamber twice as strong in numbers when the Government appealed to the electorate; an Austrian delegate told how united the party was in Austria in spite of racial and linguistic differences; and Belgian, Dutch, Danish, Swiss, Russian,

Polish, and American spokesmen each in turn also appealed for union. When the congress got to work at last it passed a resolution in favor of eight hours as the maximum limit of a day's work in all trades, and resolved that the first step to attain this end was to enforce the principle in all public works and contracts. The principle of a minimum wage was discussed as a corollary to this, and, after it was pointed out by the Germans that a fixed rate of wages would be useless unless the prices of the necessities of life could be regulated likewise, it was resolved at their suggestion that it was necessary to maintain minimum rates of wages, varying according to the cost and standard of living in each country, but always sufficient to procure the means of a decent and healthy existence; also that strong trade unions were the necessary agents for fixing and maintaining the minimum wage. The May day holiday as a demonstration in favor of eight hours, universal suffrage, and other reforms advocated by the party in all

countries was approved. Another resolution advocated the formation of a proletariat party which should employ all forms of organization, including trade union and political action, with the object of socializing all the means of production and exchange. Over the question of political alliances it was agreed that the class struggle forbids permanent alliances between the Socialists and other parties, but not temporary co-operation for specific objects or tactical advantages, as in Belgium to secure universal suffrage, in Italy for freedom, and in France over the Dreyfus affair. The entrance of an isolated Socialist into a capitalist government may be expedient as the beginning of a conquest of the public powers, but it should be with the sanction of the party, and such a minister should resign if the Government does not maintain strict neutrality in the struggles between capital and labor.

Closing and Results.—As the exposition drew to a close, special entertainments were provided in order to attract visitors. The night of Nov. 11 was devoted to a fête of illumination. The Château d'Eau blazed with light, with constantly changing colors, and in the distance the Trocadéro and all the buildings were illuminated, while the gardens displayed their garlands of translucent fruits, and for the last time the assembled people gazed on the luminous waters. Suddenly the lights went out, and the end came; then the people moved toward the gates, and at 11 o'clock the booming of a cannon from the first story of the Eiffel Tower announced that the exposition was no more.

Official statistics show that more than 50,000,000 persons visited the exposition, which is about double the number that attended the exposition of 1889, when 25,121,075 passed the gates. In that year the British and the Belgians outnumbered other visitors, but on this occasion the Germans headed the list, with the Belgians second and the British far behind, while the Americans formed an important contingent. The greatest number of visitors on a single day exceeded 600,000, compared with the maximum of 335,377 in 1889. The greatest attendance at the exposition in Chicago in 1893 was on Oct. 9, when 716,881 persons passed through the gates. As regards expenses, M. Hanotaux wrote: "France expended 200,000,000 or 300,000,000 francs to erect the exposition. She has recovered them easily in the increase of the treasury receipts, in the surplus of Parisian *octroi* duties, in the monuments remaining to the state or the city, and in the quays, bridges, and improved transportation facilities bequeathed by the exposition. Moreover, there has been a general cleaning up of the city, which has contributed to its brilliance and beauty."

An announcement was made on Dec. 15 that the exposition balance sheet showed a deficit of 2,073,786 francs.

Relation of the United States to the Exposition.—In accordance with an act of Congress approved by the President on July 1, 1898, there was appointed a commissioner general to represent the United States, to make all needful rules and regulations in reference to the contributions from this country, and to control the expenditures incident to and necessary for the proper installation and exhibition thereof; an assistant commissioner general to assist and act under the direction of the commissioner general; a secretary to act as disbursing agent, whose accounts were to be rendered to the accounting officers of the Treasury; also 12 commissioners and a number of experts having special attainments in regard to the subject of the groups in the exposition to which they

should be assigned. The necessary expenses were limited to \$650,000. On March 3, 1899, Congress appropriated an additional sum of \$560,000, making a total appropriation of \$1,210,000 for the participation of the United States at the Paris Exposition. At the end of the exposition the commissioner general is required, within four months after its close, to make a full report of the results, which, when printed, should not exceed six octavo volumes.

American Officials.—These were: Commissioner General, Ferdinand W. Peck, Chicago, Ill.; Assistant Commissioner General, Benjamin D. Woodward, New York city; Secretary, Frederick Brackett, Maryland; Commissioners, Bertha Honoré Palmer, Illinois; Brutus J. Clay, Kentucky; Charles A. Collier, Georgia; Michael H. de Young, California; William L. Elkins, Pennsylvania; Ogden H. Fethers, Wisconsin; Peter Jansen, Nebraska; Calvin Manning, Iowa; Franklin Murphy, New Jersey; Henry A. Parr, Maryland; Henry M. Putney, New Hampshire; Alvin H. Sanders, Illinois; Louis Stern, New York; William G. Thompson, Michigan; William M. Thornton, Virginia; Arthur E. Valois, New York; Thomas F. Walsh, Colorado; James Allison, Kansas; also Mrs. Daniel Manning, New York, as a special commissioner to represent the United States and the Daughters of

COMMISSIONER-GENERAL FERDINAND W. PECK.

the American Revolution at the unveiling of the Lafayette statue, and at the Paris Exposition, in accordance with a joint resolution of Congress approved Feb. 23, 1900. Also the following experts, who were placed in charge of groups as designated: Paul Blackmar, of Affairs; assistant, James M. Allen. Frederick J. V. Skiff, of Mining and Metallurgy; assistant, William S. Ward. Francis E. Drake, of Machinery and Electricity; assistant, James S. Anthony. Charles R. Dodge, of Agriculture; assistant, James L. Farmer. Tarleton H. Bean, of Forestry and Fisheries. M. H. Hulbert, of Varied Industries; assistant, William E. Crist. Willard A. Smith, of Civil Engineering and Transportation; assistant, A. C. Baker. Alexander S. Capehart, of Liberal Arts and Chemical Industries; assistant, Charles H. Simms. Howard J. Rogers, of Education and Social Economy. John B. Cauldwell, of Fine Arts; assistant, H. B. Snell. L. M. Howland, of Customs. J. H. McGibbons, of Exploitation and Acting Director of Textiles. In addition to the foregoing, there were about 40 honorary experts and special agents, who served without salaries.

The United States Building.—This stood on the Quai d'Orsay on the Seine, in the Street of Nations, between the Turkish and the Austrian pavilions. It had a frontage of 85 feet and a depth of 90 feet, and the top of the dome was 160 feet from the ground. One of its characteristic features was a classic porch, which opened on the Seine, in front of which was an equestrian statue of Washington, the joint production of the American sculptors Daniel C. French and Edward C. Potter, which was the gift of the women of the United States to France. Its total height was 22 feet, and its weight 8,200 pounds. It was the first bronze statue sent to Europe from the United States. On the vaulted roof of the pylon overhead was a quadriga representing Liberty on the Car of Progress, while a magnificent eagle, with wings extended, surmounted the dome. While the United States Building was regarded as an architectural success, still its unfortunate surroundings so dwarfed it that the effect expected was not realized. The building was formally turned over to the authorities on May 12, when Commissioner-General Peck, surrounded by the members of the United States Commission, welcomed the Commissioner General of the Exposition, M. Picard, while Sousa's band played the Marseillaise. M. Picard was then conducted by Mr. Peck to the center of the rotunda, where a brief formal address was made, after which he presented the Commissioner

General of the exposition with a gold key and pendant, representing the pavilion, as a souvenir, and a suitable response was made by M. Picard. A general reception was held, during which an interesting feature was the playing of American airs by Sousa's band.

Literature.—One of the conspicuous American features was the publication of the Paris Exposition edition of the New York Times, beginning on May 31 and ending on Oct. 31. It was under the supervision of Frank M. White, managing editor, assisted by Edward Insley and a staff of associate editors and reporters. The paper was printed on a Goss straight-line press, from type set on Mergenthaler linotype machines, in the American Publishers' Building on the grounds. It appeared every afternoon, at 4 o'clock. For those who desire information in detail, it would be well to consult the file of the daily edition of the New York Times. Special industries may be found described in the various trade journals, some of which, as the Scientific American, contained illustrations. Pictorially, the Paris Exposition has been treated in a volume entitled *The Parisian Dream City* (St. Louis, 1900). The reports of the commissioners from the United States will be published by the Government, and special reports of the transactions of the various congresses will ultimately find their way into print, as they did in the case of the Columbian Exposition of 1893.

F

FARMERS' CONGRESS. The twentieth annual session of the Farmers' National Congress was opened at Colorado Springs, Col., Aug. 21. It completed its business in three days, holding three sessions each day. About 800 delegates were in attendance. The leading agricultural States were well represented, but the attendance from New England and the extreme South was not so large as was anticipated. At no other annual meeting has the congress attended so strictly to the business before it; all excursions and other diversions were postponed until the business of the meeting was completed. The meeting was notable for the earnestness of the delegates and the care with which they considered all proposed action.

The meeting was called to order by the Hon. R. G. F. Candage, of Massachusetts, first vice-president and acting president, the president, Hon. William D. Hoard, of Wisconsin, having resigned. Prayer was offered by the Rev. M. H. Fish, of Colorado Springs. Addresses of welcome were made by Mr. Gilbert McClurg, secretary of the Chamber of Commerce of Colorado Springs; Hon. J. S. Robinson, Mayor of Colorado Springs; and Hon. Charles S. Thomas, Governor of Colorado. Responses were made by Mr. John M. Stahl, secretary of the congress; the Hon. Benjamin F. Clayton, chairman of the Executive Committee; and the Hon. J. H. Worst, president of North Dakota Agricultural College.

Mr. McClurg presented figures showing the contribution of Colorado to the wealth of the nation, especially from its mines, and to the work the State was doing for the education of its people and for the advancement of its agriculture. Mayor Robinson said: "Three fourths of the youth in our higher schools of learning come from the farm. It is true also that the large majority of the men who lead in public affairs and in business in our large cities and in the larger arena of national affairs were born and reared in the

country. It is undoubtedly true that country life and environment conduce to physical strength, intellectual power, and moral sanity, and upon these qualities rest the greatness and stability of human institutions. The farms, too, are schools of patriotism. The large cities of our country are our storm centers." Gov. Thomas said: "Did you ever stop to consider that the time has come in a few short years when the domain of agriculture has been extended even to the Western seaboard, and the waste places of the land have become the garden spot and the granary of the world? True it is, it was the love of gold and the search for the brilliant metals that brought man out into this Western country, but it is the farmer who remained and developed the resources that have made most of our wealth. The farmers took a waste tract of land and have made of it an empire."

Secretary Stahl called attention to the fact that it was our large exports of farm products, so far exceeding the exports of all other products, that had made the balance of trade so largely in our favor that we had become a creditor nation; but he hoped farmers would not forget that true national wealth was in the character of the people rather than in money at home or favorable balances abroad. "History shows," he said, "and especially the history of this nation shows, that the source of true national wealth, as of all individual worth, is in the homely home, where God is honored, the Bible is read, and children are taught industry, economy, sobriety, and purity; the home directed by that best thing mortal that Almighty God has placed on this earth—a pure and tender woman whose titles of love and honor are wife and mother." Mr. Clayton spoke very briefly, contenting himself with pointing out how well Colorado Springs had fulfilled all its pledges to the congress and paying some well-deserved compliments to that city. President Worst deplored the rush of young people from the farm to

the big city, and the fact that boys and girls who might earn thousands of dollars and fill a truly dignified place in society by putting forth their efforts on the farm are willing to live in the cities of the land, many of them having received elaborate educations, and to work indefinitely at \$800 to \$1,000 a year.

President Candage, in his annual address, said that "in importance, magnitude, and value the products of the soil represented by the delegates to this congress overshadow all other interests making for the comfort, happiness, and well-being of our country and its people. . . . I have been greatly impressed by the magnitude and value of one of the minor branches of agricultural industry—that of eggs and poultry. We enjoy the golden-voiced cackle of the barnyard fowl as she makes known the fact that she is a national wealth-producer to the annual amount of \$140,000,000. Transportation is of vital importance to the farmer and to the development of interior portions of our country in agricultural and other products. To the railroads the farmers of a large portion of our land are indebted not only for convenience of transportation to their places of abode, but for the value of their farms and the crops they produce. River and harbor improvements by the General Government are of interest to the farmer, for they tend to lower the cost of transportation by competition with the railroads. Whatever conduces to lower freight rates and better security to life and property on land or sea the farmer should advocate on the score of economy and for the sake of humanity. The time has come for the farmers, manufacturers, and commercial men to unite and demand from our National Government an American mail service to South America and to other foreign countries, in steamships under our own flag. South American countries are our neighbors and natural allies in trade and commerce, and yet, for lack of direct mail and shipping facilities, Europeans supply them with the bulk of their imported commodities. One half of the amount paid to foreign shipowners for freight on our exports and imports should be paid to American shipowners, and it would be if they could build and sail their ships on equal terms with the foreigner. A canal should be constructed and controlled by the United States to connect the Atlantic and Pacific Oceans, for the benefit of our commerce in time of peace and for the benefit of our navy in time of war. The need of the farmer is a better education for his calling—an education that shall equip him with a knowledge of soils and crop adaptability to them that shall produce the best results. The question of closer uniformity in State laws regarding marriage, divorce, inheritance, taxation, mortgage foreclosure, right of redemption, and right of woman to hold and to dispose of her property, is suggested for your consideration."

The Hon. L. Bradford Prince, ex-Governor of New Mexico, paid a high compliment to the president's annual address, and moved that there be appointed a committee of five on the president's address, with privilege of reporting at any time. The motion was adopted.

The following committee on resolutions was selected: P. Mengo, of Arkansas; W. H. Clarke, of Colorado; W. M. Dewees, of Illinois; W. E. Willcuts, of Indiana; D. F. Hoover, of Iowa; S. M. Knox, of Kansas; E. F. Wetstein, of Kentucky; George M. Whitaker, of Massachusetts; J. H. Reynolds, of Michigan; Isaac Noyes, of Nebraska; S. R. Demerest, of New Jersey; L. Bradford Prince, of New Mexico; A. R. Smith, of New York; J. L. Garber, of Ohio; J. O. Thomas, of

Oklahoma; E. W. Cooper, of Pennsylvania; J. B. Killebrew, of Tennessee; J. L. Greer, of Texas; J. H. Long, of West Virginia; Spencer L. Gates, of Wisconsin; Elwood Mead, of Wyoming; J. A. Johnson, of North Dakota; G. W. Kroiner, of Virginia; Gov. Keith, of South Dakota; S. O. Bowen, of Connecticut; J. J. Laughinghouse, of North Carolina; George M. Doyle, of Missouri.

Led by Mr. W. G. Whitmore, of Nebraska, the congress decided to transact all its business before going on any excursions or accepting any entertainment.

A short address was made by Mr. F. A. Converse, of New York. He discussed the reasons why the efforts of the farmer should be directed toward an intelligent cheapening of production. He thought the farmer is too conservative. He must change with changing conditions. He should exercise his brains more and his muscles less. With the same amount of industry, brains, and capital as much can be got out of farming as any other occupation. Make the product the best and cheapest production. Let us have better business methods. Run a cash system as far as possible. Interest the boys in a financial way and they will stay on the farm.

At the evening session Alexander R. Smith, of New York, read a paper on our shipping interests. He said: "About 20,000,000 long tons of American agricultural products are annually exported from the United States. To-day the cost of carrying wheat from the Pacific coast to Europe is more than \$10 a ton. A fair profit is possible at \$6. Rates on grain from Gulf ports to Europe are \$5 a ton—about double the normal rate. Foreign ships practically monopolize our foreign carrying trade. On a 30-per-cent. advance in ocean rates the American people have paid \$60,000,000 above the usual freight charges during the past year, of which our farmers have paid half. Legislation that will build up an American merchant marine will, by substantially reducing ocean freight rates, give our farmers larger markets and better profits. Unaided, American ships can not compete profitably with foreign ships possessing the triple advantages of less cost of construction, less cost of operation, and government aid. During the past sixty years Great Britain has paid out more than \$240,000,000 in subsidies to British steamships. If we do not change our policy of national neglect of shipping we shall, in the next quarter of a century, pay out \$5,000,000,000 to foreign shipowners. If the United States will pay in twenty years to American ships in the foreign trade a sum of money no larger than the American people now pay to foreign shipowners in one year, at the end of that period the larger part of our foreign carrying will be in the hands of our own people."

He was followed by Mr. Elwood Mead, of Wyoming, in a paper on irrigation investigations. He said: "In less than half a century irrigation has transformed the appearance and possibilities of the western third of the United States. The very essence of success in irrigation lies in the control and distribution of the water supply. The importance of this was not at first appreciated. The pioneers of irrigation paid no attention to their titles to streams or to the volume used. As a result, the water from streams is not used judiciously. Some ditches have too much water, others have not enough. Even in California, where water is so valuable, there is no adequate record of rights or systematic division of streams among the multitude of users that depend on them. In only 3 of the 15 arid States is water divided under public supervision. It is the opin-

ion of those best informed that the present haphazard development ought not to continue. There are many million acres of irrigable lands yet to be reclaimed. In order to know how much of this can safely be offered to settlers we must know how much water each stream will supply and how many acres of land it will serve. Irrigation laws must be studied. And before development proceeds much further there should be some common agreement regarding the character of a water right."

At the morning session of Aug. 22 the Committee on Resolutions made a partial report, and a memorial on the death of the Hon. A. V. Stout, of Iowa, a member of the congress, was adopted. Col. J. B. Killebrew, of Tennessee, read a paper on the natural resources of the South. He said: "Considered in reference to its capabilities for supplying those products most coveted by civilized nations, this belt may be regarded as the fairest domain in Christendom. No other region of the globe has such a diversity of valuable farm products. It produces 75 field crops and about as many garden and orchard products. Among these are cotton, of which an average of nearly 5,000,000,000 pounds are produced annually. The amount of wheat grown in the South is increasing with satisfactory regularity. The tobacco interests of the South are in a most prosperous condition. A most favorable indication in the agricultural development of the South is seen in the larger number of forage crops that are now produced. Nothing else, however, in the development of the South is so striking as the rapid increase in the growing of fruits and vegetables for the Northern markets. In the 14 Southern States there are 55,279 square miles underlaid by coal seams. In 1899 the South produced 2,500,000 long tons of pig iron. It now makes more iron than the United Kingdom made in 1847, and more than the United States made in 1871. The phosphate beds of Tennessee are the greatest known to mankind."

The hall in which the congress met had not been decorated. Mr. Amos F. Moore, of Illinois, called attention to the fact that the American flag was not to be seen by the congress while in session, which was contrary to its traditions, custom, and spirit; and in an earnest and eloquent address, in which he called attention to the fact that our flag was being attacked in foreign lands, and that our brave soldiers and marines defending it were in danger, he moved that at least one large American flag be provided for the stage. The motion was greeted with prolonged cheers, and the flag was soon placed in position.

Mr. George M. Whitaker, dairy commissioner of Massachusetts, read a paper on dairying. He said: "The particular line of thought which I wish to develop is that the dairyman is a manufacturer, and that the ordinary laws of business apply to him as well as to the manufacturer of cloth or jackknives. The primary essentials in manufacturing are three: First, technical, the know-how in the matter of production; second, executive, the ability to produce at the lowest possible cost; third, commercial, the ability to sell at a profit. I desire to enter a protest against a tendency to treat practice and science as if they were separate and to some extent competing. To my mind they are almost synonymous. If a theory is correct, the practice must be. Correct theory and intelligent practice always agree. Too much idle or unprofitable capital is frequently found in dairying. Cost of production is greatly enhanced in many cases because cows are kept that produce less than good cows are capable of

producing. How shall we restrict the sale of oleomargarine? It seems to me that the most logical and defensible way is to attack the root of the evil—to forbid the introduction of that element which constitutes the fraud, to wit, the color. There is just as much food value in white oleomargarine as in yellow. It is extremely essential that we put all the push we can into enacting section 1 of the Grout bill. Cheese seems to be as near the bottom of the ladder as it can get, and an improvement must come as a consequence. And as the world advances fraud will be less rampant and aggressive."

At this point the Committee on the President's Address reported, strongly commending what President Candage had said on transportation on land, on opening direct mail communication and the establishment of direct ocean freight lines between the United States and South American countries, on an interoceanic canal, on the development of our merchant marine, on agricultural education, and on taxation. The report added to President Candage's discussion of these topics, and it was adopted unanimously.

At the afternoon session Mr. A. J. Lockridge, of Indiana, read a paper on the mission of the farmer. He said: "The mission of the farmer is by no means of an optional character. It belongs, like the sober duties of the churchman, to the need of our common humanity. It is literally an everyday question of bread to the eater. The old wooden mold-board plow, sphinxlike on its perch in the museum, offers suggestive thoughts to the twentieth century farmer. It silently reminds the beholder, as the roar of a great city floats up to his ears, that competition along agricultural lines, glowing just as fiercely as in any part of the business world, must now have the best labor-saving devices with which to work the crops. So, too, its toil-worn parts readily recall the old-time farmer with his meager knowledge of agriculture, and quietly force the conviction of how hopelessly his ways would be handicapped in this swift-moving age. In voiceless but heedful emphasis it tells the spectators that the very best designs in machinery, electric energies, and the keenest insight into commercial labyrinths must surely prevail in the farm management if the farmer is successful and the world properly fed. . . . Such achievements will call unquestionably for their best efforts not only on the farm, but also at the student's desk. When the day is done the glorious task of a student awaits the energetic farmer of the evening lamp. Here he can diligently compare the experiments and observations of the day with the course pursued by expert agriculturists, coupled with his own discoveries, and draw beneficial conclusions therefrom. Such is the farmer's mission: To grasp right motives on the farm; to learn every detail of his business; to answer accurately the grave question why he should know that business to the end that he may follow his mission faithfully, intelligently, successfully."

This was followed by an address by Mr. John P. Brown, of Indiana, upon Agriculture Dependent upon Forests. He said: "The intimate relationship existing between the agriculture of a nation and her forests is but little understood by a large class of citizens. The value of woodlands is greatly underestimated by farmers who are so largely dependent upon their influences. The rainfall upon which we depend for every farm crop has become irregular since the denudation of vast timber areas. Each summer we see protracted droughts with their many and diverse injuries to farmers. After a season the rains come in torrents and cease not, the soil is washed from

the hillside, deep gullies are cut in the sloping fields. A moderate proportion of forest land, properly distributed, would remedy this great evil, or at least moderate it, by holding back in the spongy soil and leaf mold a portion of the water to a time of need. Trees maintain an even temperature, modifying the cold of winter and the heat of summer. Evaporation is rapid where the wind blows strongly over a field. Often the crops are ruined by hot winds, which absorb their moisture more rapidly than their roots can draw it from the earth. Belts of timber, by guiding the air currents upward, overcome this rapid evaporation. Without the shade and shelter of forests the snow melts more quickly, flowing rapidly away in early spring, leaving little for the later and dryer season. The State which protects its forests and encourages tree culture, although the present outlay may seem burdensome, will be a prosperous commonwealth in the years to come. The farmers of America can in no way serve their country better than by perpetuating the noble trees of American forests, securing to posterity a country not devastated by avaricious spoilers, but adorned with the trees so necessary to the comfort and well-being of all people."

Mr. J. G. Springer, of Colorado, president of the National Live Stock Breeders' Association, made a short address, in which he took the ground that the farmer did not know his power or did not care to exercise it, and that he spent too much time in idle grumbling when he should be correcting the injustice under which he is suffering. Mr. Springer made a strong argument in favor of giving the Interstate Commerce Commission greater powers. In his opinion the commission did not have enough powers at the beginning, and it had been shorn of what it had until it had become only a very expensive means of collecting some statistics. He attacked the Grout bill, and took the ground that neither State Legislatures nor Congress had the right to ruin an established industry by enacting effective anti-oleomargarine legislation; and he asserted that such legislation would inflict on the stock growers of the country a loss much greater than any loss that oleomargarine would inflict on the butter-makers.

At the evening session a paper on agriculture as a branch of public education was read by Mr. Ethan Brooks, of Massachusetts, who said: "Boys are now taught, under public instruction, the use of mechanical tools. Since the object of public instruction is to enable the rising generation the better to earn a living and to become good citizens: since there is nothing better than homeholding to induce the average man to interest himself in good government; since the uncertainties as to constant employment and as to success in business undertakings are so great; since a permanent abiding place is all essential, and a home and a living business can be had most economically in the country; and since we have the promise that 'while the earth remaineth, seed-time and harvest shall not cease,' is it not a great mistake to neglect instruction in agriculture? We have our agricultural colleges and experiment stations, all doing noble work. Has not the time come when it would be well to adopt the kindergarten idea in these lines of instruction? Let us encourage an education that shall engender a desire for a home where the family may engage in tilling their own ground: beginning, if necessary, in a small way; growing largely their own food supply, including the luxury of a full line of fruits and vegetables known in perfection only by those who gather them from their own grounds

and place them fresh upon their tables, and making year after year improvements which shall so increase the productiveness of the farm that as strength declines the labor of former years may bring its return."

Señor José Romero, of the Mexican legation, Washington, a duly accredited delegate from Mexico, was the first speaker of the morning session, Aug. 23. His subject was General Agriculture in Mexico. A motion for a vote of thanks for his able address was adopted unanimously.

Mr. W. W. Bates, formerly United States Commissioner of Navigation, read a paper on the policy and measures for shipping restoration. He advocated the policy of the early days of the republic toward our shipping and opposed subsidies. He said: "It will take only a few moments of time to prove, presumptively, the incapacity and inefficiency of state aid largely to increase a marine. For this we need not go beyond our own trade. France has been aiding her marine with building and sailing bounties for nineteen years, and Italy has been employing this system for fifteen years. The vessels of both nations run freely in our foreign trade. I will put this question: If the prescription of state aid is as powerful a remedy for shipping decay and as potential in causing growth and development of shipowning and shipbuilding as we are told that it is by the advocates of the pending subsidy bill, how happens it that the commerce of our principal ports has not, in the smallest degree, yet felt effects from the French and Italian policies?"

At the afternoon session was read a paper on Natural Irrigation, by Prof. H. W. Campbell, of Nebraska. "Natural irrigation is secured by a complete rearrangement and pulverizing of the top 6 or 7 inches of soil, and turning it as nearly bottom upward as possible each year. Before plowing the top 4 inches should be thoroughly pulverized. Then this finely fitted surface soil must be turned down into the bottom of a furrow 6 or 7 inches deep. Immediately after plowing, the lower 4 inches of the furrow slice must be packed as firmly as possible with the subsurface packer. The next important step is to go over the ground to pulverize all surface lumps, thus forming a mulch of loose, dry soil. Water can not pass up through loose, dry soil by capillary attraction. Therefore the soil mulch protects the moisture in the root bed from evaporation and saves all the natural rainfall for the use of the plant."

The rest of this day's session was occupied with the report of the Finance Committee, the Committee on Resolutions, and the Committee on New Constitution.

A long series of resolutions was adopted, to this effect: Favoring appropriations for river and harbor improvements; urging the establishment of a direct mail service, in American steamers, between the United States and South America; favoring the construction and control by the United States of the Nicaragua Canal; favoring the Grout bill in regard to oleomargarine; favoring congressional action to restore the American merchant marine; commending the Secretary of Agriculture for his work in collecting and distributing seeds; approving free mail delivery in rural districts; disapproving the proposal to lease public lands for grazing; asking for legislation to reduce the rates charged for use of sleeping cars; declaring that the water of all streams should forever remain public property, and that the right to its use should inhere not in the individual but in the land reclaimed; pledging every effort to make the exposition at Buffalo in 1901

a success; and declaring that Congress should increase the power of the Interstate Commerce Commission.

The committee appointed at the annual meeting in 1899 submitted a new constitution, which after some discussion was adopted unanimously. The most important parts are as follows:

"The membership of this congress shall consist of one delegate for each congressional district and two at large for each State and Territory, and one for each State agricultural college and experiment station, to be appointed by their respective Governors, and one to be chosen by each national or State society or organization created and maintained to foster any agricultural interest in the United States. Provided, that delegates thus chosen shall, when required, produce proof of the standing of their organizations. The delegates thus appointed and chosen shall hold office for two years, and shall constitute the voting membership of this body.

"The Governors of the several States and Territories may appoint such a number of associate delegates as to them may seem wise, who shall have all the powers and privileges of regular delegates except that of voting. In case Governors refuse or neglect to appoint delegates and associate delegates, then the State vice-presidents and secretaries of boards of agriculture, or either of them, shall have power of appointment.

"This congress shall meet annually at such time and place as the executive committee shall determine, and may meet on special occasions, when deemed necessary, to advise, discuss, and perform such duties as may in its judgment advance the interests of agriculture in the United States; but partisan issues and questions involving party politics shall not be introduced nor debated.

"The officers of this congress shall be a president, first and second vice-presidents, one vice-president for each State and Territory of the United States, a treasurer, a secretary and three assistant secretaries, and an executive committee of five, of whom the president and the secretary *ex officio* shall be two, to serve for two years.

"The election of officers shall be in odd years, when the numerals representing the same are not divisible by two without a remainder.

"No compensation shall be allowed by this congress to its members or officers for their expense of attendance upon its annual meeting, but the Executive Committee and other committees appointed with powers may be reimbursed for any expense incurred while in discharge of duties imposed by this body."

As officers were elected in 1899 there was no election of officers at the meeting at Colorado Springs. On the resignation of President Hoard, in May, 1900, First Vice-President R. G. F. Candage, who was elected to that office in 1899, became acting president. Col. John S. Cuninghame, of North Carolina, is second vice-president. The secretary is Mr. John M. Stahl, of Chicago, who is serving for the eighth year in that capacity. His assistants are Mr. George A. Stockwell, of Rhode Island, who has held that office eight years, and Mr. D. C. Kolp, of Texas, and Mr. E. A. Callahan, of New York, both elected in 1899. The treasurer is Mr. Levi Morrison, of Pennsylvania, elected in 1899. The executive committee is the Hon. B. F. Clayton, of Iowa, chairman; Hon. W. G. Whitmore, of Nebraska; Mr. E. F. Weinstein, of Kentucky; Col. T. C. Slaughter, of Texas; and Mr. E. L. Furness, of Indiana.

FEDERATION OF CHURCHES. The subject of federation among American churches has been informally discussed for several years, and

federative agreements relating to local work have been arranged and made operative to a greater or less extent in a number of cities. In May, 1898, the Congregational Association of New York appointed a committee to endeavor to secure the formation of a federation or alliance of the evangelical churches of that State. The Baptist State Convention of New York in October, 1899, likewise appointed a committee on church federation. A conference, attended by persons from different parts of the United States, was held in the city of New York, Feb. 1 and 2, and unanimously approved of a declaration that the time had come "for the institution of a national conference for federation among churches and Christian workers in the United States." In pursuance of another resolution of this conference, a national executive committee of 18 members, composed equally of ministers and laymen, was appointed for the promotion of federation. The Baptist, Congregational, Disciples of Christ, Lutheran, Methodist Episcopal, Presbyterian, Protestant Episcopal, and Reformed Churches are represented on this committee. Some of its functions will be to foster intercommunication between local church federations, with special reference to supplying information in regard to the work in all parts of the country; to provide counsel and promote the organization of city and State federations; to report a plan for the basis of membership in the conference of the next year; to arrange for the conference of the next year, fixing time, place, and programme; and to devise a plan for raising the money necessary to defray the expenses incurred in connection with the work. Other duties are advisory.

In connection with the movement for the federation of churches and about the time of the holding of the conference in February, a statement of Christian doctrine for the demonstration of the essential unity of their churches was signed and issued by a number of pastors in the Borough of the Bronx, New York. This statement set forth the Apostles' Creed, with the sacraments of baptism and the Lord's Supper as of Christ's ordering: declared the Bible to be the inspired word of God; and defined the Church as being "the holy society of believers in Christ Jesus which he founded, of which he is the only head, and in which he dwells by his spirit, so that, made up of many communions, organized in various modes, and scattered throughout the world, it is yet one in him." A plan for federative work within the limits of the borough accompanied the declaration.

A preliminary meeting to consider the subject of federation in the State of New York was held at Albany in July, when it was decided to call a conference, to meet at Syracuse in the fall. This conference met in November, and was attended by accredited delegates of the Baptist, Congregational, Presbyterian Reformed, and Methodist Episcopal Churches and ministers of other denominations. A constitution was adopted for an organization to be called "The Federation of Churches and Christian Workers of the State of New York." The object of this body was defined to be "the promotion of effective co-operation among the churches of the State of New York, in order that their essential unity may be manifested; that the evangelization of every community may be more systematically accomplished; that a means may be found of expressing the united Christian sentiment of the State in regard to moral issues; that the various Christian churches and Christian workers and benevolent activities of the commonwealth may be more completely co-ordinated, and that other appropriate

ends may be secured." Provision was made for a State council representing the denominations uniting in the federation work, and local councils or federations established in towns and cities of the State, on the basis defined in the articles; while other organizations of Christian workers will be entitled to representation on a basis provided by the executive board. This executive board, of 12 persons, one third of whom are to be chosen each year in alternation, with the officers, will have charge of the work of the federation under the general instructions of the council, and report to the annual meeting in November. The Rev. Dr. H. H. Stebbins, of Rochester, was chosen president of the federation, and Gov. Theodore Roosevelt and the Hon. William E. Dodge, of New York, were made vice-presidents.

The executive committee, at a meeting held subsequently to the meeting of the council, decided upon the institution of definite practical work in behalf of federation during 1901, recognized the value of help received from the National Federation, and requested the Rev. Dr. E. B. Sanford, secretary of that body, to devote a part of his time to the organization of city and county federations in New York State.

National Council of British Evangelical Free Churches.—The National Council of Evangelical Free Churches of England met in Sheffield, March 13. The opening sermon was preached by the Rev. Alexander Mackennall, D. D., Congregationalist. The Rev. C. H. Kelly, D. D., Wesleyan Methodist, was president for the year, and delivered an opening address on the subject of *What the Twentieth Century has a Right to demand from the Free Churches*. The report of the organizing secretary, the Rev. Thomas Law, showed that much more had been attempted and much more accomplished in the line of the work of the federation in the past than in any previous year of its history. Forty-four new councils had been formed in England and Wales, bringing the whole number of councils up to more than 600. The federations, the formation of which had begun two years previously, were developing rapidly, and had proved their usefulness as a connecting link between the national and the local councils. They now numbered 33. There had also been developments abroad, and communication between the central office and the colonies and the United States had been going on, with furnishing of literature and the visits of distinguished speakers. A conference had been held in the city of New York, Feb. 1 and 2, to consider the formation in the United States of a National Federation of Churches and Christian Workers, and to determine the method and scope of its work. Reports were also given from Cape Town, Durban, Kimberley, and Port Elizabeth in South Africa, at all of which places councils existed; and councils had been formed in New South Wales and Jamaica, and one in Scotland. United missions had been carried on by the two evangelists of the council, and 43 other evangelists had conducted missions in all parts of the country. An increasing number of local councils were undertaking house-to-house visitation, and were adopting the parochial system. Inquiries were being made as to villages without Free Church services, and questions were agitated as to abuses in connection with charities and educational trusts. Action of councils was described—relative to the clerical tithes bill, the rights of the children in the schools, the relation of the catechism to the School Board in Liverpool, the "tyranny" of Anglican clergy in rural districts; and in opposition to seven-day journalism and Sunday trading.

The new-formed Free Church Girls' Guild, district nursing, and the miscellaneous work done by the several councils were noticed. Free Church services had been held during the preceding summer at five centers on the Continent of Europe. The circulating libraries had been in great demand, more than 300 boxes of books having been forwarded to various councils. The publication department had been very active during the year. The treasurer reported that the receipts from all sources had been £7,947 and the expenditures £4,102; the liabilities amounted to £1,581. The resolution passed on the subject of education embodied a renewed protest "against the injustice, aggravated by recent legislation, by which, in over 8,000 parishes in England, the only public schools available are schools which, though in all cases they are largely, and in many cases almost wholly, maintained by public funds, yet are controlled by the clergy of one denomination and worked in the exclusive interest of one sect; while the religious teaching in a vast number of them is such as grievously wounds the consciences of the parents of Free Church children." The resolutions exhort members of Free Churches, especially those who are electors, not to rest content in their demands for remedial legislation till such provision shall be made as shall bring within the reach of every child in the kingdom "a school under the control of duly elected popular representatives, in which the religious instruction shall be free from sectarian bias; and until teachers and pupil teachers in all state-aided schools and children in all state-aided training colleges shall be free from any theological test." Resolutions respecting secondary education set forth that "in any future organization of secondary education the local authority should be a public representative body, on which the school boards, where they exist, should be largely represented"; approved the method laid down in the report of the Secondary Education Commission for the constitution of the local authority in county boroughs—namely, that one third of the members should be chosen by the borough council, one third by the school board, and the remaining third, half by any university college contained in the borough, or by the central office (Board of Education), and half by co-optation; advised that the administrative authority in counties should be similarly constituted; urged enforcement of the conscience clause and the effective representation of the public on the governing body of the schools in all cases where a grant of public money is made to a secondary school; that no formularies distinctive of any particular religious denomination or denominations should be used in such schools; that in case of denominational boarding schools aided out of public funds parents of other denominations be permitted to establish hostels within their organization, subject to the governing body; that the constitution of the endowed grammar schools be revised, so as to secure their undenominational character and make laymen and Free Church ministers eligible to the head mastership; and demanding provision for the establishment and maintenance by school boards of unsectarian training colleges. A scheme was presented to the council and discussed for the institution of Free Church Girls' Guilds, on which, however, definite action was not taken. A resolution with reference to the Sunday closing of places where intoxicating drinks are sold expressed regret that nothing had been accomplished, notwithstanding an agitation extending over thirty years to give England this boon, which had been acquired by nearly every other part of the empire, and advis-

ing the consolidation of the forces of the local councils and district federations with all other means of kindred character to press this measure. A plan was approved for a "simultaneous mission" to be conducted for the whole country, including the large and small towns, and, it was hoped, the villages. It was to be an eight-days' mission, which might in special cases be extended to ten days. In London it was to be held from Sunday, Jan. 27 (1901), to Sunday, Feb. 3, or Tuesday, Feb. 5, and in the rest of the kingdom from Sunday, Feb. 17, to Feb. 24 or 26. The mission is intended for all classes, and the list of missionaries includes practically all those who are regarded as the great leaders of the churches. A resolution was adopted protesting against sacerdotal teaching, ceremonies, and practices, and affirming that in the opinion of the council neither the doctrine nor the discipline of the Anglican Church would be satisfactorily safeguarded until it was disestablished, and its affairs were placed under the government of its own members.

FICTION, AMERICAN. The salient feature of American literature in 1900, as in the preceding year, was the phenomenal success of certain novels, all by American authors, of whom the majority are newcomers in the field. Edgar Allan Poe foresaw the endless possibilities of the American reading world, and planned, before the middle of the century was reached, a popular magazine on the lines later adopted by our great monthlies; but even he presumably had no conception of the more recent developments in cheap periodical literature, nor of the circulation of hundreds of thousands of copies of novels, such as we have seen of late. Susan Warner's *The Wide, Wide World*, the first American novel that might have served as a guidepost to his discerning mind, was not published until a year after his death; *Uncle Tom's Cabin* two years later; and to others the success of neither of these books appears to have suggested possibilities. They were rather regarded as unapproachable exceptions, one of which was helped by extraneous circumstances—the conflict over slavery which was to end in war. Even Edward Bellamy's *Looking Backward*, and Lew Wallace's *Ben Hur*, with its record of nearly 750,000 copies sold, seem to have been classified as sporadic appearances in the field. The idea that audiences could be found for several novels at one time, running well into the millions, was not born until within the past two years. Reputations are now made in a day, and bear fruit in a month; whether they will endure as do those of the older masters, none of whom has as yet been approached in workmanship, remains to be seen. The true artists of the present day, with the exception of Stanley J. Weyman and Anthony Hope Hawkins, do not stand any longer in the first rank so far as circulation is concerned. Mr. Howells, Henry James, Mrs. Wharton, Miss Wilkins—to name but a few, and to restrict ourselves to American fiction—are left far behind in the matter of immediate popularity, if not of enduring fame.

Many theories have been advanced in explanation of this unprecedented growth of the American reading public; and the warnings of the croaker who sees in the vogue of the novel the doom of true literature are, of course, heard in the chorus. No single cause for the movement can be assigned. It is the outcome of many developments in recent years, as diversified as the style, subjects, and methods of the fortunate authors themselves. Publishers and public have interacted upon each other in a complex and highly interesting fashion, the former perfecting their methods of reaching the multitudes of readers,

hastening by legitimate means the spread of reputations which formerly dribbled but slowly through; the daily press, ever keenly aware of new interests in its readers, has paid ever increasing attention to things literary, no journal of any standing being nowadays without its literary editor and its "book page"; and the international copyright law has unquestionably been an influence in the fostering of the American author, by giving him a fair field and an adequate return for his labors. Moreover, the nation has progressed from union far toward a lasting unity, the Spanish war having apparently the incontestable merit of adding the keystone to the edifice all but rent in twain by internecine strife. Secure in their present, and proud thereof, sanguine of their great future, the people of the United States have begun to cultivate their past, to take a new interest in the beginnings that have led to so great an achievement. In a period of historical romance, the patriotic historical novel must needs take a pre-eminent place. The national novel, appearing at the time of the full consciousness of an indivisible national feeling, was seen to fill a deeply if not long felt want. Finally—and this is perhaps the fundamental cause—that powerful agency of modern democratic civilization, the American public school, has begun to yield the fruit once denied it—culture; for the American public buys not novels alone. The recent and evidently permanent success of the innumerable cheap but handsome reprints of the classics of English literature, the many new editions of Shakespeare, the constant demand for the different home-reading series and popular scientific books, for the numerous works on music and art, so timely in their writing and launching, the interest manifested in such writers as Spencer, Darwin, Huxley, and Tyndall, far in excess of that shown in the country whose glory they are, testify to the healthy growth of culture in the United States. Statistics of the sales of all these works are not published, but they would amply prove, what is the truth, that the preponderating mass of the American public does not read for pleasure alone. The success of all such books is not sudden and phenomenal, comprised in the popularity of two or even three years—the life, with but few exceptions, of the present-day novel; it is gradual and cumulative, resulting in the end in figures fraught with meaning for him who knows how to interpret them.

In point of immediate numbers, however, fiction overshadows at present all branches of literature everywhere in the world; nor is this fact to be deplored when its growing national significance is taken into consideration. In this country we have passed during the last fifteen years through a series of successive periods of foreign cults—Tolstoi and Turgeneff, Maupassant, Daudet, Bourget, and Zola, the Spanish writers and the Scandinavians, even the only notable child of the Dutch sensitivist movement, Louis Couperus. But we have gradually forgotten them, as our own national school of fiction began to develop, and the national note of the schools of all these countries grew in volume. From England we still take, and probably shall always take, the best she has to give us, for our two literatures are one in essence; but we shall read it for extraneous reasons chiefly, for comparison, social and critical, as a measure of growing or diminishing national divergence.

The growth of the national spirit in the world's fiction is remarkable because it is universal. It coincides with the awakening of national feeling and the preoccupation with national affairs. The

most finished of French novelists, the artist who has outlived Bourget—M. Anatole France—is etching pictures of the social life of his country in the present day that probably will endure as mines of information for the future student, and not merely as masterpieces of style and method; but to foreigners, especially to Americans, his books have but little significance, unless they know the country well. The German school, with Sudermann at its head, is intensely national in its expression of discontent with the conditions that be, or in glorification of the empire founded by blood and iron. The modern Scandinavians—Fru Hansen, Jonas Lie, and Selma Lagerlöf prominent among them—are pessimistical psychologists, to be sure, but deal strictly with a national temperament created by conditions unknown beyond their borders. Italy's latest genius, D'Annunzio, is entirely alien to our life and, happily, to our morals, as is also Matilda Serao; while, finally, Russia has not yet produced a genius to wear the mantle of Turgeneff or Dostoevsky or Tolstoi. There, too, the world has moved with rapid strides; national interests outweigh the wider universal ones in an empire conscious at last of its great future. The young Russian writers have felt the trend of public thought and aspiration, Tolstoi himself leading them, for his latest two books are devoted to what will be found, in the last analysis, to be local conditions and abuses, even though he attempts to found upon them, not always securely, his gospel of universal humanity. National, not human, life is evidently to the world's novelists the inspiration of the hour.

These foreign literatures were always alien to us, but we did not realize this fully until the recent revival of our national consciousness. We are young and optimistic and clear-minded; we have no past of unspeakable abuses to sadden our thought and views of life as has the empire which is destined to share the future with us. Our past is one of glory, our present one of prosperity and hope, our future full of promise; and all these phases of our existence are reflected in the novels that have received our suffrages during the past two years.

David Harum came in the nick of time to interpret to us the fundamental unity of our national character as it has come to be. In this son of central New York the people of New England and the Middle States, and, through them, of the South, meet and mingle their characteristics. From the East he draws his humor, in a mellowed form, but not the puritanical spirit; his shrewdness in business largely comes from the same source; his honesty, sensibility, generosity, and moral cleanliness can, happily, not be ascribed to any part of this country alone, nor, it should be added, can his hearty optimism and pagan materialism. As John Oliver Hobbes has said, there is a David Harum in every American family that is American to the core. For this reason he was recognized at once, East and West and North and South, and hailed with delight. He is an individual, to be sure—thanks to his author's art—but, above all else, he is the type of the "average American," ever fitting the circumstances in which he happens to be placed, capable of rising to any height that fortune and American conditions may offer him. Spiritually he is lacking somewhat, for our sharp struggle for existence has left its influence upon him. But at the core he is sound; a man to rely on in every emergency, a laughing philosopher who takes life as he finds it, and makes the best of it for himself and for others—a good man to know and to love. It never has been observed yet, by the way, that

there is a strong affinity between the wholesome, common-sense philosophy of living preached by Mr. Howells and David Harum's practice. For the author of *The Rise of Silas Lapham* and *A Hazard of New Fortunes* has long been the foremost of our national novelists.

The popularity of Mr. Irving Bacheller's *Eben Holden* is traceable, though to a smaller degree, to the same source. Here, however, the provincial element predominates: *Eben Holden* is but the type of one of the factors that entered into the ancestry which produced David Harum.

The *Redemption* of David Corson presents—crudely, perhaps, and sensationally, but with unmistakable vigor—the Puritan conscience dormant in most of us, a blessed and invaluable inheritance from the bleak Massachusetts Bay, rarely awakened, happily, because, after all, the life of the average American, like David Harum's, is free from trespasses that are really black sins. This type is not new to our fiction. The *Scarlet Letter* immortalized it, and Julien Gordon realized it dimly in her *Puritan Pagan*, modifying its sternness, however, by cosmopolitan culture and ways of doing and thinking. The Puritan heritage also appears in one of the year's minor successes, Mr. Edwin Asa Dix's *Deacon Bradbury*—a splendid character study, but a novel hampered by a weak plot.

The element of chance in the publishing of books was strikingly illustrated in 1900 by the fate of one of the closest studies of American character in its development during the past quarter century yet published, Judge Grant's *Unleavened Bread*. The book received from the reviewers the attention it deserved and continues to deserve, but its popularity, expressed in the editions sold (about 40,000 copies at the end of the year), fell far short of what might well have been expected for it. Women form unquestionably the overwhelming majority of our novel readers, and many women resented this mercilessly true picture of a type of American woman, which has not yet entirely died out, even though Judge Grant placed his heroine in the early seventies. We have come to regard foreign criticism with indifference, if not with contempt; we are as sensitive as ever to the domestic censor, though we no longer persecute him. Judge Grant's novel has many shortcomings, but these it shares, curiously enough, with nearly all the successes here under discussion. *David Harum*, *Eben Holden*, *Unleavened Bread*, and *Deacon Bradbury* are, however, character studies pure and simple, and as such excusable for faulty method. Not so with *When Knighthood* was in *Flower*, that strange product of a pen lacking all the essentials that go to the making of a historical novel save one, a sense for the romantic.

When Knighthood was in *Flower* is nothing but a successful appeal to all the world that loves a lover. This is, at least, the only theory by which its popularity can be explained. Two beings, young and supremely handsome, ardent lovers, beset by difficulties, among romantic surroundings, will find sympathizers the world over, as they have done since the art of fiction began, and will do till the end of time. What of a diction that lacks not only every element of style, but is even disfigured by the slang of Cook County in the closing years of the nineteenth century? What of all absence of literary quality, of all distinction? The story's the thing here, and it is not historical, notwithstanding its guise. Its success was made among readers to whom Mr. James Lane Allen's polished method is but wasted effort, and it is not a hopeful sign of the times.

No explanation need be sought for the reception

of Miss Mary Johnston's *Prisoners of Hope*. Here we have good, sound work, interesting characters and situations set against interesting historical backgrounds, the human element in its relation to the making of a people—the right kinds of material used in a masterful manner. Miss Johnston's imagination needs pruning, perhaps, her talent must be trained away from its melodramatic tendencies to yield its best fruit, but hers is work of a high quality indeed, which in the opening chapters of *Prisoners of Hope* rises to the dignity of true literature and gives rich promise. She has a beautiful gift, virile through a woman's intuition at its best, and she is of interest as the first writer of her sex to invade successfully a field monopolized by men from the days of Scott and Cooper to those of Stanley J. Weyman. Woman writers of exuberant imagination we have had ere now—witness Mrs. Radcliffe and her *Mysteries of Udolpho*—but Miss Johnston stands on higher ground, and, with all the embarrassing riches of her fancy, she is a conscientious historian. A place like Mr. Weyman's in contemporary fiction is within her grasp, provided the accident of sex does not at the last moment prove to be an unexpected but insurmountable barrier, for, after all, fighting is men's work.

Mr. James Lane Allen furnishes a striking instance of the results of taking infinite pains. His latest book, *The Reign of Law*, is hardly a novel, if incident, plot, harmonious progress, and ultimate unity constitute a novel. Nor, as a chapter of intellectual life and doubt, of new lamps for old, can it boast of much originality, certainly not of novelty, at this late day. But if Mr. Allen's imagination has lagged for once, if his inventiveness has refused to respond to his call, he has perfected a literary method of such beauty and delicacy that one willingly forgets that he does not give what one expected, and reads willingly on to the end. To say that he is a stylist is but to tell part of the story; he has complete command of all the resources of his craft, which he employs here successfully to hide from all but the hardened professional reader the lack of a truly great subject. Therefore he but arouses the fervent wish that ere long his imagination may return to him strengthened and refreshed. He is a true artist, whose wide recognition and appreciation more than offset the welcome given to *When Knighthood was in Flower*.

This true feeling for literary art was also the cause of the reception of Mr. Winston Churchill's *Richard Carvel*, a novel built upon the soundest, the noblest model of Anglo-Saxon fiction—the work of William Makepeace Thackeray. No copy, whether conscious or unconscious, is ever quite so good as its original, but *Richard Carvel* came sufficiently near it to deceive not only the cultured public to which literature is an intellectual pleasure, or at most an avocation, but also many a seasoned critic. It is Thackerayan even in its length, but where the master trod without hesitation, conscious of his power, the pupil might well have hesitated. The story is unquestionably too long, too deliberate. It drags in many places, it adds no notable character to the living world of fiction, but one can not lightly forget the spirited chapters devoted to *Richard Carvel's* London life, with the ring of true Americanism echoing through them. So, with all its shortcomings, strangely overlooked in the chorus of praise that greeted its coming, *Richard Carvel* is a capital patriotic tonic—not the masterpiece it was at first supposed to be, but a notable milestone early in the road of the new American fiction.

Mr. James Lane Allen and Mr. Paul Leicester

Ford are the only "old hands" in this company of successful novelists. *Janice Meredith*, too, came at the right moment, though its faults were more readily pointed out than those of the earlier *Richard Carvel*. The critics, at least, had regained their poise. Planned on an enormous scale, to embrace the entire period of the War for Independence, the book broke down signally as a novel of adventure. The tale of war and derring-do has its limits, beyond which nothing remains but repetitions of hairbreadth escapes already used. Mr. Ford was led into this fault by lack of further combinations, even as the exuberance of her taste for adventure led Miss Johnston into overdoing this kind of thing toward the end of *Prisoners of Hope*. As a human document, too, *Janice Meredith* falls far short of the highest standard. Its heroine's character does not develop in the days that tried men's souls, and women's too. As she was in the beginning, so she is at the end of the tale: a shallow, frivolous coquette, with no suggestion of the makings of a noble woman, of the traditional American Revolutionary great-grandmother. But Paul Leicester Ford, the student of American history, redeems the shortcomings of Paul Leicester Ford the novelist. His book is, above all else, a study of the life of that epoch, the feelings of the colonists, rebels, "loyalists," and "trimmers"—not so much of the leaders, though they, too, are not lacking, as of the country people and their transplanted squirearchy. Mr. Ford's novel is strongest in that one of its three interests—the historic, the human, and the adventurous—which at the present time is probably the most important to the American reading public, the historical one.

The Rev. Mr. Sheldon's *In His Steps* deserves mention merely because no book that finds an audience of a million readers can well be entirely overlooked. It is not literature; it is a tract in the simplest form of that kind of writing. A mere reference to its meteoric career must suffice. It stands beyond the confines of American letters, a sunflower among the weeds of "reading matter"—third class, to adopt the post-office classification, the only practicable one in this case.

The popular books here discussed are about evenly divided between national history and national character, for we may include colonial days in the study of the national history of the United States. When we proceed to give a glance at the recent minor successes we find that history carries the day. Our naval victories in the war with Spain were no doubt largely responsible for the sudden prominence given in fiction to the naval side of our wars. Mr. Cyrus Townsend Brady here stands alone, a popular novelist rather than a trained literary artist—a muscular Christian and an ardent patriot, the biographer, also, of Paul Jones, the hero of more than one of his stories. Less successful attempts to exploit the American Revolution have been made within the past two years in vast numbers. They all bear evidence to the same national tendency of our latest fiction, but are remarkable only for their striking revelation of the comparative paucity of the fundamental situations upon which such tales are built—the love of a patriotic maiden for an English officer, a conflict of duty and inclination, and the alarms of war. Adventures and leaders on both sides are added according to the lore of the author. The very simplicity of the recipe makes its compounding difficult, and successes will grow fewer as the attempts become more frequent. Meanwhile we still await a really good tale of the campaign in the Carolinas, of the Cowpens, Morgan, and Tarleton.

The War of 1812 has thus far been but scantily treated by our novelists. Mr. Brady has dealt with the subject from the naval point of view, and Mr. Altsheler with the war on land in *A Herald of the West*, one of the best books of that able novelist and student. This period, however, appears to be doomed to neglect for the present, since the civil war is plainly to be the next episode in our history to be romantically treated. The lack of a really great novel of the greatest of our crises has long been felt, but it was not until 1900 that Mr. Altsheler produced his *In Circling Camps*, evidently the forerunner of a large class of books of its kind. The twentieth century, however young, already feels its distance from the happenings of the nineteenth; sufficient time has now elapsed to allow of judicious, impartial, and final dealing with an episode that long was a tender subject on both sides of Mason and Dixon's line. Historians and novelists will not succeed each other here, but will proceed abreast, and perhaps we shall thus obtain a truer knowledge of the methods of the latter, and of their value as teachers.

No fear of wounding sensibilities still raw, of arousing prejudices hardly quieted, held back our novelists in the case of the war with Spain. It has inspired already one notable novel, but only one, Mr. John Fox, Jr.'s, *Crittenden*, a book breathing a fine and sturdy patriotism, celebrating, above all else, the crowning good that war is supposed to have brought us—the lasting union of North and South, of the Blue and the Gray, the birth of the nation's confidence in its insoluble solidarity.

The novelist as teacher and interpreter—that seems to be the immediate future of our fiction. National history, national character, national life, national problems—these are to succeed the "problem" novels, "psychological" studies, and "sex" discussions of the immediate past. The improvement will be undoubtedly great, for it will aid us to "find" ourselves, and, having found, to know and understand. The modern novelist no longer wants to be an idle entertainer; and there be many who are willing to be informed while finding pleasure. The scientific historical method allures them not, theology undisguised does not attract them, and psychology and economics, likewise social studies, can not tempt them. To them the novelist may act as interpreter of the wisdom and knowledge of the day, giving a new function to his art, but assuming also great responsibilities. Technique, already much neglected, will run a parlous danger at his hands, for he may forget art for the sake of usefulness. This, however, is a question of the future, which only the future can answer.

Greatest among our national problems is probably that of the negro, not as a dweller on plantations, a picturesque, light-hearted feature of Southern scenery and life, nor as a source of folklore, but as an unassimilated lump in the social body, a possible danger that should be turned into a source of economic strength. Nearly half a century ago the negro inspired the most popular American novel ever written. Will his new condition appeal to another writer, and will that author's influence be as great as that of the "little woman who made this great war," as Lincoln said? Will he be a member of the race? Already it has its prophet, laboring indefatigably for its advance, but he is not a novelist. Thus far the negro has shown no remarkable aptitude for letters. He has produced two or three writers of dialect verse and prose, the latest of whom is Mr. Charles W. Chesnutt, linked to the race

by but a single drop of blood. But his first novel, *The House behind the Cedars*, is not a striking performance in workmanship or meaning. Mr. Chesnutt should confine himself to the short story, which introduced him to the American public.

The Chicago school, which is devoted to the study of present-day social and economic conditions, has not yet found its prophet. Mr. Robert Herrick's *The Web of Life*, published in 1900, is one of its best products thus far, but the very complexity of the subject dealt with threatens to dissipate the strength and resources of the authors of this school. Thus far they have confined themselves to reporting the things that are, with their inequalities and apparent injustice. The seer is still to come. Meanwhile this school will probably devote itself in the immediate future to the preaching of the gospel of the new Christian socialism of the West, of which Prof. Herron is one of the chief exponents.

FINANCIAL REVIEW OF 1900. While there was an absence of serious political tension between the European powers during the year, there was more or less of financial derangement at the chief foreign centers, resulting at intervals in comparatively dear rates for money. The war in South Africa, which had closed the gold mines in the Witwatersrand district, deprived Europe of a supply of gold which for the year previous to October, 1899, had amounted to about \$70,000,000. The war involved increased expenditures and consequent large borrowing by Great Britain, and rates for discount at London were maintained at such figures as almost constantly to draw gold, or at least to threaten such withdrawal, from the Continental centers. These centers, it may be noted, were insufficiently supplied, and in order to protect their stocks of gold the Banks of France and of Germany from time to time resorted to measures which tended to keep discounts firm at Paris and at Berlin. These monetary conditions were somewhat intensified early in the year by the discouraging reverses suffered by the British in South Africa. Even after the capture of Pretoria, the Transvaal capital, and the occupation of Johannesburg, the gold-mining center, and of Kimberley, the diamond field, demonstrations by the Boers were vigorous and annoying, indicating an indefinite prolongation of hostilities, the constant menacing of lines of communication, and the postponement of the resumption of gold mining. Though in October Gen. Roberts officially announced that the war was practically at an end, it appeared evident that the pacification of the conquered territory would be greatly delayed, and that until this should be effected there was little prospect of relief to the financial markets of Europe through the receipt of gold in any considerable volume from the Transvaal. Consequently, these markets would be compelled to rely for an uncertain period upon other sources for their much-needed supply of gold.

The disturbances in China, the outgrowth of at least three years of antiforeign agitation, which followed efforts by the principal European powers to enforce important territorial concessions from that empire, likewise had an unsettling effect upon the finances of Europe, and at one time serious political disagreements were threatened. The concert, which was early established and which enabled the chief European powers and the United States to adopt measures for the effective relief of the international legations and the occupation of the capital of the Chinese Empire, was, however, happily preserved. At the close of the year it appeared probable that the punitive policy which had then been unanimously agreed upon

at the instance of the United States would be adhered to, and that after this policy had been carried into execution guarantees for future protection of foreign residents in China and of native Christians and agreements providing for trade expansion would be obtained, the later contributing to the development of the vast resources of the Chinese Empire. The necessity which seemed to exist for the maintenance of military and naval establishments by the powers for the purpose of enforcing the terms of the new treaties with China would, however, doubtless require the expenditure of moneys, for the present at least, considerably in excess of the revenues which would be obtainable from the empire, demanding appropriations by individual nations of more or less magnitude, some of which might involve the issue of new loans.

One of the most notable financial features of the year was the negotiation in this country through syndicates of New York bankers of foreign government loans. The first important event of this character was the placing by Russia early in the year of railroad securities to the amount of \$25,000,000, which were guaranteed by the Russian Government, and it was understood that the proceeds of this loan would be employed in the purchase of material for Russian railroads. The British war loan for \$175,000,000, issued in March, was offered in part in this country, and \$12,000,000 thereof was awarded to subscribers in the United States. In August a British Exchequer loan for \$50,000,000 was issued, of which \$28,000,000 was taken by a New York syndicate of bankers. In the following month the German Government placed with another New York syndicate \$20,000,000 of treasury notes, and later a portion of a Swedish loan for \$10,000,000 and securities issued by the free city of Hamburg and by other German municipalities were disposed of in this country. These negotiations amounted in the aggregate to nearly \$100,000,000. The success which attended the efforts of European governments to borrow in the United States seemed to open a new field for the employment of American capital, and it was regarded at the end of the year as quite conceivable that whenever monetary conditions in New York were favorable for such operations there would continue to be opportunities offered by foreign governments for investments by Americans in their loans which would be mutually advantageous. The establishment of a market in this city for dealings in international securities was advocated by representative bankers as likely to afford facilities for transactions in these issues, which operations might eventually become almost as important as are those in the European capitals.

A financial event of the year of vast importance, and which contributed greatly to the prosperous conditions of the country, was the enactment by Congress, in March, of the measure having for its object the maintenance of the gold standard through the establishment of an ample reserve fund of gold, accompanied by provisions for the prompt and effective restoration of this fund whenever it should become impaired. Previous laws, while providing for a reserve, were not mandatory regarding the amount thereof; neither did they specifically provide for the restoration of the fund whenever it should be reduced below the sum which had been generally accepted as the minimum limit of safety. The new law inspired confidence in the ability of a Secretary of the Treasury who was loyal to the gold standard under almost all conceivable conditions to maintain the parity between the gold and the silver obligations of the Government. Though some of the provisions of the law were acknowl-

edged to be imperfect, and capable of being evaded by administrations who might be opposed to the principle embodied in the law, no doubt was entertained concerning its present efficacy. One marked effect of the law was observable in the concentration in the Treasury of a vast amount of gold, much of which had been previously held by banks and institutions, but which, as was the case after the resumption of the issue of gold certificates in 1899, was exchanged therefor at the Treasury, thus making this department the repository of a very large proportion of the visible supply of the metal in the country. These exchanges of gold for gold certificates, the absorption by the Treasury of bullion from the domestic mines and from the Yukon fields, importations of gold from Australia and imports in October from Europe, together with the receipts of gold at the customhouses in payment for duties, caused an addition to the Treasury holdings of gold during the calendar year of \$81,317,224, of which gain \$57,348,336 took place after the passage of the gold standard law. At the end of December the gross amount of gold in the Treasury was \$479,349,251, a sum unprecedented in the history of the country.

The currency provisions of the gold standard law were likewise of great importance. An issue of 2-per-cent. thirty-year gold bonds was authorized for the purpose of refunding \$830,055,250 securities, bearing interest at from 3 to 5 per cent. and redeemable in coin between 1904 and 1908 inclusive. Provision was made for the exchange at varying premiums of these old bonds for the new 2 per cents., and, with a view to encourage exchanges by banks who held the old issues as security for circulation, the tax on those circulating notes which should be issued against the 2-per-cent. bonds was reduced to $\frac{1}{4}$ of 1 per cent. per annum. The law further provided for the organization of banks with a capital of \$25,000, and also for the issue by all national institutions of circulation to the par value of the bonds deposited as security. Under the operation of the refunding provisions of the law the exchanges of old bonds for the new 2 per cents. progressed more or less rapidly until the end of the year, when refunding operations were suspended by order of the Secretary of the Treasury. After the final adjustment of pending applications for funding \$445,828,750 of old bonds had been exchanged for new and \$43,569,801 had been paid for premiums on the former. The banks established under the provisions of the law were 389 in number, with a combined capital of \$20,127,000, and the smaller banks were distributed throughout the agricultural regions where they were most needed. Comparatively few banks took advantage of the privilege to issue circulation to the par of their bonds. The increase in bank circulation during the year, however, amounted to \$93,865,887. This gain in circulation, together with the distribution by the Treasury of the above-noted amount for premiums on refunded bonds and the maintenance by the Treasury during the year of nearly \$100,000,000 of public funds on deposit with those national banks, numbering 240, who gave bonds as security for such funds, contributed to general monetary equilibrium throughout the greater part of the year.

Commercially the country was marvelously prosperous during the year. Each month recorded an important excess of exports over imports of merchandise, the smallest of such excess being \$36,782,101, in July, and the greatest \$92,509,286, in October, which sum was never before surpassed. The excess of merchandise exports over imports for the calendar year was likewise the largest on record, amounting to \$648,998,738, and the total com-

merce of the country, which during the fiscal year ending June 30 for the first time in our history passed the two-billion-dollar mark, being \$2,244,424,266, was \$2,307,102,970 in the current calendar year. Moreover, the imports of manufacturers' material and the exports of manufactured goods were larger than ever before, and our exports were not only greater, but they were more widely distributed throughout the world than in any preceding year. Exports of manufactured goods amounted to \$432,284,366 during the calendar year, and our manufacturers are now successfully competing with those abroad in nearly all the markets of the world.

The enormous excess of merchandise exports over imports in the last four calendar years, amounting to \$2,103,194,933, and the fact that after deducting the visible liquidations, through the movement of gold and silver, of this balance there remains a vast sum unaccounted for except through the return of an unknown amount of stocks and bonds, have led to renewed efforts to revise, on a more satisfactory basis than heretofore, estimates of the amount which is known as the "invisible" adverse balance of trade. This balance includes freight, insurance, undervaluations of imported goods, interest on securities held abroad, the amount expended by tourists less the sum which is brought into the country by immigrants, the expenditures by American citizens residing abroad, and other items which necessarily must, as well as the return movement of securities above noted, be estimated. The amount of such "invisible" adverse balance is admitted to be not less than \$150,000,000 annually, and some bankers who have given the matter much study claim that it is double this sum. Whatever may be the amount, in order to arrive at an approximation of the actual balance of international indebtedness this invisible annual adverse balance must be deducted from the apparent balance—which is the sum of the excess of exports over imports of merchandise and gold and silver coin and bullion—and the result should show approximately the amount of unliquidated foreign indebtedness upon which to base economic estimates.

The following tabular survey of the economic conditions and results of 1900, contrasted with those of the preceding year, is from the Commercial and Financial Chronicle:

ECONOMIC CONDITIONS AND RESULTS.	1899.	1900.
Coin and currency in the United States, Dec. 31.....	\$2,253,133,438	\$2,449,021,009
Bank clearings in the United States.....	\$94,178,080,233	\$86,160,587,252
Business failures.....	\$90,870,880	\$138,495,673
Imports of merchandise (year).....	\$798,967,410	\$829,052,116
Exports of merchandise (year).....	\$1,275,467,971	\$1,478,050,854
Gross earnings 119 roads (year).....	\$730,883,810	\$786,957,839
Railroad construction, miles.....	4,500	4,328
Wheat raised, bushels.....	547,303,846	522,229,505
Own raised, bushels.....	2,078,143,933	2,105,102,516
Cotton raised, bales.....	9,432,559	9,930,270

Money.—Influenced by the large customs receipts of the Government during the first four months of the year, which receipts consisted almost wholly of gold, and by accretions from domestic mines, the gross gold holdings of the Treasury gradually increased from \$398,032,027 at the

end of 1899 to \$426,989,371 at the close of April. The withdrawals of gold for export in May were nearly counterbalanced by augmented receipts from the sources above noted, and after the middle of the year gold exports were more than offset by importations at San Francisco of gold from Australia, and in October from Europe, and by bullion from the Yukon, which passed through the Pacific coast assay offices, so that by the end of October these gross gold holdings were \$458,266,143. The amount held at the end of the year was \$479,349,251. The net gold in the Treasury at the close of 1899 was \$236,909,230, while at the end of 1900 it was \$215,719,872, this result being largely due to an increase in gold certificates from \$101,122,797, Dec. 31, 1899, to \$263,629,379 at the corresponding date in 1900. The circulation statement of the Treasury reported that on Jan. 1 the amount of gold was \$617,977,830 and of gold certificates \$161,122,797, while the total of all forms of metallic and paper money in circulation on that date was \$1,980,398,170, making a circulation per capita of \$25.73. The statement of Jan. 1, 1901, shows that the amount of gold in circulation was \$629,192,578, of gold certificates \$232,787,929, and of all forms of metallic and paper money \$2,173,251,879, making a per capita circulation of \$28.19.

The cash holdings of the New York associated banks at the beginning of the year were \$198,996,000, of which \$144,001,700 consisted of specie. These holdings were increased to \$231,594,300 by Feb. 10, chiefly in consequence of a return flow of money from the interior, but they fell to \$205,846,400 by March 24, more or less rapidly recovering thereafter to \$252,950,200, the maximum of the year, Sept. 1, when the specie was \$179,291,900, influenced by the disbursements of premiums upon bonds refunded under the provisions of the act of March 14. Then came a reduction in the cash holdings to \$212,379,000, Nov. 10, caused by the withdrawals of money for the crop movements, followed by a recovery, and the amount held at the end of the year was \$225,073,200. The loans of the banks at the beginning of the year were \$677,797,000, and they gradually increased to \$763,203,100, March 10. After a fall to \$739,331,000, March 24, there was a notable gain due to loans upon fundable bonds and also to hypothecations of securities bought in this market for European account, and the maximum for the year, and indeed on record, was reached Sept. 25, when the loans were \$825,830,600. The reduction of cash above noted caused a liquidation of loans, and they were reduced to \$785,656,500, Nov. 10, after which there was a recovery to \$796,457,200 by the end of the year. Deposits at the beginning of January were \$748,953,100, the minimum of the year. There was a rise to \$829,917,000, March 3, followed by a fall to \$800,116,400, March 24. Then came a recovery to \$907,344,900, Sept. 15, succeeded by a decline to \$831,091,800, Nov. 10. At the end of the year the deposits were \$854,189,200. The surplus reserve was at the maximum (\$30,871,275) Feb. 3, and at the minimum (\$2,686,425) March 17. While the cash, loans, and deposits were advancing during the spring and the summer the surplus reserve increased to \$28,125,950 by Aug. 11. Then came a fall to \$2,947,700 by Oct. 20, followed by a recovery, and the surplus at the end of the year was \$11,525,900.

The condition of the New York Clearing House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Jan. 2, 1901, compared with the same items for the preceding two years, are given in the following table:

Money on call loaned at the Stock Exchange during the year at 25 per cent. in November and as low as 1 per cent. from June to October inclusive. During the first few days in January loans were made at 12 per cent., but gradually the market grew easier, influenced by a return movement of currency from the interior, and by the end of the month the rate fell to 2 per cent. In February the tone was easy, rates declining from 3 per cent. to 1½ per cent., but in March there was an advance to 7 per cent., pending the passage of the new currency law, influenced by the decrease in the surplus reserve of the banks. Thereafter during the month the market was easier, and loans were made at 2 per cent. at the close. In April, influenced by the improved condition of the banks, money was freely offered, and call-loan rates fell from an average of 3½ per cent. to 2½ per cent. The market then began to be favorably affected by the increase in bank note circulation and by the refunding operations, and up to the end of April \$260,783,050 fundable bonds had been presented for exchange into the new 2 per cents., while the disbursements for premiums on the funded bonds were about \$26,000,000. Notwithstanding exports of gold to Europe in May, the money market was easy, call loans ranging from 3 per cent. to 1½ per cent., and averaging 2 to 2½ per cent. The range in June was from 1 to 2 per cent., with the average 1½ to 1¾ per cent. In July, while the range was the same, the average was 1½ to 1¾ per cent., and in August, with an unchanged range, the average was 1½ to 1¾ per cent. It may be noted that on Aug. 18 a call by the Treasury matured for the surrender for redemption of the 2-per-cent. bonds of 1891, which were extended at 2 per cent. and made redeemable at the pleasure of the Government. These bonds then outstanding amounted to \$25,364,500, and they were largely held by banks as security for circulation and public deposits. The surrender of the bonds was slow, however, and at the end of the year there were \$1,207,600 of these securities outstanding. In September, while the range for money on call was from 1 to 2 per cent., averaging from 1½ to 1¾ per cent., the feature was a perceptible hardening of the rates for time money due to the demands from borrowers who desired to make provision for periods beyond the

election, and rates for five to six months collateral loans were 5 per cent. In October money on call was active, ranging from 1½ per cent. early in the month to 6 per cent. by the close, and the activity was almost wholly due to the pending presidential election and to the low bank reserves resulting from the drain to the interior for crop purposes. The average was from 2½ per cent. to 4½ per cent. Time loans were firmly held at 5 per cent. for all periods. In November, immediately previous to the election, there was an urgent demand for money on call to tide over that period, and on the 2d loans were made as high as 20 per cent. and the borrowing was in many cases until the succeeding Wednesday. On the following Monday 25 per cent., the highest of the year, was recorded for loans over the election. On the day after that event, however, money was comparatively plentiful, and it so continued for the remainder of the month, ranging from 2 per cent. to 6 per cent. In December, money on call loaned at the New York Stock Exchange at 6½ per cent. and at 3 per cent., and the tone of the market, until toward the close of the month, was firm, influenced by the absorption of money by the Treasury and by a movement of currency to the interior, which reduced the supply, and by the active stock speculation which increased the demand. In the last week of the month liberal Treasury disbursements for interest and for pensions and free offerings by commission houses who had anticipated some stringency at the end of the year and had therefore made provision with time loans contributed to an easier feeling, though the rate did not fall below an average of 5 per cent. One feature was an inquiry for thirty-day collateral loans at 5 per cent. to tide over the period of expected activity in money in January.

The offerings of money on time during the year were generally confined to local banks and trust companies, though some institutions in near-by cities sought contracts on stock collateral for fixed periods. The buying of commercial paper was, however, largely by banks in the interior, some as far west as St. Paul, and owing to this competition for paper rates, except in January and in October, were comparatively easy. The extremes for the year were from 6 per cent. in January to 3½ per cent. in June for indorsements, and

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 6.....	\$677,797,000	\$144,001,700	\$16,234,100	\$748,953,100	\$34,964,300
April 7.....	753,566,300	151,756,300	20,574,500	822,495,600	61,772,500

from 6 per cent. at the beginning of the year to 3½ per cent. in May for first-class four to six months' single names.

The clearings of the New York associated banks in 1900 amounted to \$52,634,201,865, against \$60,761,791,901 in 1899. Clearings of all banks in the country amounted to \$86,160,587,352, against \$94,178,089,233 in the previous year. The clearings on Dec. 27, 1900, at New York were the largest on record, amounting to \$364,013,290. The table at the foot of page 220 is the New York Clearing House statement of bank averages at the beginning of each quarter in 1900 and at the end of the year.

Stocks.—The stock market, though irregular and comparatively inactive at the beginning of the year, gradually developed strength under the lead of New York Central, and the tendency was generally upward for the investment properties to the end of January, influenced by growing ease in money. The speculation seemed to be entirely unaffected by the unsettled London markets in the closing days of the month, caused by news of the disaster to the British forces in South Africa compelling their retreat across the Tugela river after the temporary occupation of Spion Kop. The announcement that the Third Avenue Railroad Company had an excessively large floating debt, and was thereby financially embarrassed, caused a sharp decline in the stock of that company. The continuance of the war between the independent refiners of sugar and the American Sugar Refining Company, together with unfavorable developments at the annual meeting of this company, made the stock exceptionally weak. The tone of the market was generally strong early in February, influenced by declarations of first dividends by several leading railroad companies, notably the Union Pacific, the Baltimore and Ohio, and the Reading, and the speculation was also favorably affected by large purchases of the bituminous coal shares and of stocks of Southern roads, buying of the former being stimulated by the activity in iron and coal and of the latter by a rise in the price of cotton. After the middle of the month a further decline in Third Avenue Railroad stock, in American Sugar, in United States Rubber, and in People's Gas, together with unfavorable bank statements, had a depressing effect upon the general market, inducing speculative sales. There was, however, a partial recovery by the end of the month. Influenced by the passage of the gold standard bill, which became a law on the 14th, and by the absorption by the Metropolitan Street Railway Company of the Third Avenue Railroad, through which provision was made for the adjustment of the enormous loans made by that corporation, the stock market opened quite strong in March, and there appeared to be very confident buying, not only by domestic, but by foreign speculators of leading American railroad properties for the remainder of the month. The European purchases seemed to be directly influenced by the establishment of our currency upon a gold standard, and there were indications, which were observable in the foreign exchange market, that large amounts of the stocks so bought were hypothecated with New York banking houses instead of being shipped abroad. The advancing tendency of the market was checked by realizing sales early in April, and the business was less active while the tone was irregular during the first half of the month. Then it was announced that the American Steel and Wire Company had closed a number of its mills because of a decrease in the demand for its productions, and the executive manager of the company gave expression to quite discouraging views regarding the condition

of the steel trade. The above-noted action of the company and the later reduction in prices of the products of the steel and wire mills in order to dispose of accumulated stocks, together with the request made by the company that deliveries of large amounts of material by the Federal Steel Company be deferred, which request caused that company to close part of its mills, had a demoralizing effect upon the stocks of all iron and steel concerns. These stocks had been greatly advanced in price during the previous month, and the fall tended unfavorably to affect all the industrial properties, and the whole market was more or less unsettled. There was, however, a prompt recovery in the railroad stocks, influenced by easier rates for money and by an improved condition of the bank reserves, which encouraged large purchases of leading stocks at the decline. Moreover, there was a feeling among speculators that the situation in the steel and iron trade had been exaggerated with a view unfavorably to influence the market. Disclosures in the following month, however, indicated that there really was good cause for the action of the Steel and Wire Company, and that the production of steel and of iron had, under the influence of the extraordinarily high prices which had been ruling, been excessive and entirely unwarranted by the demand. Consequently, inquiry by consumers of these goods fell off, and it failed to be stimulated by the general reduction in prices which was made in order to market accumulated stocks. The unsettling effect upon the speculation of the decline in the shares of the iron and steel properties resulting from these disclosures was in some measure counteracted by news of the adjustment of the differences between the local gas companies, by the rehabilitation of the Third Avenue Railroad Company through the issue of new bonds, and by prospects for the settlement of the war between the sugar refiners, and the market irregularly recovered. The failure of an important commission house through an effort to corner cotton had somewhat of a disturbing effect toward the end of the month, and the market was irregular at the close of May. In June the tendency of stock values was generally downward for the greater part of the month. The opening of the presidential campaign was a partially disturbing factor owing to the prospect that the political lines would be closely drawn between the gold standard and free silver coinage, as was the case four years previously. The unsettled condition of industrial enterprises and important declines in steel and iron and in cotton goods had a depressing effect upon manufacturing interests. Unfavorable crop reports and damage to spring wheat in the Northwest more or less affected the status of the grain-carrying roads, and an export movement of gold contributed to speculative selling of stocks. The outbreak of the rebellion in China, the isolation of the legations at Peking, and the military operations by the allied forces, including those of the United States, for the relief of the legations, had a disturbing influence, and tended to repress speculative operations on the Stock Exchange.

The market was quite inactive during July, and though there were recoveries in some of the specialties and a generally firm undertone, the volume of transactions on the Exchange was quite small. The action of the Democratic National Convention at St. Louis clearly defined the free coinage of silver as the paramount issue of the presidential campaign, and some confidence was felt in the indorsement at the election of the existing administration. The crop conditions grew more favorable owing to quite general rains in the Northwest, and the indications pointed to a better yield of

winter wheat than in the previous year. There was no marked improvement in the industrial situation, however, and prices of steel and iron continued to decline without stimulating any special inquiry from consumers. The reports from China regarding the foreign legations were sensational and more or less disturbing until the close of the month, when official announcements were made of an assuring character. Speculation was dormant during August, and the aggregate of transactions in stocks was but little more than 4,000,000 shares, against nearly 13,000,000 in the same month in 1899. The influences contributing to this inactive speculation were the presidential campaign, the generally unfavorable industrial situation, and the uncertainty regarding the crops, though concerning the latter there were assurances of an average harvest of grain. The Chinese situation became less disturbing, the legations having been rescued and Peking being occupied by the allied forces, but complications seemed to be threatened by the attitude of the Russian Government. The tone of the market was, however, generally firm, and there was a good demand for the leading railroad properties, including the trunk lines, the Grangers, the Southwesterns, and the Anthracite Coal shares. Early in September a strike of coal miners in the Pennsylvania regions had a depressing effect upon the stocks of the coal-carrying roads. The market was also more or less unfavorably influenced by a large movement of currency hence to the South and to the Southwest due to the demand for money for the cotton crop, and later considerable sums were sent to Western points to facilitate the marketing of grain. The partial destruction of Galveston by a hurricane, involving the loss of nearly 2,000 lives and of millions of dollars' worth of property, was one of the notably unsettling events of the month, chiefly, however, affecting the cotton situation. The results of the State elections in Vermont and in Maine seemed to give some assurance of increased sound money majorities at the presidential election, which feeling was partially reflected in the stock speculation, but the volume of business was comparatively small and the trading was almost wholly professional. After the middle of the month large speculative sales of the Anthracite Coal shares, of the local traction stocks, of the industrials, and of the trunk line properties made the market generally heavy, but toward the end of the month some progress in the movement for the settlement of the anthracite coal strike caused a covering of short contracts, and the tone was generally better thereafter to the close. The tendency was upward early in October, notwithstanding the efforts of labor agitators to prevent the adjustment of the differences between the coal miners and the operators. The prospect of dearer money resulting from the continued movement of currency to the interior seemed to have little effect, for there was a very confident feeling that higher money rates would cause such a fall in foreign exchange as to bring comparatively large amounts of gold from Europe. The notably strong stocks were Missouri Pacific, Union Pacific, Chicago, Burlington and Quincy, the trunk lines, and the local traction issues. After the middle of the month the market became active and buoyant, influenced by assurances of the re-election of President McKinley, by engagements of gold in Europe for shipment hither, by the settlement of the anthracite coal strike, and by investment purchases of leading railroad properties, including the principal trunk lines. Buying of railroad bonds was a notable feature of the movement, and the transactions in these were unusually large. The buoyancy continued during the greater part of the

fourth week of the month, encouraged by increasing confidence in the political situation, by a smaller movement of currency to the interior, and by receipts of gold from abroad. The daily transactions were quite large and the buying was especially noticeable in Metropolitan Railway and also in Brooklyn Rapid Transit, the latter on reports of a prospective change in the management. Great Northern and Southern Pacific were exceptionally strong, and there was an increasing demand for railroad mortgages, indicating investment purchases. A sharp upward movement in Pacific Mail gave color to a report that Southern Pacific interests would be represented in the management. In the last days of the month there was a natural downward reaction in the market, due to profit taking, and though there was a very confident feeling regarding the result of the presidential election, a disposition was manifested by nonprofessional speculators to await the event. A sharp advance in rates for money, which appeared to be wholly due to the November settlements, tended somewhat to limit the volume of business, and about the only notable feature was a rise in Pennsylvania on the announcement of an extra dividend of 1 per cent. The activity in money on the Friday and on the Monday previous to the election checked operations in stocks except by the professionals, but the tone of the market was generally firm. The feature on the day after the election was a sharp advance in the whole list, with enormous transactions both for domestic and for European account. Some of the foreign arbitrage houses cabled purchasing orders to London on the previous night for execution on the "curb" at that center on the following morning, and these purchases materially aided in imparting a buoyant tone to the foreign markets for American securities. Though there were large realizing sales in the New York market during the day, the offerings were promptly absorbed and the volume of transactions was almost unprecedentedly large at well-sustained advances. The tendency was uninterruptedly upward until the 12th, when there was a reaction due to realization, followed later in the week by substantial recoveries, and some of the leading stocks sold at the highest prices recorded in recent years. The business on Monday, the 12th, it may be noted, was the greatest ever reported at the Exchange, amounting to 1,688,250 shares of stock and \$5,335,000 bonds. The transactions in the following week were also large, aggregating 7,167,745 shares of stock, against 6,720,025 shares in the preceding week, and the exchanges at the Clearing House, reflecting this enormous business, were for the week ending Nov. 24 unprecedentedly large, amounting to \$1,599,539,179. The market, though less active and somewhat irregular owing to realizations and London selling, was generally strong to the close of the month. In December there was very confident buying of stocks, influenced by the generally prosperous conditions prevailing, which were reflected in augmented railroad earnings promising increased dividends. One important event of the month which had a direct effect upon the speculation in the coal shares was the announcement of the purchase of the Pennsylvania Coal Company by capitalists largely interested in the anthracite coal properties. Another event was a conference of railroad presidents with the object of devising plans for the maintenance of rates. Rumors of combinations of important railroad interests in the West and Northwest also had a stimulating effect upon the market. Notwithstanding enormous sales of stocks, chiefly high-priced properties, by Europeans, the market appeared readily to

absorb these stocks, and the tendency was generally upward to the close of the month. On the 22d the transactions on the Exchange were unprecedentedly large for a half holiday, amounting to 1,005,519 shares, and the sales for the week ending that day were 7,775,640 shares, exceeding in amount any previously recorded. For the seven weeks ending Dec. 21, including the week ending Nov. 9, the transactions in stocks were 38,006,044 shares, and the tone of the market during this entire period was almost uninterrupted strong and at times remarkably buoyant. Total sales of stocks at the New York Stock Exchange in 1900 were 138,380,184 shares, against 176,421,135 shares in 1899, 112,699,957 in 1898, 77,324,172 in 1897, 54,490,643 in 1896, 66,583,232 in 1895, 49,075,032 in 1894, 80,977,839 in 1893, 85,875,092 in 1892, 69,031,689 in 1891, and 71,282,885 in 1890.

The following shows the highest prices of a few of the speculative stocks in 1899, and the highest and lowest prices in 1900:

STOCKS.	1900.		
	Highest.	Highest.	Lowest.

The Crops.—The condition of the cereal crops was somewhat unfavorable early in the year, owing to the backward season, which delayed farm operations, and also to winter killing of fall-sown wheat. Conditions were, however, by no means uniform, wheat being at a low average in Ohio, Michigan, and Indiana, and high in the Southwest, on the Pacific coast, in Illinois, and in Kansas. Conditions improved later in the spring, so far as regards winter wheat, but spring-sown

grain was unfavorably affected by drought. The harvest of fall-sown grain, which began in June, was excellent in Texas, Kansas, and Oklahoma, and the indications then pointed to a crop of winter wheat at least 50,000,000 bushels in excess of that in the previous season. The damage to spring wheat was greatest in the extreme Northwest, but the July report of the Department of Agriculture showed that the largely increased yield in Kansas and in other States in that section would, to a considerable extent, offset the loss in Minnesota and in the Dakotas. The condition of corn was then reported better than at the corresponding date in 1899, while the cotton crop outlook was good. Corn declined in condition during the latter part of the summer, in consequence of the hot weather, but as the acreage was larger the yield was expected to be above the average. Official estimates of the results of the combined wheat crops were but little below the output of the previous year. At the end of the season the final estimates of the Department of Agriculture indicated a yield of 2,105,000,000 bushels of corn, of 522,229,000 of wheat, of 809,126,000 of oats, of 59,000,000 of barley, and of 24,000,000 of rye, and the striking feature of the estimates was that the grand total of these cereals was 3,519,879,770 bushels, against 3,518,988,796 in 1899. The yield of wheat was unexpectedly good, and the results were phenomenal in Kansas and in other States in that locality. The estimates of the yield of cotton were from 9,900,000 to 10,500,000 bales. The Department of Agriculture based its calculation of a crop of 9,930,270 bales of cotton upon an acreage of 25,038,000 and a yield of 194 pounds per acre. The largest crops were raised in Texas, Georgia, Alabama, Mississippi, South Carolina, Arkansas, Louisiana, and North Carolina. The smallest crops were in Virginia, Missouri, and Florida. The table at the foot of this page shows the yield and the value of the crops for the years 1899 and 1900 on the basis of the price at New York at the beginning of 1900 and 1901.

Foreign Exchange.—The exports of domestic and foreign merchandise for the year ending Dec. 31, 1900, were \$202,582,883 above those of 1899, and the imports of merchandise were \$30,084,706 greater. The excess of merchandise exports over imports for the year was \$648,998,738, against \$476,500,561 for 1899. The excess of exports over imports of merchandise and gold and silver coin and bullion for 1900 was \$602,856,506, against \$493,162,816 in 1899. Gold imports were \$12,603,402 in excess of exports in 1900, against \$5,955,553 in 1899.

The foreign exchange market was influenced early in January by a fall in open market discount rates in London, reflecting easier conditions prevailing at that center, which caused a reduction in the Bank of England minimum rate on the 11th from 6 per cent. to 5 per cent. Concurrently there was a reduction by the Bank of France in its rate from 4½ per cent. to 4 per cent., and by the Bank of Germany from 7 per cent. to 6 per cent., and later to 5½ per cent. Still another influence affecting exchange was the withdrawal by

the Bank of England on the 9th of its offer to make advances at the rate of 2½ per cent. on gold while it was in transit from New York, which offer had stimulated the export of gold hence to London in the previous month. The tone of the market was generally strong at the gold export point for sight sterling during the first week, and then \$3,900,000 gold was shipped to London. In the following week, however, rates gradually fell off, to react in the succeeding week. Then the Bank of England further reduced its rate of discount to 4½ per cent., and again, a week subsequently, to 4 per cent., when the Bank of France lowered its rate to 3½ per cent. The supply of bankers' and also of commercial bills was limited, and there was a good demand to remit for stocks sold for European account and some inquiry for mercantile remittances, which kept the market firm. In the last days of the month, influenced by the derangement in London caused by the news of the British disaster at Spion Kop, South Africa, rates for sight sterling advanced to the gold exporting point, though none of the metal was shipped. Rates for exchange at the opening of the month were \$4.82½ to \$4.82½ for sixty-day and \$4.87½ to \$4.87½ for sight, while at the close of the month they were \$4.84 to \$4.84½ for the former and \$4.87½ to \$4.87½ for the latter, the difference in the quotations for sixty-day reflecting the reduced rates for discounts in London. The market was dull and the tone easier, especially for long sterling, in February, influenced by a better supply of commercial bills chiefly drawn against cotton, which was then bought freely by English spinners who had deferred purchases earlier in the cotton season because of erroneous estimates of the volume of the crop. Short sterling, however, was generally firm until after the middle of the month, affected by a demand for remittance, but toward the close this class of bills yielded to free offerings of drafts against securities and the market was weak. Rates for exchange at the beginning of the month were \$4.84 to \$4.84½ for sixty-day and \$4.87½ to \$4.87½ for sight, while at the end of the month they were \$4.83½ to \$4.83½ for the former and \$4.86½ to \$4.87 for the latter. The tone of the market continued easy in March until after the third week, influenced by an increasing supply of drafts against cotton, the exports of which were large. After the 22d, however, the market grew firmer, affected by a scarcity of bankers' bills, notwithstanding the fact that, stimulated by the enactment of the gold standard law, there were large purchases in our market of securities for European account. It appeared, however, that the stocks so bought by foreigners were not sent forward, but they were temporarily hypothecated with the New York banking houses in order to take advantage of the lower rates for money ruling in our market compared with the discount rates abroad. Had the stocks been promptly forwarded, as is usually the case when such purchases are made, the resulting supply of drafts against the securities would have been abundant, and lower rates for exchange would have ruled. Concurrently with this scarcity of bills there was a demand for exchange to transfer bankers' balances to London for employment at that center at more profitable rates of interest than could be obtained in New York, and hence exchange gradually advanced and the tone was strong to the end of the month. The opening rates were \$4.83 to \$4.83½ for sixty-day and \$4.86½ to \$4.86½ for sight. After falling by the 22d to \$4.82 to \$4.82½ for the former and to \$4.85½ to \$4.85½ for the latter, there was a reaction by the close to \$4.82½ to \$4.82½ for sixty-day and \$4.86

to \$4.86½ for sight. The tendency of the market was almost continuously upward during April, influenced by the scarcity of bills resulting from the above-noted retention of securities bought for foreign account, by the demand to transfer balances to London, and also by an investment inquiry for long sterling. Two consignments of gold of \$500,000 each were shipped hence to Buenos Ayres on London account, and on the 26th \$500,000 gold was sent to Paris in consequence of the inducement of an offer by the Bank of France of interest on the consignment while it was in transit. The rates for exchange at the opening of the month were \$4.82½ to \$4.83 for sixty-day and \$4.86½ to \$4.86½ for sight, while the closing rates were \$4.84½ to \$4.84½ for the former and \$4.88½ to \$4.88½ for the latter. The influences operating during April continued to affect the exchange market in May, and for the greater part of the month sight sterling ruled very near to the gold exporting point, though no gold was shipped to London. The Bank of England early in the month raised its bid price for American eagles from 76s. 3½d. to 76s. 4d. per ounce, but this movement failed to attract gold to London. Shipments of the metal hence to Paris continued, however, in response to the above-noted inducement of interest while in transit, and by the 24th \$10,022,375 had been shipped. The receipt by the Bank of England of £1,000,000 gold from Russia with which to meet interest payments had the effect of so far relieving the monetary tension at London as to cause a reduction by the Bank on the 24th of its minimum rate of discount from 4 per cent. to 3½ per cent. On the following day the Bank of France reduced its rate of discount from 3½ per cent. to 3 per cent., and at the end of the month open market rates were easy at all the chief European centers, and the relaxation in the monetary tension abroad was reflected by lower rates in the foreign exchange market. Quotations at the opening of the month were \$4.84½ to \$4.84½ for sixty-day and \$4.88½ to \$4.88½ for sight. The former advanced to \$4.84½ to \$4.85 by the 14th, but at the end of the month rates were \$4.84½ to \$4.84½ for sixty-day, while those for sight were \$4.87 to \$4.87½. The export movement of gold to Paris was resumed about the middle of the month of June, and some of the metal was sent to Berlin, there being a good demand for gold from Continental centers, the Bank of France continuing to offer inducements to shippers and the Bank of Berlin likewise seeking to attract the metal. The shipments to these points amounted to \$7,626,413. The rates for exchange at the opening of the month were \$4.84½ to \$4.84½ for sixty-day and \$4.87 to \$4.87½ for sight. There was a gradual advance in the former to \$4.85 to \$4.85½ and in the latter to \$4.87½ to \$4.87½, but at the close of the month rates were \$4.83½ to \$4.84 for the former and \$4.86½ to \$4.86½ for the latter. Exports of gold were temporarily checked after the 23d, but they were resumed in July, and on the 19th \$2,029,543 was sent to Paris. The extremely low reserve of the Bank of England early in the month seemed to indicate a movement of the metal hence to London, but none was shipped. The bank on the 19th advanced its rate of discount from 3 per cent. to 4 per cent. in consequence of the new phase of the Chinese situation, which had then developed, and open market discounts in London were thereafter firm because of the announcement of the supplementary Treasury estimates of £11,500,000 due to the prolongation of the war in South Africa. Influenced by the monetary tension in London, and also to some extent by the Chinese situation, which tended to check the supply of commercial bills against exports of

cotton goods to the Orient, the foreign exchange market was strong in July and rates opened at \$4.83½ to \$4.83½ for sixty-day and \$4.86½ to \$4.86½ for sight. The former advanced to \$4.84 to \$4.84½ and closed at \$4.83½ to \$4.84, while the latter rose to \$4.87½ to \$4.88 and closed at \$4.87½ to \$4.87½. On Aug. 7 subscriptions for a British Exchequer loan for £10,000,000 at 3 per cent. were simultaneously opened at the Bank of England and at the banking offices of J. P. Morgan & Co. and of Baring, Magoun & Co., in this city, and the books were closed on the same day after more than \$55,000,000 had been subscribed in New York. On the following day it was announced that \$28,000,000 of the loan had been awarded to American subscribers by the advice of the Bank of England, the governors of which pointed out to the Chancellor of the Exchequer that this large award was an easy and a natural way of attracting gold to London; otherwise the bank might have to raise its rate of discount to 5 or 6 per cent., and to take extraordinary measures to bring gold to England. It was stipulated in making the award to American subscribers that \$10,000,000 of the \$28,000,000 should be immediately remitted to the bank. This institution offered the inducement of interest on additional consignments of gold while in transit, and at the same time the bank advanced the bid price of American eagles to 76s. 5d. and of gold loans to 77s. 10d. per ounce. Stimulated by these inducements, \$17,386,227 gold was shipped to London during the month, and the Bank of France attracted \$2,008,907 through the offer of interest on the consignments while in transit. The foreign exchange market was strong prior to the announcement of the award of the Exchequer loan. Then under the influence of offerings of bills against gold exports, and also of a decline in open market discount rates abroad, rates receded, but later the tone again became firm. Quotations opened at \$4.83½ to \$4.84 for sixty-day and at \$4.87½ to \$4.87½ for sight. There was an advance in the latter to \$4.88½ to \$4.88½, but the market closed with sixty-day at \$4.84½ to \$4.84½ and sight at \$4.87½ to \$4.87½. It may be noted that the shipments of gold to London were almost wholly covered with cable transfers, which at the beginning of the movement were \$4.88½ to \$4.89, later declining to \$4.88 to \$4.88½. In September the placing in this country, through the National City Bank and Kuhn, Loeb & Co., of an issue of 80,000,000 marks 4-per-cent. treasury notes of the German Empire and of a portion of \$10,000,000 4- to 3½-per-cent. Swedish Government bonds had more or less influence upon the foreign exchange market early in the month, though no gold was remitted for these subscriptions, settlements being made with exchange drawn against credits at Berlin. After the announcement of the German loan exchange fell off sharply, influenced by a liberal supply of cotton and grain bills. The Galveston disaster on the 8th was followed by the report on the 10th by the Department of Agriculture, which showed a decline in the general average condition of the staple during August. As the result of this report and also of the hindrance to the movement of cotton in Texas, by reason of the disaster at Galveston, the price of the staple sharply advanced from 9½ to 11 cents per pound, and in Liverpool a corner developed, but this corner was broken by an agreement by Manchester spinners to refrain from buying American cotton during the month. European purchases of the staple were, however, large, and the resulting drafts continuously affected exchange. Rates opened at \$4.84½ to \$4.84½ for sixty-day and \$4.87½ to \$4.87½ for sight, and they closed at \$4.82½ to \$4.82½ for the former and

at \$4.85½ to \$4.86 for the latter. The liberal offerings of cotton and grain drafts, together with activity in money at this center, caused by the withdrawals of funds for the handling of cotton at the South, resulted in a gradual decline in rates for exchange to the gold importing point toward the middle of October. The engagements of gold for import from Europe began on the 9th, and before the close of the month nearly \$9,000,000 had been engaged from London, Paris, and Berlin, and it is noteworthy that one consignment of \$2,500,000 in American gold loans, which had been shipped from India for the Bank of England, was intercepted at London and transshipped to New York. At the opening of the month the rates for exchange were \$4.81½ to \$4.82 for sixty-day and \$4.85½ to \$4.85½ for sight. The rates at the close were \$4.80½ to \$4.80½ for the former and \$4.84 to \$4.84½ for the latter. The lowest rates for the month were \$4.80 to \$4.80½ for sixty-day and \$4.83½ to \$4.83½ for sight. Active money and an indisposition on the part of foreign bankers to operate in view of the pendency of the presidential election made the exchange market weak during the first few days of November, and on the 5th sales of sixty-day bankers' bills were made at \$4.79½ and of sight at \$4.83, the lowest rates for the year. On the day following the election there was an urgent demand for exchange to remit for stocks which had been bought in London for New York account, and, influenced by a continued inquiry for this purpose, the market was strong to the end of the month. It was then estimated that since the election about \$50,000,000 of stocks which had been bought in London or sold in the New York market through arbitrage houses for European account had been remitted for, and almost every incoming steamer during November brought American securities from Europe. Though the tone of the market was weak early in December, influenced by comparatively firm rates for money, there was a recovery after the middle of the month caused by more or less of an urgent demand to remit for stocks imported and those which were sold in this market for European account. The increasing tension in the monetary situation at London, foreshadowing an advance in the Bank of England rate of discount, induced a covering of short contracts in sterling toward the close of the month, when the tone was quite strong. Rates for sixty-day sterling opened at \$4.81½ to \$4.82, fell by the 17th to \$4.80½ to \$4.80½, and reacted by the end of the month to \$4.81½ to \$4.81½. The rates for sight sterling opened at \$4.85½ to \$4.85½, declined to \$4.84½ to \$4.84½ by the 17th, and recovered to the opening figures by the close of the month.

Railroads.—Earnings of the principal lines of railroad showed general gains throughout the year, and rates were well maintained with few exceptions. One of the most important events early in the year, affecting the chief transportation lines, was the advance in freight rates, through changes in classification, which advance went into effect in January. Subsequently there was an agreement to abolish commissions on passenger business beginning with February. The Lake Shore acquired control of the Lake Erie and Western in January; the Great Northern announced an additional issue of stock; the Chesapeake and Ohio passed under the joint control of Pennsylvania and Vanderbilt interests; and the State of Massachusetts sold its holdings of 50,000 shares of Fitchburg common stock for \$5,000,000 in 3-per-cent. bonds of the Boston and Maine road. In February the Cleveland, Cincinnati, Chicago and St. Louis resumed dividends on the common stock, the Cen-

tral New Jersey increased its quarterly dividends, the Canadian Pacific enlarged its dividend, the Baltimore and Ohio, the Union Pacific, and the Reading first preferred began paying dividends, and Kansas City, Fort Scott and Memphis resumed such payments after suspension since 1893. In March the Pennsylvania acquired an interest in the stock of the Norfolk and Western; the Chicago and Alton bought the northern and the Illinois Central the southern divisions of the St. Louis, Peoria and Northern, which was sold under foreclosure; the Fitchburg stockholders voted to lease the road to the Boston and Maine, and the Metropolitan Street Railway Company of New York bought control of the Third Avenue Railroad line, and subsequently leased it. The Pennsylvania, which had early in the year issued \$12,930,500 new stock at par, issued in April \$9,464,500 more stock on the same terms; the Chicago and Alton Railway Company was organized to take over the Chicago and Alton Railroad and its recent acquisition; the Southern Pacific acquired the Louisville, Evansville and St. Louis, the Houston, East and West Texas, and the Carson and Colorado roads; the Seaboard Air Line was organized with \$75,000,000 bonds, \$25,000,000 common stock, and \$37,500,000 preferred stock, and the Northern Pacific made arrangements to acquire the St. Paul and Duluth. In May the Chicago and Alton Railroad declared an extra dividend of 30 per cent. on its common and preferred stock, and the Chicago and Eastern Illinois and the Lehigh Coal and Navigation Company increased their regular dividends. In the following month the Rutland and the Hocking Valley likewise increased dividends, and the Lake Erie and Western resumed dividends on the preferred stock. In July Illinois Central and Union Pacific, and in August Kansas City, Fort Scott and Memphis, declared additional dividends, these declarations and those above noted indicating prosperous railroad conditions. In October the trunk lines decided to advance grain rates between the Mississippi river and the seaboard. After the presidential election there were indications that plans which had long been in contemplation, looking to the improvement of the railroad interests of the country, had been awaiting this settlement of the political and the financial situation. The Northern Pacific voting trust was dissolved and the common stock was placed on a 4-per-cent. basis; the Southern Pacific bought control of the Pacific Mail Steamship Company; the Pennsylvania and the Chicago and Eastern Illinois declared extra dividends, and the dividend of the Lehigh Coal and Navigation Company was again increased. The purchase in December of the Pennsylvania Coal Company in the interest of the Erie Railroad was one of the most important events, practically insuring the maintenance of harmonious relations between the anthracite coal railroads and the principal individual operators. This movement gave color to rumors of far-reaching railroad combinations, which were partly confirmed on Jan. 5 by the announcement that the Central New Jersey had been bought by J. P. Morgan & Co., who had turned the property over to the Reading, which they already controlled. A report was then current that control of the St. Paul had been bought by Great Northern and Northern Pacific interests, who would lease the road, and that purchase of the Wabash was contemplated for the purpose of making a seaboard connection through the Erie.

Listings of railroad bonds on the New York Stock Exchange during the year amounted to \$443,713,000, of which \$147,878,597 were new issues. The stocks listed aggregated \$620,935,000,

of which \$296,550,572 represented new issues. Compared with those in 1899, bond listings were \$81,671,240 and those of stocks were \$83,237,605 less this year, mainly because of fewer reorganizations and extensions. The industrial properties placed upon the "unlisted" department were 8 in number, having a total of \$132,901,100 common and \$31,325,000 preferred stock.

Manufacturing Industries.—It is noteworthy that while in 1899 there was apparently a widespread tendency in the direction of consolidations of capital in manufacturing enterprises, there was in 1900 a marked change in the character of the movement. Previously old or more or less established concerns were absorbed by the combinations, whereas in this year new competitive companies were formed. The change was doubtless largely due to the fact that in the previous year the capital creations were so enormous that they were not only unwieldy, but they caused apprehensions among the banking interests of the country that they were likely to become a highly disturbing factor. Moreover, owing to the extremely conservative treatment of these properties by the bankers the digestion of the securities issued by the corporations was impeded, the market for them grew congested, and much difficulty was experienced in obtaining subscriptions for even the most promising of new enterprises. At the end of 1899 consolidation schemes were pending involving an aggregate capitalization of more than \$600,000,000, while the capital of companies projected and later abandoned exceeded \$1,000,000,000. At the close of 1900 comparatively few of the above noted pending schemes had been consummated, and a very small number of the abandoned plans had been revived. The new industrial organizations which were perfected this year represent \$948,875,000 in stocks and bonds against \$5,215,795,000 in 1899, which latter sum includes concerns projected and abandoned and increases of capital proposed which were never consummated. Careful revision of the emissions of stocks and bonds of companies projected in 1899 leaves the then completed organizations representing a capitalization of \$2,543,350.

In January a remarkably favorable statement, somewhat indicative of prosperous industrial conditions, accompanied the declaration of dividends on the common stock of the American Steel and Wire Company. A war between the Consolidated Gas Company and the New Amsterdam Company was vigorously conducted, resulting in the reduction in the price of gas in New York city from \$1.05 to 65 cents per thousand. In February, English cotton spinners who had refrained from buying the staple in the previous year because of misleading estimates of the yield of the American crop, became alarmed concerning the statistical position of the crop and bought freely, influencing a sharp rise in the price of the staple and consequently in the manufactured goods. In March, American Malting Company was unfavorably affected by the admission by the directors that the dividends predicated upon the results of 1898 had been based upon expected profits which were not realized. This announcement had a partially depressing influence upon other industrial properties, which depression was intensified in the following month by disclosures regarding the unfavorable condition, owing to overproduction, of the American Steel and Wire Company and of other enterprises of a similar character, which had an unsettling effect upon the iron and steel trade. In May this industry and the metal trades generally became more or less demoralized not only in this country but in England and Germany,

and in nearly all lines of trade accumulating stocks of goods and falling values were the feature. Print cloths were reduced from 3½ to 3¼ cents in May and to 2¼ cents in June, though the price of cotton was rising, and in the last-named month steel billets fell to \$25 per ton against \$32 in May, and even at the decline consumers refrained from buying. In July the price dropped to \$19 per ton in Pittsburg, and in that month the cotton manufacturing industry began to feel the effect of the check to exports caused by the troubles in China. The industrial depression was more or less marked during the presidential campaign. In September the print cloth market was partially relieved by the purchase of 500,000 pieces of accumulated stocks at 2¼ cents. The Amalgamated Association of Iron and Steel Workers and the manufacturers settled their differences, giving work to 60,000 men who had been idle since July, and the American Tin Plate Company likewise adjusted the troubles with their employees. A strike of anthracite coal operators, involving 140,000 men, began in September and ended in the following month, the operators acceding to the demands of the miners. After the presidential election industrial affairs rapidly improved, iron production increased, prices of manufactured articles generally rose, and prosperous conditions prevailed for the remainder of the year. The woolen and silk manufacturing industries were, however, notable exceptions. The woolen manufacturers early in the year suffered from overproduction and also from the cancellation of orders, and the trade was in a state of depression for the greater part of the remainder of the year, and without clear indication of improvement at the close. Silk manufacturers encountered a rising market for the raw material early in the year, and they bought freely at about the highest prices. When the new crop began to arrive prices rapidly declined, entailing loss upon manufacturers. Then followed forced sales of goods, unmistakably indicating overproduction. Toward the close of the year, however, the industry showed improvement, owing chiefly to curtailment of output.

There was a steady gain in exports of manufactured goods during the first quarter of the year, those for March amounting to \$44,767,139, against \$35,586,940 in January. Then followed a gradual decline in the value of these exports to \$32,281,487 in November. The total for the year was, however, unprecedentedly large, amounting to \$432,284,366, against \$380,787,891 in 1899 and \$307,924,994 in 1898. The falling off in the exports after the middle of the year was largely due to the interruption to Chinese trade in cotton goods, and also to the waning movement in bicycle exports.

The commercial failures for the year were 10,774 in number, involving \$138,495,673 of liabilities. Besides the strictly commercial defaults, however, there were 60 financial concerns, involving \$34,000,000. The above-noted failures compare with 9,337 in 1899, involving \$90,879,899; 12,186 in 1898, with liabilities of \$130,662,899; 13,351 in 1897, involving \$154,332,071; and 15,088 in 1896, involving \$226,086,134.

FINE ARTS IN 1900. Under this title are treated the principal art events of the year ending with December, 1900, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—In consequence of the transformation of the *Galerie des Machines*, where the exhibitions of the two salons were held in 1898 and 1899, into a *Salle des Fêtes* for the Universal Exposition of

1900, the annual exhibition of the *Société des Artistes Français* was held in the *Place de Breteuil*. The *Société Nationale des Beaux Arts* held no exhibition in 1900.

Paris: Salon of the Artistes Français.—The *Société des Artistes Français* elected the following officers for the year: Honorary Presidents, Léon Bonnat, Édouard Detaille; President, Jean Paul Laurens; Vice-Presidents, Auguste Bartholdi, Tony Robert-Fleury; Secretaries, Georges Jehan Vibert, Georges Lemaire, Jean Louis Pascal, Augustin Mongin; Corresponding Secretary, Albert Maignan; Treasurer, Émile André Boisseau.

The annual exhibition, opened on April 7, comprised 2,872 numbers, classified as follow: Paintings, 1,379; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 426; sculptures, 380; engraving on medals and precious stones, 59; architecture, 99; engraving and lithography, 376; decorative art, 153.

The following are the honorary awards for 1900: Section of Painting: Medal of honor, Ferdinand Humbert, *Portraits de Alex et Elsa Eyraud*. No first-class medal awarded. Second-class medals: Charles Moulin, Achille Granchi-Taylor, Henry Pinta, Louis Ridel, Camille Delpy, Victor Leydet, Adolphe Lalire, Paul Charles Chocarne-Moreau, Émile Troucy, J. Louis Verdier, Frédéric Lauth, Mme. Hortense Richard. Third-class medals: Henri Emilien Rousseau, Laurent Jacquot-Defrance, Charles Sims, Jacques Roger Simon, Joseph Marius Avy, Mlle. Lenique, Édouard Zier, Ludovic Alleaume, Jacques Marie, Paul Legrand, Adolphe Déchenaud, Mme. Frédérique Vallet-Bisson, Frank Russell Green, Nicolas Auguste Laurens, Henry Tenré, Dwight Frederick Boyden, Mme. Wisinger-Florian, Mlle. Charlotte Chauchet, Joseph Bail, Richard E. Miller, Gustave Pierre, Auguste Levêque, George Inness, René Charles Edmond His, Lucien Stoltz, Adrien Gabriel Voisard-Margerie, Étienne William Cot, Paul Antin, Emmanuel Fougerat.

Section of Sculpture: Medal of honor, Raoul Verlet, fountain for city of Bordeaux. First-class medals: Henri Coutheillas, Henri Vidal. Second-class medals: Auguste Carli, Gaston Leroux, Marie Pierre Curillon, Jean Baptiste Antoine Champeil, J. Henry Schmid, Athanase Théodore Fossé. Third-class medals: Henri Frédéric Varenne, Paul Richer, André Abbai, Jules Déchin, Charles Joseph Michel Mathieu, Eugène Léon L'Hoest, Louis Bertrand, Victorien Tournier, Pierre Robert Christophe, Auguste Maurice Verdier.

Section of Architecture: Medal of honor, Albert Guilbert, commemorative monument. First-class medals: Désiré Despradelle, Alfred Henri Recoura. Second-class medals: Paul Bigot, Auguste Patouillard, Marcel Dourgnon. Third-class medals: Félix Capron and Gaston Renevey, Gustave Dehaut, Louis Léonard Martin, Henri Victor Blanchard, Emil Pierre Demur, Georges Gromort.

Section of Engraving and Lithography: Medal of honor, Auguste Boulard, *Vive l'Empereur* (etching). First-class medal, Abel Mignon. Second-class medals: Eugène Chiquet, Paul Avril, Firmin Bouisset, Edmond Duplessis. Third-class medals: Antonin Delzers, Charles Dupont, Edgar Chahine, Gaston Rodriguez, Frédéric Jacque, Gustave Frantzen, Auguste Leroy, Jules Lerendu, Léon Hodebert, Mme. Goldammer-Dupont.

In consequence of the *Exposition Universelle*, to which the best works of the French painters were contributed, the exhibition of the *Société des Artistes Français* comprised but little more than half the usual number of pictures, sculptures, and other exhibits. Want of space will prevent any detailed description this year.

Paris: Exposition Universelle.—The art exhibition constituted one of the principal features of the exposition of 1900, a special new building, called the Grand Palais des Beaux Arts, with large and spacious galleries, having been erected for it on the Avenue Nicolas II. This splendid building, which is not doomed to destruction like most of the other exposition structures, but is destined to be permanent and the future home of the Salons, consists of two long lateral wings connected by two lines of galleries, the whole forming a structure nearly resembling in plan the letter H. It may be divided, as to its exhibits, into three distinct collections: First, a French centennial exhibition, comprising French paintings, sculptures, drawings, and prints from the beginning of the century down to the last international exposition, an effort having been made not to repeat the exhibits of 1889; second, a French decennial exhibition, composed of the works of French artists during the past ten years since 1889; and third, a foreign decennial exhibition, including the productions of foreign artists during the same period. Twenty-three of its galleries were devoted to French art, while not more than six galleries were allotted to any one foreign country.

The awards consisted of medals of honor, first-class medals (gold), second-class medals (silver), third-class medals (bronze), and honorable mention. They were so numerous, especially in the lower classes, that we can give only the first two classes in painting in full and the American second-class medals.

Medals of honor:

Austria—M. Klint.

Belgium—Alfred Stevens, Alexandre Struys.

Denmark—Peter Severin Kroyer.

England—Laurence Alma-Tadema, W. Quiller Orchardson.

France—Jean Jacques Henner, Jean Charles Cazin, Dagnan-Bouveret, Henri Harpignies, Ernest Hébert, Alfred Philippe Roll, Antoine Vollon, Benjamin-Constant, Aimé Morot, Henri Martin.

Germany—Francis Lenbach, Fritz von Uhde.

Holland—Josef Israels.

Italy—Jean Boldini.

Norway—Fritz Thaulow.

Russia—M. Serof.

Spain—Joaquin Sorolla y Bastida.

Sweden—Anders Zorn.

United States—James McNeill Whistler, John S. Sargent.

Of the above artists MM. Hébert and Dagnan-Bouveret received the medal of honor the second time, both having been similarly honored at the exposition of 1889.

First-class medals were awarded as follow:

Austria—Heinrich de Angeli, Josef Mehoffer.

Belgium—Alfred Baertsoen, Émile Clous, Leon Frédéric, Th. Verstraete.

Bulgaria—M. Mrkvicka.

Denmark—Vigo Johansen, Th. Philipsen.

France—Armand Bertin, Alfred Pierre Agache, Joseph Bail, Mlle. Caroline Bailly, Léon Barillot, Marcel Baschet, Victor Binet, Jacques Blanche, Eugène Buland, Georges Callot, Paul Chabas, Jules Chéret, Charles Cottet, Adrien Demont, Mme. Demont-Breton, Louis Deschamps, Émile Friant, Gustave Gagliardini, J. Geoffroy, Albert Laurens, Ernest Laurent, Henry Levolle, Henry Lévy, Maurice Lobre, Edgard Maxence, René Ménard, Boutet de Monvel, J. A. Meunier, Petitjean, Pointelin, Xavier Prinnet, P. Renouard, A. de Richmont, Henri Royer, Georges Rochegrosse, J. Saint-Germier, P. Santai, Lucien Simon, Francis Tattégren, Paul Vayson, J. H. Zuber.

Germany—E. von Gebhardt, Michel Hertrich,

Max Koner, Gotthard Kuehl, Andre Muller, Franz Stuck.

Great Britain—Stanhope Forbes, John Swan, E. J. Gregory, George Clausen, George Reid, J. H. Lorimer.

Greece—G. Jacobides.

Holland—B. J. Blommers, G. H. Breitmer, H. W. Mesdag, H. J. Weissenbruch.

Hungary—Jules Benczur, Stephen Csok, Philip Lazlo.

Italy—L. Balestrieri, Pie Joris, F. P. Michetti, Ange Morbelli, Dominique Morelli, Hector Tito.

Japan—M. O-Hashi.

Norway—Eyolf Soot, Halfdan, Strøm, Eiebakke.

Portugal—B. P. Columbano, J. Salgado.

Russia—Philip Maliavine, Constantin Korovine, Axel Gallen, Ero Jaernefelt.

Spain—Jimenez Aranda, Ulpiano Checa, Vierge.

Sweden—Carl Larsson, Nils Forsberg, Alfred Wahlberg.

Switzerland—Ferdinand Hodler, Carlos Schwabe, E. Burnaud, Mlle. Louise Breslau.

United States—J. W. Alexander, Mlle. Cecilia Beaux, George Brush, William M. Chase, Winslow Homer, Abbott H. Thayer.

Second-class medals awarded to American artists: Barlow, Benson, Bisbing, Bohm, Bridgman, Clark, Fromuth, Gay, Gibson, Hassam, Johnson, Keller, Lockwood, MacEwen, Nourse, Reid, Story, Tanner, Vinton, Walden.

In the Section of Engraving and Lithography, Americans honored were: Whistler, medal of honor; Cole and Pennell, first-class medals. Second-class medals were awarded to Schladitz and Wolff.

In the Section of Sculpture, medals of honor were given to French, MacMonnies, and Saint-Gaudens, and first-class medals to the following: Barnard, Brooks, Grafty. Second-class medals: Bitter, Borglum, Dallin, Flanagan, MacNeill.

In the Section of Architecture no medal of honor was given to an American. First-class medals: Boring, McKim. Second-class medals: Cope, Day, Flagg, Benson and Brockway, Hunt, Peabody and Stearns, Post, Shepley, Warren.

Paris: Miscellaneous.—An important art event of the year was the sale at the Georges Petit gallery, May 20 to June 7, of the paintings, drawings, and studio effects of Rosa Bonheur. The pictures, chiefly those which the artist chose to keep beside her and not to sell, numbered 892, and included paintings of wild beasts, horses, mules, asses, cattle, sheep, dogs, foxes, etc., and a large number of landscapes. Besides these there were nearly 1,000 water-color and pastel studies. The total amount realized at the sale was 1,180,890 francs, of which 935,121 francs was for paintings. Among the best prices obtained were: Lion Couché, 15,100; Tigre Royal dans le Jungle, 9,150; Tigre Royal, 5,300; Le Roi de Désert, 7,000; Tête de Lion, 8,000; Lion Regardant le Soleil, 5,900; Les Lionceaux, 9,900; Tête de Lion, 11,300; Cheval Blanc au Vert, 8,200; Bœufs Nivernais, 33,600; Bœufs dans un Pâturage, 17,500; Bœufs Écossais, 10,800; Cerf Écouteant le Vent, 21,300; Dans la Forêt, le Matin, 20,200; Le Marché aux Chevaux de Paris, 9,300. The highest price paid for a drawing was 7,700 francs for a small water color of a tiger. A large number of the drawings, which were of the greatest interest, sold for more than 1,000 francs each.

The sale of the Moreau-Nelaton collection, May 11 to 15, brought a total of 600,718 francs. Among the best prices obtained were: Decamps—Enfants effrayés à la Vue d'une Chienne, 101,000 francs; A la Porte du Chenil, 35,000; Le Capucin Collecteur, 8,000; Paysan à l'Affût, 7,000. Diaz—Le Conte Arabe, 10,800. Jules Dupré—Le Chemin

devant l'Auberge, 5,700. Ziem—Le Grand Canal à Venise, 49,500; La Flotte dans le Grand Canal, 29,700.

An equestrian statue of Washington, the gift of the women of America to the women of France, was unveiled in Paris on the 3d of July. It is the work of Daniel C. French and E. C. Potter, and is the first bronze statue cast in the United States and sent to Europe. The total height, with the pedestal of Tennessee marble, is 22 feet.

A statue of Rosa Bonheur, representing her in the costume she was accustomed to wear when at work, has been erected in one of the principal squares of Fontainebleau. She is clad in a peasant's blouse which partially covers velveteen trousers, the dress well known to the farm hands of By, a little place a few miles from the forest of Fontainebleau. The head, covered with a mass of bushy hair, as she used to wear it, is a fine one.

London: Royal Academy.—The thirty-first annual winter exhibition was devoted to the works of Van Dyck, and, though coming so soon after the tercentenary exhibition at Antwerp last year, possessed some features which made it of especial interest. While it contained more of the best English examples of the master than were shown at Antwerp, it exhibited also some of the best foreign examples which made that display memorable. Among these latter was the famous portrait of Philip, Lord Wharton, belonging to the Emperor of Russia, sold in 1779 with the Walpole collection. Other notable exhibits were the Madonna and Child with the Abbé Scaglia as Donor, lent by Lady de Rothschild; The Betrayal of Christ, by Sir Francis Cook; Marchese di Spinola, by the Earl of Hopetoun; portrait of Paola Adorno, by the Duke of Abercorn; and portraits of Thomas Killigrew and Thomas Carew, portrait of Beatrice de Cusance (Princesse de Cante-Croix), and Three Children of Charles I, from the collection at Windsor Castle.

The one hundred and thirty-second summer exhibition, with more than 2,000 numbers, equaled in artistic importance most of those of past years notwithstanding the absence of some of the great names removed by death in the past decade. Among the recognized best pictures of the year is Mr. Sargent's life-size portrait of the three sisters of George Wyndham, M. P.—Lady Elcho, Mrs. Tennant, and Mrs. Adeane—which some of the critics account one of the noteworthy products of the last quarter of the century. Besides this masterpiece, Mr. Sargent contributed portraits of Lord Russell of Killowen and of Lord Dalhousie, both of which attracted attention.

Briton Riviere contributed a notable St. George, representing the hero stretched at full length on the ground, exhausted by his encounter with the dragon, with his head upheld by the succored Princess Sabra. The dragon, which forms the central motive of the picture, stretches his immense body in a sinuous line from the foreground, where it incloses St. George's horse, to the edge of a cliff, where its head lies. Beyond the cliff are the deep blue waters of the sea, their color reflected in the blue scales of the dragon, which are emphasized by the chestnut of the crushed horse.

Sir Alma-Tadema's exhibit, entitled Gold Fish, represents a pillared and tessellated court with a gold-fish pool in the center. Beside this, lying at full length, with a cushion under her arms, is a red-haired girl in a pale green robe, and in the distance an almost imperceptible figure crossing a bridge is watched by a girl on the terrace without.

Sir Edward Poynter, the president of the Academy, was represented by a life-size portrait of Mrs. Murray Guthrie, in an evening dress of white

satin, seated in an empire chair. He sent also a classical study in oils—two Greek girls at a fountain—and a water-color drawing of a scene beside the Lake of Orta.

E. Blair Leighton's picture, entitled God Speed, represents a lady standing on a stairway beside a castle gate, binding a scarf on the arm of her knight about to go forth, one may suppose, to combat for her sake. Through the gateway, under the raised portcullis, are seen the spears of his troop riding out of the castle.

Edwin Abbey was represented by two Shakespearean themes, one, entitled The Trial of Queen Katherine, depicting a poignant moment in the history of Katherine of Aragon, the other The Penance of the Duchess of Gloucester. The latter, wrapped in only a white sheet and barefooted, is walking over rough stones carrying a lighted taper, followed by her conductor to the Isle of Man, Sir John Stanley.

A. S. Cope contributed a full-length portrait of Lord Kitchener of Khartoum, in khaki, standing in his tent, and Prof. Herkomer sent a three-length life-size portrait, in uniform, of the Duke of Connaught.

Mr. Orchardson's picture, the largest in the exhibition, being some 14 feet long, a commission from the Royal Agricultural Society, commemorates the Prince of Wales's presidency of the society. It represents the corridor at Windsor Castle, with the Queen, the prince, and other members of the royal family carefully and successfully grouped.

Among many landscapes and sea views, noteworthy are Colin Hunter's London from the Tower Bridge, David Murray's In View of Windsor, Edward Stott's Saturday Night, J. McWhirter's Over the Sea from Skye, and C. E. Johnson's Autumn on the Wye.

English artists are disappointed at the decrease of the amount of sales of pictures at the Royal Academy, the total being £16,084, as against £21,670 received in 1899. The falling off is generally attributed to the war in Africa. Frank Dicksee's Two Crowns was purchased by the Chantry fund trustees for £2,000. Miss Kemp-Welch's Horses Bathing brought £1,000. The highest price paid for a water color was £150 for a work by Alfred East.

London: New Gallery.—The winter exhibition was devoted to examples of early Flemish and Netherland art. Most of the famous masters of these schools were represented either by well-known originals or by attributed pictures. Among the interesting examples was The Holy Women at the Sepulchre, attributed to Jan van Eyck, from the collection of Sir Francis Cook. Of many pictures attributed to Hans Memling, the Virgin and Child with Saints, owned by Mr. Bodley, was most admired. The north room was devoted almost entirely to Rubens, among the exhibits being his large Daniel in the Lion's Den and Diana and her Nymphs.

The fourteenth summer exhibition contained 498 numbers of about the average merit. Among the best pictures was Edward Stott's Little Apple Gatherer, a blue-eyed peasant girl standing full-faced, plucking with her left hand fruit from a limb above to put into her pinafore gathered up with her other hand. The same artist sent also two other pictures—The Widow's Acre and Sundown.

Mr. Watts contributed portraits, as did also Sir George Reid and Mr. Sargent. Mr. Sargent's picture, the Hon. Victoria Stanley, represents a little girl of six years, standing with a whip in her hand.

London: Miscellaneous.—The sale of the collection of Sir Robert Peel, on May 10 and 11, including both paintings and sculptures, produced a total of £62,500. Of the former, two Van Dycks, portraits of a Genoese senator, said to be Bartolommeo Giustiannini, and his wife, brought £24,250. This is the record price, says the London Art Journal, for a Van Dyck in the auction room, though the equestrian portrait of Charles I, now in the National Gallery, was bought in 1884 by the Government from the Duke of Marlborough for £17,500. Other sales were: Portrait of Marie Antoinette, doubtfully attributed to Greuze, 1,350 guineas. Sir Peter Lely, portrait of Cowley (the author), 670 guineas; Nell Gwynne, 650 guineas; Countess of Kildare, 650 guineas. Thomas Phillips, portrait of Byron, 300 guineas. Sir Thomas Lawrence, portrait of Curran, 850 guineas. John Hoppner, portrait of himself, 1,500 guineas. Gainsborough, portrait of Sir William Blackstone, 750 guineas. Reynolds, portrait of Dr. Johnson, 420 guineas. William Collins, Winter Scene on the Thames, 2,000 guineas; Morning after a Storm, 1,500 guineas. Landseer, The Shepherd's Prayer, 750 guineas. Mulready, The Cannon, 1,240 guineas. Charles Lucy, Lord Nelson on the Victory, 400 guineas. B. R. Haydon, Napoleon at St. Helena, 400 guineas. Of the sculptures, Sir Francis Chantrey's splendid bust of Sir Walter Scott sold for £2,250. Thorwaldsen's Apollo as a Shepherd brought 600 guineas.

At the James Reiss sale, May 12, a good example of Hobbema, View of a Water Mill, brought 6,200 guineas, and a Rembrandt, Bridge over a Canal, 2,200 guineas.

Among other sales of the year were: Romney, portrait of Charlotte Peirse, 7,000 guineas; portrait of Sophia Lawrence, 2,900 guineas. Gainsborough, Woody Lane with Peasant and Donkeys, 1,170 guineas. Sir John Everett Millais, Boyhood of Raleigh, 5,200 guineas; The Moon is up and yet it is not Night, 1,000 guineas. Lord Leighton, Helios and Rhodos, 2,750 guineas. Meissonier, The Standard Bearer, 2,500 guineas. Troyon, Landscape with Cattle, 2,550 guineas; The Plough, 1,900 guineas. J. F. Millet, The Sower, 850 guineas.

The sale of the collection of the late Mme. de Falbe, on May 19, produced a total of £13,484. Among the pictures were: Gainsborough, portrait of Mrs. Hartley, 300 guineas; Opie, Fortune Teller, 1,200 guineas; Boucher, Marie Leczinska introduced to the Domestic Virtues (dated 1740), 970 guineas; Rubens, Repose of Holy Family, 500 guineas; Velasquez, portrait of Henry de Halmale, 405 guineas; Hobbema, Village Scene, 400 guineas.

The chief art event of the season was the opening of the magnificent Wallace collection, bequeathed by Lady Wallace to the Government, on June 25, at Hertford House, Manchester Square. The scope of the collection, made by the third and fourth Marquises of Hertford and by Sir Richard Wallace, is immense. It contains more than 20 Greuzes and 9 Watteaus, while almost all the great painters of all the schools are well represented. Of the Spanish school there are 6 examples by Velasquez and 8 by Murillo. The Italian school is represented by Titian's Rape of Europa (replica, the original being in Mrs. Gardner's collection in Boston) and Perseus and Andromeda (from the Orleans gallery), and important examples by Luini, Andrea del Sarto, Domenichino, Canaletto, and Guardi. The collection has 11 Rubenses, including the famous Rainbow Landscape, and 7 Van Dycks. Rembrandt is represented by 11 canvases and Franz Hals by only 1, but an exceptionally fine one, The Laughing Cav-

alier. The examples of the other great Dutch painters are all superior. The English school and the modern French school are also superbly represented. It has been calculated that the entire collection, including arms, bric-a-brac, etc., is worth \$18,000,000. The admission is free excepting on Saturday afternoons, when a fee of sixpence is charged.

New York: National Academy of Design.—The officers for 1900 are as follow: President, Frederick Dielman; Vice-President, J. G. Brown; Corresponding Secretary, H. W. Watrous; Recording Secretary, George H. Smillie; Treasurer, Lockwood de Forest; Council, H. Bolton Jones, J. Carroll Beckwith, C. D. Weldon, B. West Clinedinst, C. Y. Turner, H. Siddons Mowbray. The Academy consists of 98 academicians and 58 associates.

The seventy-fifth annual exhibition was held, Jan. 1 to Jan. 27, in the galleries of the Fine Arts Society building in Fifty-seventh Street, pending the removal of the Academy to its new home on Morningside Heights. It comprised 313 numbers, of which 298 were paintings. The prizes of the year were awarded as follow: The Thomas B. Clarke prize of \$300, for the best American figure composition painted in the United States by an American citizen, to Charles Schreyvogel, of Hoboken, N. J., for his spirited painting entitled My Bunkie, representing an American cavalryman at full gallop carrying a wounded comrade out of range in an Indian fight. The Norman W. Dodge prize of \$300, for the best picture painted in the United States by a woman, to Phœbe A. Bunker, for her October at Cedar Brook. The Julius Hallgarten prizes, \$300, \$200, and \$100, for the best three pictures in oil colors painted in the United States by American citizens under thirty-five years of age: First prize to Louis Paul Dessar, for his Landscape with Sheep; second to E. Irving Couse, for his Adoration of the Shepherds; third to W. Granville-Smith, for his Light of the House.

Among the exhibits besides those to which prizes were awarded were: Daniel Huntington, portraits of Carl Schurz, Morris K. Jesup, and Dr. J. W. McLane; John F. Weir, East Rock—New Haven, November Landscape, and Hollyhocks; George H. Smillie, At Cotuit—Cape Cod, Road to the Lighthouse—Northeast Coast; Eastman Johnson, portraits of Whitelaw Reid, Gen. Thomas Davies, and Edward Lyman; Gilbert Gaul, War; Childe Hassam, The Flower Shop; George Inness, Jr., Sheep in Pasture; Irving R. Wiles, A Long Island Road, A Summer Interior; Clara T. Chesney, portrait of Moncure D. Conway; Charles Warren Eaton, September Moonrise, Valley at Sunset; Thomas Moran, The Teton Range—Idaho, The Cliff Dwellers—Arizona, The Pearl of Venice; J. Wells Champney, Fair Nineteen; F. A. Bridgman, In the Oasis; Henry Mosler, Day Dreams; Arthur Parton, An Old Orchard, Arkville Meadows; E. L. Henry, Home from the Philippines.

A new annual prize for each Academy exhibition has been founded by George Inness, Jr., in memory of his father, to be called the George Inness Medal. It consists of a gold medal of the value of \$100, and is to be awarded to the best painting without regard to subject.

New York: Society of American Artists.—The twenty-second annual exhibition was held in the Fine Arts Society building, from March 24 to April 28. The officers for 1900 are: President, John La Farge; Vice-President, Kenyon Cox; Secretary, Douglas Volk; Treasurer, Samuel Isham. These, together with Edwin H. Blashfield, constitute the Board of Control. Advisory Board—Herbert Adams, William Bailey Faxon, Kenneth

Frazier. Will H. Low. The society has 113 members.

The Shaw fund of \$1,500, awarded annually for the purchase of a figure composition in oil by an American artist, was given to Irving R. Wiles for his picture entitled *The Yellow Rose*. The Webb prize of \$300, for the best landscape in the exhibition painted by an American artist under forty years of age, was awarded to W. Elmer Schofield for his picture entitled *Autumn in Brittany*.

The exhibition comprised 378 numbers. Among the principal exhibits were: Cecilia Beaux, portrait of Rev. William R. Huntington; William M. Chase, *Rest by the Wayside*, *A Gray Day*, and *Spring*; John La Farge *The Divinity of Contemplation seated by the Stream of Life* (Japanese subject); Eastman Johnson, *Child and Rabbit*, *Boy with Violin*; Carleton Wiggins, *Late Afternoon—Long Island*; R. Swain Gifford, *Port Clarence—Bering Strait*; Kenyon Cox, *A Fan*, *Hope and Memory*; Leonard Ochtman, *The Lane at Twilight*; Thomas Moran, *The Goose Pond*; Arthur Parton, *Close of Day*; Edward Gay, *The Wheat Field*; Charles Warren Eaton, *Evening in Maine*; Anna Lea Merritt, *Merry Maids*; Charles Hopkinson, *In the Harvard Yard*.

New York: Miscellaneous.—The principal art sale of the year was that of the William T. Evans collection, exhibited at the American Art Galleries and sold on three nights in February at Chickering Hall. The total sum realized for 270 lots was \$158,340. On the first night the highest price obtained was for Homer Martin's *Westchester Hills*, which brought \$4,750. Other prices were: R. C. Minor, *The Close of Day*, \$3,050. George Inness, *Sunset on the Passaic*, \$2,500; *Montclair by Moonlight*, \$1,000; *Meadowland in June*, \$850. Benjamin Fitz, *The Reflection*, \$2,450. F. S. Church, *Pandora*, \$1,000; *Una and the Lion*, \$720. Abbott H. Thayer, *Young Woman*, \$2,050. Henry W. Ranger, *Connecticut Woods*, \$1,400; *Morning at High Bridge*, \$1,400; *New Jersey Oaks*, \$1,100. H. Siddons Mowbray, *Arcadia*, \$960.

On the second night the best sales were: George Inness, *Georgia Pines—Afternoon*, \$5,900; *Nine o'Clock*, \$3,550; *The Valley on a Gloomy Day*, \$1,225. Winslow Homer, *Weather Beaten*, \$4,000. Henry W. Ranger, *A Veteran*, \$1,100; J. G. Brown, *The Longshoreman's Noon*, \$1,350. F. S. Church, *St. Cecilia*, \$1,200; *The End of Winter*, \$1,025. A. H. Wyant, *Driving Mists*, \$2,550; *Cloudy Day—Keene Valley*, \$2,100. George Fuller, *Bringing Home the Cow*, \$1,550. Homer D. Martin, *Normandy Trees*, \$2,850.

The best sales on the third night were: A. H. Wyant, *In the Adirondacks*, \$6,300. George Fuller, *Lorette*, \$3,600. Homer Martin, *Old Church in Normandy*, \$3,200; *A Normandy Farm*, \$1,600. George Inness, *Winter Morning at Montclair*, \$2,500; *A Summer Morning*, \$1,200; *The Moon at Night*, \$1,050. Wyatt Eaton, *Reverie*, \$1,200. J. F. Murphy, *An Autumn Landscape*, \$1,025. W. H. Low, *The Harvest Procession*, \$1,400. W. Gedney Bunce, *Sunset, San Giorgio, Venice*, \$1,000. H. W. Ranger, *A Connecticut Pasture*, \$1,400; *An East River Idyll*, \$1,350. F. S. Church, *Madonna of the Sea*, \$1,125; *Carleton Wiggins, After Wind, Rain*, \$900.

The sale of the collection of the late Judge Hilton, at Chickering Hall in February, brought \$118,715 for 169 pictures. Meissonier's *L'Aumone* brought the highest price, \$18,300. It is said to have cost A. T. Stewart \$24,000.

The Austin H. King collection of modern foreign paintings, sold in February, realized a total of \$77,375 for 57 works. The highest price was \$7,000 for a fine Schreyer, *Bedouins on the March*. Other

sales were: Alma-Tadema, *Tibullus in Delos*, \$5,850; Grison, *After the Fête*, \$3,550; Diaz, *In the Forest*, \$3,825; Van Marcke, *In the Lane*, \$3,550.

Florence.—A new Botticelli has been added to the little room in the Pitti Palace where for the past four years has hung the *Pallas of the Medici*, found in a similar way, and, like the latest acquisition, attributed to the early years of the master. The new picture, resurrected from the rubbish of the attic, is a *Madonna and Child with Angels*, a circular painting on wood. It contains six figures—the Virgin, with long, emaciated hands clasped, kneeling in front of the Child, who, held by two angels at the left, is raising his arms toward her, and behind, at the right, two more childlike angels. Behind, full-blown roses twine themselves into a decorative background. Though the Italian experts pronounce the authenticity of the picture undoubted, some critics of the first rank are inclined to question their judgment.

Haarlem.—In August Haarlem in the Netherlands was the scene of interest to all art lovers in the erection of a fine statue to its great portrait painter, Franz Hals, who died there in 1666. The city was *en fête*, a charming little drama illustrating the painter's life was enacted by a private club, and *tableaux vivants* of his works were given by resident artists and others interested in art. The drama depicted his career from his days of poverty to the culmination of his art life, when the burgomeester came to inform him that the town had voted him a pension with free house rent for the rest of his days.

Philadelphia: Pennsylvania Academy of Fine Arts.—The sixty-ninth annual exhibition, opened in January, was more than usually successful, and attracted contributions from all parts of the country. The prizes were awarded as follow: Temple gold medal for the best painting in oil by an American artist, to Miss Cecilia Beaux, for her portrait group entitled *Mother and Daughter*. The Walter Lippincott prize of \$300, for the best figure painting by an American artist, to Henry O. Tanner, for his picture entitled *Nicodemus*. The Mary Smith prize of \$100, for the best painting by a resident woman artist, to Mary E. R. Clay, for her portrait entitled *Irene K.* Honorable mention to Janet Wheeler, for her *Portrait*, owned by Miss Howell.

Pittsburg: Carnegie Institute.—The fifth annual celebration of Founder's Day was held in Carnegie Music Hall on Thursday, Nov. 1. The principal speaker was his Excellency Wu-Ting-Fang, Chinese minister to the United States, who made a comparison between Oriental and Occidental methods of education.

The awards of the International Art Jury of the prizes for pictures in the art exhibition were as follow: André Dauchez, Paris, France, medal of the first class (gold), carrying with it an award of \$1,500, for his picture entitled *The Kelp Gatherers*. Ben Foster, New York, medal of the second class (silver), carrying with it an award of \$1,000, for his picture entitled *Misty Moonlight Night*. Sergeant Kendall, New York, medal of the third class (bronze), carrying with it an award of \$500, for his picture entitled *The End of the Day*. Robert W. Allan, London, honorable mention, for his picture entitled *All Hands on Deck*. Julius Olsson, London, honorable mention, for his picture entitled *Waterfall in Winter*. W. Elmer Schofield, Ogontz, Pa., honorable mention, for his picture entitled *Twilight*.

Miscellaneous.—In April was unveiled near Morningside Park, New York, at One Hundred and Thirteenth Street, a monument by Bartholdi

consisting of bronze statues of Washington and Lafayette, on a granite pedestal. It is a reproduction of the monument lately erected in the Place des États-Unis, Paris, by the same sculptor.

Among the contributions to the Metropolitan Museum, New York, during the year are: Cambyse's Punishment of an Unjust Judge, by Rubens, from the J. L. Monke collection, Antwerp, presented by William E. Dodge; and three pictures presented by J. Pierpont Morgan—portrait of Columbus, by Sebastian del Piombo; Lord Nelson on the Victory, by Charles Lucy; and Napoleon at St. Helena, by Benjamin Robert Haydon. The last two pictures were bought at the Sir Robert Peel sale in May at 400 guineas each.

Benjamin West's painting The Raising of Lazarus, which hung for many years in Winchester Cathedral, England, has been presented by its purchaser, J. Pierpont Morgan, to the Wadsworth Atheneum, Hartford, Conn. The canvas, which is signed Benj. West, 1780, measures 10 feet 10 inches by 5 feet 5 inches.

The Botticelli Madonna, sold by Prince Chigi, of Rome, to a London firm of picture dealers, has been purchased by Mr. P. A. B. Widener, of Philadelphia, and is now hung in the art gallery of his country house at Elkins. This famous picture, called the Madonna of the Thorns, represents the Virgin with the infant Jesus in her lap at the right, and at the left a celestial youth offering a gift of wheat and grapes. Over the youth is a crown of thorns, from which the picture derives its name. The sale of this picture being in violation of the law prohibiting the exportation of works of the old masters from Italy, Prince Chigi is reported to have been condemned to pay a fine of \$63,000, the amount paid for the picture by the London firm. The inference is that the picture cost Mr. Widener more than this sum.

FLORIDA, a Southern State, admitted to the Union March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; 391,422 in 1890; and 528,542 in 1900. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William D. Bloxham; Secretary of State, John L. Crawford; Treasurer, James B. Whitfield; Comptroller, W. H. Reynolds; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant General, Patrick Houstoun; Commissioner of Agriculture, Lucius B. Wombwell; State Chemist, W. A. Rawls; State Examiner, W. V. Knott; Railroad Commissioners, R. H. M. Davidson, H. E. Day, J. M. Bryan; State Health Officer and Secretary Board of Health, Dr. Joseph Y. Porter; Board of Health, W. B. Henderson, D. T. Gerow, H. L. Simpson; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry and Francis B. Carter.

Population.—The official figures of the national census for 1900 are compared in the table below with the figures of the census of 1890, and show the increase in percentages by counties.

The population of the largest ten cities in 1900 was as follows, the figures in parentheses being those for 1890: Jacksonville, 28,429 (17,201); Pensacola, 17,747 (11,750); Key West, 17,114 (18,080); Tampa, 15,839 (5,532); St. Augustine, 4,272 (4,742); Lake City, 4,013 (2,020); Gainesville, 3,633 (2,720); Ocala, 3,380 (2,904); Palatka, 3,331 (3,039); Fernandina, 3,245 (2,803).

Finances.—The report of the Treasurer at the close of business, Nov. 30, 1900, showed a balance to the credit of the several State funds amounting to \$406,041.78. During the past two years \$200,000

COUNTIES.	1900.	1890.	Per cent.

of the public debt has been paid from the general revenue fund by taking up the notes for \$200,000, which were issued by authority of the Legislature of 1889 and 1891. These notes were bearing interest at the rate of 5 per cent., and their payment and cancellation have saved the State \$10,000 in interest, besides reducing the debt \$200,000. This has been done without an increase of taxation. The State tax levy was reduced below the levy authorized by the Legislature a half mill in 1898 and a half mill in 1900. The general revenue fund is now sufficient to meet the general expenses of the State and to pay the expenses of the next Legislature, in 1901. The 7-per-cent. bonds of 1871 remaining in the hands of individuals were to be taken up at maturity, Jan. 1, 1901. The amount thus held was about \$30,000. The remainder of this issue is held in the sinking fund and the educational funds of the State.

The total tax levy in the State in 1899 was 5½ mills; for 1900 the levy was fixed at 5 mills, and was distributed as follows: General revenue tax, 2½ mills; pension tax, 1 mill; Board of Health tax, ½ mill; constitutional school tax, 1 mill.

During 1899 the total State taxes levied amounted to \$518,030.12; State licenses, \$144,958.48; county taxes, \$1,126,503.80; school sub-district taxes, \$43,520.37.

Valuations.—The assessed valuation for 1900 was \$96,518,953.73, an increase of \$2,991,599.94 over the assessed valuation for 1899. (The valuations in two of the counties is estimated, the valuations of 1899 being taken as the basis.) The report of valuations for 1899 gives the following data: Number of horses, asses, and mules, 52,690; neat and stock cattle, 478,707; sheep and goats, 108,668; hogs and dogs, 207,523. Full cash value of all animals, \$4,642,472. Value of all other personal

property, \$10,695,883. Total value of real estate, \$59,177,137; personal property, \$15,338,355; railroads and rolling stock, \$18,759,125.64; telegraph lines, \$252,736.15; aggregate value of all property returned for taxation in 1899, \$93,527,353.79.

Agriculture.—The Commissioner of Agriculture gives the following estimates for 1900: Num-

WILLIAM S. JENNINGS, GOVERNOR OF FLORIDA.

ber of acres under cultivation, 1,058,897. Value in sea island and upland cotton, \$2,319,689; value of field crops, \$5,955,018; value of vegetables, \$648,364; value of citrus fruits, \$794,869; value of melons, \$207,944; value of all fruits but citrus, \$628,352; value of stock and farm cattle, \$6,075,409; value of poultry, \$322,045; value of eggs, \$383,783; value of dairy products, \$811,671; value of honey produced, \$28,883. Total value of agricultural animals and products, \$18,175,227.

Lands.—The Commissioner of Agriculture reports that on Dec. 31, 1900, the State held swamp lands to the extent of 404,667 acres. In 1899 and 1900, 21,714 acres of swamp lands were disposed of. On Dec. 31, 1900, 73,706 acres of internal improvement lands were held, 23,122 acres having been sold in 1899 and 1900. The State school lands, on Dec. 31, approximated 295,646 acres, 46,977 acres having been sold in 1899 and 1900. The State seminary lands on hand Dec. 31 were 28,383 acres; there was sold in 1899 and 1900, 2,034 acres.

The commissioner of the United States Land Office reported on July 1, 1900, that there were 1,596,411 acres of United States land unoccupied in the State.

Banks.—According to the statement of the Comptroller on June 30, 1900, 23 incorporated banks were doing business under the laws of the State. At the close of business, June 30, their assets amounted to \$4,643,618.35, an increase over the assets on Jan. 1, 1900, reported as \$3,862,541.21, of \$781,077.14. Five of the State banks are savings banks or have savings departments. On Jan. 1, 1900, these reported assets of \$1,738,555.71.

Insurance.—The last statement of the State Treasurer gives 87 insurance companies authorized to do business in the State in 1899. Of these, 58 were fire insurance companies, 11 life insurance, 18 miscellaneous (surety, accident, plate glass, marine, etc.). The aggregate risks carried by the companies during 1899 were \$57,203,124, on which the premiums received were \$1,511,645.87. The losses aggregated \$764,202.78. The 58 fire insurance companies wrote risks aggregating \$36,406,652, for which \$710,271.83 in premiums was paid. The losses aggregated \$312,834.39. The 11 life

insurance companies carried risks for \$6,482,133, for which \$739,818.50 was paid in premiums. The total losses sustained were \$432,457.68. The 18 miscellaneous companies wrote risks aggregating \$14,314,339, for which \$61,555.54 was paid in premiums. The losses in this class were \$18,910.71.

Railroads and Telegraphs.—The railroad mileage in Florida in 1900, as assessed by the Comptroller, was 3,109.70 miles of main track, with 341.32 miles of branch, side, and switch track. The assessed valuation of the railroads in the State was \$19,190,301.81. In 1899 the mileage of main track was 3,054.17, with 316.56 miles of branch, side, and switch track. The total assessed valuation in 1899 was \$18,759,125.64. The valuation of rolling stock was \$2,475,228.61.

There were 3,148.40 miles of telegraph lines assessed in 1900, ranging from 1 to 55 wires to each pole. The total assessed valuation for the telegraph lines of the State was \$259,317.40. In 1899 there were assessed 3,002.60 miles of telegraph lines, at a valuation of \$248,734.55.

Corporations.—The following figures are believed to be accurate: Between Dec. 31, 1899, and Dec. 15, 1900, 56 charters of incorporation were issued. These included 11 to manufacturing enterprises, 2 to building and loan associations, 6 to transportation and drainage companies, 4 to mutual profit associations, and 3 to agricultural enterprises. The year was marked by a large increase in naval stores operations, and by the establishment of the first factory to transform cassava and sweet potatoes into starch.

Education.—The following statistics are from the latest report of the Superintendent of Public Instruction for the two years ending June 30, 1898: Children of school age in State (census of 1896), 152,598; white, 86,196; negro, 66,402. Children enrolled in public schools during the school year 1897-'98 numbered 108,455, divided as follows: White males, 35,116; white females, 32,541; negro males, 19,632; negro females, 21,116. The percentage of school population enrolled in public schools was 71 per cent. for both races; whites, 78 per cent.; negroes, 61 per cent. Average length of school term, both races, 104 days; white, 106 days; negroes, 99 days. Illiterates between six and twenty-one years (school census of 1896), 6,752; white, 2,033; negro, 4,719. Per capita expenditure in 1897-'98, both races, \$6.78. Average monthly wages paid: White male teachers, \$38.66; white female teachers, \$33.96; negro male teachers, \$28.85; negro female teachers, \$26.73.

The severe shrinkage in land values of the State, caused by the temporary destruction of the orange industry in the freeze of 1895, decreased the school revenues beyond the point of necessary expenditure. The Legislature of 1899 therefore passed an act permitting counties to divide themselves into subdistricts, which subdistricts might decide by vote whether they would tax themselves (not exceeding 3 mills) in addition to the maximum county tax of 5 mills, authorized by law for schools. Several subdistricts had so taxed themselves when an injunction was served on the school board of Duval County, making a test case as to the constitutionality of the act. The Supreme Court decided in April, 1900, that the act was constitutional.

The State appropriates annually an average of \$35,500 in partial support of normal, military, and industrial schools.

The school census for the school year 1899-1900, as compiled by the State Superintendent of Public Instruction, is as follows: White males, 48,023; white females, 45,328; total white, 93,351. Negro males, 33,689; negro females, 34,388; total negro,

68,077. Total males, 81,712; total females, 79,716. Grand total, 161,428.

Charities.—The School for the Deaf and Blind had an enrollment of 59 for the year ending July 1, 1900, divided as follows: White deaf girls, 17; white deaf boys, 12; white blind girls, 3; white blind boys, 6; negro deaf girls, 7; negro deaf boys, 10; negro blind boys, 4. Appropriation made by the State for the support of the school was \$11,000.

The Hospital for the Insane had on Jan. 1, 1900, 561 inmates. During the eleven months ending Nov. 30, 203 patients—64 white males, 50 white females, 48 negro males, 41 negro females—were admitted, a total of 765 being under treatment during this period. On Nov. 1, 632 patients were in the hospital—200 white males, 184 white females, 131 negro males, 117 negro females. Of patients admitted between Jan. 1, 1899, and Nov. 30, 1900, 237 were natives of the State, 157 of other States, and 36 of foreign birth. The inmates of the hospital have increased 120 per cent. during the past eight years, and 162 per cent. during the past ten years. This increase is probably due to the fact that the management of the hospital so greatly improved that more patients were sent to it than in former years. The State in 1899 expended \$71,716.35 in the maintenance of the Hospital for the Insane.

Penitentiary.—On Dec. 1 there were 778 State convicts, of whom 102 were white males and 2 white females, 651 were colored males and 23 colored females. From Dec. 1, 1899, to Dec. 1, 1900, 18 convicts died, 6 were pardoned, and 14 escaped. The State has no prison, and the convicts are leased to contractors. On Dec. 1 the 778 convicts were in 7 phosphate mining camps and 6 naval stores camps. The office of Supervisor of State Convicts was created by act of Legislature in 1899, and the hours of labor, the food, clothing, and housing of the convicts was regulated by law. A marked improvement in the condition of the convicts has resulted. A reform school for minors is situated at Marianna.

Health.—The annual report of the State Board of Health, issued March 15, 1900, gives the following statistics, based upon the population of 464,639 (State census of 1895):

EAR.	Death rate per 1,000 of population.	Birth rate per 1,000 of population.
1891.....	18.29	14.72
1892.....	13.86	15.43
1893.....	10.02	13.68
1894.....	11.66	15.47
1895.....	9.60	13.80
1896.....	8.63	13.18
1897.....	8.09	11.19
1898.....	11.29	14.23
1899.....	11.67	15.50
Average.....	10.89	13.02

In the year ending Dec. 31, 1899, there were in the State 8,180 births, 5,390 deaths, 6,112 marriages.

Yellow fever appeared in epidemic form at Key West and Miami, introduced from Cuba, in the summer and autumn of 1899. The disease was very mild, and the mortality was light. Stringent quarantine regulations prevented its spread, and the disease did not reappear in 1900.

In the spring of 1900 the Marine Hospital Service established a detention station for the Southern States, which Surgeon-General Wyman declares to be the best equipped of five or six similar stations kept up by the Marine Hospital Service. It is on the main line of the Savannah, Florida and Western Railroad, on the south side

of St. Mary's River, where it divides Florida from Georgia. It will accommodate 2,000 persons, and can be made ready at twenty-four hours' notice.

Political.—The Democratic State Convention met in Jacksonville, June 19, and nominated the following ticket: For Governor, William S. Jennings; Justice of the Supreme Court, Francis B. Carter; Secretary of State, John L. Crawford; Comptroller, W. H. Reynolds; Attorney-General, W. B. Lamar; Superintendent of Public Instruction, W. N. Sheats; State Treasurer, J. B. Whitfield; Commissioner of Agriculture, B. E. McLin; Railroad Commissioner, J. L. Morgan.

The platform approved the Chicago platform of 1896, and the stand taken by William J. Bryan on all great questions since that time; denounced maintenance of a large standing army, imperialism, and trusts; favored an income tax, reduction of tariff to a revenue basis; demanded repeal of war taxes, and a return to Democratic principles of economy.

On State issues the platform said: "We declare in favor of the most liberal support and development of the public school system.

"We favor the passage of such laws as will best tend to the improvement of our system of public roads.

"We favor municipal ownership of all public utilities, pledging the passage of such laws, and, if necessary, such constitutional amendments as will enable municipalities to acquire, own, and operate all such utilities, and the passage of such laws as will, until such ownership, prohibit the granting of municipal franchises for more than a limited term of years, and without the consent of the municipal electors expressed at an election.

"We favor the nomination of all candidates for office, both State and county, and of United States Senators, by a majority vote in white Democratic primary elections, held under the provisions of law.

"We demand a radical reform of the State convict system."

The platform declared that the question of the removal of the State capital from Tallahassee and of the holding of a constitutional convention should be settled by the white Democratic electors of the State, at a primary to be held at the time of holding the State election, Nov. 6.

On Sept. 12 the Prohibitionists met at Ocala and chose candidates for presidential electors. A. M. Morton was nominated for Governor, but no other State nominations were made. Resolutions were passed approving the action of the National Prohibition party at Chicago in 1900, condemning the liquor trade, and requesting voters to withhold support from all candidates who were not pledged to use their influence against liquor.

The Republican convention held two meetings, the first on Jan. 19, at St. Augustine, the second at Ocala, on July 21. The following ticket was nominated: For Governor, Mathew B. Macfarlane; Secretary of State, George W. Allen; Attorney-General, Frederick Cubberly; Treasurer, Walter G. Robinson; Comptroller, John W. Powell; Superintendent of Public Instruction, George W. Holmes; Commissioner of Agriculture, Otto C. Butterwick; Justice of Supreme Court, Henry C. Goodell; Railroad Commissioner, Lambert M. Ware.

The convention adopted a platform approving the administration of President McKinley and declaring for the gold standard. On State issues the platform declares:

"We demand legislative enactments providing that State convicts from the several counties be employed in the construction of good roads in their respective counties.

"We condemn the policy of the Democratic party, as declared in its platform of principles, relative to the question of capital removal, confining its settlement exclusively to white Democratic voters and Democratic primary alone, thus ignoring contemptuously the rights of all electors of other political parties and property owners to participate in a general election, which should be provided for by general law relating to the same."

The People's party and the Social Democrats of the State nominated presidential electors, but put no State tickets in the field.

The State being overwhelmingly Democratic, all interest in the campaign centered on the question of the removal of the capital and on the four proposed amendments to the Constitution. Jacksonville, Ocala, St. Augustine, and Gainesville were candidates for the capital, in opposition to Tallahassee. Gainesville withdrew before the close of the campaign.

The official returns of the election in November gave: For President—Bryan (Democrat), 28,007; McKinley (Republican), 7,499; Populist, 1,090; Prohibitionist, 2,239; Social Democrat, 603. For Governor—Jennings (Democrat), 29,251; Macfarlane (Republican), 6,438; Morton (Populist), 631.

The vote on the constitutional amendments was as follows: To provide for representation of new counties in the Legislature—for, 6,495; against, 4,511. To prohibit special legislation in favor of corporations—for, 6,159; against, 4,458. To provide for election of county commissioners—for, 8,891; against, 3,706. To provide for new State seal and a State flag—for, 5,601; against, 4,121. The vote on location of the State capital was: Tallahassee, 10,328; Jacksonville, 5,946; Ocala, 3,373; St. Augustine, 1,800.

Seventeen Senators and 68 members of the House of Representatives were elected to the Legislature of 1901, all Democrats. The State government is solidly Democratic.

FRANCE, a republic in western Europe, proclaimed Sept. 4, 1870, when the Emperor Napoleon III was deposed. The Constitution of Feb. 24, 1875, vests the legislative power in the Chamber of Deputies and the Senate, forming together the National Assembly, and the executive power in the President of the republic and the Council of Ministers. The National Assembly, united in Congress, elects the President for the term of seven years, and has authority to revise the Constitution when convened for that purpose by the resolve of both houses. The Constitution has been modified by the additional laws of Aug. 2 and Nov. 30, 1875, Dec. 9, 1884, June 16, 1885, and July 1, 1899. The Senate is composed of 300 members, elected in the departments for the term of nine years, one third retiring every third year. The electoral body consists of the Senators and Deputies of the department, the departmental and district councils, and delegates of the communal councils. Under the former law 75 of the Senators were elected originally by the National Assembly, afterward the Senate, for life, and now at the death of one of these life Senators his place is filled by a Senator elected for the usual term by one of the departments, determined by lot. There were 16 life Senators still surviving in September, 1899. The Chamber of Deputies is composed of 584 members, one to each *arrondissement* having less than 100,000 inhabitants, two when the population is greater, the *arrondissement* being then divided into two electoral districts. Every male citizen twenty-one years of age can vote for the Deputy in his *arrondissement* if he has resided six months in one town or commune and is not serving in the army or otherwise disqualified. In 1898 there were

10,231,532 registered electors, of whom 7,657,420 voted. Officers and soldiers of the active army and the majority of public functionaries are not eligible to the Chamber. The ministers are responsible to the Chamber. In case of defeat on a Cabinet question the President selects a new Premier Minister representing the victorious party or combination, who in consultation with the President selects his colleagues. The President can dissolve the Chamber with the consent of the Senate. He has authority to conclude treaties by the advice of his ministers, but can not declare war without the assent of both Chambers. Every act of the President must be countersigned by the minister in whose department it falls.

The President of the republic is Émile Loubet, elected Feb. 18, 1899. The ministry formed June 22, 1899, was composed as follows: President of the Council and Minister of the Interior and of Public Worship, M. Waldeck-Rousseau; Minister of Foreign Affairs, M. Delcassé; Minister of Finance, M. Caillaux; Minister of War, Major-Gen. de Gallifet; Minister of Marine, M. Lanessan; Minister of Public Instruction, Georges Leygues; Minister of Public Works, P. Baudin; Minister of Agriculture, Jean Dupuy; Minister of Commerce, Industry, and Posts and Telegraphs, M. Millerand; Minister of the Colonies, M. Decrais; Minister of Justice, M. Monis.

Area and Population.—The area of France is 204,092 square miles. The population on March 29, 1896, was 38,517,975, nearly 189 to the square mile. The foreigners numbered 1,027,491, or 2.66 of the total population. The number of public officials and employees, including those in Algeria, was 384,038, exclusive of the army and navy, but including 44,863 clergymen, 121,712 teachers, and 6,560 judges and magistrates, and their total annual pay amounted to 585,363,000 francs. The number of unpaid officials, such as mayors of communes and members of councils, was 462,500. The number of marriages in 1898 was 287,179; of births, 843,933; of deaths, 810,073; excess of births, 33,860. The number of divorces was 7,238. Paris, in 1896, had 2,536,834 inhabitants; Lyons, 466,028; Marseilles, 442,239; Bordeaux, 256,906; Lille, 216,276; Toulouse, 149,963. There were 89,915 primary schools in 1898, with 153,505 teachers and 5,535,125 enrolled pupils; 30,368 evening schools for adults, with 483,000 pupils; 109 lyceums, with 52,372 pupils; 229 communal colleges, with 33,949 pupils; 202 lay private schools, with 9,727 pupils; and 438 clerical schools, with 67,643 pupils; 40 lyceums for girls, with 8,431 pupils; 28 colleges for girls, with 3,563 pupils; 51 secondary courses for girls, with 4,239 pupils; and in the universities there were 142 students of theology, 8,939 studying law, 3,435 students of science, 2,804 in the faculties of letters, 3,026 studying pharmacy, and 8,153 medical students in January, 1899, besides 969 students in outside medical schools and 786 university students in Algeria. Of the total number of 28,254 students 1,399 were foreigners and 817 were women, including 258 foreigners.

Finances.—The budget estimate of revenue for 1899 was 3,477,575,535 francs, of which 3,423,609,469 francs constituted the general budget of France and 54,152,371 francs the Algerian budget. Of the revenue collected in France 472,181,557 francs were direct contributions and 36,363,527 francs taxes assimilated to direct contributions; 2,035,726,450 francs were indirect taxes, including 526,904,000 francs from registration, 179,219,400 francs from stamps, 5,526,000 francs from the tax on bourse transactions, 72,078,100 francs from the tax on income from personal property, 441,492,050 francs from customs duties, 624,012,000 francs

from indirect contributions, and 186,494,900 francs from the sugar duty; 691,007,100 francs came from state monopolies, including 395,319,000 francs from tobacco, 43,605,000 francs from matches and gunpowder, 235,399,400 francs from the post office and telegraphs and telephones, and 16,683,700 francs from the mint, railroads, and various other monopolies; 62,219,410 francs came from domains and forests, 56,621,694 francs were miscellaneous receipts, and 67,498,731 francs for *recettes d'ordre*. The total budget of expenditure was 3,477,575,535 francs, including 73,012,516 francs for Algeria. Of 3,404,563,019 francs expended in France 1,249,896,915 francs were for the public debt, 13,302,560 francs for the President, Chamber of Deputies, and Senate, 20,034,610 francs for the Ministry of Finance, 35,112,933 francs for the Ministry of Justice, 16,076,800 francs for the Ministry of Foreign Affairs, 76,644,327 francs for the Ministry of the Interior, 43,024,553 francs for the Ministry of Worship, 649,496,036 francs for the Ministry of War, 303,600,510 francs for the Ministry of Marine, 217,432,696 francs for the Ministry of Education and the Fine Arts, 35,653,153 francs for the Ministry of Commerce, Industry, Posts, and Telegraphs, 90,794,762 francs for the Ministry of the Colonies, 30,701,433 francs for the Ministry of Agriculture, 187,619,864 francs for the Ministry of Public Works, 218,111,881 francs for *régie*, collection of taxes, etc., 176,800,824 francs for the post office and telegraphs, and 40,259,162 francs for repayments. The capital valuation of the debt of France on Jan. 1, 1899, was 29,948,331,297 francs, consisting of 22,002,683,638 francs of perpetual *rentes*, 6,930,154,925 francs of redeemable debt, including the Morgan loan of 199,514,454 francs, 1,902,515,260 francs of annuities to railroads, and 4,828,125,211 francs of other obligations, and the floating debt, reported to amount to 1,015,492,734 francs. The annual amount of *rentes* is 692,157,850 francs; interest and amortization of the redeemable debt, 314,109,110 francs; interest on floating debt, 241,518,402 francs; total annual charge, 1,247,785,362 francs, as set down in the budget for 1900. The debt is about \$150 per head of population. The annual income of the nation has been estimated at 25,000,000,000 francs, of which 15,000,000,000 francs are the fruits of personal labor. The private wealth of France has been estimated at 202,000,000,000 francs, of which 75,000,000,000 francs represent land, 50,000,000,000 francs buildings, 5,000,000,000 francs specie, 70,000,000,000 francs securities, 10,000,000,000 francs farm implements and live stock, and 17,000,000,000 francs other personal property. By the conversion of 5 per cents. into 4½ per cents. in 1883 an annual saving of 34,000,000 francs was effected, a further saving of 5,000,000 francs by the conversion of old 4½ and 4 per cents. into 3 per cents. in 1887, and one of 68,000,000 francs by the conversion of the 4½ per cents. into 3½ per cents., making a total reduction of 107,000,000 francs in the annual cost of the national debt. The refunding of 3½ and 3 per cents. at 2½ per cent. was contemplated when the 3 per cents. stood above par, but has been delayed owing to the fall in *rentes*.

The Army.—The period of military duty is from the age of twenty to that of forty-five. Every Frenchman fit for service is liable to serve three years in the active army, ten years in the reserve, six years in the territorial army, and six years in the territorial reserve. Students and seminarians are only required to perform one year of active service, provided that they complete their studies. The peace strength as fixed in the budget of 1900 is 540,405 of all ranks in France, 60,102 in Algeria, and 15,968 in Tunis. The number of officers is

26,847 in France, 2,309 in Algeria, and 584 in Tunis. The general staff in France numbered 3,636 officers, with 702 men; in Algeria, 294 officers, with 95 men; in Tunis, 69 officers, with 24 men. In the military schools were 3,644 men, including 420 officers. Unclassed amid the troops were 1,960, of whom 1,707 were officers, in France; 779, of whom 560 were officers, in Algeria; and 111, of whom 107 were officers, in Tunis. In the 19 army corps of France there were 328,703 infantry, including 12,152 officers; 11,881 administrative troops; 66,671 cavalry, including 3,490 officers; 77,769 artillery, including 3,891 officers; 12,299 engineers, including 484 officers; and 8,519 train, including 360 officers; a total of 505,842 men, including 20,377 officers. The gendarmery numbered 21,571 men, including 624 officers; the Republican Guards, 3,050 men, including 83 officers. In Algeria the infantry numbered 41,001 men, including 954 officers; the administrative troops, 3,512 men; the cavalry, 7,597 men, including 365 officers; the artillery, 2,716 men, including 53 officers; the engineers, 802 men, including 13 officers; the train, 2,114 men, including 30 officers; total, 57,742 men, including 1,424 officers. The Algerian gendarmery numbered 1,192 men, of whom 31 were officers. In Tunis there were 11,202 infantry, including 280 officers; 534 administrative troops; 1,853 cavalry, including 86 officers; 993 artillery, including 21 officers; 325 engineers, including 4 officers; and 714 train, including 13 officers; total, 15,621 men, including 404 officers, besides 143 gendarmes, including 4 officers. Deducting the men on furlough and sick leave and other vacancies, the present strength of the active army is 539,515 officers and men and that of the gendarmery and Republican Guards is 25,693. Including vacancies and furloughs, the active army in France numbered 515,784 men, including 26,140 officers, with 114,601 horses; in Algeria, 58,910 men, including 2,378 officers, with 12,548 horses; in Tunis, 15,825 men, including 580 officers, with 3,556 horses; total active army, 590,519 men, including 28,998 officers, with 130,705 horses; total gendarmery, 22,906 men, including 659 officers, with 11,830 horses; grand total, including Republican Guards, 616,475 men, of whom 29,740 were officers, with 143,275 horses. The number of men liable to service in case of war is estimated to be 2,350,000 in the active army and its reserve, 900,000 in the territorial army, and 1,100,000 in the territorial army reserve; total, 4,350,000 men, of whom not more than 2,500,000 could be counted on for effective service. France is divided into 19 regions, and Algeria makes another region, each occupied by an army corps. But the active army is not organized on a territorial basis. In every regiment are commingled recruits from every part of France, and the same system is continued in the reserves. There are 145 regiments of infantry of the line in France of 4 battalions each, 19 regional regiments of 4 battalions for garrisoning the fortresses, 18 battalions of chasseurs, and 12 battalions of mountain chasseurs, making in all 658 battalions. In Algeria and Tunis there are 4 regiments of zouaves of 5 battalions, 4 regiments of Algerian rifles, called Turcos, of 6 battalions, 2 regiments of the foreign legion of 5 battalions, 1 company of Saharan rifles, and 5 battalions of African light infantry. The infantry is armed with the Lebel rifle of the model of 1886, having 5 cartridges in the magazine and a caliber of 8 millimetres. Two of the army corps have attached to them a company of velocipedists. Each of the army corps of France has a brigade of cavalry, and there are 7 separate divisions, composed of 20 brigades or 41 regiments. In Algeria and Tunis there are 4 brigades, comprising 10 regi-

ments. The cavalry is composed of 13 regiments of cuirassiers, 31 regiments of dragoons, 21 regiments of mounted rifles, 14 regiments of hussars, 6 regiments of African chasseurs, and 4 regiments of spahis, comprising altogether 447 squadrons of 5 officers and 140 men, to be raised to 155 men in time of war. The dragoons, hussars, and chasseurs are armed with carbines of the model of 1886, the cuirassiers with revolvers. A squadron of Saharan and one of Soudanese spahis belong also to the cavalry. The field artillery consists of 19 brigades and 3 commands, comprising 40 regiments with 430 mounted batteries of 4 or 6 pieces, 52 batteries of horse artillery, 14 mountain batteries, and 12 batteries in Algeria and Tunis. The field guns are rapid firing, having a caliber of 75 millimetres. There are 18 battalions of fortress artillery, with 105 batteries, besides 7 batteries in Algeria and Tunis. The guns have 95, 200, and 270 millimetres caliber, the mortars a caliber of 15 centimetres, and rapid-firing guns have been introduced with a caliber of 12 centimetres. The engineers comprise 1 regiment of sappers and miners of 4 battalions and 1 company of sapper conductors, 5 regiments of sappers and miners of 3 battalions and 1 company of sapper conductors, 1 regiment of railroad sappers, and 7 companies of sapper conductors. There are 20 squadrons of train, 16 having 3 and 4 having 6 companies, 12 of the companies being in Algeria.

There are 145 regiments of infantry reserves of 3 battalions in time of peace formed of the complementary cadres of the regiments of the line, and besides these there are 30 battalions of reserve chasseurs; 40 regiments of reserve cavalry are, like the infantry reserves, linked to the active regiments of the line, and the 41 regiments of the independent cavalry divisions have each its adjunct reserve regiment, and for each brigade of artillery there are 12 batteries of reserves.

The Navy.—By the law of 1898 the authority of the chief of staff, a vice-admiral who assists the Minister of Marine in directing the affairs of the navy, was enlarged so as to give him, subject to the approval of the minister, full charge of the construction, maintenance, putting into commission, and mobilization of the ships. The expenditure on the navy has increased, with fluctuations, from 201,000,000 francs in 1890 to 304,000,000 francs in 1899. The *personnel* of the navy in 1898 comprised 15 vice-admirals, 30 rear-admirals, 125 captains, 215 commanders, 758 lieutenants, 420 sub-lieutenants, and 170 midshipmen, making a total of 1,733 commissioned officers and 40,580 men, including warrant officers. The navy is manned partly by conscription among the seafaring population and partly by voluntary enlistment. The sailors inscribed in the naval reserve number 114,000. The armor-clad fleet in 1899 comprised 34 battle ships averaging over 10,000 tons (Amiral Baudin, Amiral Duperré, Colbert, Dévastation, Formidable, Courbet, Friedland, Hoche, Magenta, Marceau, Neptune, Redoutable, Richelieu, Suffren, Trident, Brennus, Cafman, Indomptable, Requin, Terrible, Bouvines, Jemmapes, Amiral Tréhouart, Valmy, Carnot, Charles Martel, Jauréguiberry, Masséna, Bouvet, Charlemagne, Saint-Louis, Henri IV, Gaulois, and Jena), 5 heavily armored cruisers with guns mounted in barbette (Bayard, Duguesclin, Turenne, Vauban, Victorieuse), 7 coast-guard turret and barbette ships built before 1883 (Fulminant, Furieux, Onondaga, Tempête, Tonnerre, Tonnant, Vengeur), 7 armored cruisers, averaging 5,250 tons, built since 1890 (Dupuy de Lôme, Amiral Charner, Chanzy, Latouche-Treville, Bruix, Pothuau, D'Entrecasteaux), 2 new deck-protected cruisers of over 8,000 tons, having a

powerful rapid-fire armament and capable of making 23 knots (Guichen, Chateaufort), 2 powerful armored cruisers, the latest type, exceedingly rapid and armed with a pair of 7.6-inch guns and a strong quick-firing equipment (Jeanne d'Arc, Montcalm), 8 first-class cruisers built between 1876 and 1889 (Duquesne, Tourville, Sfax, Tage, Cécille, Jean Bart, Alger, Isly), 16 second-class cruisers built between 1877 and 1897 (Aréthuse, Iphigénie, Nafade, Dubourdieu, Davout, Suchet, Bugeaud, Chasseloup-Laubat, Friant, Pascal, Descartes, D'Assas, Du Chayla, Cassard, Catinat, Duquay-Trouin), 18 third-class cruisers built between 1878 and 1898 (D'Estaing, Primauguet, Nielly, Fabert, La Clocheterie, Éclairer, Amiral Rigault de Genouilly, Milan, Surcouf, Forbin, Lalande, Troude, Cosmao, Coëtlogon, Linois, Galilée, Lavoisier, D'Estrées), 1 torpedo depot ship (Foudre), 8 armored gunboats built between 1884 and 1892, 11 gunboats built between 1878 and 1896, 7 first-class and 5 second-class avisos, 24 transports, 8 sloop screw gunboats, 2 side-wheel gunboats, 10 side-wheel steamers, 10 destroyers built between 1885 and 1898, 10 torpedo dispatch boats, 33 sea-going torpedo boats, 108 first-class, 84 second-class, and 30 third-class torpedo boats, 6 torpedo vedettes, and 3 submarine torpedo boats. There were under construction in the beginning of 1900 2 armored cruisers (Dupetit-Thouars, Gueydon), sister ships to the Montcalm, having a displacement of 9,517 tons, engines of 20,000 horse power, giving a speed of 21 knots, and an armament of 2 7.6-inch, 8 6.4-inch quick-firing, 4 4-inch, and 24 smaller guns; 3 of the same type, with the same speed and the same armament (Gloire, Conde, Sully), having a length of 453 feet, 64 feet beam, and 23 feet mean draught, protected by 6 inches of armor at the water line, thinner side armor above, and armored and splinter-proof decks, the heavy guns mounted in turrets, the rest in casemates; 2 made slightly larger to carry 2 additional 4-inch quick frasers (Marseilleise, Amiral Aube); 3 of a smaller type, 7,700 tons, with engines of 17,100 horse power, capable of making 21 knots, armed with 10 6.4-inch and 16 small quick frasers (Kléber, Desaix, Dupleix); and 1 deck-protected cruiser, of 5,500 tons, with engines of 17,000 horse power, designed to give a speed of 23 knots, carrying a battery of 8 6.4-inch quick frasers and 12 of 1.8-inch bore (Jurien de la Gravière).

The Minister of Marine proposed the construction of 6 new battle ships, of 14,865 tons, with 12 inches of armor over vital parts, to have a speed of 18 knots and carry 4 12-inch and 18 6.4-inch guns; 5 armored cruisers, of 12,600 tons, able to steam 22 knots, and equal in armament and protection to the new Drake class in England; also 28 destroyers, 112 new torpedo boats, and 38 submarine craft. If this programme were carried out the navy in 1907 would consist of 28 battle ships, 24 armored cruisers, 52 destroyers, 263 torpedo boats, and 38 submarine torpedo craft. The cost of the new constructions was put at 800,000,000 francs, which was believed by the opponents of the new programme, who objected especially to the building of more large battle ships, to be too low an estimate. The Government decided to build the cruisers, 3 to be completed in 1901 and the other 3 before 1905, and to postpone the construction of battle ships, except one that was to be ready in three years.

Commerce and Production.—The area cultivated as farm and garden land and pasture in France is 36,977,098 hectares out of a total area of 52,921,578 hectares, of which 8,397,131 hectares are covered with forest. The production of wheat on 6,963,711 hectares in 1898 was 128,096,149 hec-

tolitres; of grass and hay on 5,612,858 hectares, including permanent pasture, 284,092,995 quintals; of oats on 3,887,505 hectares, 98,064,158 hectolitres; of wine from 1,648,493 hectares of vineyards, 31,730,992 hectolitres; of rye on 1,474,915 hectares, 23,524,318 hectolitres; of potatoes on 1,542,967 hectares, 118,321,602 quintals; of clover on 1,134,615 hectares, 44,306,732 quintals; of barley on 814,463 hectares, 16,519,611 hectolitres; of buckwheat on 569,783 hectares, 7,566,143 hectolitres; of Indian corn on 561,689 hectares, 8,280,025 hectolitres; of turnips and beets on 436,120 hectares, 104,633,354 quintals; of beet-root sugar from 262,251 hectares, 65,935,449 quintals; of mixed grain on 236,960 hectares, 4,225,874 hectolitres; of colza on 50,279 hectares, 933,140 quintals; of flax from 19,271 hectares, 113,969 quintals of fiber and 90,696 quintals of seed; of hemp from 29,250 acres, 206,189 quintals of fiber and 88,104 quintals of seed; of tobacco from 16,892 hectares, 202,951 quintals. The nuts, apples, plums, and mulberry leaves produced in 1898 were valued at 201,191,033 francs, oranges and lemons at 1,868,715 francs. The number of domestic animals on Dec. 31, 1898, was 2,894,379 horses, 208,227 mules, 361,728 donkeys, 13,418,687 cattle, 21,277,582 sheep, 6,230,966 hogs and 1,501,658 goats. The production of cocoons in 1898 was 6,893,033 kilogrammes; of raw silk, 3,934,329 kilogrammes, value 90,332,550 francs. The value of mining products in 1897 was 377,825,285 francs. The production of coal and lignite was 30,797,900 tons; of iron ore, 4,582,000 tons; of pig iron, 2,484,200 tons; of manufactured iron, 784,000 tons; of steel, 1,325,213 tons; of silver and lead ore, 21,212 tons; of zinc ore, 83,044 tons; of manganese ore, 37,212 tons; of salt, 948,003 tons; of antimony ore, 4,685 tons. The imports of woolen yarn in 1898 were 10,000,000 francs in value, and exports 29,500,000 francs; imports of woollen cloth were 38,300,000 francs, and exports 222,800,000 francs; imports of silk manufactures 50,900,000 francs, and exports 250,600,000 francs. Besides 31,730,000 hectolitres of wine produced in 1898 6,555,000 hectolitres were imported, while the total export was only 1,381,000 hectolitres. The cider product was 10,637,000 hectolitres. The production of alcohol was 2,412,460 hectolitres. The quantity of codfish and cod-liver oil landed in 1898 was 547,421 metric quintals; of herring, 422,992 quintals.

The general commerce in 1898 amounted to 5,582,600,000 francs for imports and 4,673,500,000 francs for exports. The value of the special imports in 1898 was 4,472,500,000 francs, and in 1899 it was 4,217,000,000 francs, of which 1,020,000,000 francs were food substances, 2,506,000,000 francs raw materials, and 691,000,000 francs manufactured goods, against 1,506,000,000 francs for food, 2,348,000,000 francs for raw products, and 618,000,000 francs for manufactures in 1898. The special exports, or exports of French products and manufactures, in 1898 was 3,510,000,000 francs, consisting of 663,000,000 francs' worth of food products, 932,000,000 francs' worth of raw materials, and 1,916,000,000 francs' worth of manufactured goods, and in 1899 the total value was 3,899,000,000 francs, of which 681,000,000 francs represent food substances, 1,084,000,000 francs raw materials, and 2,134,000,000 francs manufactured goods. The imports of cereals in 1898 were valued at 632,000,000 francs; raw wool, 387,100,000 francs; wine, 309,900,000 francs; raw silk, 233,900,000 francs; coal, 207,200,000 francs; raw cotton, 166,200,000 francs; timber and wood, 147,300,000 francs; oil seeds, 137,800,000 francs; hides and fur skins, 129,700,000 francs; coffee, 107,200,000 francs; ores, 70,800,000 francs; flax, 52,000,000 francs; silk

manufactures, 50,900,000 francs; cattle, 40,800,000 francs; woollen manufactures, 38,300,000 francs; cotton manufactures, 37,600,000 francs; sugar, 29,900,000 francs. The exports of silk goods of French manufacture in 1898 were valued at 250,600,000 francs; woollen manufactures, 222,800,000 francs; wine, 218,300,000 francs; raw wool and woollen yarn, 185,700,000 francs; fancy goods, 140,400,000 francs; cotton manufactures, 128,700,000 francs; raw silk and yarn, 118,900,000 francs; leather, 109,200,000 francs; *lingerie* and confections, 91,800,000 francs; skins and furs, 87,400,000 francs; cheese and butter, 80,900,000 francs; metal goods and tools, 79,100,000 francs; chemical products, 75,300,000 francs; leather wares, 73,900,000 francs; liquors, 48,000,000 francs; refined sugar, 38,000,000 francs.

The values in francs of the special imports from the principal countries in 1898 and 1899 are given in the following table:

COUNTRIES.	1898.	1899.
Great Britain	505,000,000	532,000,000
United States	628,000,000	400,000,000
Germany	385,000,000	345,000,000
Belgium	815,000,000	311,000,000
Argentine Republic.....	251,000,000	258,000,000
Spain	325,000,000	238,000,000
Russia	282,000,000	162,000,000
Italy	138,000,000	150,000,000
British India.....	191,000,000
Algeria	225,000,000

The values of the exports to the principal foreign countries were in francs as follow:

COUNTRIES.	1898.	1899.
Great Britain	1,022,000,000	1,181,000,000
Belgium	549,000,000	555,000,000
Germany	394,000,000	428,000,000
United States.....	210,000,000	296,000,000
Switzerland.....	902,000,000	204,000,000
Italy	143,000,000	173,000,000
Spain	82,000,000	196,000,000
Algeria	225,000,000
Brazil	65,000,000	57,000,000
Argentine Republic.....	49,000,000	51,000,000

Of the total value of imports in 1898 the value that came by land was 1,540,000,000 francs, and by sea 4,042,000,000 francs, of which 1,579,000,000 francs came in French ships and 2,463,000,000 francs in foreign ships. Of the exports 1,607,000,000 francs went by land carriages and 3,066,000,000 francs in ships, of which 1,596,000,000 francs were borne in French and 1,470,000,000 francs in foreign ships. The transit trade in 1898 amounted to 790,000,000 francs. The share of the principal ports in the total general import and export trade in 1898 was as follows: Marseilles, 1,951,000,000 francs; Havre, 1,693,000,000 francs; Paris, 733,000,000 francs; Bordeaux, 676,000,000 francs; Dunkerque, 663,000,000 francs; Boulogne, 473,000,000 francs; Rouen, 267,000,000 francs; Dieppe, 254,000,000 francs; Calais, 243,000,000 francs; Tourcoing, 194,000,000 francs; Cete, 164,000,000 francs. The imports of gold coin and bullion in 1898 were 199,407,834 francs, and exports 313,207,577 francs; imports of silver coin and bullion 191,372,520 francs, and exports 188,591,251 francs; total specie imports, 390,780,354 francs; total exports of specie, 501,798,828 francs.

Navigation.—The total number of vessels entered at French ports in 1898 was 103,059, of 23,857,951 tons, of which 82,094, of 11,907,268 tons, were French and 20,965, of 11,950,683 tons, were foreign; the total number cleared was 103,876, of 24,297,315 tons, and of these 82,585, of 12,220,972 tons, were French and 21,291, of 12,076,343 tons,

foreign. The French vessels entered comprised 8,533, of 4,611,561 tons, engaged in the foreign trade and 73,561, of 7,295,707 tons, in the coasting trade; of those cleared 9,024, of 4,925,265 tons, were in the foreign and 73,561, of 7,295,707 tons, in the coasting trade. Included in the French marine in the foreign trade are the vessels of the colonies and those in the sea fisheries. The merchant marine on Jan. 1, 1899, consisted of 14,406 sailing vessels, of 414,673 tons, with 67,583 men in their crews, and 1,209 steamers, of 485,617 tons, with crews numbering 20,627. The sailing vessels plying European waters numbered 150, of 14,824 tons, and 271, of 178,307 tons, navigated the oceans; all the rest were employed in the coasting trade or the fisheries or in port service. The Government gives 16,000,000 francs a year in premiums for building and navigating vessels and 4,550,000 francs to encourage the cod fisheries.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1898 was 23,324 miles, besides 2,404 miles for local traffic. In 1899 the railroads of general interest had a length of 23,576 miles. The length of tramways at the end of 1899 was 2,319 miles. The main lines of railroad were built by companies under the supervision and partly with the assistance of the state. They belong to six companies, and will revert to the Government between 1950 and 1960. The Government guarantee of interest expires in 1914 for four of the companies, in 1934 for another, and in 1935 for the last. The Government built and is the owner of 1,700 miles of railroad. The cost of the railroads up to 1897, when they had a length of 23,152 miles, was 15,898,000,000 francs. There were 374,755,000 passengers carried in 1897, and 108,399,000 tons of freight. The expenses in 1897 were 696,775,000 francs; receipts, 1,335,350,000 francs.

The number of letters sent through the post office in France and Algeria in 1897 was 952,644,000, of which 795,745,000 were internal and 156,899,000 international; registered letters and parcels, 46,550,000, of which 44,062,000 were internal and 2,488,000 international; of postal cards, 58,767,000, of which 51,681,000 were internal and 7,086,000 international; of newspapers, circulars, samples, etc., 1,305,764,000, of which 1,153,575,000 were internal and 152,189,000 international.

The telegraph system on Jan. 1, 1898, consisted of 62,952 miles of lines, with 218,684 miles of wire. The number of dispatches in 1897 was 44,515,175, of which 36,799,740 were internal, 5,158,911 international, 1,116,142 transit, and 1,440,382 official. There is in Paris a pneumatic tube system with 237 miles of tubes. The telephone systems of France had 10,510 miles of line and 99,890 miles of wire in the towns, and there were 103,807,528 conversations in 1897. The long-distance circuits, of which there were 809, had 12,892 miles of line and 34,510 miles of wire, and there were 1,916,966 conversations in 1897.

Dependencies.—The colonies and protectorates of France have an estimated total area of 4,307,000 square miles and a population of 60,000,000. Algeria is regarded as a part of France, and has no separate Legislature. The Governor General communicates with the ministers of the different departments in regard to the administration, and is advised by a council of 15 members, which discusses and votes the annual budget, while the departments of finance, justice, and public instruction, public works, and native affairs have local officials to direct them. Tunis is under the protectorate of France, and is practically ruled by a ministry selected and directed by the Minister of Foreign Affairs. The colonies proper have elective

councils to assist the Governor besides representation in the French Chambers in the case of the older colonies and delegates in the Superior Colonial Council in the case of the others. The Senators and Deputies of the colonies have seats in this council, and officials and private individuals who are appointed on account of their local or expert knowledge. Most of the colonies receive assistance from the French Government in the form of grants of money voted by the Chambers, which amounted in 1900 to 89,768,262 francs, while the receipts of the French treasury from colonial services were 4,730,540 francs. Naval and military expenditures incurred in the colonies are not as a rule included in these votes, but in the budgets of the Ministries of War and Marine.

Andorra is a semi-independent republic in the Pyrenees, partly under the suzerainty of France, which is exercised through the prefect of the department of Pyrénées Orientale. The heads of families elect the Legislative Council of 24 members, which elects the syndic who presides over the executive. The judicial magistrates are appointed alternately by the French Government and the Spanish Bishop of Urgel. The area of the republic is 175 square miles and the population about 6,000.

Algeria is divided into the three departments of Algiers, Oran, and Constantine, each of which elects a Senator and two Deputies to the National Assembly. The Governor General is M. Jonnart, who in November, 1899, succeeded M. Laferrière, appointed in 1898. The area is 184,474 square miles, with a population in 1896 of 4,429,421, of whom 3,873,278 were found in the civil area and 556,143 in the military territory. The French population in 1896 numbered 318,137; foreign population, 446,343. Of the native population about 75 per cent. consists of Kabyles or Berbers, 15 per cent. of Arabs, and 10 per cent. of Moors, Turks, negroes, etc. Outside of the boundaries of Algeria is the Algerian Sahara, having an area of 123,500 square miles and about 50,000 inhabitants. The city of Algiers in 1899 had 96,784 inhabitants; Oran, 85,081; Constantine, 51,997. The natives are all Mohammedans, the Jews now having the status of French citizens. In the primary schools, of which there were 1,161 in 1897, with 62,873 boys and 41,334 girl pupils, instruction is given in French or Arabic. There were 52,108 French, 19,362 Mohammedans, 14,791 Jewish, and 37,839 foreign pupils taught in 1896. The infant schools were attended by 26,075 children. The university students in Algiers in 1896 numbered 522; in the lycées maintained in the capitals of the three departments there were about 2,000, and in communal colleges 3,863. The expenditure for education in 1900 was 6,453,824 francs.

The receipts of the Government for 1900 were estimated at 55,398,711 francs from local sources, of which 12,135,331 came from direct taxes, which are paid by natives only, 8,394,400 francs from registration and stamps, 13,425,000 francs from customs, 5,583,600 francs from monopolies, 4,385,000 francs from domains and forests, 8,069,770 francs from miscellaneous sources, and 3,405,610 francs were *recettes d'ordre*. The budget of expenditure amounted to 72,144,494 francs, which does not include 55,901,310 francs for military purposes and 2,500,000 francs for the public debt. The expenditures of the different departments of the administration were 23,435,013 francs for the interior, 21,031,000 francs for public works, 8,136,448 francs for finance, 6,528,824 francs for instruction and fine arts, 6,326,099 francs for commerce, posts, etc., 3,108,590 francs for agriculture, and 2,622,250 francs for justice. The military forces in 1900 con-

sisted of 58,910 men, inclusive of 2,278 officers, with 13,470 horses. The territorial army consists of 10 battalions of zouaves, 3 squadrons of cavalry, and 10 batteries of artillery. A new force organized for operations south of Algeria consists of the Sahara tirailleurs and spahis.

There were 3,644,614 persons dependent on agriculture, 207,310 of them Europeans, in 1896. The extent of land cultivated was about 20,000,000 hectares. The production of hard wheat in 1898 was 5,780,719 quintals; of soft wheat, 1,598,598 quintals; of barley, 9,028,420 quintals; of oats, 874,402 quintals. Most of the soft wheat and of the oats is grown by Europeans, but less than 20 per cent. of the hard wheat for which Algeria is famed. There were 141,189 hectares under vines, producing 4,554,354 hectolitres of wine. More than half the vineyard proprietors are Europeans. The Government owns the cork forests, covering 281,400 hectares, which produced 5,270 tons of cut corks in 1898. The production of tobacco on 7,015 hectares was 5,324,525 kilogrammes. The cultivated olive trees number 6,500,000. The number of horses and mules in 1898 was 345,139; of asses, 255,870; of camels, 205,287; of cattle, 1,004,175; of sheep, 7,026,290; of goats, 3,526,508. Natives own 93 per cent. of the animals. The forests cover 3,247,692 hectares. Of those that are accessible and utilized only 468,395 hectares are owned by private individuals. There are 14 paying iron, zinc, lead, copper, and antimony mines. The iron ore raised in 1897 was 447,000 tons, valued at 3,316,000 francs; of zinc and lead ore, 32,445 tons, valued at 1,524,200 francs. Phosphate beds are worked by English and other companies, and new ones are being discovered frequently. The principal production is at Tebessa. The total export in 1897 was 228,141 tons, valued at 4,562,820 francs. Pottery, leather manufacture, weaving, and working esparto are considerable industries. The general imports in 1898 had a total value of 302,223,058 francs, of which 225,535,389 francs were imports from France. The value of the general exports was 285,768,687 francs, of which 232,136,851 francs were exported to France. The special imports were valued at 290,059,706 francs; special exports, 265,543,209 francs. The values in francs of imports from and exports to different countries in the special trade of 1898 are given in the following table:

COUNTRIES.	Imports.	Exports.
France.....	225,535,389	224,451,296
Great Britain.....	6,155,258	13,629,190
Morocco.....	17,640,351	231,515
Tunis.....	6,598,092	3,655,855
Russia.....	6,253,729	1,720,807
Spain.....	6,097,243	1,211,370
United States.....	5,286,580	867,057
Brazil.....	5,704,531
Italy.....	1,591,326	3,310,160
Belgium.....	425,590	4,390,914
Germany.....	696,357	2,716,309
Austria-Hungary.....	1,555,859	846,142

The values of the chief imports in 1898 were 16,755,725 francs for cattle, 11,945,199 francs for cereals, 5,881,435 francs for coffee, 3,836,774 francs for timber, 3,166,454 francs for coal, 1,644,953 francs for hides, 1,488,953 francs for machinery, 1,408,719 francs for tobacco, and 1,231,894 francs for oils. The values of the principal exports were 6,581,304 francs for alfalfa, 5,830,732 francs for tobacco, 3,527,016 francs for iron ore, 2,610,191 francs for hides, 2,060,828 francs for cork, 1,065,412 francs for cereals, and 906,755 francs for cattle.

The number of vessels entered at Algerian ports during 1898 was 1,834, of 1,101,068 tons; cleared, 1,798, of 1,117,408 tons. Of the vessels entered 472, of 279,722 tons, and of those cleared 364, of

189,634 tons, were French. The number entered in the coasting trade was 8,627, of 1,621,623 tons. The merchant marine of Algiers on Jan. 1, 1899, comprised 657 sail vessels, of 7,420 tons, and 64 steamers, of 10,958 tons.

The railroads in operation in 1899 had a total length of 2,146 miles, including 325 miles in Tunis. The length of telegraph lines was 5,603 miles, with 12,915 miles of wire. The number of dispatches sent during 1897 was 1,882,938, of which 1,671,217 were internal, 54,250 international, and 157,471 official.

The southern part of each of the Algerian departments is a military territory governed by martial law, comprising 556,143 square miles of the officially occupied area of Algeria. This is the region constantly disturbed by the nomad Kabyles, who are in chronic revolt and who occupy the attention of the large military force that France has had to maintain in Algeria chiefly on their account. French statesmen and military authorities have long recognized that these desert tribes can only be brought into subjection by taking possession of the oases from which they obtain their supplies of food. The possession of these oases is necessary also in order to establish communications with the new dominions in the central Soudan. Aside from military reasons, the fact that Morocco lays claim to the principal oases has hitherto deterred the French from occupying them, although this has been the ambition of successive governors general of Algeria, and an extension of the French occupation has been achieved from time to time, not without protests from the Sultan of Morocco. The Saharan rifles and spahis were organized for the purpose of establishing French rule in this region and gradually extending it over the desert tribes until the way shall be clear for military and commercial communications between Algeria and the French sphere on the upper Niger and Lake Chad. Two columns of troops set out late in 1899 to take possession of the oases south of Oran, near the frontier of Morocco. The Algerian troops occupied Insalah, the chief place in the district of Tidikelt, on Dec. 28, 1899. This is 300 miles south of the military station of El Golca, northeast of Gurara and Tuat, the other groups of oases and desert villages that the French must occupy before they can break the power of their enemies in the Sahara. Although the sedentary population of these oases is only 144,000, Arabs or white Berbers possessing the power and property and black Berbers and negro slaves doing the work, which is to raise dates of many varieties by means of subterranean irrigation conduits, these places are the fountainhead of the opposition to the French in the Sahara, not only on the part of the rebellious Kabyles but of the Tuaregs, who contest French supremacy in the Soudan. The chief center of anti-French intrigues has been Insalah, but in all these oases the ruling races are bitterly opposed to the French, although among the lower orders there has grown up a feeling in favor of French rule as preferable to the tyranny of Arabs and the exactions of Tuaregs. The Sultans of Morocco have clung to their shadowy sovereignty because the original seat of their family was in the oasis of Taflet, adjoining this region, and when the French first turned their attention to this country, about 1860, the inhabitants of Tuat sent a deputation to Morocco offering tribute and appealing to the Sultan to protect them against the infidels. Their hostility to the French has become intensified since the missionaries of the Sheikh el Senoussi appeared among them, though the aristocracy have material reasons for opposing French civilization, controlling as they do not only the

resources and labor of the country but the trade routes between the Soudan and the Mediterranean coast and between Morocco and Tripoli. The occupation of Insalah was followed on March 19, 1900, by the conquest of Inrhar, the chief place in the oasis of Gurara, after hard fighting by a force commanded by Col. D'Eu, which killed over 600 of the inhabitants. This movement to the westward led to a concentration of Moorish forces at Figuig, which was also threatened, as it lies near the route of the railroad that has been built from Oran southward and has had its terminus at Ain Sefra, on the northern slope of the Atlas range, 70 miles northwest of Figuig. The continuation south of the mountains is to be through Igli and Tuat. In February, 1900, it was opened to Jenien-bu-Kez, and preparations were made to extend it to the French military post of Duveyrier, near Figuig, and thence to Tuat and Tidikelt, by way of Igli, as soon as the occupation of the oases could be completed. On March 25 Col. Bertrand marched with a strong column of foreign legionaries, Algerian rifles, African mounted rifles, spahis, artillery, and engineers, with a train of 2,500 camels, against Igli, which surrendered without fighting on April 5. This place, lying south of Figuig, was claimed as Moorish territory, and its occupation was suspected to be preliminary to an attack on the Moorish oasis of Tafilet. Although the French Government denied such intention, the frontier tribes gathered to retake Igli. The Sultan dispatched an envoy to Tangiers to protest to the representatives of the powers against what was alleged to be an invasion of Moorish territory. Igli lies south of Morocco, not of Algeria, and in the boundary treaty of 1845 France recognized as Moorish territory the Tuat oases, which are east of the boundary line of Morocco extended. Great Britain was precluded from interfering in the dispute by the agreement of 1890, which practically recognized the oases of Tuat, Tidikelt, and Gurara as lying within the French sphere. The occupation of Gurara was completed on May 26 by Col. Menestrel. The inhabitants in general welcomed the French, who as far as they pushed their occupation gave employment to the poverty-stricken laboring population and paid much higher wages than they had ever received. The district of Timimun was annexed later, and instructions were then given to the French posts already established to limit their operations to reconnaissances necessary for their security. In a reconnaissance at the beginning of September a French force was attacked by Berbers near Salah Metarfa, in the Deldul region, and came away with the loss of 26 killed and wounded.

The regency of *Tunis* is under the nominal rule of the Bey Sidi Ali, born Oct. 5, 1817, and is nominally a vassal of Turkey. The French protectorate was established in 1882. The French Resident General, R. P. Millet, is Minister of Foreign Affairs, and of the 8 other ministers only 2 are Arabs. The French army of occupation is kept at a strength of about 600 officers and 16,000 men, and the gendarmery of 150 men is French, while the rural police is composed of natives. Tunis has an area of about 51,000 square miles and a population estimated at 1,500,000, mainly composed of Kabyles and Bedouin Arabs. The ordinary revenue for 1898 was estimated at 24,061,100 francs, for 1899 at 24,733,100 francs, for 1900 at 26,089,300 francs; expenditure for 1898 at 24,080,525 francs, for 1899 at 24,731,053 francs, for 1900 at 25,988,215 francs. Of the revenue for 1900 direct taxes produced 7,944,400 francs according to the estimates, customs and other duties 8,791,700 francs, monopolies 7,182,300 francs, domains 1,273,400 francs, and

various sources 897,500 francs. Of the expenditures 11,780,445 francs were for finance and the expenses of the debt, 4,541,900 francs for public works, 3,615,110 francs for administration, 1,680,000 francs for the civil list, 1,346,515 francs for posts and telegraphs, 1,022,270 francs for agriculture and forestry, 1,011,500 francs for instruction, and 990,475 francs for the army and various other expenses. Arrears of revenue and of expenditure estimated at 1,992,500 francs are not included in the ordinary budget, nor 8,334,213 francs of exceptional expenditure raised by loan. The public debt of Tunis, consolidated in 1884 into a perpetual 3-per-cent. *rente* of 6,307,520 francs a year, was converted again into a 3½-per-cent. loan in 1888.

Agriculture is the main business of the country. Cereals are the chief product. There were 435,337 hectares of wheat in 1895, 433,978 hectares of barley, 8,069 hectares of vineyard, 12,000,000 olive trees producing 20,000,000 kilogrammes of oil, value 15,000,000 francs, and 1,350,000 date trees in the south, the export of dates being 1,000,000 francs a year. The number of horses in 1896 was 61,121; of asses and mules, 128,908; of cattle, 252,220; of sheep, 907,642; of goats, 612,621; of camels, 112,265. The fisheries, which are mainly followed by Italians, yielded 208,430 kilogrammes of sardines, 19,800 kilogrammes of anchovies, and 180,000 kilogrammes of sponges and sepia, in 1895. The total value of imports in 1898 was 62,744,681 francs, against 53,820,670 francs in 1897; exports, 52,214,651 francs, against 36,730,871 francs. The values of the principal imports in 1898 were 6,900,000 francs for cotton goods, 5,500,000 francs for groats, 5,000,000 francs for grain, 2,000,000 francs for flour, 1,700,000 francs for sugar, 1,700,000 francs for rails and metal goods, 1,600,000 francs for machines, 1,500,000 francs for woolen and silk goods, and 9,223,500 francs for precious metals. The values of the principal exports were 13,500,000 francs for wheat, 3,000,000 francs for olive oil, 3,000,000 francs for zinc ore, 2,000,000 francs for alfalfa, 1,500,000 francs for wine, and 1,500,000 francs for tan bark. The imports of precious metals were 9,223,500 francs, and exports 8,018,000 francs. The length of railroads is 883 miles, of which the Government owns 806 miles. There are 2,060 miles of telegraphs, with 3,670 miles of wire. The postal traffic in 1897 consisted of 3,084,539 internal and 9,732,873 foreign letters. The number of telegraph messages was 526,634. The number of vessels entered at Tunisian ports in 1898 was 9,377, of 2,221,805 tons. The merchant fleet belonging to Tunis consists of 403 vessels, all of small tonnage.

The convention signed on June 14, 1898, delimiting French and English possessions in the bend of the Niger, and the Anglo-French agreement of March, 1899, conceding to France the Sahara and the central Soudan westward to the Libyan desert and the Nile basin, remove nearly every possible ground for contention between France and England over their respective spheres of influence in northern Africa (see WEST AFRICA). In East Africa France has the colony of *Obok*, connected with which is the protectorate of *French Somaliland*. Since the port of Obok, first acquired in 1855, was occupied in 1881 French influence has been extended in that part of Somaliland and into Gallaland. The port of Jibutli was created in 1888 and made the seat of government. It has a population of 15,000, including 2,500 Europeans. A railroad to Harar has been partly constructed. The imports amount to 3,500,000 francs a year, and exports, chiefly coffee, wax, and ivory, to 1,300,000 francs. The inhabitants of this region are Danakils and Gallas. The local revenue in 1899 was estimated at 650,000 francs. The supplement-

tary expenditure of France for 1900 was fixed at 337,500 francs. The coast line is 125 miles and the inland boundary is undetermined. The population of the French colony is 22,370. In the north France claims the Bay of Adulis by virtue of a cession to Napoleon III by the King of Tigre.

Off the east coast of Africa numerous islands are colonies of France, some of which have been colonized for centuries. The claim to Madagascar itself was based on the exercise or assertion of sovereignty as early as 1642, but the country was not effectively occupied till 1895 (see MADAGASCAR). The island of *Réunion*, 420 miles east of Madagascar, has been a French possession since 1649, and is represented in the French Chambers by a Senator and two Deputies. The area is 965 square miles. The population in 1897 was 173,192. St. Denis, the capital, had 32,850 inhabitants in 1899. There are plantations of sugar cane, coffee, cacao, vanilla, and spices, on which coolie and native labor is employed. There were 15,219 British Indians, 4,496 natives of Madagascar, 9,848 Africans, and 836 Chinese in 1897. A railroad, 83 miles long, now belonging to the Government, connects the port of Pointe-des-Galetes with the interior towns. The local revenue in 1899 was estimated at 5,979,077 francs. The expenditure of France for 1900 was 4,460,203 francs. The value of imports in 1898 was 19,765,268 francs, and of exports 19,027,857 francs, the export of sugar being 8,851,250 francs and vanilla 6,883,775 francs in value. The island of *Mayotte*, which has been French since 1843, and the *Comoro Islands*, first occupied in 1886, are administered from Réunion. Mayotte has an area of 140 square miles and 11,640 inhabitants. Sugar and rum are the chief products, but vanilla is becoming an important culture, and recently coffee has been planted extensively. The imports are about 440,000 francs and exports 960,000 francs. The local revenue in 1899 was 245,000 francs, to which France added 13,000 francs, and to repair the damages of a hurricane in February, 1898, a loan of 500,000 francs to be paid without interest in twenty years. The subvention from France in 1900 was 42,583 francs. The Comoros have an area of 620 square miles and a population of 47,000, mainly Mohammedan. Sugar and vanilla are cultivated, and coffee and clove trees have recently been planted. The revenue is about 260,000 francs. *St. Paul*, *Amsterdam*, and *Kerguelen* islands in the Indian Ocean have been annexed by France. *Nossi Bé* having an area of 130 square miles and 9,500 inhabitants, and producing sugar, coffee, rice, vanilla, and tobacco, has been attached administratively to Madagascar; also *Sainte Marie*, 64 square miles in extent, with 9,500 inhabitants.

In Asia the oldest French possessions are the towns of Pondichery, Karical, Shandernagar, Mahé, and Yanaon, with outlying districts covering an area of 196 square miles and having a total population of 279,091, including 1,000 Europeans. They form the colony of *French India*, all that remains of the once large possessions in the Indian peninsula. The colony sends a Senator and a Deputy to the National Assembly. The revenue for 1899 was estimated at 1,159,204 rupees. The French subvention for 1900 was 308,412 francs. The imports in 1898 were 3,877,710 francs; exports, mainly oil seeds, 14,836,736 francs.

The French conquests in Indo-China are modern, beginning with the protectorate over Cochin China, now a French colony, in 1861 and over Cambodia in 1862, though their origin goes back to an earlier colonial period when France was a dominant power in India and intervened in Annam in 1787. The protectorate over Annam was proclaimed in 1884

and established in 1886, and the conquest of Tonquin, which was annexed by proclamation as a dependency of Annam in 1884, was not accomplished without several years of fighting and two hard campaigns, in the last of which China became involved by the informal intervention of Chinese troops. In 1893, after an armed conflict with Siam, the protectorate was extended over Laos. *French Indo-China* is under the authority of a single governor general and forms a customs union, but the provinces have different forms of government and separate local authorities. The total area is about 363,000 square miles and the aggregate population is estimated at 23,300,000. The imports in 1898 were valued at 102,444,346 francs, of which 44,415,786 francs came from France. The exports of native produce were 125,553,528 francs in value, of which 29,198,786 francs went to France. The foreign exports were 1,957,665 francs in value, making the total exports 127,510,979 francs. The territory of Kwang-Chi-Wan, on the coast of China, acquired in 1899 by lease from the Chinese Government, has been placed under the authority of the Governor General of Indo-China. The Superior Council of Indo-China, created in 1887 and reorganized in 1897, is consulted by the Governor General and assists him in controlling the budgets of Cochin China, Annam, Tonquin, Cambodia, and Laos. The military force maintained by France in Indo-China numbers 9,059 men, recruited in Europe and paid by the French Government. The present Governor General is Paul Doumer. The revenue for 1899 was estimated at \$17,620,000; the contribution of France in 1900 was 19,222,288 francs.

Cochin China has an area of about 23,160 square miles, with a population estimated in 1899 at 2,323,499, comprising 4,451 Europeans, 2,054,831 Annamites, 183,659 Cambodians, 6,374 Mois, 2,656 Chams, 65,801 Chinese, 4,130 Malays, 1,477 Indians, 46 Tagals, and 46 other foreigners. A regiment of French marines is stationed in Cochin China and one in Tonquin and one in Annam. Besides there is the native soldiery trained by French officers, numbering in Cochin China 2,405. The main crop is rice, of which 11,277,770 piculs were exported in 1898 to China, Japan, and Europe. Other articles of export are cotton, silk, hides, fish, isinglass, pepper, cardamoms, and copra. The merchandise imports in 1898 were valued at 54,964,222 francs; exports, 108,010,322 francs. Coffee is raised by European and some native planters. The number of vessels entered in 1898 at the port of Saigon was 600, of 726,368 tons; cleared, 579, of 729,781 tons. The railroad from Saigon to Mytho is 51 miles long. The total length of telegraphs is 2,276, with 3,840 miles of wire, over which 321,536 messages were sent in 1896. There are 850 miles of railroad planned.

Annam has a King, Thanh Thai, who was set up by France in 1889, and the administration is carried on under French control by native officials. The area of the protectorate is 88,780 square miles; the population is estimated at 6,000,000. The products of the country are rice, silk, corn, areca nuts, cinnamon, tobacco, sugar, betel, manioc, bamboo, rubber, dyes, medicinal plants, and timber. The natives mine and work iron, copper, zinc, and gold, and make pottery and silk fabrics. The value of imports in 1898 was 3,775,000 francs; exports, 3,075,000 francs. The revenue in 1899 was estimated at \$1,845,835.

Cambodia is ruled by King Norodom under French direction. The area is 40,530 square miles; the population is estimated at 1,500,000, including besides the various native races 250,000 Chinese and Annamites and 40,000 Malays. Pnom Penh,

the capital, has about 50,000 inhabitants. The revenue for 1899 was estimated at \$1,997,600, out of which the King receives \$415,200 to maintain his court. The products of the country are rice, cotton, betel, tobacco, indigo, sugar, silk, pepper, corn, cinnamon, and coffee. Fish are exported, as well as cotton and cotton seed, rice, and tobacco.

Tonquin is governed by the French Resident, the Annamite Viceroy having been removed in 1897. The area is 119,660 square miles. The population is estimated at 12,000,000. Hanoi, the capital, has about 150,000 inhabitants. The force of native troops, officered by Frenchmen, is 14,916. The imports in 1898 were valued at 43,875,000 francs, of which 20,425,000 were French imports; exports, 16,425,000 francs. The foreign goods sent through to Yunnan were valued at 5,000,000 francs and the return traffic at 3,200,000 francs for shipment abroad. Tonquin is an important producer of rice, and the bulk of the crop is shipped to Hong-Kong for the Chinese market. Other products are sugar, silk, pepper, cotton, oil seeds, tropical fruits, tobacco, and coffee, which has been planted by Europeans. French companies operate the coal mines, the product of which is about 200,000 tons a year. The tonnage of 1,407 vessels entered in 1896 was 461,454. The railroad from Phulang to Langson, 64 miles, is to be extended to Nacham, and thence into Yunnan, where French engineers were at work when the antifeign disturbances in China caused a temporary interruption. The local revenue in 1899 was estimated at \$3,993,638; the contribution of 1900 from the French treasury was 390,000 francs.

Laos has an estimated area of 91,000 square miles and 1,500,000 population. The country produces rice, cotton, and tobacco, and contains large forests of teak. French companies have concessions to work gold, tin, and lead mines and to dig precious stones. The budget for 1900, defrayed by the other provinces of Indo-China, was \$692,431.

The French possessions in the Pacific comprise New Caledonia and its dependencies and the Society Islands and groups and islands of lesser importance in Oceanica. New Caledonia, which has been the principal penal colony of France, has an area of about 6,900 square miles, nearly half of which is mountainous and unproductive, and half the remainder pasture land and forest. The European population in 1898 comprised 5,585 colonists, 1,762 officials, 1,714 soldiers, 2,515 freed convicts, and 7,477 convicts in the penal settlement, which occupies 400 square miles. The total number of Europeans was 19,053; Asiatics, 1,829; natives, 31,874; total population, 52,756. The products of agriculture include coffee, corn, tobacco, sugar, manioc, grapes, and pineapples. Convicts are employed in agriculture, and also Kanakas and natives of the New Hebrides. The minerals produced in 1897 consisted of 27,464 tons of nickel, 3,200 tons of cobalt ore, 3,949 tons of chrome, 2,200 tons of copper ore, and 25 tons of gold ore. The exports of mineral produce in 1898 were valued at 4,261,353 francs. The total imports were 9,752,806 francs in value, of which 5,026,928 francs were French; total exports, 6,736,720 francs, of which France took 3,497,767 francs. There were 137 vessels entered at Noumea in 1898, of 119,880 tons, and 138, of 161,105 tons, were cleared. The local revenue in 1899 was 3,180,050 francs; expenditure of France in 1900, including 3,638,100 francs for the penal establishment, 6,643,748 francs. Attached to New Caledonia is the Isle of Pines, having an area of 58 square miles and a population of 600, besides the convict settlement composed of habitual criminals from France. The Wallis Islands, with an area of 58 square miles and about 4,500 natives,

were occupied in 1887, while New Caledonia has been French territory since 1854. The Loyalty Islands, having an area of 800 square miles and 14,800 inhabitants, export sandalwood and produce bananas for food and export. Fatuna and Alaï, with a population of about 1,500, were occupied in 1888. The Huon Islands have also been annexed. The New Hebrides are controlled jointly by France and England under the convention of Oct. 29, 1887.

The French possessions in Oceanica comprise the *Society Islands*, chief of which are Tahiti and Moorea; the *Windward Islands*, comprising Raiatea, Taboa, and Bora Bora; the *Tubai and Ravavae* groups; the *Tuamotu Islands*, the *Gambier Islands*, the island of Rapa, and the *Marquesas Islands*. They have an aggregate area of 1,520 square miles and about 29,000 inhabitants. Tahiti, which produces copra, sugar, rum, and vanilla, and also coffee, cotton, and tobacco, though not so much as formerly, imported 2,933,800 francs' worth of merchandise in 1898, and exported 2,504,975 francs' worth. Of the imports 1,290,300 francs came from the United States, which took 982,025 francs of exports. The number of vessels entered at Papeete in 1898 was 314, of 38,572 tons; cleared, 323, of 38,722 tons. The local revenue in 1899 was 1,146,547 francs; the contribution of France in 1900 was 852,383 francs. Moorea has an area of 50 square miles and 1,557 inhabitants. The population of Raiatea and Taboa is about 2,300; of Huahine, 1,300; of Bora Bora, 800. The area of the Tubuai and Ravavae islands is about 100 square miles, their population 2,300. Rapa, only 15 square miles in extent, has 192 inhabitants. In the Tuamotu Islands are about 7,000 natives. The Gambier group contains 460 inhabitants on an area of 6 square miles. The area of the Marquesas group is 480 square miles, with a population of 5,240 natives, who gather copra for export.

In America, all that remains of the once great colonial dominions of France are the petty islands of St. Pierre and Miquelon, retained as a fishing station near the banks of Newfoundland; the West Indian islands of Martinique and Guadeloupe (see WEST INDIES), and French Guiana. *St. Pierre* and *Miquelon* have 10 and 83 square miles of area respectively, and the former 5,700 the latter 550 permanent inhabitants. There were 18,500 tons of fish caught in 1897, and the exports of dried fish were valued at 24,700,000 francs; fish oil, 1,030,000 francs. The local revenue in 1899 was 519,865 francs; the contribution of France in 1900 was 282,938 francs.

French Guiana had a Governor, L. Mouttet, in 1900, who was assisted by a Council of 16 members. The colony sends a Deputy to the French Chamber. The area is 46,850 square miles, not including the territory disputed with the republic of Brazil. The population is estimated at 30,300, not including 1,500 aborigines but including 3,900 convicts and 1,800 on ticket of leave. The capital and seaport, Cayenne, has 12,300 inhabitants. Rice, corn, manioc, cacao, coffee, sugar, indigo, and tobacco are raised, but not in considerable quantity, the area under cultivation not being above 8,000 acres. Gold mining is now the chief industry. The export of gold in 1897 was 74,646 ounces; in 1898, 48,600 ounces; in 1899, 81,715 ounces. Silver, iron, and phosphates are also obtained. Other exports are rum, coffee, cacao, and cabinet woods. The total value of imports in 1897 was 9,334,000 francs; of exports, 7,160,000 francs. The number of vessels that visited Cayenne was 40, of 17,290 tons. The revenue in 1899 was estimated at 3,027,750 francs, exclusive of the contribution from France, which in 1900 was 6,899,061

francs, of which 5,450,550 francs were for the support of the penal colony of Cayenne. This was started in 1885, and is composed of habitual criminals and convicts sentenced for more than eight years. The tract between the Araguay and the Oyapuk rivers, containing rich gold fields discovered in recent years, was in dispute between Brazil and France, which claimed that the river Vincent Pinzon, defined as the boundary in the original treaty, was identical with the Araguay. In the beginning France laid claim to the whole region between the Amazon, the Rio Branco, and the Atlantic Ocean. After negotiations lasting fourteen years, during which various arrangements were made that failed to receive the ratification of one party or the other, a treaty was made in 1897 leaving the whole dispute to be arbitrated by the President of the Swiss Confederation, who rendered his decision on Dec. 1, 1900. The award gives to Brazil 147,000 square miles of the disputed territory and only 3,000 square miles to France, consisting of a strip north of the Tumuc Humac mountains. The boundary follows the Thalweg of the Oyapuk river from its mouth up to its source and from there to the boundary of Dutch Guiana, the water parting in the Tumuc Humac range.

Political Events.—The session of the Chambers began on Jan. 9. Paul Déroulède, André Buffet, M. Guérin, and Comte de Lur-Saluces, the chiefs of the Nationalist, Anti-Semite, and royalist plotters of revolt, having been banished and the lesser ones acquitted, the Government proposed to efface all traces of the discord and bitterness engendered by the Dreyfus affair by a general amnesty. This was not acceptable to Émile Zola nor to ex-Col. Picquart, the champions of Dreyfus, who were still under indictment, nor would it stop the suit for slander brought by Mme. Henry against Joseph Reinach, and similar actions.

In the triennial elections for the renewal of one third of the Senate the Nationalist candidates were not successful except in the old strongholds of Clerical and royalist opinion. Gen. Mercier was elected in one of these, the department of the Loire Inférieure. His success was due to a newspaper in which a religious association, the Assumptionist Fathers, assailed the Government with extravagant abuse. The Government suppressed this confraternity by judicial process as an unauthorized association. The Paris newspaper published by these ecclesiastical politicians, who were in receipt of enormous pecuniary contributions for the support of their agitation against the existing form of government, was called *La Croix*, and its daily circulation was 250,000, while its articles were reprinted in 50 provincial sheets published for that purpose by the same society. The recrudescence of clerical agitation for the overthrow of the republic provoked the Republicans to fresh anti-clerical legislation. The Government brought in an educational bill requiring three years of preliminary study in a state school as a condition of appointment to any public office or of admittance to any one of the special schools of the state. The bill was intended to extinguish the remaining Catholic higher schools, and another measure was proposed forbidding religious organizations to establish primary or secondary schools. The supporters of these measures justified them by asserting that Catholic schools encouraged and propagated a reactionary spirit hostile to the republic.

Many of the clergy attacked the Government bitterly in consequence of the condemnation of the Assumptionist Fathers. Archbishop Gouthe-Souillard, of the diocese of Aix, assailed the Premier in

terms which it was impossible to ignore, and yet it was inexpedient to apply the too rigorous remedy of the penal code, which punishes offenses of this sort with banishment. The occasion suggested to M. Waldeck-Rousseau an amendment to the code, substituting the milder and more practicable penalty of imprisonment for terms ranging from three months to two years for criticism of Government measures introduced into pastoral letters, and for criticism of acts of the supreme authority contained in a speech or sermon or published in the press the term of from two weeks to six months. The minister took the familiar ground that ecclesiastics who are functionaries and stipendiaries of the state are bound to observe an attitude of respect toward the Government. Cardinal Richard, Archbishop of Paris, published letters in *La Croix* condemning the suppression of the Assumptionists. The Government, out of regard for his great age, took no action in his case, but suspended the stipends of other bishops who joined in the attacks, refraining, however, from the application of the press law, which the bishops sought to provoke the ministry to put in force and which would be more incontestably legal than the suspension of stipends, though the latter course has the sanction of precedents going back for a long period.

M. Méline failed in an attempt to upset the Cabinet based on its Radical measures against Clericalism and the presence of a Socialist, M. Millerand. The fickle Parisian populace, which of late years has given Socialist majorities, now turned against the Government containing a representative of the Socialists, which the departments had indorsed in the senatorial elections and which held together its majority in the Chamber. In the municipal elections, which took place in May, Paris elected 32 Nationalists and 8 Monarchists to the municipal council. Algiers elected Anti-Semites. Most of the French municipalities elected Republicans, and the ministers asserted that they were generally in harmony with the Government, and a large proportion of the Opposition majority in the Paris council were Republicans, though opposed to the Government. The Chamber by 286 votes to 237 approved the ministerial declaration of a continued policy of Republican reforms and defense of the secular state. The universal exposition necessitated political quiet and a truce to party rancor. The ministerial programme, besides the education bill, included a bill on associations, an income tax, and a revision of the death duties. M. Waldeck-Rousseau proposed a new libel law. The Socialist party was generally hostile to the presence of a Socialist in a *bourgeois* ministry, and its general committee drew up a protest against the action of the Socialist Deputies when these supported the Cabinet against an interpellation of the Nationalists reflecting on the violent repression of strikers at Châlons.

On May 29 Gen. Gallifet, who was in poor health, resigned his portfolio as Minister of War, and Gen. André was appointed to succeed him. His retirement was not due to differences with his colleagues, but to the attacks of the Nationalists, who charged the ministers with trying to reopen the Dreyfus case, and who were joined by M. Méline and his section of the Republicans, while M. Bourgeois with his band of Radicals came to the rescue of the ministry with a motion expressing confidence in the Government and in the devotion of the army to the republic. Gen. André's entrance into the Cabinet was followed by the resignation of the commander in chief of the army. Gen. Jamont, who protested against changing the chief of the general staff. Gen. Brugère succeeded

him as generalissimo and Gen. Pendezec was appointed head of the general staff. The difficulty arose from the opposition of Gen. Delanne, the head of the staff, who was removed, to Gen. André's act in changing some of the heads of bureaus. The amnesty bill of the Government was violently opposed by the Dreyfusards as well as by the Anti-Semites. It proposed to extinguish all pending prosecutions, including the impeachment of Gen. Mercier, ex-Minister of War, but not to restore Dreyfus to his civil rights. The vote on the bill was postponed till the winter session. The navy bill and projects for colonial defense compelled the Government to devise ways and means for increasing the revenue. Not even the Nationalists would raise a cry against increased taxation for such purposes. A credit of 61,000,000 francs was voted for gunboats and other means of colonial defense, and the organization of a colonial army was approved. The parties applauded with one mind the operations in the Sahara and the course of M. Pichon, the French minister at Peking, in the Chinese difficulty. The requirements of the Government were 58,000,000 francs more than in the last budget, 20,000,000 francs of this being for coast defense. An increased yield of the existing taxes was expected to amount to 35,000,000 francs, and the readjusted death duties and new taxes were counted on to produce the remainder. A reduction of the national debt to the extent of 37,000,000 francs accruing from the repayment of war loans was a feature of the budget of M. Caillaux. The naval programme involved the expenditure of between 150,000,000 and 200,000,000 francs a year, including the cost of coast defenses. The abolition of the *octroi* duties by the towns is a fiscal reform that has been contemplated for a long time. This tax on articles of consumption collected at the gates of the large towns produces about 330,000,000 francs a year throughout France. It is a tax unsuited to modern methods of living, costly to collect, inconvenient, and obstructive to trade, causing a loss to the community much greater than the net receipts of the towns from this source. The first large town to do away with it is Dijon. The Chamber agreed to the proposal of the municipality to supersede the duty by increasing the taxes on houses, wine shops, horses and carriages, and dogs. The Chamber agreed to a bill exempting school-teachers from their annual period of drill in the reserves, and resolved that all reservists be released from this service for the year in order to facilitate visits to the exhibition, but did not carry the resolution into effect because the authorities insisted that a special law would be necessary.

The new direct taxes proposed in the budget were carried through by a great majority. The income tax act is expected to double the amount hitherto paid by the average citizen. Foreigners residing in France are taxed equally with Frenchmen. The amount of income received by the individual is roughly computed by multiplying by 5 or 6 the amount that he pays for rent, and on this income he pays a tax of 4 per cent. The session was closed on July 10.

The Chambers met again on Nov. 6. A deficit instead of the contemplated surplus for the year was the forecast of the Budget Committee. The legislation proposed by the Premier included the remodeling of the duties on strong drink in connection with the prospective reduction at the beginning of 1901 of the *octroi* duties on hygienic beverages, such as wine and cider; a bill on associations, by which the Government hoped to put an end to an increasing peril and prevent the creation of an influence that no state could tolerate;

the creation of workmen's pensions, and measures on the education of state officials, courts-martial, trade unions, and the income tax. With regard to strikes, the bill of 1892 provided for optional arbitration, compulsory arbitration having been objected to as an infringement of the right to strike and also as an unwarranted extension of the powers of the state, even though the enforced arrangement should be more reasonable than one that the masters and men might make among themselves. The results of the law of 1892 had been considerable, and recent prolonged strikes had been settled by arbitration, though not by justices of the peace, the official arbitrators. The Government did not consider the state entitled to dictate to individuals how they should regulate their factories or settle their disputes, but it was desirable that the free working of arrangements between employers and employed should lead to something better than the present situation; to this end it was proposed to introduce a clause into labor contracts which would make arbitration obligatory upon the parties after they had freely entered into such contracts.

A bill was introduced into the Senate by M. Piot imposing a tax on unmarried men and women above thirty years of age and on couples married for five years and having no offspring, while rewarding families of more than 4 children out of an annual credit of 20,000,000 francs. The religious associations, which the Government decided to place under stricter regulations because by ingenious evasion of the existing law or owing to its lax administration they had reached a position in which a serious peril to the state was discerned, hold in mortmain property valued at 1,000,000,000 francs and personal property estimated at a higher figure. This great wealth has been employed for political as well as for religious purposes, and the political aims followed by the religious orders are subversive of the republican state. M. Waldeck-Rousseau declared that the religious orders, dispersed but not suppressed, have covered France with their operations, usurping the functions of the secular clergy, acquiring control of the seminaries, and defying the authority of the bishops. The bill on education, supplementing the measure dealing with religious associations, requires those who wish to enter the civil service or the army to receive their education in the secular state institutions, since under present conditions half the youth of France are educated in such a way as to become practical strangers to the other half, and in clerical institutions become involved with ideas fundamentally hostile to the republic.

A debate on its general policy resulted in a majority for the Government of 330 to 238, a greater one than it commanded in the previous session. The bill on strikes, presented by M. Millebrand, provides that in every factory employing 50 or more men a printed notice shall state whether or not arbitration is one of the conditions of employment. All state contracts will require it to be. If it is a condition in private employment, the men are to elect delegates, who will submit any complaints or demands to the employer, and, failing an agreement, both sides may nominate arbitrators. In case the employer refuses to do so, the men may resolve to strike by secret ballot, but the majority must comprise at least one third of the persons employed, and there must also be a weekly vote to decide on the continuance of the strike or its cessation. A previous measure decreed in September provided for the creation of labor councils composed equally of employers and workmen nominated by their trade unions or syndicates. These bodies will inform the Government

of the conditions of labor, influence the relations between labor and capital, and appoint conciliators or arbitrators in the case of strikes. The amnesty bill was passed without the inclusion of M. Déroulède and his fellow-exiles or of the Assumptionist monks.

FRIENDS. Friends in America.—Besides the regular sessions of the yearly meetings, conferences of American Friends to consider special questions were held in Philadelphia in 1829 and in Baltimore in 1849. The first general conference of the yearly meetings was held in Richmond, Ind., in 1887, and was attended by delegates from London and Dublin yearly meetings, and from all the yearly meetings on the American continent except that of Philadelphia, which was unofficially represented. It was afterward decided to hold similar conferences of the American yearly meetings once in five years. Such conferences have been held at Indianapolis, Ind., in 1892 and 1897. At the conference of 1897 it was felt that a closer union of the yearly meetings and a uniform discipline would be desirable. A committee was appointed in furtherance of this purpose, which prepared a draft of a constitution and discipline and published them in May, 1900, for the information and consideration of the yearly meetings. No change was proposed in the new constitution in the organization or principles of government of the society, or in methods of transacting business. The democratic principle was sought to be maintained by continuing the chief legislative, judicial, and executive authority in the yearly and monthly meetings, in the proceedings of which every member has a right to participate. The brief article on belief was intended as a general statement, and was thought to be all that was now necessary, since the "Richmond declaration" had been so recently prepared and had met with general acceptance. The preparative meeting was discontinued, its business being referred to the monthly meeting. The five years' meeting, adopting the idea of the quinquennial conference into the Quaker system, was designed to be a practical working body, without legislative authority. In it the smaller yearly meetings were given a larger representation than in actual proportion to their numerical strength. The article on belief declares that "the vital principle of the Christian faith is the truth that man's salvation and higher life are personal matters between the individual soul and God. Salvation is deliverance from sin and the possession of the spiritual life. This comes through a personal faith in Jesus Christ as the Saviour, who, through his love and sacrifice, draws us to him. Conviction for sin is awakened by the operation of the Holy Spirit causing the soul to feel its need of reconciliation with God. When Christ is seen as the only hope of salvation, and a man yields to him, he is brought into newness of life, and realizes that his sonship to God has become an actual reality. This transformation is wrought without the necessary agency of any human priest or ordinance or ceremony whatever. A changed nature and life bear witness to this new relation to him.

"The whole spiritual life grows out of the soul's relation to God and its co-operation with him, not from any outward or traditional observance. Christ himself baptizes the surrendered soul with the Holy Spirit, enduing it with power, bestowing gifts for service. This is an efficient baptism, a direct incoming of divine power for the transformation and control of the whole man. Christ himself is the spiritual bread which nourishes the soul, and he thus enters into and becomes a part of the being of those who partake of him. This

participation of Christ and apprehension of him become the goal of life for the Christian. Those who thus enter into oneness with him become also joined in living union with each other as members of one body. Both worship and Christian fellowship spring out of this immediate relation of believing souls with their Lord.

"The Holy Scriptures were given by inspiration of God and are the divinely authorized record of the doctrines which Christians are bound to accept, and of the moral principles which are to regulate their lives and actions. In them, as interpreted and unfolded by the Holy Spirit, is an ever fresh and unailing source of spiritual truth for the proper guidance of life and practice.

"The doctrines of the apostolic days are held by the Friends as essentials of Christianity. The Fatherhood of God, the Deity and humanity of the Son, the gift of the Holy Spirit, the atonement through Jesus Christ by which men are reconciled to God, the resurrection, the high priesthood of Christ, and the individual priesthood of believers, are most precious truths to be held, not as traditional dogmas, but as vital, life-giving realities. The sinful condition of man and his proneness to yield to temptation, the world's absolute need of a Saviour, and the cleansing from sin in forgiveness and sanctification through the blood of Jesus Christ, are unceasing incentives to all who believe to become laborers together with God in extending his kingdom. By this high calling the Friends are pledged to the proclamation of the truth wherever the Spirit leads, both in home and in foreign fields.

"The indwelling Spirit guides and controls the surrendered life, and the Christian's constant and supreme business is obedience to him. But, while the importance of individual guidance and obedience is thus emphasized, this fact gives no ground for license; the sanctified conclusions of the Church are above the judgment of a single individual.

"The Friends find no scriptural evidence or authority for any form or degree of sacerdotalism in the Christian Church, or for the establishment of any ordinance or ceremonial rite for perpetual observance. The teachings of Jesus Christ concerning the spiritual nature of religion, the impossibility of promoting the spiritual life by the ceremonial application of material things, the fact that faith in Jesus Christ himself is all-sufficient, the purpose of his life, death, resurrection, and ascension, and his presence in the believer's heart, virtually destroy every ceremonial system and point the soul to the only satisfying source of spiritual life and power.

"With faith in the wisdom of Almighty God, the Father, the Son, and the Holy Spirit, and believing that it is his purpose to make his Church on earth a power for righteousness and truth, the Friends labor for the alleviation of human suffering; for the intellectual, moral, and spiritual elevation of mankind; and for purified and exalted citizenship. The Friends believe war to be incompatible with Christianity, and seek to promote peaceful methods for the settlement of all differences between nations and between men.

"It is an essential part of the faith that a man should be in truth what he professes in word, and the underlying principle of life and action for individuals, and also for society, is transformation through the power of God and implicit obedience to his revealed will.

"For more explicit and extended statements of belief, reference is made to those officially put forth at various times, especially to the letter of George Fox to the Governor of Barbadoes in 1671,

and to the Declaration of Faith, issued by the Richmond Conference of 1887."

The constitution is to become operative upon those adopting it when it shall have been approved and adopted by seven yearly meetings.

The missionaries of the American Friends are supported by yearly meetings or by associations severally interested in the care of one or more districts. Sixty missionaries are thus sustained in stations at Ramleh, Syria, Nanking (China), Tokio (Japan), Newgong (Bundelcund, India), Jamaica, Victoria, Matamoros, Metahuala, Cedral, and Estación de Catorce, Mexico; Douglas, Kotzebue, and Kake Island, Alaska.

The American Friends' Board of Foreign Missions at its meeting in February, 1900, made arrangements for securing an incorporation under the laws of the State of Indiana, and completed its organization for work in the field. At the same time it decided to open a mission in Cuba, and appointed an agent or superintendent to go out as early as possible and start the work.

The Friends' African Industrial Mission was organized early in the year to found an industrial mission settlement on the eastern shore of the Victoria Nyanza. It contemplates obtaining by lease from the British Government and purchase from the natives a tract of land on the high and therefore healthy plateau, where the most profitable crops of the region may be cultivated and other industries pursued for the products of which good markets are not far distant; and it is the purpose of the mission to become self-supporting as soon as possible. The several hundred native workmen needed to do the manual labor of the settlement will be required to live on the station, where they will be withdrawn from heathen surroundings and kept continuously under Christian influence. Boys in school will be taught various handicrafts, such as blacksmithing, carpenter's work, and shoemaking, and the girls household duties. Daily gospel services will be one of the features of the life of the settlement. The board controlling the mission is to be composed of two Friends from each yearly meeting.

Several yearly meetings have already engaged heartily in the work, and a large number of qualified workers have applied for service without any appeal having been made.

British Friends.—The summary of numbers for the year 1899 supplied to the London Yearly Meeting shows a membership in Great Britain of 17,153, being an increase of 121 on the number reported in the previous year; these were comprised in 376 congregations, 4 more than in 1898. Other numbers were 8,000 habitual attenders at the congregational meetings, 380 persons admitted to the society during the year "on conviction," and 145 retired, 145 births, and 256 deaths. The disparity in the number of births and of deaths is explained partly by reference to the relatively large number of persons who join the society in mature life, causing additions to the death rate not balanced by corresponding additions to the birth rate, and partly by failure to enter the names of children of mixed marriages or marriages between Friends and non-Friends.

A chief subject of discussion at the meeting on ministry and oversight of the London Yearly Meeting in May was the eldership. The meeting had in 1898 adopted a minute on worship and ministry in which what were regarded as the true conditions of living worship and of enlightened and effective ministry were set forth. Now it discussed and adopted a minute to be sent down to the monthly meetings, pointing out the nature of the duties involved in eldership and the

qualifications which should be regarded in appointing persons to that office. In the Yearly Meeting at Large a committee was appointed to prepare a statement of the real position of the society in regard to war, and an appeal was directed to be made to the Government asking that, in deciding upon a settlement of the conflict in South Africa, the Christian sentiment of the country and the desire for justice and magnanimity should have due weight. The minute prepared by this committee and adopted by the meeting took the following form: "This meeting has felt profound sorrow on account of the war in South Africa, with its mournful sacrifice of brave lives, its many stricken and darkened homes, and its manifold sequel of misery and bitterness. It can not but also grieve over the discredit brought upon the religion of Jesus Christ by warfare between those who name his name and seek him as their Saviour and example. It respectfully appeals to the Government of these realms to do all that can be done to allay mistrust and to remove misunderstandings, which ever inflame and embitter strife, and are among the most fruitful causes of war and of its continuance. It earnestly desires and prays for the establishment of an early and durable peace in South Africa, which shall enable all elements of the population, including the native races, to grow together side by side under free institutions, and shall rest not upon the Government of the sword or the humiliation of the vanquished, but upon the lasting foundations of justice and good will." The subject of "birthright membership" was brought up in a minute from the Bedfordshire quarterly meeting, in which it was pointed out that the principle of "hereditary religion" is contrary to the teaching of the New Testament; that there should be a sharp distinction between the natural birth and spiritual birth; that only about 40 per cent. of the membership of the society is through birthright, and that it is not fair to those who come into it by request to maintain two kinds of membership. The minute proposed, therefore, that children should henceforth be enrolled as associates, with all the privileges now enjoyed by birthright members, except that they should not be members of meetings for business until they apply for full membership. Arguments were urged in the yearly meeting against the change proposed, that heredity was of great value in religious associations; that there was danger that the inducements offered by other churches and social attractions would draw away many of the young people if their close, organic connection with the society was broken during these early formative years; and that the proposed new plan might result in introducing "tests" for membership—that is, that young people would be received only after a careful examination of their faith. The fact was emphasized that the very condition of entering the kingdom of heaven, as laid down by Christ, is to "become as little children," and that the apostle Paul clearly regarded children as a real part of the Church. One of the principal points urged in favor of the change was that the true Quaker is, alone, the person who has experienced the regenerating power of the Holy Spirit. The contemplated new discipline of American Friends provides that the children of members be enrolled as associate members. "They are thus recognized, not because their birthright can of itself make them members of the body of Christ, for they can only become such by experiencing the new birth by the Holy Spirit, but because of the promises in the Holy Scriptures to believers and their households, and the conviction that true Christians will so make

their children the objects of living prayer, and will so instruct them in the Gospel and go with them to the throne of grace, that they will surrender their hearts to God in their youth, and early take a natural and living interest in the Church as they do in the family. Persons thus enrolled as associate members shall be enrolled as active members of the Church when they shall have made a credible profession of faith in Jesus Christ as their Saviour and Lord, and shall have accepted the doctrines of the Gospel as held by the Friends. If the member does not make such

profession when he reaches matured years, his name may be dropped from the list of members at the discretion of the monthly meeting. When but one parent is a member, the children may be enrolled as associate members upon the request of that parent and the consent of the other." Other minutes of quarterly meetings were presented adverse to any modification of the rules. After discussion, a minute was drawn in the yearly meeting stating that it was not prepared at present to make any change.

G

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890; and 2,216,331 in 1900. Capital, Atlanta.

Government.—The following were the State officers in 1900: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, W. J. Speer; Comptroller, William A. Wright; Attorney-General, Joseph M. Terrell; State School Commissioner, G. R. Glenn; Adjutant General, J. M. Kell; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McCandless; Librarian, James E. Brown; Railroad Commissioners, L. N. Trammell, S. R. Atkinson, T. C. Crenshaw; Prison Commissioners, J. S. Turner, C. A. Evans, T. Eason; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Henry T. Lewis, Andrew J. Cobb, William A. Little, and William H. Fish; Clerk, Z. D. Harrison—all Democrats.

Finances.—The Treasurer's report for the year ending Sept. 30, 1900, contains these items: Balance in the treasury, Oct. 1, 1899, \$438,776.66; received after that date, \$3,542,069.69; making a total of \$3,980,846.35. The disbursements for the same period, Oct. 1 to Sept. 30, 1900, were \$3,564,700.05; leaving a balance in the treasury, Oct. 1, of \$416,146.30. This balance was composed of advances on civic establishment coupons paid, etc., amounting to \$38,217.01, and \$377,929.29 belonging to the reserved fund. The gain in values in 1900 over 1899, including every form of property, was \$18,788,333. Of this amount \$3,489,206 is in the railroads of the State and \$15,299,127 is in county property. The taxable property was valued at \$436,000,000.

Appropriations.—The appropriations for the year were: Special appropriations, \$9,794.41; State University, 1900, \$8,000; State Normal School—1899, \$4,000; 1900, \$12,000; trustees Sanitorium—1899, \$1,197.90; 1900, \$642.16; trustees State University, \$545.86; temporary loan, \$100,000; widows' pensions—1899, \$420; 1900, \$213,300; Western and Atlantic Railroad change bills, \$3; total, \$3,564,700.05.

Education.—The Superintendent of Education says, in his report for 1900: "All the States in the Union except a small group of Southern States now have a nine months' absolutely free term for all the children of school age. Georgia has only a five months' term. Massachusetts spends \$39.10 every year for each child enrolled, Rhode Island spends \$36.26, New York \$34.55, while Georgia spends \$6.31. As a matter of fact, Georgia spends

on her country children each year less than \$4 for each child enrolled. Georgia provides for each child of school age \$2.16, while Massachusetts provides \$22.16, Rhode Island \$14.62, New York \$16.95. Nearly all the Middle and Western States spend ten times as much per child of school age as Georgia spends. The teachers in these systems receive three and four times as much salary as our teachers receive. . . . If you have taken the trouble to ascertain the present value of the courthouse and jail in your county and the present value of all the schoolhouses in your county, you have learned, perhaps, that your courthouse and jail have cost the county three or four times as much as all the schoolhouses in the county have cost. . . . The tables in this report will show that the average pay of the country school-teacher in Georgia for the last school year was \$128 per annum.

"In 1898, the date of the last school census, the school population was 660,870. This report shows an enrollment for the school year 1899 of 423,467, with a total average attendance of only 253,193. This enrollment and attendance show a percentage of increase over former years, and yet less than 40 per cent. of our children of school age attended school for the entire school term.

"Fulton County [Atlanta is in this county] is spending this year on her prisoners \$82,050.45. In the county's budget there is not a dollar for schools. The State gives the county \$13,747.71. The average number of prisoners in Fulton County is supposed to be about 2,000. The school children of the county by the last census number 6,850. Here are 6,850 children at school at a cost of \$13,747.71, and 2,000 prisoners in prisons or in the chain gang at a cost of \$82,050.45."

Mr. E. C. Branson, president of the State Normal School, says in an article on Education and Crime: "One sixth of our whites and nearly seven tenths of the negroes are illiterate, according to the census of 1890; and we find that 44 per cent. of our penitentiary convicts were committed for crimes of passion and violence, while 35 per cent. were committed for burglary alone. Georgia is near the bottom in the column of illiteracy, only four States having a lower rate, and person and property are exposed accordingly.

"Taking the illiteracy returns for Georgia in 1893 and the figures in our penitentiary report nearest that date, we find that an illiterate negro population of 27 per cent. furnished 54 per cent. of the negro convicts; while a literate negro population of 73 per cent. furnished 46 per cent. of the negro convicts. Thus the illiterate negro population of the State averaged 3 convicts per 1,000, while the literate negro population of the State averaged 1."

The school fund for 1900 was \$1,440,042.

The Governor, in his annual message, said: "The

schools for the higher education of the negroes, supported by churches and other organizations, are richer than those for the higher education of whites. The value of the property of the negro schools of Atlanta alone, it is said, is greater than all the endowments of all the schools and colleges in the State for the education of the whites."

Prisons.—The State Prison Commission has abolished the county camp of Coffee County, where inhuman treatment was shown to have been exercised. With this removal, the last camp under the old convict lease system disappears.

Banks.—The annual report of the State banks shows that there has been no failure among them, while there has been an increase of \$2,305,000 in loans and \$1,824,000 in deposits. The report has the following:

ITEMS.	Sept. 5, 1899.	Sept. 5, 1900.
Resources:		
Loans.....	\$25,448,855.81	\$27,733,942.79
Overdrafts.....	618,353.60	600,762.85
Bonds and stocks.....	2,340,801.52	2,408,262.46
Real estate, etc.....	1,826,318.99	1,709,769.98
Due from banks and bank- ers.....	4,001,708.30	3,648,196.76
Cash on hand.....	2,841,083.76	2,694,977.85
Items other than above.....	84,620.22	118,746.39
Total.....	\$37,250,651.20	\$38,929,686.08
Liabilities:		
Capital paid in.....	9,240,825.00	785,327.50
Surplus and net profits.....	2,789,264.15	3,145,564.10
Due to banks and bankers.....	1,055,111.05	1,055,625.34
Due unpaid dividends.....	12,597.43	17,305.01
Due depositors.....	21,150,309.15	22,009,064.14
Rediscouunts.....	827,747.85	1,189,005.18
Bills payable.....	2,169,687.94	2,777,894.81
Items other than above.....	4,955.63
Total.....	\$37,250,651.20	\$38,929,686.08

Products.—The official statement, Sept. 1, 1900, gives 1,309,000 bales as Georgia's cotton crop for the year. It was late in maturing, and fell somewhat below that figure.

In 1899 an effort was made to diversify the industries of the State, with some success. The following is the estimate made in May, 1900, of the fruit industry in and near Floyd County: Peach trees, 600,000; apple trees, 100,000; pear trees, 25,000. These trees will produce in a good year 1,000,000 crates of peaches, 300,000 crates of apples, 25,000 crates of pears, which will load 2,000 cars of peaches, 150 cars of apples, 15 cars of pears. This list does not include Japanese plums and grapes. There are magnificent vineyards, and it is probable that 10,000 gallons of wine are made yearly. One grape grower experimented last year on producing clarets, and had wonderful success.

The La Grange Creamery received a medal for butter exhibited at the Paris Exposition. The company is four years old, and is doing a profitable business. The sugar-cane crop of the State was the largest ever raised, and the Williams Manufacturing Company report a good demand for sirup.

Within a year or two there have been established in Georgia a broom factory, a cigar factory, an electric-light plant, a flouring mill, ice factories, and a cheese-making plant; but the cotton-mill industry has made the greatest progress of any. At Tifton, Quitman, Cochran, Hampton, Pelham, Moultrie, Dublin, Cordele, and Columbus mills are either newly erected or in process of construction, while there are three new ones in Atlanta. These are being fitted with machinery for doing all kinds of work, from the weaving of cotton fabric to the manufacture of oil from cotton seed.

The railroads have been active in assisting colonies to settle in districts especially favorable to manufactures or farm industry.

Political.—The Democratic State Convention was held June 14, in Atlanta. The platform approved the State administration, and commended the chief executive and each of the State officials; congratulated the people of Georgia on the present system of public schools; favored an amendment to the Constitution limiting the power of the General Assembly to levy and assess taxes exceeding a specified percentum; favored an amendment to the Federal Constitution providing for election of United States Senators by direct vote of the people; favored immediate construction and control of the Nicaraguan Canal by the United States; renewed belief in the allegiance to the principles of Democracy as contained and enumerated in the national Democratic platform of 1896; denounced trusts; adhered to the doctrine of a tariff for revenue only; and demanded repeal of the tax on State bank issues.

The following ticket was nominated: For Governor, A. D. Candler; Secretary of State, Philip Cook; Comptroller General, William A. Wright; State Treasurer, Robert E. Park; Attorney-General, James M. Terrell; State School Commissioner, G. R. Glenn; Commissioner of Agriculture, O. B. Stevens; Prison Commissioner (full term), Clement A. Evans; Prison Commissioner (unexpired term), Thomas Eason; Associate Justices Supreme Court, Henry T. Lewis, William A. Little; United States Senator, A. O. Bacon.

The Republicans met in State convention in Atlanta in March, and nominated a full ticket.

The Populists held a State convention in Atlanta in April, and named a full State ticket. The platform declared: "As the fusionists who betrayed the People's party and our own gallant chieftain, Thomas E. Watson, and thereby demoralized our hitherto impregnable band of patriots, have themselves been shaken off and our ranks cleared and purified by their expulsion from our party, so have our once broken ranks been reformed, revived by the spirit of loyal hope and confidence.

"The People's party yields nothing in its opposition to licensed saloons as a public nuisance. The gospel of Christ is the solution of every human problem and the correction of every evil. We appeal to the Christians of Georgia to unite with us in our efforts to suppress this monster evil, so long fostered and nourished by the Democratic party as a means to acquire office at the expense of Christianity and to the degradation of man.

"We favor an amendment to the Constitution of this State providing for an initiative and referendum and the imperative mandate in legislation, submitting to the people for ratification or rejection all important legislative enactments.

"We emphatically condemn the convict law passed by the Legislature of 1897 as being the enactment of a system more iniquitous than the old lease act.

"We denounce the present fee system and demand that all public officials, where practicable, be placed upon salaries proportionate to the depressed financial condition from which the laborers of the country suffer.

"We denounce the Democratic party for its extravagant administration, increasing the burden of taxation upon the people from year to year, until the people groan under the oppression of high taxes."

At the State election, in October, Allen D. Candler, Democratic candidate for Governor, received 90,445 votes; George W. Trayler, the Populist candidate, 23,235. A constitutional amend-

ment giving pensions to the widows of Confederate soldiers was carried by a small majority. In many places no vote concerning it was cast.

At the presidential election, in November, the State gave 46,665 plurality for William J. Bryan. The vote was the lightest ever cast in Georgia. There was no opposition to the Democratic candidates for Congress.

GERMANY, an empire in central Europe, composed of the federated German states. The King of Prussia is German Emperor, and in this capacity has supreme charge of political and military affairs, with power to make war and declare peace, except that for an offensive war he must have the consent of the federated states and princes. There are two legislative bodies with concurrent powers—the Bundesrath, representing the confederated states, and the Reichstag, representing the German people. The acts upon which they agree become law on receiving the Emperor's assent and being countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 of population, elected by universal manhood suffrage and by secret ballot for the term of five years. Alsace-Lorraine, the imperial province, is represented by 4 commissioners, who sit in the Reichstag without having votes. Out of 10,628,992 registered electors 7,702,265 voted in the election of 1893. The Emperor has power to dissolve the Reichstag with the consent of the Bundesrath, in which event elections must take place within sixty days and the Reichstag be convoked within ninety days. The imperial ministers act independently of each other under the supervision of the Chancellor. The Chancellor of the Empire at the beginning of 1900 was Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The following ministers had charge of the several departments of state: Minister of Foreign Affairs, Graf von Bülow; Minister of the Interior and Representative of the Chancellor in the Reichstag, Graf von Posadowsky-Wehner; Head of the Admiralty and Admiral Commanding in Chief, Rear-Admiral Tirpitz; Minister of Justice, A. Nieberding; Imperial Treasurer, Freiherr von Thielmann. The heads of the various imperial bureaus were: Post Office, Lieut.-Gen. D. von Podbielsky; Imperial Railroads, Dr. Schultz; Imperial Exchequer, Herr Magdeburg; Imperial Invalid Fund, Dr. Rösing; Imperial Bank, Dr. Koch; Imperial Debt Commission, Herr von Hoffmann.

Area and Population.—The total area of the German Empire is 208,830 square miles. The population on Dec. 2, 1895, was 52,279,901, having increased at an average annual rate of 1.12 per cent. since 1890. The number of households was 11,256,150. The number of marriages in 1897 was 447,770; of births, 1,991,126; of deaths, 1,206,492; excess of births, 784,634. The number of emigrants in 1898 was 21,899, of whom 17,272 were destined for the United States, 785 for Brazil, 1,302 for other parts of America, 1,092 for Africa, 223 for Asia, and 163 for Australia. The destination of 1,062 who sailed from French ports was not reported. The emigrants who sailed from German ports and from Antwerp, Rotterdam, and Amsterdam, consisted of 11,667 males and 9,170 females. There were 2,283 families, comprising 7,277 persons. The total number of emigrants from Germany since 1870 was 2,451,312, of whom nearly 90 per cent. went to the United States. Of the emigrants of 1898 Prussia furnished 12,161, Bavaria 2,124, Württemberg 1,151, Saxony 1,128, Hamburg 1,479, Baden 713, Hesse 316, Bremen 427, Oldenburg 205, Mecklenburg-Schwerin 153, and Alsace-Lorraine 135. The number of emigrants from

countries outside of Germany who embarked at German ports in 1898 was 83,805.

Education is compulsory throughout Germany, and every commune is compelled to support one or more elementary schools. In the towns are commercial schools for the business class, and for the working classes continuation and night schools. The number of Gymnasias, which fit students to enter the universities by a course of nine years in the classics and other studies, was 439 in 1897; the number of Progymnasias, which have not the higher grades of the Gymnasias, was 92; the number of Realgymnasias, in which modern subjects replace Greek, was 128; Realprogymnasias, 93; Oberrealschulen, in which modern languages are taught instead of Latin and Greek, 40; Realschulen, 198; commercial colleges, 2; other public secondary schools, 32; private schools, 56; teachers' seminaries, 181; special schools, 32; polytechnics, 9; agricultural schools, 31; schools of mining, 15; schools of architecture and building, 15; academies of forestry, 9; schools of art and art industry, 23; schools of navigation, 47; schools of music, 7. There are 21 universities, namely, Berlin, with 418 professors and teachers and 4,997 students in 1899; Munich, with 194 professors and teachers and 4,257 students; Leipsic, with 220 professors and teachers and 3,270 students; Bonn, with 152 professors and teachers and 2,140 students; Freiburg, with 119 professors and teachers and 1,670 students; Breslau, with 169 professors and teachers and 1,621 students; Halle, with 148 professors and teachers and 1,613 students; Tübingen, with 104 professors and teachers and 1,525 students; Heidelberg, with 149 professors and teachers and 1,462 students; Göttingen, with 131 professors and teachers and 1,307 students; Marburg, with 93 professors and teachers and 1,222 students; Würzburg, with 88 professors and teachers and 1,214 students; Strasburg, with 129 professors and teachers and 1,079 students; Erlangen, with 69 professors and teachers and 1,042 students; Kiel, with 100 professors and teachers and 901 students; Greifswald, with 95 professors and teachers and 834 students; Giessen, with 82 professors and teachers and 814 students; Königsberg, with 119 professors and teachers and 794 students; Jena, with 97 professors and teachers and 732 students; Münster, with 48 professors and teachers and 594 students; Rostock, with 55 professors and teachers and 475 students. There is a naval academy and school at Kiel, and at Berlin and Munich are military academies, and there are 9 cadet schools and 9 military schools.

Finances.—The revenue of the Imperial Government for 1901 was estimated at 1,783,042,000 marks from ordinary and 275,291,000 marks from extraordinary sources; total, 2,058,334,000 marks. The total estimated expenditure was 1,979,135,000 marks. The revenue from customs and excise duties in 1900 was estimated at 742,261,000 marks; from stamps, 61,648,000 marks; from posts and telegraphs, 47,065,300 marks; interest of the Invalid fund, 27,938,500 marks; revenue from railroads, 26,583,600 marks; from the Imperial Bank, 9,789,600 marks; from the printing office, 1,873,900 marks; various receipts, 1,013,300 marks; federal contributions, 489,953,800 marks; other contributions, 14,696,900 marks; extraordinary receipts, 88,388,600 marks; total estimated revenue, 1,526,188,000 marks. The estimated expenditures for 1900, including supplementary estimates, amounted to 1,551,709,400 marks, of which 1,300,309,800 marks were ordinary recurring expenditures and 251,399,600 marks nonrecurring and extraordinary expenditures. Of the recurring expenditures 519,824,500 marks were for the army, 481,908,400

marks for the imperial treasury, 75,613,300 marks for the imperial debt, 69,103,100 marks for the navy, 65,295,600 marks for the Pension fund, 44,348,000 marks for the Ministry of the Interior, 27,938,500 marks for the Invalid fund, 11,999,900 marks for the Ministry of Foreign Affairs, 2,117,900 marks for the Ministry of Justice, 693,300 marks for the Reichstag, 840,100 marks for the audit bureau, 390,600 marks for railroads, and 236,600 marks for the imperial chancellery. Of the federal contributions in 1900 Prussia paid 298,040,500 marks, Bavaria 54,733,000 marks, Saxony 35,465,300 marks, Württemberg 19,693,200 marks, Baden 16,265,100 marks, Alsace-Lorraine 15,494,800 marks, Hesse 9,716,800 marks, Hamburg 6,376,400 marks, Mecklenburg-Schwerin 5,593,500 marks, Brunswick 4,063,800 marks, Oldenburg 3,496,200 marks, Saxe-Weimar 3,176,100 marks, Anhalt 2,745,200 marks, Saxe-Meiningen 2,189,100 marks, Saxe-Coburg-Gotha 2,026,100 marks, Bremen 1,838,300 marks, Lippe 1,263,500 marks, Reuss-Schleiz 1,241,500 marks, Mecklenburg-Strelitz 960,100 marks, Schwarzburg-Rudolstadt 830,400 marks, Lübeck 779,500 marks, Schwarzburg-Sondershausen 728,200 marks, Reuss-Greiz 631,300 marks, Waldeck 540,300 marks, Schaumburg-Lippe 385,600 marks.

The funded debt of the empire on March 31, 1898, consisted of 1,240,000,000 marks of 3½-per-cent. and 942,246,800 marks of 3-per-cent. bonds; total, 2,182,246,800 marks. Of the old debt of the North German Confederation 17,700,000 marks remained unpaid, and the unfunded debts were 70,000,000 marks of treasury bonds and 120,000,000 marks of paper money, making the total liabilities 2,372,246,500 marks, the 3-per-cent. bonds having been increased by 40,000,000 marks during the year and the treasury bonds by 10,000,000 marks. The amount of the Invalid fund was 405,741,710 marks. The war fund of 120,000,000 marks was preserved in specie.

The budgets and debts of the individual states, in the case of the most of them for 1900, in that of the others for 1899, are given in marks in the following table:

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	57,738,731	57,664,066	23,842,800
Anhalt.....	26,417,450	26,417,450	167,500
Baden.....	86,068,577	92,120,313	325,625,433
Bavaria.....	379,358,055	379,358,055	1,435,395,775
Bremen.....	23,373,105	22,229,925	189,597,300
Brunswick.....	14,461,000	14,461,000	28,102,862
Hamburg.....	89,910,202	89,316,722	245,305,781
Hesse.....	37,378,159	37,418,195	238,789,225
Lippe.....	1,339,889	1,398,066	1,167,991
Lübeck.....	5,019,705	5,019,705	18,613,091
Mecklenburg-Schwerin	4,261,000	4,261,000	111,835,300
Mecklenburg-Strelitz
Oldenburg.....	8,133,681	8,265,605	56,107,490
Prussia.....	2,326,327,348	2,326,327,348	6,506,650,595
Reuss-Greiz.....	1,540,883	1,540,883
Reuss-Schleiz.....	2,731,403	2,731,403	1,040,550
Saxe-Altenburg.....	4,571,834	4,571,834	687,450
Saxe-Coburg-Gotha...	8,077,429	4,664,502	3,077,253
Saxe-Meiningen.....	7,624,330	6,802,800	8,688,969
Saxe-Weimar.....	10,461,076	10,461,076	93,567,670
Saxony.....	82,934,955	82,934,955	752,464,950
Schaumburg-Lippe.....	1,023,970	1,023,970	481,500
Schwarzburg-Rudolstadt	2,778,050	2,778,050	3,984,000
Schwarzburg-Sondershausen	2,985,755	2,985,755	3,367,951
Waldeck.....	1,546,779	1,546,779	1,671,000
Württemberg.....	81,498,066	80,750,167	498,068,800

In Alsace-Lorraine there was also an extraordinary revenue of 4,387,908 marks and an expenditure of 4,847,240 marks provided for. Anhalt has 7,199,201 marks' worth of public property. The debt of Baden is secured on the railroads, which produced a net revenue of 23,299,488 marks in

1897 and have cost the state 489,000,000 marks to build. Nearly half of Bavaria's revenue is derived from railroads, posts, telegraphs, and mines, and of the debt 1,090,441,943 marks were raised for building railroads, which yielded above expenses and interest 13,882,044 marks in 1897. The debt of Bremen, incurred for railroads and harbor works, requires a great part of the revenue to pay the interest. Brunswick devotes a separate revenue of 2,634,000 marks to education and art, and the duke's civil list of 1,125,000 marks is also outside of the budget; besides the revenue from domains and forests and from an invested fund of 41,300,000 marks, the state receives an annuity of 2,625,000 marks on account of the railroads transferred to Prussia, while it has to pay an annuity of 1,219,740 marks to extinguish a premium loan that is separate from the general debt, 80 per cent. of the latter having been spent on railroads. The debt of Hamburg, incurred for public improvements, absorbs 13,714,500 marks of the revenue, one third of which is raised, as in Bremen also, by direct taxation, which in Hamburg is as much as 30 marks per capita. In Hesse the debt is represented by railroads; there was an extraordinary revenue of 4,021,388 marks and extraordinary expenditure of 3,224,900 marks. Lübeck possesses domains and forests and invested funds from which two fifths of the revenue is obtained, and direct taxes give most of the remainder, while of the expenditure one fourth goes for interest and amortization of the debt. The budget of Mecklenburg-Schwerin is the common budget, exclusive of the separate revenue of the states and the revenue of the grand duke, which amounts to 20,926,000 marks a year, derived from domains, funds, and railroads, in value far exceeding the debt. In Mecklenburg-Strelitz the grand duke bears the whole cost of the public administration, and publishes no accounts of his revenue and expenditure; there is a debt of about 6,000,000 marks. Of the revenue of Prussia 92,022,804 marks come from domains and forests, 183,131,800 marks from direct taxes, 78,885,000 marks from indirect taxes, 82,475,900 marks from the lottery, 2,357,900 marks from the marine bank, 364,070 marks from the mint, 149,289,988 marks from mines, furnaces, and salt works, 1,285,962,519 marks from railroads, 334,980,560 from the finance administration and dotations, 71,117,200 marks from the Ministry of Justice, 16,734,631 marks from the Ministry of the Interior, 8,038,000 marks from the Ministry of Public Works, 5,237,281 marks from the Ministry of State, 4,683,566 marks from the Ministry of Agriculture, 4,448,359 marks from the Ministry of Instruction and Worship, 4,446,381 marks from the Ministry of Industry and Commerce, 2,146,489 marks from the Ministry of State, 4,600 marks from the Ministry of Foreign Affairs, and 300 marks from the Ministry of War. Of the total expenditure of the Prussian Government 1,050,953,998 marks are working expenditure, of which 45,306,150 marks are required for the domains and forests, 122,649,240 marks for financial administration, 127,955,497 marks for the operation of mines, furnaces, and salt works, and 754,953,111 marks for the operation of railroads; 648,085,662 marks are charges on the consolidated fund, of which 227,685,246 marks are interest on the public debt, including railroad debts, 39,033,903 marks the annual sinking fund, 298,068,026 marks the annual contribution to imperial funds, 70,970,991 marks appanages, annuities, and indemnities, 8,000,000 marks the addition to the King's crown dotation, 2,444,140 marks expenses of management, etc., 1,672,915 marks the expense of the Chamber of Deputies, and 210,440 marks that of the Chamber

of Lords; 488,135,878 marks are the cost of the state administration, of which 105,757,000 marks are assigned to the Ministry of Justice, 137,758,158 marks to the Ministry of Instruction and Worship, 64,961,338 marks to the Ministry of the Interior, 30,440,660 marks to the Ministry of Public Works, 21,659,785 marks to the Ministry of Agriculture, Domains, and Forests, 10,656,288 marks to the Ministry of Commerce and Industry, 108,004,209 marks to the Ministry of Finance, 551,300 marks to the Ministry of Foreign Affairs, 138,297 marks to the Ministry of War, and 8,118,843 marks to the Ministry of State. The total ordinary expenditure of Prussia amounts to 2,187,175,538 marks; extraordinary expenditure, 139,151,810 marks. For the year ending March 31, 1901, the revenue is estimated at 2,472,266,033 marks, including 166,409,282 marks to be expended for extraordinary purposes. The national debt of Prussia bears $3\frac{1}{2}$ per cent. interest, except 865,000,000 marks of 3-per cent. bonds, and the annual charge in 1900 for interest, sinking fund, and management amounted to 237,956,411 marks. The expenditure of the Prussian Government amounts to 73 marks per capita; the direct taxes are 5.70 marks, including only the income tax, the supplementary tax on investments, and the tax on commercial travelers, as in 1895 the land and house taxes and the trade licenses were transferred to the communes. The annual average income in Prussia per capita is estimated at 342 marks; the total national income at 10,000,000,000 marks. The revenue of the Saxon duchies is derived in great part from domains, and direct taxes provide the rest. Saxe-Altenburg's small debt can be extinguished by funds accumulated in the treasury six times the amount. In the others the debts are more than covered by property and cash assets. The Kingdom of Saxony receives a net revenue from railroads more than covering the expenses of the debt, which are 31,575,000 marks a year, and from the railroads and the domains, forests, and mines it gets more than half its total revenue and taxes only lightly the incomes and earnings of the population, estimated at a total of 2,000,000,000 marks a year. The debt of Württemberg, the bulk of which pays $3\frac{1}{2}$ per cent. interest, was contracted mainly for railroads.

The Army.—The German army is organized territorially, and the army corps are distributed as follow: First, East Prussia; Second, Pomerania; Third, Brandenburg; Fourth, Prussian Saxony; Fifth, Posen; Sixth, Silesia; Seventh, Westphalia; Eighth, Rhenish Prussia; Ninth, Schleswig-Holstein; Tenth, Hanover; Eleventh, Hesse-Nassau; Twelfth, Saxony; Thirteenth, Württemberg; Fourteenth, Baden; Fifteenth, Alsace; Sixteenth, Lorraine; Seventeenth, West Prussia; Eighteenth and Nineteenth, Bavaria. The Prussian Guards form the Twentieth Corps, and in time of war the separate Hessian division will be strengthened to form the Twenty-first Army Corps. Each army corps can be mobilized independently and take the field as a complete fighting unit, composed of troops of all arms and having its separate stores and equipments. A corps is composed of 2 divisions of infantry, each of 2 brigades, each brigade of 2 regiments of 3 battalions each, with 4 squadrons of cavalry and 4 field batteries of 6 guns, and either a rifle battalion or a battalion of pioneers attached to every infantry division; and besides the divisional cavalry and artillery every corps contains a cavalry division of 4 regiments, with 2 batteries of horse artillery attached, an artillery reserve of 6 field batteries and 1 mounted battery, a battalion of pioneers, and a battalion of train. The battalion of infantry on

the peace footing is 544 men, to be raised in war to 1,002 by calling in part of the reserves. The troops stationed in Alsace-Lorraine and the guard corps are kept at the strength of 686 men in peace time. The total number of field batteries, including 47 mounted batteries, is 494, usually of 4 guns in time of peace and 6 guns in war. The total number of men trained in the German army and available for war is estimated at 3,000,000. The effective strength of the army on the peace footing in 1899 was 23,230 officers and 562,266 men, with 98,038 horses. There are 215 regiments of infantry, numbering 12,028 officers and 362,469 men; 19 battalions of rifles, 410 officers and 11,974 men; 288 district commands, 819 officers and 5,548 men; and 2,572 men in the administrative service, schools, etc., making a total of 13,257 officers and 382,563 men in the infantry. The cavalry numbers 93 regiments, containing 2,385 officers and 65,710 men, besides 813 on special duty. In the 43 regiments of field artillery there were 2,671 officers and 57,843 men, besides 810 on special duty. The foot artillery consists of 17 regiments and 1 battalion, containing 873 officers and 22,702 men, besides 134 on special duty. The engineers consisted of 23 battalions of pioneers, 3 railroad regiments, 2 balloon detachments, 1 railroad battalion, and 3 railroad companies, containing in all 738 officers and 19,014 men, besides 127 on special duty. Of train there are 21 battalions, containing 310 officers and 7,745 men, besides 69 on special duty. There were 529 officers and 4,453 men in the special formations, and the number of general officers and officers not attached to regiments was 2,467, with 283 men. Every German is liable to military service, and no substitution is allowed. All troops are bound to obey the German Emperor, to whom they swear an oath of fidelity, except the Bavarians, who are not required to take the oath in time of peace. Bavaria, Saxony, and Württemberg have war ministries of their own, and the kings reserve the right to appoint the officers; but the Emperor's approval is necessary for all appointments, and nothing affecting the superior direction of the troops of any state can be done without his consent. The period of service in the active army and its reserve is six years for the infantry and seven for the cavalry and field artillery, and service with the colors is two years for infantry and three years for the other arms. When the entire period has expired the soldier is inscribed in the Landwehr for five years, or in the case of the cavalry and artillery soldiers, who have to serve one year longer, in the standing army and reserve. At the age of twenty the young men are summoned for service; out of about 360,000 who are liable the annual contingent is obtained by lot, and all who are not drawn are inscribed in the *Ersatz* reserve, in which they should receive twenty weeks of training in three different periods, although many of them are never called out for drill, and in time of war they may be drafted into the army to fill depleted ranks, otherwise they pass at the end of twelve years into the Landsturm, the final levy for the defense of the fatherland, to which every able-bodied man between seventeen and forty-five years of age belongs unless he is in the active army or its reserve or in the Landwehr. Scattered among the active troops are educated young men, about 8,000 each year, serving at their own expense a single year, from whom many of the Landwehr officers are selected. Among the improvements introduced most recently in the German army is the formation of machine-gun detachments, to be attached to rifle or infantry regiments in all the army corps. Experiments

have been made with motor wagons for the transport of food and ammunition and with balloons filled with hydrogen gas for use in fortresses. The increase of the army on a peace footing for 1901 is 295 officers, 25 surgeons, 3,125 rank and file, and 1,556 horses.

The Navy.—The naval programme sanctioned by the Reichstag in 1898 provided for a fleet of 17 battle ships, besides 2 in reserve; 8 smaller battle ships, already existing; 9 large and 26 small cruisers, besides 3 large and 4 small ones as a reserve. This was exclusive of the 8 torpedo gunboats, 19 gunboats, 35 first-class torpedo boats, 103 smaller torpedo boats, and various training ships and vessels for special service that were in existence. To complete the programme it was necessary to build 7 new battle ships and 2 large and 7 small cruisers before 1906, and the total cost was estimated at 1,000,000,000 marks. There were afloat at the beginning of 1900, of second-class battle ships 8, and 6 were building; 8 third-class battle ships; 19 coast-defense vessels; 8 second-class cruisers, and 2 were building; and 5 third-class cruisers. The programme of 1898 was regarded at the time as fixing the final strength of the navy, and no new vessels were to be built excepting as they were required to replace the old ones, which would, at the end of a certain period determined for each class, be relegated to the reserve. The battle ships of the class of Kaiser Friedrich der Dritte, launched in 1896, have a displacement of 11,180 tons, 11½ inches of armor at the water line, engines of 13,000 horse power, giving a speed of 18 knots, and an armament of 4 9.4-inch guns and 18 6-inch, 12 3.4-inch, and 18 small quick firers. Of this type are Kaiser Wilhelm II, launched in 1897; Kaiser Wilhelm der Grosse, launched in 1899; and the Kaiser and Deutschland, yet to be built. A new ship has been built on the plan of the Fürst Bismarck, launched in 1897, of 10,650 tons, with 8-inch armor, 14,000 horse engines, a speed of 19 knots, and a battery of 4 9.4-inch, 12 6-inch quick-firing, 10 3.4-inch quick-firing, and 18 machine guns. Three new ships of the larger class will have a displacement of 12,000 tons, 12 inches of armor, the same steaming capacity as the Deutschland, and the same armament. A new type of cruiser is the Hertha class, comprising also the Freya, Victoria Luise, Vineta, Hansa, and two others not yet completed, having a displacement of 5,650 tons, 4 inches of deck armor, and an armament of quick-firing guns—2 8.2-inch, 8 6-inch, and 10 3.4-inch—protected by armor, with water-tube boilers, 10,000 horse power, giving a speed of 18½ knots. The German cruisers have no woodwork, and guns are mounted in every available part of the superstructure, giving a remarkably heavy total energy of fire. The small deck-protected cruisers Gazelle, Niobe, and Nympe, of 2,850 tons, with engines of 6,000 horse power making 19½ knots, are armed with 10 4-inch quick-firers.

A new naval programme practically doubling the strength of the navy as previously fixed was the chief subject of debate in the Reichstag session of 1900. It proposed to increase the number of battle ships from 19 to 38, the number of large cruisers from 12 to 20, and the number of small cruisers from 30 to 45. In the next sixteen years 3 large and 3 small ships are to be annually placed on the stocks. In order to bring the fleet intended for active service up to its full strength as soon as possible the new vessels intended for two new squadrons will be completed before the ships in the reserve fleet are replaced by new constructions. Each of the new squadrons will consist of a flagship, 8 battle ships, 2 large and

8 small cruisers for scouting purposes with the fleet when stationed in home waters, and 5 large and 5 small cruisers for service on foreign stations. The reserve will be increased by 2 battle ships, 1 large and 2 small cruisers. The monitors of the Siegfried class will be replaced by battle ships. The first two squadrons of the new navy will form the fleet on active service and the third and fourth squadrons will form the reserve fleet, half of which, as well as the entire active fleet, is to be kept in constant use.

The *personnel* of the German fleet for 1900 consisted of 1,118 executive officers, 1,119 warrant officers, 142 surgeons, 5,193 petty officers, 18,079 seamen, and 1,000 boys. An increase of 33,746 men is calculated for the navy as it will be in 1920. The increase provided for in the budget of 1901 is 91 officers, 11 surgeons, and 2,735 men. The vessels to be placed on the stocks during the year are 2 battle ships, 1 large cruiser, and 2 small cruisers. The naval estimates show an increase of 49,000,000 marks over the estimates of the preceding year.

Commerce and Production.—The production of wheat in 1899 was 3,292,945 metric tons of 2,200 pounds; of rye, 7,532,706 tons; of barley, 2,514,024 tons; of oats, 5,780,699 tons; of buckwheat, 99,487 tons; of potatoes, 31,791,683 tons; of hay, 21,971,628 tons; of sugar beets, 11,568,589 tons; of fodder beets and turnips, 10,502,608 tons; of hops, 21,867 tons; of wine, 1,406,818 hectolitres. The output of coal in 1898, according to the provisional report, was 96,280,000 tons; of lignite, 31,648,500 tons; of iron ore, 15,893,200 tons; of zinc ore, 641,700 tons; of lead ore, 151,600 tons; of salt, 702,800 tons; of potassic salt, 2,208,900 tons; of other mine products, 300,200 tons. The value of all the mineral products was 939,000,000 marks. The quantity of pig iron produced in 1897 was 6,881,466 tons; of zinc, 150,739 tons; of lead, 118,881 tons; of copper, 29,408 tons; of silver, 448 tons; of tin, 929 tons; of sulphur and sulphuric acid, 625,447 tons; of gold, 2,781 kilogrammes; of nickel, bismuth, vitriol, and other products, 34,776 tons. The total value of foundry products was 531,824,814 tons. The quantity of manufactured iron made was 7,697,883 tons, valued at 1,009,899,942 marks. The exports of fresh fish in 1898 were valued at 6,600,000 marks, while the imports were 28,000,000 marks, those of salt herrings 35,700,000 marks, and those of other cured fish 5,100,000 marks in value. There were 402 sugar factories in 1898, which out of 13,697,892 tons of beets produced 1,755,229 tons of raw sugar and 344,480 tons of molasses. The production of refined sugar was 1,207,350 tons. From starch were obtained 7,527 tons of sugar, 35,413 tons of sirup, and 4,207 tons of coloring matter. The quantity of beer brewed in 1898 was 66,423,000 hectolitres, of which 16,982,000 hectolitres were brewed in Bavaria, which has its own excise laws and forbids the use of any material but malt, hops, and water. The quantity of alcohol produced in 60,779 distilleries was 3,288,000 hectolitres.

The total value of the special imports in 1898 was 5,439,676,000 marks; of the special exports, 4,010,565,000 marks. The imports of live animals were 182,169,000 marks in value, including 91,712,000 marks for horses and 5,961,000 marks for hogs; exports of live animals, 20,872,000 marks; imports of animal products were 150,508,000 marks, and exports 32,622,000 marks; imports of articles of consumption were 1,636,867,000 marks, and exports 483,227,000 marks; imports of seeds and plants were 56,034,000 marks, and exports 34,080,000 marks; imports of fuel were 137,025,000 marks, and exports 209,578,000 marks; imports of fats and oils were 271,140,000 marks, including

80,173,000 marks for petroleum, exports of fats and oils, 31,272,000 marks; imports of chemicals, drugs, and colors were 281,190,000 marks, and exports 377,842,000 marks; imports of stone, clay, glass, and manufactures thereof were 71,803,000 marks, and exports 154,825,000 marks; imports of metals, raw and manufactured, were 654,966,000 marks, and exports 739,391,000 marks; imports of timber and wood manufactures were 390,340,000 marks, and exports 133,112,000 marks; imports of paper and paper manufactures were 26,536,000 marks, and exports 103,443,000 marks; imports of hides and leather were 248,991,000 marks, and exports 236,685,000 marks; imports of textile materials and manufactures were 1,092,424,000 marks, and exports 890,682,000 marks; imports of rubber and rubber goods were 68,614,000 marks, and exports 54,781,000 marks; imports of machinery and instruments were 101,433,000 marks, and exports 204,653,000 marks; imports of hardware and cutlery were 21,510,000 marks, and exports 106,483,000 marks; imports of books and art objects were 42,117,000 marks, and exports 136,191,000 marks; miscellaneous exports, 826,000 marks. The value of wheat imported was 231,447,000 marks; of rye, 102,595,000 marks; of barley, 132,776,000 marks. The imports of coffee were 137,028,000 marks in value. The value of raw hides imported was 141,479,000 marks. The main textile materials imported were raw cotton for 250,792,000 marks, wool for 241,406,000 marks, and raw silk for 103,135,000 marks, and 92,239,000 marks were paid for imported woolen yarns. The chief exports of textile manufactures were woolen goods for 133,647,000 marks, mixed silk and cotton cloth for 103,192,000 marks, coarse cottons for 67,272,000 marks, and hosiery for 80,709,000 marks, and trimmings and haberdashery were exported to the amount of 96,661,000 marks. The exports of leather goods were 76,548,000 marks in value; of paper, 59,280,000 marks; of wooden wares, 66,715,000 marks. The value of aniline dyes exported was 71,950,000 marks. Coal exports amounted to 200,493,000 marks. The exports of sugar reached 212,357,000 marks; hop exports, 27,135,000 marks. Home manufactures and agricultural products are encouraged by protective duties, and on spirits, malt, salt, sugar, and tobacco internal taxes are levied. Of the total imports in 1898 the value of 2,853,988,000 marks paid duties amounting to 515,326,000 marks, an average of 18.1 per cent. of the values of dutiable goods; and the value of 2,585,688,000 marks were free of duty. The imports of gold and silver in 1898, included under metals, were 337,372,000 marks; exports, 253,511,000 marks.

The year 1899 was one of extraordinary business activity in Germany, and was marked by a general advance of prices, especially in coal and iron, the increasing want of which was felt more than at any time in the previous five years, and was likely to become more acute on account of the prospective rapid increase of the German navy. The enhancement of prices was in part brought about by the operation of combinations and rings among producers, the number of which had increased in three years from 350 to about 550. The imports of iron and iron manufactures were 839,839 tons in 1899, an increase since 1897 of 275,094 tons and an increase in value of 32,060,000 marks. The imports of machinery and implements were 150,439 tons, an increase of 67,982 tons in quantity and 26,855,000 marks in value. The exports of iron and iron manufactures amounted to 1,509,887 tons in 1899, an increase of 116,934 tons in quantity and 82,001,300 marks in value; exports of machinery and implements were 283,245 tons, an in-

crease of 72,727 tons and in value of 59,800,000 marks. The rapid growth of manufactures in Germany has produced a dearth of both labor and capital that tends to check continued expansion. The constant rise of industrial wages has not only depleted the agricultural districts of their laborers and diminished emigration, but attracts laborers from Slavic countries and Italy. The lack of capital has several times caused a stringency in the money market, which may be rendered acute when the Imperial Government applies for loans to build the new navy and the Prussian Government for the money to dig the Midland Canal.

The distribution of the special commerce of 1898 is shown in the following table, giving in marks the value of imports from and exports to each country:

COUNTRIES.	Imports.	Exports.
Great Britain	826,380,000	804,728,000
Russia	736,519,000	440,506,000
Austria-Hungary.....	661,176,000	453,688,000
France	260,306,000	205,901,000
Netherlands	184,110,000	290,091,000
Switzerland.....	178,518,000	255,983,000
Belgium.....	201,356,000	187,272,000
Norway and Sweden.....	131,995,000	170,216,000
Italy.....	170,315,000	94,368,000
Denmark.....	65,617,000	120,296,000
German free ports.....	16,092,000	66,909,000
Turkey and Greece.....	79,908,000	89,269,000
Spain.....	48,148,000	94,725,000
Portugal.....	17,564,000	15,005,000
North America.....	920,690,000	383,364,000
South America.....	408,517,000	148,935,000
British India.....	230,942,000	57,131,600
The rest of Asia.....	118,394,000	112,956,000
Africa.....	97,161,000	63,465,000
Australia.....	88,295,000	34,669,000
Other countries.....	3,662,000	683,000
Total	5,489,676,000	4,010,565,000

Navigation.—The German merchant navy, on Jan. 1, 1899, comprised 2,490 sailing vessels, of 601,161 tons, and 1,223 steamers, of 1,038,391 tons; total, 3,713 vessels, of 1,639,552 tons, counting all seagoing craft of more than 17.65 tons, but not vessels engaged in coasting and inland navigation, of which, on Jan. 1, 1898, there were 22,564, of 3,371,247 tons. Of the sailing vessels trading with foreign ports 431, of 48,861 tons, and of the steamers 427, of 170,857 tons, belonged in the Baltic, while 2,059 sailing vessels, of 552,300 tons, and 796 steamers, of 867,534 tons, belonged to North Sea ports. The crews of the merchant vessels numbered 43,146 men. Of the sailing vessels 578, and of the steamers 1,214, were of iron or steel. There were 46 sailing vessels and 303 steamers over 2,000 tons, 211 sailing vessels and 195 steamers between that and 1,000 tons, 107 sailing vessels and 236 steamers from 500 to 1,000 tons, 339 sailing vessels and 343 steamers between 100 and 500 tons, and 1,787 sailing vessels and 146 steamers under 100 tons. The length of navigable rivers in Germany is 5,831 miles, not counting 1,371 miles of canalized rivers; the length of canals, 1,452 miles. The Kaiser Wilhelm Ship Canal, connecting the naval ports of Kiel and Wilhelmshaven, 61 miles long, with a breadth of 213 feet at the surface and 72 feet at bottom and a depth of 29½ feet, was built at a cost of 156,000,000 marks, primarily to afford a safe and quick passage of naval forces between the North Sea and the Baltic. In aggregate tonnage the German commercial marine stands second in the world, and its proportion to that of the whole world has risen in twenty-five years from 5 to 9 per cent., the German steam tonnage having increased tenfold.

Railroads, Posts, and Telegraphs.—The mileage of completed railroads in Germany in-

creased from 27,851 miles in 1893 to 30,093 in 1898. In the beginning of 1899 there were 31,150 miles in operation, of which 2,945 miles belonged to companies, and of these 120 miles were operated with the Government system. The narrow-gauge railroads were only 861 miles in length, of which 412 miles belonged to the state. The capital expenditure up to 1898 was 11,935,490,000 marks; gross receipts, 1,684,730,000 marks; expenses, 957,674,000 marks; net earnings, 6.09 per cent.; number of passengers, 692,354,000, paying 454,979,000 marks; metric tons of freight, 285,586,000, paying 1,092,227,000 marks.

The number of letters forwarded by the imperial post office during 1898 was 1,306,423,560, by the Bavarian 144,323,680, by the Würtemberger 59,337,330; total, 1,510,804,570. The number of postal cards was 612,729,814 in the imperial postal district, 40,240,320 in Bavaria, and 26,666,406 in Württemberg; total, 679,636,540. The number of circulars, etc., was 658,119,006 in the imperial district, 61,799,603 in Bavaria, and 32,322,997 in Württemberg; total, 752,241,606. The number of samples in the imperial district was 45,556,782, in Bavaria 3,819,820, in Württemberg 1,326,208; total, 50,702,810. The number of newspapers was 1,029,841,514 in the imperial district, 214,874,063 in Bavaria, and in Württemberg 51,062,147; total, 1,295,777,724. The value of money remitted was 22,371,535,916 marks in the imperial postal district, 2,164,069,745 marks in Bavaria, and 995,200,790 marks in Württemberg; total, 25,530,806,451 marks. The receipts of the imperial post office from postal, telegraph, and telephone services were 349,150,754 marks, and expenses 311,361,262 marks, leaving a surplus of 37,789,492 marks; receipts of the Bavarian services were 31,837,149 marks, and expenses 27,133,608 marks, leaving 4,703,541 marks; receipts in Württemberg were 14,571,653 marks, and expenses 12,078,434 marks, leaving 2,493,219 marks. The telegraph lines of the imperial post office had a length in 1898 of 64,136 miles, with 245,528 miles of wire; the Bavarian lines a length of 9,557 miles, with 25,948 miles of wire; the Württemberg lines a length of 2,725 miles, with 6,935 miles of wire; total length of lines, 76,418, and length of wire, 278,411 miles. The number of internal telegrams sent in the imperial district was 27,242,694, in Bavaria 2,383,023, and in Württemberg 1,226,661; total, 30,852,378. Of foreign telegrams in the imperial district 10,441,372 were sent, 619,662 in Bavaria, and in Württemberg 213,947; total foreign telegrams, 11,274,981. There were 212,121 telephone connections in 900 towns of the German Empire in 1898, with 18,521 miles of line and 220,104 miles of wire, and the number of conversations was 490,788,565; of long-distance circuits there were 1,251, with 13,400 miles of line and 80,004 miles of wire, and the number of conversations during 1898 was 72,339,266.

Dependencies.—The German possessions overseas have all been acquired since 1884. In Africa the German protectorates have an estimated total area of 930,760 square miles and about 14,200,000 inhabitants (see EAST AFRICA, WEST AFRICA, and German Southwest Africa under CAPE COLONY). In Asia, Germany holds under a lease from the Chinese Government the naval station of Kiaochau, on the Shantung peninsula. The leased area is about 200 square miles, with 60,000 inhabitants. The neutral zone over which the German Imperial Governor has control is 30 miles broad, having an area of 2,500 square miles and a population of 1,200,000. The cost of the administration for 1901 is 9,780,000 marks. A garrison of 1,500 marines is stationed in the fort. The town will be a free port. The Government offers

inducements to German colonists to settle in the protectorate on land it has purchased from the Chinese owners, who are not at liberty to sell to individual Europeans. The coal fields of Wiehsien and Pashan, within 100 miles of Kiaochau, will be worked by German capitalists, who have an option on all mining and railroad enterprises to be undertaken in the Shantung province. The first section of 25 miles of a railroad from Kiaochau was completed early in 1900 after interruptions caused by the opposition of the inhabitants, who attacked the Germans near Kaumi.

The German possessions in the Pacific were increased in 1899 by the annexation of the two largest of the Samoan islands, Great Britain and the United States withdrawing from the tripartite control and relinquishing their rights in respect to these islands; and by the acquisition from Spain of the Caroline and Pelew groups and of the Mariana Islands with the exception of Guam, previously ceded to the United States. The cession, on the other hand, of Choiseul, Isabel, and other islands of the Solomon Archipelago to Great Britain diminished the total land area, which after these changes amounts to about 96,160 square miles, with a population of 427,000. The northeastern part of New Guinea was declared a German protectorate in 1884, under the name of *Kaiser Wilhelm's Land*. The area is about 70,000 square miles, the population 110,000. There were 58 Europeans in 1899, of whom 53 were Germans. There are over 36,000 coconut palms, which are taken care of for the production of copra. Cotton, tobacco, and coffee have been cultivated experimentally. Besides copra, the natives sell trepang and mother-of-pearl for trade goods. The area and sago palms, bamboos, and ebony and other woods are found in the forests, and recently gold has been discovered in the Bismarck mountains. The administration was formerly in the hands of the New Guinea Company, but on April 1, 1899, it was assumed, together with that of the Bismarck and Solomon Islands, by the Imperial Government, which appointed as Governor R. von Bennigsen. The local revenue for 1899 was estimated at 75,000 marks, and expenditure at 732,000 marks; imperial subvention, 657,000 marks.

The *Bismarck Archipelago* includes Neu Pommern (formerly New Britain), Neu Mecklenburg (formerly New Ireland), Neu Lauenburg (formerly the Duke of York Islands), Neu Hanover, the Admiralty, the Anchorite, the Hermit, and other islands. The aggregate area is estimated at 20,000 square miles, the population at 188,000. There were 200 Europeans in 1899, of whom 96 were Germans, and there were 64 Chinamen and 68 Samoans and Fijians. The imports for 1899 were valued at 1,060,000 marks; exports, 939,110 marks, of which 726,400 marks represent copra and 120,800 marks trepang.

The *Solomon Islands* are divided between Germany and Great Britain. The northern part of the group is the German portion, the area of which was decreased from 9,000 square miles, with 89,000 inhabitants, to 4,200 square miles, with 45,000 inhabitants, by the transfer to Great Britain on Nov. 14, 1899, of islands south and east of Bougainville. The products are tortoise shell and sandalwood.

The *Marshall Islands* have an area of 150 square miles and 15,000 inhabitants, besides 79 Europeans, of whom 50 are Germans engaged in the copra trade. There are plantations of coconut trees that produced 2,729 tons of copra in 1899. The total imports were valued at 465,700 marks.

Savaii and Upolu, of the Samoan group, became German by virtue of the Anglo-German agreement

of Nov. 14, 1899, which the United States accepted and ratified in January, 1900 (see SAMOA).

The Caroline, Pelew, and Marianne, or Ladrone, Islands passed into German possession on Oct. 1, 1899, by virtue of a treaty concluded with Spain on Feb. 12, 1899, for the price of 16,750,000 marks. Until a separate administration shall be organized they are under the authority of the Governor of New Guinea. The estimated annual expenditure is 220,000 marks. In 1899 the sum granted was 465,000 marks, of which 355,000 marks were required for permanent improvements. For 1901 the grant was 370,000 marks. The *Caroline Islands* are of coral formation. There are about 500 isles, of which Ponape, Yap, and Kusai are the chief, containing about 5,400 inhabitants of Malay blood, with Japanese and Chinese intermixture. The *Pelew Islands*, 26 in number, produce copra, tortoise shell, and mother-of-pearl. The German *Marianne Islands* are small and the population is scanty. The total area of the three groups is about 560 square miles, with 40,000 population.

The colonial expenditures of the Imperial Government have mounted in a progressive ratio. The Reichstag voted money in 1900 to continue the railroad in East Africa from Tanga toward Karogwe, but would not consent to begin a central railroad between Dar-es-Salaam and Mrogoro. The employment of the regular marine infantry in Kiaochau is objectionable to the representatives of the people, although the constitutional right of the Emperor to employ the conscripts wherever he wishes can not be disputed. A resolution was passed by the Reichstag requesting the Government to organize the troops in Kiaochau as far as possible on the basis of voluntary enlistment, and to take measures for the creation of a body of Chinese soldiers. The subsidies granted to the colonies for 1901 exceed those of the preceding budget by more than 5,000,000 marks. The subsidy for Southwest Africa is calculated at 9,378,000 marks; for East Africa, 9,117,000 marks; for the Cameroons, 2,192,800 marks; for Togoland, 884,000 marks; for German New Guinea, 709,700 marks; for the Caroline, Pelew, and Marianne Islands, 286,500 marks; for Samoa, 146,000 marks. This list does not include 3,020,807 marks required to cover deficits in former estimates. A sum is demanded for the construction of the central railroad in East Africa in spite of the previous rejection of the project by the Reichstag, and money is wanted to be used in settling agricultural colonists from India, who will receive, in addition to a grant of land, 500 marks each as a bonus to enable them to begin the cultivation of rice and cotton.

The Reichstag.—One of the longest and busiest sessions in the history of the German Reichstag came to an end on June 13, 1899. The first sitting was on Dec. 6, 1898, and when the members separated in June, 1899, the session was not closed, but adjourned in order that the discussion of certain bills that had not been finally disposed of might be resumed when the house met again on Nov. 14, 1899. One of the more important of these was the penal servitude bill, intended to afford protection to workmen who refused to go on strike. This measure the Emperor had suggested and announced, but while it was being discussed a strong agitation was conducted against it in the country, and it was denounced as tending to interfere with the right of coalition. When it was brought up as soon as the Reichstag resumed its sittings the Center, the National Liberals, the Radicals, and the Social Democrats were found arrayed against the Government, and it was rejected on the second reading almost without dis-

cussion. The Government acknowledged the defeat, and to make peace with the majority Prince Hohenlohe, who in 1896 had promised the Reichstag to secure the repeal throughout the empire of the laws forbidding the union of political societies one with another, accepted a resolution passed by the house, and shortly afterward promulgated a decree by which the union of political societies was permitted in all parts of the empire, notwithstanding provisions to the contrary in the laws of some of the states.

The meat inspection bill was another of the measures that engaged the attention of the Reichstag at different periods and underwent various vicissitudes. When originally introduced by the Government its ostensible and primary purpose was to safeguard the public health by preventing the sale of diseased or unwholesome meat. The Agrarians, not satisfied with the degree of protection afforded to German producers by the Government measure, mustered their full strength not only in the Conservative but in the Clerical and the National Liberty party, and with the large majority that they commanded they carried amendments that practically prohibited the importation of foreign meat on the pretext that it is impossible to make sure that meat imported from abroad has been properly inspected in the country of its origin. The Government declined to accept the bill as it passed the second reading. The Government needed the votes of the Agrarians, whose strongest element is the old Junker party of Prussia, joined by the landowning nobility of other parts of Germany. Their support was necessary to carry through the naval bill, but the protests against the transformation of the meat inspection bill that came from the Hanseatic towns and from the trading and working population of the manufacturing centers could not be ignored. To enhance the price of a prime necessary of life was a serious thing, and not less serious was the probable loss of trade and the possible danger of reprisals from the United States, with which an eighth part of the whole foreign commerce of Germany was conducted in 1898. The Agrarian amendments not only placed restrictions of a prohibitive character on foreign meat imports, but lightened the regulations for the inspection of meat slaughtered in Germany. All salted meats except ham and bacon, all meat preserved in tin cans or other vessels, and all sausages or mixtures of minced meat were forbidden to be imported at all; whole carcasses or half carcasses of beef and pork, unskinned and with heart, lungs, and kidneys undisturbed, could be imported up to Dec. 31, 1903, and cooked meat prepared in a way excluding any danger to health, and after that date the importation of all meat or meat products would be unlawful with the exception of lard, bacon, margarine, and sausage skins. The date is that of the expiration of the commercial treaties, by which time it was expected that Germany would be able to supply all the meat required for domestic consumption. The agitation started by the industrial and commercial classes subsided when it was made known that the Government and the Federal Council would not accept the bill as reported by the committee and approved by the Agrarian majority. The compromise that the ministry made with the Agrarians surprised the country, leaving as it did some of the strongest protectionist features untouched. The concessions obtained from the Agrarians were the excision of the clause practically excluding all foreign meat after the end of 1903 and the permission for pickled meat to enter the country when its origin and the manner in which it has been preserved are known by expe-

rience to exclude all danger to health and when it is possible to bring satisfactory proof of its innocuous nature on its introduction into the country. It was further provided that the meat must be imported in pieces not less than 4 kilogrammes in weight. The prohibition of the import of canned meat and of sausages was retained, and the restrictions on the importation of fresh meat were not removed. The bill was passed on the third reading on May 23 by 163 votes to 123. As the bill affects the stock-raising and meat-exporting interests of the United States and Australia, the American and British governments made inquiries. Meat extracts were not included in the prohibition, though the Government has power to extend the application of the bill to them. The bill went into force on Oct. 1. The discriminations which attended the enforcement of former statutes had gone so far toward extinguishing the American trade in meat products with Germany that it was hoped that simpler methods of inspection under this act might even help to revive trade in the meats not prohibited.

A bill known as the *lex Heinze*, intended to regulate certain phases of public morality revealed in recent criminal trials, gave occasion to scenes of obstruction such as have not been witnessed in the Reichstag since the days of the *Kulturkampf*. The Clericals introduced amendments making the bill more stringent in regard to the exposure and sale of books and works of art of an objectionable character and the censorship and supervision of theatrical and other public amusements. The Conservatives supported the bill, the National Liberals also in principle, making a large majority in favor of the most puritanical restrictions. The Social Democrats, joined by the Radicals, declared an uncompromising opposition to the measure as placing restrictions on the freedom of art and of literature. Nearly the whole intellectual world of Germany, the leading representatives of letters, art, learning, and culture in Berlin, Munich, Leipsic, and other cities, and the general public opinion of the country sustained the Socialists in their resistance. Indignation meetings and signed remonstrances showed that the measure was regarded as an invasion of the most highly valued of German liberties. The majority was not deterred, however, from the determination to force it through, and the Clerical President of the Chamber, Graf Ballestrem, whose impartiality till then had won good opinions of all parties, strained the rules to aid its passage and thereby alienated the National Liberal supporters of the bill, enabling the Socialists to block it completely. As it was an amendment of the penal code, the calling of the roll could be demanded by 50 members. The Socialists called for a roll call on each separate clause, and by leaving the hall with the Radicals left the house without a quorum unless the majority parties were present in their full strength. When later the National Liberals joined them in these tactics they were able to prevent action at all times. The result was that the bill was withdrawn and another substituted, identical with the old one in the paragraphs dealing with immorality, but not containing the paragraphs affecting art and literature. This was passed rapidly through the house without opposition. A motion passed the Reichstag for the abolition of the dictatorship in Alsace-Lorraine, the execution of which rested, however, with the Government.

The new navy bill was presented in the beginning of February, 1900. The nonrecurring expenditure for construction and armament of new vessels was estimated at 1,600,000,000 marks and

for docks and harbors at 261,000,000 marks. Of the total sum it was proposed to raise 769,000,000 marks by loans spread over the sixteen years required for the completion of the new navy, while 1,092,000,000 marks will be met from the revenue. The recurring expenditure is expected to increase 5,400,000 marks each year during the period, rising from 140,800,000 marks in 1901 to 306,270,000 marks in 1916. The bill provides that supplies must be settled every year by the estimates, fixes a maximum which the naval expenditure of each year may not exceed, and retains the paragraph of the old naval bill which lays down the principle that expenditure on the navy shall not be met by increasing indirect taxes on articles consumed by the masses. The bill was supported by the Conservatives, though without enthusiasm, and by the National Liberals. The Clericals withheld their approval until they could learn how the financial means could be provided, as with disappearing surpluses and a cutting down of the amortization of debt the country was staggering under the demands for the former navy bill and army act of 1899. The Socialists were unanimous in their opposition to the bill. Enthusiasm for a navy in Germany has never been developed except among the manufacturing class, the shipowners, and exporters of the Hanse towns, and the colonial enthusiasts. The efforts of a navy league organized for the purpose of awakening an interest in the sea power of the country failed to influence the agricultural classes or to stir the vast bulk of the population living remote from the seaboard. The Clericals and the Conservatives of Agrarian tendencies thought that the trading and industrial classes ought to bear the whole cost of naval expansion, while the Social Democrats were of the opinion that, no matter how the cost might be met, it would cause an increase in the price of bread and other articles of popular consumption. The financial aspect of the question was the first and the principal subject of discussion, and on its solution depended the extent of the increase. The vote of the Clericals was not obtained until the amount of the proposed expenditure was cut down 390,000,000 marks by reducing the number of ships for foreign service. The Government insisted that two double squadrons were necessary, as the German fleet would have to maintain its superiority both in the Baltic and the North Sea. As amended by the budget committee, the navy bill, superseding the sexennate act of 1898, provides that the future strength of the navy shall be two double squadrons, each consisting of a flagship and 16 battle ships, 8 great and 24 small cruisers for service with the fleets, 3 great and 15 small cruisers for service on foreign stations, and a reserve of 4 battle ships and 4 great and 6 small cruisers. It is expected that the fleet will be brought up to the stipulated strength by the end of 1920. The Budget Committee reported in favor of fresh and increased taxation, although the Government had taken the ground that none would be necessary. A resolution from the Center restricted the amount to be raised by loans and enjoined the Government to use any surplus that might ensue from the new taxes in the reduction of debt. The stamp duty on lotteries was doubled, and a stamp duty of 1 per cent. on every mining share issued and of 0.1 per cent. on sales of mining shares was decreed. On the sale of other securities a transfer tax of 0.03 per cent. is levied. The import duty on foreign champagne was increased 50 per cent., that on foreign spirits 33½ per cent., and the protectionist principle was carried further by increasing the duty on foreign beer 50 per cent., affecting the Pilsen beer of Bohemia, which

is consumed enormously in northern Germany, and to a less extent English ale and porter. A stamp duty of 10 pfennigs was levied on bills of lading, trade between German ports being exempted. The navy bill passed the final reading as the last act of the session by the vote of 201 National Liberals, Moderate Radicals, Clericals, and Conservatives against 103 Social Democrats, Extreme Radicals, and South German Democrats, with 17 Clericals and 2 Conservatives.

After the prorogation of the Reichstag the crisis in China led to the organization of an expedition to the far East. The Emperor in his public utterances assumed for Germany a leading part in the political adjustment of the Chinese question since German activity in Shantung had precipitated the troubles and the German minister to China had paid for it with his life, and as Germany was willing to send out a powerful expedition the other powers accepted as commander in chief of the allied forces in the Chinese imperial province of Chih-Li, the German Field-Marshal Graf Waldersee. The strength of the expedition was 582 officers, 188 officials, 120 surgeons, and 18,712 men, with 5,579 horses, and the cost was estimated at 152,770,000 marks up to March 31, 1901. The Reichstag was not summoned to vote supplies as the Constitution requires, the Government presuming that the country approved the expedition and being unable to present preliminary estimates of sufficient accuracy. When the first soldiers departed the Emperor enjoined them to take no prisoners and give no quarter, and to make the name of German a terror in China that would be remembered like that of Attila and his Huns for a thousand years. Such vindictive utterances jarred on the ears of the public, and when soldiers wrote home about unmilitary barbarities appropriate to Huns, saying they were obeying the Emperor's orders, satirical strictures in the newspapers directed against the Emperor were plainer and sharper than they ever were before. The prosecutions for *lèse-majesté* multiplied at an alarming rate, and noted journalists were among the persons convicted. When the Reichstag met, the utterances and acts of the Emperor were openly discussed for the first time without the ministers or the president intervening to stop the discussion. The principle was asserted in the press and accepted in the Reichstag that when the Emperor acts as his own chancellor and takes the direction of affairs into his own hands the immunity of his acts from public or legislative discussion which custom hitherto prescribed must cease forthwith. Prince von Hohenlohe was absent and apparently had no part in shaping the Chinese policy of the Government, and before the autumn session of the Reichstag began he offered his resignation. The Emperor accepted it on Oct. 17, and appointed Graf Bülow to succeed him as German Imperial Chancellor, Prussian Minister President, and Minister of Foreign Affairs.

The new session was opened on Nov. 14. Among measures foreshadowed were one to regulate the legal status of sailors, a reform in the system of state insurance against accidents, fresh taxation of the wine trade, and a bill dealing with insurance companies. The long-pending difference between the German and United States governments regarding the right of American insurance companies to do business in Prussia had been amicably settled. The companies that formerly had their agencies in that country were expelled because they were foreign corporations which invested the money received for premiums elsewhere beyond German jurisdiction and supervision. Under the new arrangement they are required to keep a cer-

tain reserve in Germany, and the opportunity arose when the German Government required advances in September for the Chinese expedition for an advantageous investment in imperial treasury bonds which, owing to the tightness of the Berlin market, the Government disliked to offer in Germany because the best rates obtainable would compare unfavorably with the high showing for German public credit made when the last loan was emitted, and would furnish a bad precedent for future credit operations. Nevertheless there were bitter criticisms from Agrarians, Clericals, Radicals, and Socialists when the issue of 80,000,000 marks of treasury bonds was placed in the United States, thus demonstrating the financial difficulties of Germany at the very moment when a new development of German world politics was boastfully proclaimed.

Increased estimates for the Workmen's Insurance fund and for the defenses of the country were hinted at in the speech from the throne. The treasury statement made the estimate of expenditure for 1902 2,240,947,301 marks, 174,303,289 marks increase upon the estimate for the previous year. The estimated revenue is 2,137,192,606 marks, 103,754,695 marks less than the estimated income, the deficit to be met by a loan. The principal measure to be considered by the Reichstag was the new autonomous tariff, or general tariff, which is the scale of maximum duties to be levied on imports coming from countries that do not enjoy the most-favored-nation treatment, and is to be taken as the basis on which the new commercial treaties will be negotiated. In framing the new tariff the views of all the agricultural, industrial, and commercial interests have been carefully ascertained and considered, and the Minister of the Interior has been in constant consultation with experts. The provisional tariff agreement with England was continued by vote of the Reichstag for one year longer.

The Prussian Diet.—Although the ministry, in spite of the personal efforts of the Emperor-King, failed to obtain the assent of the Diet to the construction of a ship canal from the Rhine to the Elbe in 1899, the project was brought before the Diet again in 1900 and urged as a necessary measure for the relief of the state railroads and the development of inland commerce. The bill was even extended so as to include other proposed ship canals and the improvement of natural water ways in the interests of traffic and of the amelioration of land, notably a ship canal between Berlin and Stettin, the provision of a sufficient quantity of water in the Oder Bruch, the improvement of the state of the lower Oder, the Spree, and the Havel, the development of the water ways between the Oder and the Vistula, and a Masurian lake canal; also the deepening of the harbor of Emden for the accommodation of transatlantic steamers, so as to provide a German port for Westphalia. The Diet was asked further to vote considerable sums to extend and complete the railroad system. A special tax on great department stores was proposed, with the object of strengthening the position of the middle classes in commerce and industry. A store may deal in groceries, provisions, tobacco, and drugs; in dry goods and clothing; in household utensils, crockery, glass, and furniture; or in jewelry, fancy articles, art goods, stationery, tools and instruments, hardware, and arms. If its business is confined to one of these departments it pays no tax except the existing trade tax. Any firm or corporation doing a retail business combining two or more of these departments must pay an extra tax, varying in proportion to the extent of its turnover from 1½ per cent. on sales

amounting to 500,000 marks a year up to 2 per cent. on 1,000,000 marks or over. The law is expected to prevent the extension of the system of department stores or to delay it until independent shopkeepers and small tradesmen have time to organize themselves better. Artisans and retailers may preserve their independence by means of a better technical and business education, by placing their workshops where they can make use of a common motor power, and thus employ artificial power more generally in their work by forming co-operative associations for the granting of credit and the purchase of raw materials, by dealing as far as possible on a cash basis, and perhaps by associating themselves together for the sale of their wares and establishing shops owned in common. The session of the Diet was opened on Jan. 9 and closed on June 19, having been prolonged by the difficulty that Dr. Miquel, the Minister of Finance, encountered in getting the consent of the Chamber of Deputies to the imposition of a special tax on the great retail stores having various departments.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 and upward in amount and value, that were made, became operative, or were completed in the United States in 1900. It excludes the ordinary denominational contributions for education and benevolent purposes, or State and municipal appropriations to public and sectarian institutions, and the grants of Congress for various measures of relief. It also excludes the contributions for the relief of the famine in British India, which exceeded \$250,000, and the cash gifts by individuals and corporations for the relief of the flood sufferers in Galveston, Texas, which, up to Nov. 10, were reported at \$1,253,710 and included \$27,907.02 contributed by the school children of New York city to the school children of Galveston. Beyond the specially noteworthy gifts, a striking feature of the benevolence of the citizens of the United States during the year was the large increase in the number of gifts and bequests. The known value of the gifts and bequests here enumerated exceeds \$47,500,000.

Adams, Julius, Boston, bequests to the Carney Hospital, \$25,000 outright and one fourth of his residuary estate conditionally.

Albright, John J., Buffalo, N. Y., gift to Smith College, Northampton, Mass., \$10,000.

Aldrich, J. B., Woonsocket, R. I., bequests to the Woonsocket Hospital, \$15,000; the Universalist church there, \$5,000.

Ancrum, John L., Asheville, N. C., bequests available on the death of his widow, to the Porter Military Academy, Charleston, S. C., \$15,000, and the Charleston Society for the Prevention of Cruelty to Animals, the residue of his estate, estimated at \$25,000.

Arnold, Olney, Pawtucket, R. I., bequest to Tufts College, \$5,000.

Atwater, Mrs. Caroline Swift, Poughkeepsie, N. Y., gift to Vassar College for its infirmary, \$12,000, doubling her gift of 1899.

Avery, Samuel Putnam, New York, gift to the New York Public Library, a collection of 17,000 prints, etchings, lithographs, and photographs, representing the labor of more than thirty years and a large expenditure of money.

Banker, Henrietta, Essex County, N. Y., bequests to the National American Woman's Suffrage Association and the town of Keene, in the Adirondacks, her residuary estate, which yielded each \$8,000.

Barber, O. C., Akron, Ohio, gift to the Akron City Hospital, to remove debt, \$100,000.

Barnard, Erastus A., Chicago, gift to the city for a public park, land valued at \$200,000.

Bartlett, A. C., Chicago, gift to Chicago University, for a physical culture hall, \$125,000.

Bates, Elizabeth H., Port Chester, N. Y., bequest to the University of Michigan, as allowed by surrogate, \$86,688. See her name in the record of 1899.

Belmont, August, New York, gift to the Cathedral of St. John the Divine, funds for a chapel to cost between \$150,000 and \$200,000.

Beloit College, Beloit, Wis., gifts from friends for permanent endowment, \$350,000.

Bennett, Joseph M., Philadelphia, bequests to the University of Pennsylvania and the Methodist Orphanage, nearly all of an estate estimated at \$2,000,000.

Bennett, Mrs. Margaret J., Baltimore, bequests to the Mount Vernon Place Methodist Church, \$30,000; Woman's College, Maryland Hospital for Women, Home for the Aged of the Methodist Episcopal Church, and the Patterson Memorial Association, each \$25,000; other institutions, \$22,000; Boys' Home Society, \$10,000; and to trustees for the founding of a Bennett Home for Deserving Women, \$150,000.

Billings, L. F., gift to Harvard University, \$5,000.

Blackstone, Timothy B., Chicago, bequests to the James Blackstone Memorial Library Association, Branford, Conn., \$100,000; and the Art Institute, Passavant Memorial Hospital, Chicago Relief and Aid Society, Chicago Orphan Asylum, Chicago Home for the Friendless, and St. Luke's Hospital, each \$25,000.

Boardman, Mrs. Lucy, New Haven, gift to Trinity Episcopal Church, property valued at \$65,000.

Bowen, Charles C., Detroit, bequest to Kalamazoo College for a Greek professorship, \$50,000.

Boyd, Edward, Cincinnati, bequest to St. Paul's Protestant Episcopal Church, \$10,000.

Boylston, Mrs. Josephine E., Newton, Mass., bequests to religious and charitable institutions, chiefly Congregational, an aggregate of \$9,000.

Bradford, George E., Gloucester, Mass., gift to the local Young Men's Christian Association, real estate valued at \$18,000.

Bradford, Prof. Vincent L., Philadelphia (died 1884), bequest to Washington and Lee University, made available by the death of his widow, his law library, collection of paintings, and half of his estate, estimated at over \$200,000.

Brenz, John D., Brooklyn, N. Y., bequests to institutions in New York and Italy, \$5,000; and to his executors the residue of his estate, valued at \$500,000, on the death of his sister, the income to be used to promote "charity or religion by the Protestant faith only."

Brigham, Robert Breck, Boston, bequests to nearly every charitable institution in Boston, an annuity of \$1,000, and to trustees the residue of his estate, estimated at \$3,000,000 to \$5,000,000, for the erection of a Hospital for Incurables.

Brodhead, Josephine, Washington, D. C., bequest to the town of South Newmarket, N. H., for a public library, \$10,000.

Bromley, Mrs. Isaac H., Norwich, Conn., gift to Yale University for a lectureship on public affairs, \$5,000.

Brookings, Robert S., and **Samuel S. Cupples**, St. Louis, Mo., joint gift to Washington University, the business property known as Cupples Station, paying nearly 10 per cent. on a stock capital of \$5,000,000.

Brooklyn (N. Y.), Children's Aid Society of, gift from two woman friends, names with-

held, an infants' hospital and beach pavilion, \$10,000.

Brooklyn (N. Y.) Institute, gift from friend, name withheld, \$5,000.

Brown, Harold, Newport, R. I. (died May 10, 1900), bequests to the Domestic and Foreign Missions of the United States of America, \$100,000; diocesan missions of Rhode Island, \$50,000; St. Colomba's Church, Middletown, R. I., \$50,000; and the Rhode Island Hospital, Newport Hospital, Brown University, and Emmanuel Church, Newport, each \$25,000.

Brown, John Nicholas, Newport, R. I. (died May 1, 1900), brother of **Harold**, bequests to the Butler Hospital, \$50,000; Rhode Island Hospital, \$54,000; Brown University, \$25,000 and his pledge of \$25,000; widows and orphans of Rhode Island Episcopal clergymen, \$50,000; Newport Hospital, \$8,000; Young Men's Christian Association of Providence, \$5,000; Episcopal Domestic and Foreign Missions, \$25,000; St. John's Church, Providence, \$10,000; Redwood Library, Newport, \$5,000; and \$150,000 for ground and building and \$500,000 for endowment of the Providence Public Library.

Brush, Miss Helen C., New York, bequest to the First Church of Christ, Scientist, \$82,000; will contested.

Bryson, Mrs. Eliza Tileston, New York, bequests to the Bryson Day Nursery and the New York Infirmary for Women and Children, each \$5,000; Teachers' College, New York, and St. Christina Home, Saratoga, each \$2,500.

Bucknell University, Lewisburg, Pa., gifts from friends, an aggregate of \$60,000, which secured gift of \$15,000 from John D. Rockefeller.

Bugbee, Edwin H., Putnam, Conn., bequest to the Danielson Free Library Association, his private library and \$15,000 for a library building.

Burt, Horace G., New York, gift to the University of Wyoming, a tract of 20 acres of land adjoining the university grounds.

Calderwood, Thomas, Clinton, Iowa, bequests for missionary work in Armenia and India, \$6,000; to institutions in Clinton, Council Bluffs, and Lyons, \$8,000.

Carleton, George H., Georgetown, Mass., bequests for a home for aged men and women, \$35,000; Perley Free School, \$5,000; other benevolent purposes, \$12,000.

Carnegie, Andrew, New York, gifts to the Carnegie Library and Institute in Pittsburg, Pa., an addition of \$1,850,000 to the \$1,750,000 given in 1899 for the enlargement of the building; for the erection and endowment of a polytechnic institute in Pittsburg, \$3,000,000; for public libraries in East Orange, N. J., York, Pa., and Hawick, Scotland, each \$50,000; for a library in Fort Dodge, Iowa, \$30,000; for libraries in Leavenworth, Kan., and Chillicothe, Mo., each \$25,000; to the Tuskegee Normal and Industrial Institute, \$20,000; and to Stevens Institute of Technology, \$15,000, supplementing a previous gift of \$50,000 for a new building.

Carr, A. Whitney, Jordan, N. Y., gift to the State of Iowa for free scholarships in the State University for deserving but poor boys, \$50,000.

Carruth, John G., Philadelphia, gift to the Dormitory fund of the University of Pennsylvania, \$20,000.

Casey, Margaret De Koven, New York, bequests to three institutions in Middletown, Conn., and New York city, \$7,000.

Cathedral of St. John the Divine, New York, gift from a friend, name withheld, for the choir fund, \$100,000.

Cheney, Mrs. Mary Robinson, gift to Yale University, to promote post-graduate work, \$5,000.

Chrisman, Mrs. Eliza, Topeka, Kan., bequests to the Ohio Wesleyan University, \$35,000; First Methodist Church, Topeka, \$5,000; Women's Missionary Society, Topeka, \$3,000; and nearly all the remainder of her estate of \$250,000 for the founding of a university of Topeka, contingent on the local Methodist churches raising a like amount within ten years.

Christian, Harry L., Brooklyn, N. Y., bequests to the Hans Christian Kindergarten, \$10,000; Norwegian Hospital, \$5,000.

Chute, Isaac S., Exeter, N. H., bequests to the Exeter Hospital, his valuable residence property; Congregational Home Missionary Society, \$5,000; Berea College, Hampton Normal Institute, Tuskegee Normal Institute, and the Methodist Episcopal Church, Exeter, each \$2,000; and the American Sunday School Union, American Missionary Association, American Baptist Missionary Union, and the American Board, the residue of his estate.

Clark, Jonas G., Worcester, Mass., bequests to Clark University, which he founded, for the library and a department of art, each \$100,000; also \$1,000,000 and the residue of his estate, providing the people of Worcester raise a fund of \$500,000 within three years. If a smaller sum only is raised his estate is to double it.

Cobb, Silas B., Chicago, bequests to Chicago Home for the Friendless, \$50,000; Orphan Asylum, \$25,000; Old People's Home and Young Men's Christian Association, each \$5,000; and American Sunday School Union, \$2,500.

Colorado College, Colorado Springs, gifts from friends, securing a promised gift of \$50,000 from Dr. D. K. Pearsons, \$150,000.

Columbia University, New York, gift from a friend, for the Library fund, \$10,000.

Cone, Albert G., Chicago, bequests to the Presbyterian Hospital, \$135,000; Chicago Home for Incurables, \$50,000; and Homeopathic Hospital, \$10,000.

Converse, E. S., and wife, Boston, gift to the Woman's Charity Club Hospital there, \$15,000.

Coram, Joseph A., Lowell, Mass., gift to Bates College, Lewiston, Me., for library building, \$20,000.

Corbin, Eli L., Oxford, N. Y., children of the late, gift to the village, a public library.

Crane, George F., and wife, New York, gift to St. Andrew's Episcopal Society at Washington, Mass., ground, chapel, and \$10,000 in bonds.

Crane, Mrs. Rachel B., Peekskill, N. Y., gift to the Boards of Home and Foreign Missions of the Presbyterian Church, each \$50,000.

Crapo, Philip M., Burlington, Iowa, gift to the new public library there, \$20,000.

Cudahy, Michael, Chicago, gift to the Catholic University of America, Washington, D. C., \$50,000.

Cupples, Samuel S. See BROOKINGS, ROBERT S.

Cutler, Isaac, Boston, gift to the town of Farmington, Me., for a public library, \$10,000.

Da Costa, Jacob M., M. D., Philadelphia, bequests to Pennsylvania Hospital, Children's Hospital, College of Physicians, and University of Pennsylvania, each \$5,000; Sunday Breakfast Association, \$1,000; Jefferson Medical College, his medical museum; and the College of Physicians, his medical library.

Davis, Moses M., Rome, N. Y., gift to the Christian Science church there, all his property, estimated at \$50,000.

De Koven, John, bequest to Yale University, \$68,152.

Denison University, Granville, Ohio, gifts from friends, about \$200,000, thus securing gift of John D. Rockefeller of \$100,000.

Dickson, Walter Scott, Salem, Mass., bequests to the city for the care of the chapel and conservatory in Greenlawn Cemetery presented by him, \$53,000; the Young Men's Christian Association, Salem Public Library, and Peabody Academy of Science, each \$10,000; four other institutions, each \$5,000; Tufts College, \$25,000 direct and \$20,000 in reversion; Salem Hospital, the reversion of \$30,000; Associated Charities of Salem, the reversion of \$50,000; and to other institutions, the reversion of \$100,000.

Dickinson Hospital, Northampton, Mass., gift to trustees from a friend, funds for an annex, to cost between \$15,000 and \$20,000.

Diehl, Rev. William, Brooklyn, N. Y., gift to his congregation, the German New Church property, valued at \$10,000.

Dixwell, Epes Sargent, Boston, bequests to the Cambridge Hospital and the Avon Home, each \$5,000; Boston Latin School Association, \$1,000.

Dodge, William Earl, New York, gift to Columbia University for the erection of a students' hall, to be under the control of the Young Men's Christian Association of New York city, \$100,000; to the Army Branch of the Young Men's Christian Association, on Governor's Island, a building, cost \$5,000; to Yale University, for the promotion of Christian citizenship, \$30,000.

Dortie, Henry T., New York city, bequests to the Society for the Prevention of Cruelty to Children, New York Eye and Ear Infirmary, New York Society for the Relief of Ruptured and Crippled, Holy Trinity Mission, Paris, France, St. Vincent de Paul French Orphan Asylum, New York, Manhattan Eye and Ear Hospital, St. Mary's Free Hospital for Children, New York Skin and Cancer Hospital, New York Free Circulating Library, and the New York Home for Incurables, each \$3,000.

Drake, Ex-Gov. Francis Marion, Centerville, Iowa, gift to Drake University, Des Moines, named after him, \$32,500. He also made the university a joint heir with his five children to his property, valued at \$3,000,000.

Dun, Robert Graham, New York, bequests to the Metropolitan Museum of Art, 25 paintings, valued at \$200,000; the Presbyterian, St. Luke's, and Mount Sinai Hospitals, and the New York Institution for the Instruction of the Deaf and Dumb, each \$5,000.

Duncan, William, M. D., Savannah, Ga., bequests to the Savannah Hospital, \$1,500 at once, and the reversion of half of his estate, valued at \$80,000.

Dunlap, Juliana, Philadelphia, bequest to the Society of St. John the Evangelist (England) for the religious work of its branch in the United States, the reversion of \$22,000.

Durand, Henry C., Lake Forest, Ill., gift to Lake Forest University, \$20,000.

Dutton, Mrs. Everell F., Sycamore, Ill., gift to the Sycamore Public Library, for a new building, \$25,000.

Dwight, Edmund, Boston, bequests to the Art Museum, two paintings by William M. Hunt and one by Washington Allston, and to Harvard University the reversion of \$125,000.

Dwight, John, New York, gift to Mount Holyoke College, for a memorial art building, \$60,000.

Eastman, George, Rochester, N. Y., gift to the Rochester Mechanics' Institute, \$200,000.

Eichler, Mrs. Marie, New York, bequests to seven institutions in New York, \$11,000, and two in Germany, \$5,250.

Ellwanger, George, Rochester, N. Y., gift to the German Protestant Church, for a home for the aged, real estate valued at \$15,000.

Emanu-El Sisterhood, New York, gifts from friends for a new building, \$75,000.

Ethical Culture, Society for, New York, gifts from three friends, names withheld, for new building fund, \$150,000.

Evans, Mrs. Mattie K., Philadelphia, bequests to charitable and religious institutions, \$20,000.

Fahnestock, Harris C., New York, gift to the New York Post-Graduate Medical School and Hospital, for a training school for nurses, real estate valued at \$65,000.

Flower, Ex-Gov. Roswell P., New York, widow and daughter (Mrs. Emma F. Taylor) of, joint gift to the Flower Hospital, \$200,000.

Ford, Jarvis, St. Joseph, Mo., bequests to trustees for a free library, \$20,000; and to the Municipal Hospital, \$10,000.

French, John, Brooklyn, N. Y., bequests to four local Methodist Episcopal institutions, each \$5,000; the Methodist Episcopal Hospital, the Brooklyn Church Society, and the Hanson Place Church, each the reversion of \$10,000; and six other institutions, the reversion of \$20,000.

French, John D. W., Boston, bequests to the Episcopal City Mission, Young Men's Christian Association, Church Home for Orphans, St. Luke's Home for Convalescents, Chapel of the Good Shepherd, and trustees of donations for the Protestant Episcopal Church, each \$10,000; Harvard University, Diocesan Board of Missions, Massachusetts Horticultural Society, and American Forestry Association, each \$5,000; and the Diocesan Board of Missions of Massachusetts, the residue of his estate.

Frick, Henry C., Pittsburg, gift to Wooster (Ohio) University, a library.

Furman, Mrs. Mary J., Nashville, Tenn., bequest to Vanderbilt University, her estate valued at \$200,000 to \$250,000.

Gallup, Mrs. Delia, Chicago, gift to the University of Chicago, to endow the history library, \$30,000.

Gammell, Robert Ives and William, Providence, R. I., gifts to Brown University, each \$10,000.

Garcelon, Mrs. Caroline M., Oakland, Cal. (died in 1891), bequests to the city of Oakland, for a hospital, \$600,000, and to Bowdoin College, \$400,000, made available in 1900 by a decision of the United States Supreme Court.

Gardner, Mrs. John L., Boston, gift to the city, for a free museum, her new Italian palace in the Fens, with all its art contents, comprising costly paintings, sculptures, bronzes, metal work, tapestries, etc.

Gardner, Sarah E., Newport, R. I., bequest to the Rhode Island Society for the Prevention of Cruelty to Animals, \$50,000.

Garth, Mrs. John H., Hannibal, Mo., gift to the city, for a public library, \$25,000.

Gayley, James, class of '76, gift to Lafayette College, a chemical laboratory, cost \$30,000.

General Theological Seminary, New York, gift from alumni and others, Hoffman Memorial Hall, cost \$100,000.

Gibbs, Edward N., New York, bequest to Amherst College, \$10,000.

Gibbs, Miss Zela, New York, gift to the Cathedral of St. John the Divine, \$5,000.

Glover, Mrs. Louisa Cecelia, New York, bequests to St. Joseph's Theological Seminary, Yonkers, \$10,000; Institution of Mercy, \$4,000; Little Sisters of the Poor, \$2,000; other religious bodies, \$5,000.

Goddard, Chancellor William, Providence, R. I., gift to Brown University, \$25,000.

Goldstone, N. L., Des Moines, Iowa, bequests to local institutions, \$14,000.

Goldthorpe, William, Jo Daviess County, Ill., bequest to the Board of Education of the Methodist Episcopal Church, \$30,000.

Gould, Helen M., New York, gifts to the New York University for a Hall of Fame for Great Americans, \$100,000; to the Naval Branch of the Young Men's Christian Association for a building near the navy yard, Brooklyn, \$50,000; Berea (Ky.) College, \$5,000; and Hall of the Christ building fund, Chautauqua, \$5,000.

Greenwich (Conn.) Library, gift from friend, name withheld, \$10,000.

Young Men's Christian Association, New Haven, Conn., gifts from friends for auditorium, \$35,000.

GOLD NUGGETS. The important discoveries of gold in the past century began in 1848, in California. Three years later those in Australia followed, a few years afterward those in British Columbia, and those of Colorado in 1858-'59. Those of the Transvaal were made principally in 1886. Gold was discovered at various places in Alaska in 1882-'94, and the first claim in the Klondike was located in August, 1896.

Australia.—Australia has been found richer than any other part of the world in gold nuggets. The colony of Victoria has yielded the greatest number, and New South Wales the largest one recorded. This monster nugget, found at Hill End, was 4 feet 9 inches by 3 feet 3 inches, averaging 4 inches in thickness, and \$148,000 was paid for it to the finders, Messrs. Byer and Haltman. Just previously they had so exhausted their resources as to be obliged to live on charity, and this rich find is said to have unfitted one of them for work for a long time thereafter.

At Bakery Hill, Ballarat, Victoria, June 15, 1858, a party of 24 found the Welcome nugget, and sold it for \$52,000 in Ballarat. It was exhibited in Melbourne, and was sold again for \$48,025. The Welcome was found at a depth of 180 feet, was water worn, and contained 10 pounds of quartz, clay, and oxide of iron. It measured 20 inches by 12 inches by 7 inches, and when melted in London, in November, 1859, it yielded 99.20 per cent. of pure gold. Three years before the finding of the Welcome a nugget of 480 ounces and one of 571 ounces were discovered very near the same spot. Canadian Gully has an interesting record. In it two new miners, working with

two others, found a nugget of 76 ounces, and immediately after, digging to a depth of 60 feet, they took out a nugget weighing 1,619 ounces, which they took to England and sold for \$27,000. The Lady Hotham, weighing 1,177 ounces 9 pennyweights, was also found at a depth of 60 feet, where the earth about it had been yielding one ounce of gold to the ton. Also a beautiful pyramidal nugget came to light not ten feet from the point where the 1,619 ounce nugget had been discovered. In the year 1853 a nugget of 371 ounces 2 pennyweights, worth \$1,327, one of 368 ounces, and one of 143 ounces 15 pennyweights were taken from the same gully. Near this gully a nugget of 1,177 ounces 17 pennyweights was discovered in 1854, and smaller ones to the amount of 220 pounds, so that the claim yielded \$65,000. In the Indicator vein in the Ballarat group was found, about 1870, a remarkable pendant of pure gold. It consisted of a golden wire about 4 feet long, hung at intervals with lumps of gold about as large as an egg. It was found at a depth of 250 feet, and was worth \$7,500.

Other nuggets found at Ballarat are: At Eureka, in an abandoned hole, one of 625 ounces, and, in 1857, near Native Youth, at a depth of 9 feet, the Nil Desperandum, 540 ounces. Also there was found at Ballarat in 1860, at a depth of 400 feet, a solid lump of gold weighing 834 ounces, and in 1889 a 48-ounce nugget is recorded, taken from the Pinchgut Gully.

The Welcome Stranger is a famous Australian nugget. It was discovered in the rut made by a peddler's cart, for it had been but barely covered with loose loam. The nugget measured 10 by 21 inches, weighed 2,250 ounces, and contained 98.66 per cent. of gold. The value was \$47,670. It was found Feb. 15, 1869, at Moliagul, near Dunolly, where prospecting had but just begun. Heavy gold and many large nuggets were found in that region. Among these were the Schlemm, 478 ounces, the Spondulix, 130 ounces, one of 110 ounces 9 pennyweights, which was found in 1854, and two nuggets, unearthed soon after the Welcome Stranger and near the same spot, of 114 ounces and 36 ounces respectively.

Kingower yielded the Blanche Barkley, a nugget of 1,743 ounces 13 pennyweights, which lay buried at a depth of 15 feet. It was taken to Melbourne and was exhibited there, and also at the Crystal Palace, London, where it proved very interesting to the public and netted the owners \$250 a week. It contained 95.58 per cent. pure gold and was valued at \$34,525. Also at Kingower was found a nugget of 805 ounces, one of 782 ounces, one of 282 ounces 2 pennyweights in 1854, one of 260 ounces in 1856, and one of 236 ounces in 1860. In the last-named year a moss-covered nugget was picked up by a party of prospectors. A nugget of 120 ounces, lying but a few inches below the surface, was dug up by a boy in the same locality in 1858. Nuggets of 106 ounces 16 pennyweights and 100½ ounces were found at Kingower in 1861. At the McIntyre diggings, near that place, a nugget weighing 810 ounces was discovered in 1857, a nugget of 452 ounces in 1870, and in the year 1858 one weighing 300 ounces was taken from under six feet of soil.

Besides the large nuggets already mentioned, Australia has produced several others weighing more than 1,000 ounces. These are: The Precious, 1,021 ounces; the Viscount Canterbury, 1,105 ounces; the Heron, 1,108 ounces; one from Berlin weighing 1,121 ounces; and one from Laskman's lead of 1,034 ounces 5 pennyweights. The Precious was found Jan. 5, 1871, a year in which Berlin generously yielded nuggets, two others being

the Kum Tow, 718 ounces, and the Needful, 247 ounces. The following year one of 477 ounces was found there. The Viscount and Viscountess Canterbury also came from Berlin. The latter weighed 884 ounces. They were found in 1869. In the same year, one of 893 ounces was discovered at Berlin, and in 1870 one of 896 ounces, and in 1872 was found the Crescent, 179 ounces.

The Heron, a solid lump of gold, weighing 1,008 ounces, worth \$20,400, was found near Old Golden Point, Fryer's Creek, Mount Alexander, where also nuggets of 264 ounces, 22 ounces, and 84 ounces had been found. The Victorian nugget was found in 1852 in White Horse Gully, Sandhurst; it weighed 340 ounces. Parliament bought it for \$8,250 and presented it to the Queen. In the same hole also, in 1852, was found a nugget of 573 ounces, valued at \$10,500, and near by, imbedded a foot deep in gravel, the Dascombe nugget was found in the same year. Robinson Crusoe Gully, Sandhurst, yielded a nugget of 377 ounces 6 pennyweights. Also at Sandhurst, in 1852, one of 288 ounces was found. Another Australian nugget was presented to the Queen in 1858. It weighed 146 pounds.

In West Australia, in 1899, a singular nugget of 100 pounds was found as the result of a vision. A priest was told by a poor, devout parishioner that he had miraculously learned of the whereabouts of the nugget. He followed the directions and dug up a lump of gold which from its shape he named the "Sacred and Golden Sickle."

Other Australian nuggets, with the place where found and the year (when recorded), are the following:

Daisy Hill (1855), at a depth of 3½ feet, 715 ounces.

McIvor (1858), 658 ounces.

Back Creek, Taradale, at a depth of 12 feet, 648 ounces.

McIvor (1855), 645 ounces.

Midas mine, Cheswick (1887), the Lady Loch, 617 ounces.

Yandoit, Castlemain (1860), value \$10,000, 600 ounces.

Ironback (1889), 461 ounces.

Twisted Gum Tree, 408 ounces.

Yandoit, Castlemain (1860), at a depth of 16 feet, 384 ounces.

McIvor (1857), 328 ounces.

McCallum's Creek, 326 ounces 10 pennyweights.

Jones's Creek (1856), 281 ounces.

Daisy Hill (1856), 275 ounces 3 pennyweights 18 grains.

Brown's Diggings (1856), 263 ounces 8 pennyweights.

Mount Blackwood (1855), found on the surface of the ground, 240 ounces.

Yandoit (1860), about 20 feet deep, 240 ounces.

Mount Korong (1856), at a depth of 18 inches, value \$5,000, 235 ounces 13 pennyweights.

Mount Korong (1854), 192 ounces.

Bryant's Ranges (1854), 183 ounces 8 pennyweights 12 grains.

Tarrangower (1855), 180 ounces.

Evans's Gully (1861), 153½ ounces.

Jones's Creek, Mount Moliagul (1855), 145 ounces 5 pennyweights.

Cheswick Creek (1860), 144 ounces.

Blackwood (1889), 142 ounces.

Jones's Creek, Mount Moliagul (1855), 140 ounces.

Rokewood, Break-of-Day claim (1898), 138 ounces.

Jim Crow (1858), 136 ounces.

Mount Korong, at a depth of 4½ feet, 132 ounces 9 pennyweights.

Blue Gully (1898), 127 ounces.

Mount Moliagul (1857), value \$2,000, 104 ounces 8 pennyweights.

Bokewood, 54 ounces.

Five others were taken from Yandoit, the Lady Brasse from the Midas mine, Cheswick, and small nuggets to the amount of 80 ounces from Back Creek, Taradale, and many others have been found on various Australian gold fields, from 20 ounces to 200.

Eldorado County was the scene of the first gold discovery in California. A little nugget was found by James W. Marshall and Peter Winner in 1848. It was about the size of a Lima bean, but it excited the whole country, and began that great stream of emigration which flowed westward for several years thereafter. In the beginning of California prospecting, nuggets as large as eggs were often found, and occasionally some twice that size. The largest nugget California ever yielded weighed 80 pounds. Two drunken fellows were crossing the Grizzly mountains to Camp Corona in 1854, when, on the night of Nov. 17, a heavy rain fell. They sought shelter in a deserted hut, but before morning the water carried them away, and one was drowned. On the following morning, the other, Oliver Martin, was beginning to dig a grave for his companion when he unearthed the nugget. He secured help, and carried it to Camp Corona, exhibited it in various parts of the country, from which he realized \$10,000, and sold it for \$22,700. Never after that did Martin touch liquor, for the fortunate escape and the fortunate find seemed to him an act of Providence. With his providential capital he began businesslike mining, and when he died, in New Orleans, he left more than a million dollars. Eldorado County yielded not only the first California nugget, but the first large one. This weighed 121 ounces, and was dug from the bank of American river in 1850. Also in 1850 was found, in French Ravine, Calaveras County, a nugget of 263 ounces, worth \$4,893. The same ravine, in the year following, yielded one worth \$8,000. From the Sailor Diggings, Downieville, Eldorado County, also in 1851, a party of English sailors found a 31-pound nugget, and several others from 5 to 15 pounds, which they exhibited in England.

In 1852 a nugget of 45 pounds was found in Tuolumne County. A consumptive friend of the finder brought it East to exhibit it, and gave lectures on mining in California. For a time the miner failed to hear from him, when one day news came of his death, and that the nugget was deposited in a bank for the owner. It yielded \$8,000 worth of gold.

In 1853 a nugget of 330 ounces, worth \$5,625, was found at Columbus, Tuolumne County.

In 1854, on Sullivan's Creek, Eldorado County, one of 28 pounds, worth \$7,168, was found.

In 1855, French Ravine yielded one worth \$10,000.

In 1856, at Remington Hill, Nevada County, half of a worn boulder of gold quartz was found, worth \$4,672.50. Two years later a hired man engaged at the mine suddenly told his employers he was going to leave. One of them suspected that the other half of the boulder had come to light, so mounted his horse and went in pursuit, to find his surmise correct and return \$4,430.75 the richer for his ride.

In 1858, a boy named Perkins, playing with a toy water wheel in a worked-over mountain stream in Calaveras County, came upon a nugget that yielded \$1,800.

In 1859, near Butcher's Ranch, Placer County, a nugget of 20 pounds brought the finder \$3,264. The same man in the same mine found, years later, one of 147 ounces, worth \$2,852.

In 1861 California's second largest nugget was found (65 pounds). A half-breed Indian discovered it in Nevada County, lying in the bed of a stream in which he was washing his overalls. The mine owners sold it for \$17,400, and presented \$100 to each of their employees, with \$300 extra to the finder. In 1864, near Michigan Bluff, Placer County, a lump of pure gold of 226 ounces was found, of the value of \$4,204.

In 1867, near Gibsonville, Calaveras County, a nugget of over 100 ounces, worth \$1,700, was found.

In 1868, on Table mountain, Tuolumne County, on his way to prospect a certain place, a colored man saw the corner of a nugget. He dug it up and buried it in another spot, which he marked. Then he proceeded to his destination, where he found such good diggings that he remained several weeks. When he returned for his nugget he found a company of Italians at work but 10 feet away from it. He explained the situation, and was permitted to take away his treasure, which weighed 35 pounds and brought him \$7,000.

In 1869, in Sierra County, a nugget was found in the Monumental claim, and was widely exhibited. It weighed 132 pounds, and realized \$9,800.

In 1870, in Shasta County, a Frenchman picked up a nugget worth \$6,200.

In 1874, in Alpine County, a solid lump of gold was discovered. Henry E. Ellis went there to live in the mountains. Mrs. Ellis was driving home their cow, and picked up a stone to throw for the amusement of her dog. It was heavy, and she sold her find for \$2,250. It was exhibited at the World's Fair in Chicago.

In 1876, in Placer County, a white quartz bowl-der yielding \$5,700 worth of gold was found.

In 1880, on Flat Creek, Shasta County, a nugget worth \$520 was found.

Other California nuggets recorded, but without a date, are: From Calaveras County, one of 266 ounces, worth \$2,800; at Elizabethtown, one worth \$2,600; at Mohawk valley, one of 420 ounces, worth \$6,700; and at Ruby Belle camp, one worth \$9,000. From Nevada County, near Dutch Flats, a nugget worth \$12,300. From Eldorado County, at Gold Hill, one of 380 ounces, worth \$6,500; near Knapp Ranch, one of 50 pounds, worth \$8,500. At Spring Gulch an almost pure gold nugget was found by a Frenchman, whose lucky find made him insane the following day. The value of the nugget (\$5,000) was sent across the ocean to his family.

Colorado's largest nugget, "Tom's Baby," was found in the Gold Flake mine, Summit County, July 23, 1877. It weighed 13 pounds. The only other nugget recorded was found in the crop of a turkey in Denver, in January, 1900, and was worth about a dollar.

North Carolina boasts the mining claim that has produced more nuggets than any other single claim in the world—the Reed mine, Cabarrus County. The weights of these are 28 pounds, 22 pounds, 17 pounds, 16 pounds, 13½ pounds, 9½ pounds, two 9 pounds, two 8 pounds, 5 pounds, 3½ pounds, two 2 pounds, and 1½ pound (\$60,000 worth in all), and a peck of golden beans and peas. A slave made the first discovery on this claim, and a slave also found the 17-pound and the 16-pound nuggets. A claim near Albemarle, Stanley County, is the next richest; nuggets of 10½ pounds, 8½ pounds, 5½ pounds, 3 pounds, a dozen of 1 pound, and 2 quarts of smaller pieces are among the finds. A 4-pound and a 2-pound nugget were found at the Sam Christian mine, Montgomery County. A 10-pound nugget was found at the Crawford mine, Stanley County, in 1895, and also in the same year at the same mine one of 8 pounds 5 ounces.

Nevada has not been very rich in large nuggets; the largest was taken from the Osceola mine about 1880. Its weight was 24 pounds, its value \$4,000. It was stolen, but the thief repented and two months later returned \$2,000—all that was left. The same mine in 1899 yielded a nugget worth \$2,190.

Montana sent to the Paris Exposition a collection of nuggets worth \$12,000; the largest weighs 5 pounds, and is worth \$1,050. Nearly 100 specimens were exhibited, including a beautiful one of 48 ounces, worth \$1,000, and 3 from 45 ounces to 20 ounces, several more above 10 ounces, a dozen above 2 ounces, and 38 of 1 ounce. Montana's largest nugget came from Snowshoe Gulch, Little Blackfoot river. It was found at a depth of 12 feet, and realized \$3,356. Confederate Gulch, near Diamond, in 1890 was yielding nuggets worth \$15 an ounce, and one of these was worth \$29.

Arizona has produced but few nuggets. In 1899 Papago Indians found one worth \$900 in Horse-shoe Basin, Quijoroa mountains, 50 miles south of Tucson, and many smaller nuggets have been found.

New Mexico produced, several years ago, a nugget worth \$1,300, and the old Spanish prospectors found large nuggets.

Mexico has been exhibiting in New York city the largest nugget of pure gold found in the past fifteen years. It was discovered in the San Mateo mountains of Chihuahua, weighs 468 ounces, and is worth \$8,430. A poor peon found it on a mining company's property, and received \$1,000 as a reward. A singular nugget, bought from an Indian, was presumably from Mexico. It was 1½ inch long by ¾ inch wide, 19 carats fine, of a beautiful color, and in shape a perfect miniature corn husk.

Though South America has undoubtedly produced a great quantity of nuggets in the past three hundred years, reliable information about them is not to be had, except in a single instance. A nugget of 60 pounds was found at La Paz, Peru, in 1730.

The Klondike has produced no large nugget; the most important weighed but 34 ounces. This was found on Eldorado Creek, and was worth \$583. The Yukon's largest nugget was found in 1889 on Eldorado Creek, and weighed 72 ounces; its value was \$1,158.

The important British America nuggets are: One of 84 ounces, found on Spruce Creek in July, 1899, value \$1,000; one of 52 ounces, found on Gilbert river, Quebec, in 1866; also on the same river one of 45 ounces; one of 29 ounces 12 pennyweights 17 grains, worth \$600; and a nugget found at Dexte Creek, worth \$61. The 52-ounce nugget found on Gilbert river was discovered by a little girl, Clotilde Gilbert. Her father sent her to the field for a horse one Sunday morning to go to mass, and when she was crossing the ford in the stream she saw this nugget in the sand.

Of the South African nuggets we have the following record: At Pilgrim's Rest were found several 4-pound nuggets, and one of more than 7 pounds, which was an exact model of the human hand. It was exhibited at the Philadelphia Centennial Exposition. On Frazier's Hill nuggets from 2 to 3 pounds were found. Upper Pilgrim's Creek yielded nuggets from 4 to 5 pounds, which brought \$19.50 an ounce.

Siberia's largest nugget was the "Ural," found in the mountains of that name, worth \$24,000. Three convicts found a still more valuable one (\$30,000), and the Czar gave them their liberty, though he kept all the gold for himself. The "Tzar" was found in 1882 in the Tzar Alexander mine. Its value was \$11,000. And it is recorded

that recently a nugget was found at Orsk, weighing 1,150 ounces.

With regard to the gold fields of Japan, no particulars are officially given.

We find information of two French nuggets found near the Ardèche. A shepherd picked up one to throw at some goats, and next day his brother found it, took it to a jeweler, and received 1,200 francs for it. One of 543 grammes was turned up by a farmer's hoe about the year 1870. Smaller nuggets are said by the village priest to have been found frequently in the vicinity during the past sixty years.

See Famous Gold Nuggets of the World, by Thomas Jefferson Hurlley, of the American Institute of Mining Engineers (New York, printed privately, 1900), to which we are indebted for the information in this article.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by the union of the Kingdom of England and the Principality of Wales with the Kingdom of Scotland, constituting together the Kingdom of Great Britain, and of this with the Kingdom of Ireland, the whole forming the United Kingdom of Great Britain and Ireland, which holds supreme dominion over the Empire of India and colonies and dependencies of various kinds—self-governing colonies, colonies governed and administered partly or wholly by the Crown, and protectorates under native laws and rulers—constituting, with the United Kingdom, the British Empire. The reigning sovereign in 1900 was the Queen-Empress Victoria, born May 24, 1819, died Jan. 22, 1901, the daughter of Edward, Duke of Kent, the fourth son of George III. The successor to the throne is Albert Edward, Prince of Wales, born Nov. 9, 1841, eldest son of Queen Victoria and the Prince Consort Albert, Duke of Saxe-Coburg-Gotha. George, Duke of York, born June 3, 1865, the only living son of the Prince of Wales and Princess Alexandra of Denmark, is next in succession, and after him his eldest son, Albert Edward, born June 23, 1894, issue of his marriage with Victoria May, daughter of the Duke of Teck.

The power to legislate for the United Kingdom and for all parts of the British Empire, except so far as it is delegated to local legislative authorities, is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are princes of the blood royal; spiritual lords, which are the metropolitan bishops of ancient English sees; hereditary peers of England, of Great Britain, and of the United Kingdom; representative peers of Scotland, elected by their fellows for the duration of Parliament, and of Ireland, elected for life; and life peers and law lords, created by the sovereign by advice of the Cabinet. The number of peers on the roll in 1899 was 591. The House of Commons contains 670 members, of whom 253 represent the county constituencies, 237 the boroughs, and 5 the universities of England; 39 the county constituencies, 31 the boroughs, and 2 the universities of Scotland; and 85 the county constituencies, 16 the boroughs, and 2 the universities of Ireland. The franchise is possessed by all male householders and lodgers of full age, about 1 in 6 of the population; the number of electors registered in 1899 was 6,000,283, of whom 5,208,137 were in England, 671,128 in Scotland, and 721,018 in Ireland. The duration of Parliament, unless it is previously dissolved, is seven years. The Committee of Ministers, called the Cabinet, representing the majority for the time being in the House of Commons, exercises in fact the executive authority in the United

Kingdom and the British Empire that is nominally vested in the Crown. The Prime Minister chooses his colleagues and dispenses the patronage of the Crown; he initiates the policy of the Government or approves the measures suggested by the other ministers in their several departments, and when his policy or his acts encounter the displeasure of Parliament, manifested by an adverse vote on a Cabinet question or by a direct vote of censure, he either resigns forthwith, in company with the rest of the Cabinet, or appeals to the country by dissolving Parliament and ordering new elections. When a Cabinet resigns the retiring Prime Minister advises the Queen as to the selection of the statesman most competent to form a new Government, usually the leader of the Opposition in the House of Commons. The Cabinet formed on June 25, 1895, by Lord Salisbury, consisted in the beginning of 1900 of the following members: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the Earl of Halsbury, formerly Sir Hardinge S. Giffard; Lord Privy Seal, Viscount Cross, formerly Sir Richard Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford, formerly Sir Henry James; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir M. White Ridley; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Government Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne, formerly Edward Gibson; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

Area and Population.—The area of the United Kingdom is 120,979 square miles, England having an area of 50,687, Wales 7,442, Scotland 29,785, Ireland 32,583, the Isle of Man 227, and the Channel Islands 75 square miles. The estimated population of England and Wales on June 30, 1899, was 31,742,588; of Scotland, 4,281,850; of Ireland, 4,535,516; total United Kingdom, 40,559,954. The metropolis of London in 1899 was computed to have 6,528,434, of whom 4,546,752 lived in the inner ring or registration London and 1,981,682 in the outer ring. Of the large towns of England and Wales, Liverpool contained an estimated population of 634,212 in the middle of 1899; Manchester, 543,902; Birmingham, 514,956; Leeds, 423,889; Sheffield, 361,160; Bristol, 320,911; Nottingham, 239,384; Bradford, 236,241; Kingston-upon-Hull, 234,270; Newcastle, 228,625; Salford, 218,244; Leicester, 213,851; Portsmouth, 190,741; Cardiff, 185,826; Bolton, 162,221; Oldham, 150,772. Glasgow, in Scotland, had an estimated population of 733,903; Edinburgh, 298,927; Dundee, 166,072. In Ireland the population of Dublin within the metropolitan police district was 361,891 at the census of 1891; of Belfast, 255,950. The number of marriages in England in 1898 was 254,819; of births, 922,873; of deaths, 552,040; excess of births, 370,833. The number of marriages in Scotland was 32,090; of births, 130,879; of deaths, 78,406; excess of births, 52,473. The number of marriages in Ireland was 22,580; of births, 105,457; of deaths, 82,404; excess of births, 23,053. The number of emigrants, natives and foreigners, that sailed from British ports in 1899 was 241,106, of whom 159,201 went to the

United States, 33,727 to British North America, and 12,289 to Australasia. Of the total for 1898 of 205,171 emigrants, 119,739 were males and 85,432 females. The number of British and Irish emigrants in 1899 was 146,772, an increase of 6,133 over the preceding year. Of the total, 87,703 were English, a decrease of 2,976; 16,152 were Scotch, an increase of 582; and 42,922 were Irish, an increase of 8,527. The number of immigrants, natives and foreigners, in 1898, was 139,346, reducing the total net emigration to 65,825; the immigrants of British and Irish origin numbered 91,248, reducing the emigration of the native population to 49,396. The number of Irish who emigrated from Ireland in 1898 was 32,241, making a total of 3,754,899 since 1851. The total emigration of natives of Great Britain and Ireland from 1815 to 1898 was 14,920,263. From 1853 to 1898 the emigration of the native population was 8,549,569, of whom 5,690,172 settled in the United States, 885,739 in British North America, 1,410,068 in Australia and New Zealand, and 563,590 in other countries. The number of elementary day schools in England and Wales, both voluntary and board schools, was 19,937, with 5,576,866 children registered and 4,554,165 in average attendance. There were 5,595 board schools, with an average attendance of 2,087,519 pupils; 11,815 National Society schools, with 1,883,263 pupils; 457 Wesleyan schools, with 124,971 pupils; 1,033 Roman Catholic schools, with 246,128 pupils; and 1,122 British, undenominational, and other schools, with 230,355 pupils. The total number of certificated teachers was 59,874; assistant teachers, 26,736; pupil teachers, 31,038; additional women teachers, 15,136. The number of training colleges was 44, with 3,700 resident students and 14 for day attendance, with 1,050 students. The number of secondary schools in England and Wales in 1897 was 6,209, with 291,544 pupils, about 25 per cent. of them in boarding schools. In Scotland there were 3,067 elementary schools inspected in 1898, with 717,747 children on the registers and 605,776 in average attendance. The total number of schools was 3,113, of which 2,757 were public schools, with an average attendance of 535,636. The number of training colleges in 1899 was 8, with 1,055 students. The number of elementary schools reported in Ireland in 1898 was 8,651, with 808,467 children on the rolls and 518,799 in average attendance. There were 8,604 schools altogether, of which 3,925 were Roman Catholic and 1,401 Protestant, and 3,278 mixed Roman Catholic and Protestant. The elementary schools of the United Kingdom are supported by school fees, local rates, voluntary subscriptions, income from endowments, and parliamentary grants. The parliamentary grants in England in 1899 amounted to £8,021,391 and in Scotland to £1,177,727, besides £599,464 for various British schools; in Ireland grants and rates together were £1,321,777. The universities and colleges of England, Scotland, and Ireland in 1898, numbering 69 colleges altogether, had 1,670 instructors and 25,891 students. The University of Oxford, consisting of 23 colleges, had 95 teachers and 3,446 students; Cambridge University, with 19 colleges, 116 teachers, and 3,016 students; Durham University, a single college, 20 teachers and 170 students; the University of Edinburgh, 103 teachers and 2,848 students; the University of Glasgow, 102 teachers and 2,010 students; the University of Aberdeen, 58 teachers and 765 students; the University of St. Andrews, 59 teachers and 261 students; Dublin University, 54 teachers and 1,100 students; University College, London, 73 teachers and 1,100 students; King's College, London, 136 teachers and 1,465 students;

Queen's College, Belfast, 26 teachers and 311 students; Queen's College, Cork, 23 teachers and 188 students; Queen's College, Galway, 23 teachers and 91 students. Other colleges are at Aberystwith, Bangor, Manchester, Newcastle, Nottingham, Sheffield, Birmingham, Leeds, Bristol, Cardiff, Lampeter, and Liverpool.

Finances.—The revenue for the year ending March 31, 1899, was estimated in the budget at £107,110,000, and the expenditure, including supplementary estimates, at £108,815,036. The actual receipts were £108,336,193, and the actual expenditures £108,150,236, leaving a surplus of £185,957. Taxation by customs, excise, and estate duties, stamps, the land tax, the house duty, and the income and property tax produced £90,485,553, while the nontax revenue, derived from the postal and telegraph services, Crown lands, interest on Suez Canal shares, and miscellaneous sources, was £19,114,980, making the total net receipts £109,600,532. The net revenue from customs was £21,558,227, of which £10,993,727 were collected on tobacco imports, £4,023,504 on tea, £2,124,728 on rum, £1,350,006 on brandy, £761,426 on other spirits, £1,399,099 on wine, £173,590 on coffee, £196,989 on raisins, £120,695 on dried currants, and £414,463 on other articles. The net excise receipts were £29,310,939, namely, £17,109,274 from spirits, £11,638,201 from beer, £246,915 from license duties, £308,975 from railroads, and £7,574 from other sources. From death duties, etc., the net receipts were £11,486,818 in amount, £7,719,943 coming from the estate duty, £43,508 from the temporary estate duty on property of persons dying before Aug. 2, 1894, £57,617 from the probate duty on similar property, £2,873,091 from the legacy duty, £751,227 from the succession duty, and £41,432 from the corporation duty. The yield of the land tax was £805,400 net; of the house duty, £1,576,878. Stamps produced a net revenue of £7,704,920, of which £4,182,377 came from deeds, £1,381,835 from receipts, £667,311 from bills of exchange, £266,404 from patent medicines, £169,277 from licenses, etc., £320,492 from the duty on companies' capital, £230,718 from insurance, £180,769 from bonds to bearer, and £305,717 from other sources. The income and property tax collected amounted to £18,042,311. Of the nontax sources of revenue the post office yielded £12,841,399, the telegraph service £3,204,396, Crown lands £449,735, interest on Suez Canal shares purchased from the Khedive £713,554, and the mint, the Bank of England, fee stamps, etc., £1,905,896. The national expenditure is divided into the consolidated fund charges, amounting for the year ending March 31, 1899, to £27,044,236; the army and navy supply services, amounting to £44,068,000; and the civil and miscellaneous services, amounting to £37,038,000, including the expense of collecting the revenue. Of the consolidated fund charges £25,000,000 were for the national debt, £408,773 for the civil list, £281,568 for annuities and pensions, £79,114 for salaries, £517,069 for courts of justice, £452,392 for payments to local taxation accounts, and £305,330 for miscellaneous payments. The cost of the army was £20,000,000, including £300 for ordnance factories; cost of the navy, £22,025,000; civil services, £22,025,000; customs and inland revenue expenses, £2,816,000; post office expenses, £8,030,000; expense of telegraph service, £3,347,000; packet service, £820,000; total supply services, £81,106,000.

Parliament summoned to a special session in October, 1899, authorized the issue of £10,000,000 of treasury bills toward the expenses of the war in South Africa. Before the close of the financial

year £13,000,000 more were voted. In the budget for 1901 the Chancellor of the Exchequer estimated at £38,000,000 the necessary expenses of the war for the year. The revenue for 1900 was estimated in the budget at £111,157,000, being £2,821,000 more than the revenue for the previous year. In presenting the budget for the following year early in March, 1900, Sir Michael Hicks-Beach estimated it at £116,040,000. The budget estimate of expenditures for 1900 was £110,927,000, to which £745,000 of supplementary estimates were added and from which £1,132,000 were deducted on account of savings, making the exchequer expenditure for the year £110,540,000 and showing a surplus of £5,500,000 if the cost of the war were excluded; but, adding £23,000,000 of supplementary army estimates for the war and £270,000 for interest on the treasury bills authorized in the autumn session, the total exchequer expenditure was expected to be £133,810,000, showing a deficit of £17,770,000, of which £8,000,000 was temporarily provided for by the issue of treasury bills. The receipts from beer, spirits, and tea in 1900 showed a large increase over the preceding year, partly owing to withdrawals from bond toward the close of the financial year in anticipation of higher duties. Receipts from tobacco fell off, and from wine the receipts were less than were expected, though the increase was considerable, owing to the increase in the duties. The death duties produced £13,300,000, not counting £4,171,000 allotted to the local taxation fund. From the estates of millionaires £2,271,000 were received, and of this £900,000 came from the estate of an American living modestly in a London club. The stamp duties, owing principally to activity on the stock exchange, produced £350,000 more than the estimate. The post office receipts and other nontax revenue showed an increase of £573,000 over the previous year. Adding to the expenditure for 1900 as provisionally estimated in the early budget the sum of £9,599,000 paid to the local taxation account, being £78,000 more than in 1899, and further the expenditure on capital account of £4,847,000, of which £1,861,000 came from the surplus of previous years, this expenditure being for barracks, telephones, the Uganda Railroad, naval and military works, and the acquisition of the territory of the Royal Niger Company, the total expenditure for the year ending March 31, 1900, was expected to reach £148,257,000, compared with £121,224,000 in the foregoing year.

The amount of the funded debt on March 31, 1899, was £583,186,305, the estimated capital value of terminable annuities was £36,243,280, and the unfunded debt was £8,133,000, making a total of £627,562,585, to which should be added £312,441 borrowed under the Russian Dutch loan act of 1891, £187,893 under the imperial defense act of 1888, £2,829,029 under the barracks act of 1890, £1,222,276 under the telegraph act of 1892, £1,969,722 under the Uganda Railway act of 1896, £455,381 under the act of 1895 for the acquisition of sites for public offices, and £501,638 under the Whitehall public office act of 1897, these items making a sum of £7,478,380, which increases the gross liabilities to £635,040,965, against which may be offset the value of the Suez Canal shares, £27,451,000 at the market rate, £703,961 of other assets, and £8,919,173 of exchequer balances in bank. During the financial year ending March 31, 1900, the funded debt was reduced by £30,715,000 and the capital value of the terminable annuities was increased by £24,242,000 as the result of the operation of provisions in the finance act of 1899 authorizing the cancellation of £28,

000,000 of consols by the issue of terminable annuities. By the new sinking fund of 1899 the sum of £1,339,000 was redeemed, but the issue of £8,000,000 of treasury bills increased the debt by £1,527,000, without taking account of the deficit of £9,770,000 unprovided for at the end of the year.

The expenditure for 1901 was estimated at £26,000,000 for debt charges, £27,523,000 for the navy, £61,499,000 for the army, £22,839,000 for the civil services, and £16,221,000 for the revenue departments; total, £154,082,000. On the basis of the existing taxation the revenue was estimated at £21,900,000 from customs, £31,800,000 from excise, £13,000,000 from death duties, £8,400,000 from stamps, £800,000 from the land tax, £1,650,000 from the house duty, £18,800,000 from the income tax, £13,800,000 from the post office, £3,550,000 from telegraphs, £450,000 from Crown lands, £850,000 from Suez Canal shares, etc., and £1,900,000 from miscellaneous sources; total, £116,900,000. This left an estimated deficit of £37,182,000 for the year. The war estimates, including £250,000 interest on the war debt, amounted to £38,047,000, to which the sum of £5,000,000 was added as a provision for military and naval contingencies, making with the deficit of £17,000,000 for 1899 due to the war the total sum of £60,000,000 as the estimated cost of the war. To reduce the deficit Sir Michael Hicks-Beach proposed to raise £12,317,000 by increased taxation, of which £6,500,000 are from an increase of the income tax from 8d. to 1s. in the pound, £150,000 from a stamp duty of 1s. on contract notes in all the produce exchanges, the same as is imposed on the contract notes given by brokers of the stock exchange, £1,752,000 from an increase in the beer duty of 1s. a barrel of 36 gallons, £1,915,000 from an increase in the duty on spirits of 6d. a gallon, £1,100,000 from an addition of 4d. a pound to the tobacco duty and 6d. a pound to the duty on foreign cigars, and £1,800,000 from an increase in the tea duty from 4d. to 6d. a pound. This reduces the deficit anticipated for 1901 to £24,868,000, and a suspension of the sinking fund reduces it by £4,640,000 more to £20,228,000. Adding the deficit of £17,770,000 for 1900 and £5,000,000 for military and naval contingencies, the total final deficit would be £42,998,000. To meet this the Chancellor of the Exchequer proposed to renew the treasury bills issued in October, 1899, and issue £5,000,000 more, and to issue a new loan for about £30,000,000, not consols but bonds issued for a term not exceeding ten years, to be repaid as far as possible with what can be exacted from the Transvaal. The plan of taxing produce contracts was given up. Besides the increase in the cigar duty from 5s. to 5s. 6d. a pound, and in the duty on cut plug from 3s. 10d. to 4s. 4d., which was finally voted, the general duty on manufactured tobacco was raised from 3s. 5d. to 3s. 10d. a pound.

When the financial year came to an end the actual deficit for 1900 was found to be £13,882. The revised estimate calculated the deficit for 1901 at £22,541,000, but at the end of July it was calculated at £35,850,000. The Chancellor obtained authority from Parliament to raise £35,000,000 by the creation of bonds redeemable in ten years, or by the issue of treasury bills at his option. He was authorized to borrow £7,550,000 more, and obtained sanction in August for a fresh loan of £13,000,000, giving a margin of £5,818,000 over the total deficit of £49,732,000 as estimated at that time. The total estimated cost of the South African war then stood at £69,323,000, in-

cluding £1,086,000 of interest on war debt. Of this amount £43,863,000 were provided for by loans and £25,460,000 by revenue, including the surplus of £9,335,000 in the revenue over ordinary expenditure in 1900, and the amount of revenue available in 1901 to meet war charges was estimated at £16,125,000. When a vote of £11,500,000 was obtained toward the end of July, including £3,000,000 for operations in China, the war in Africa was officially declared by Lord Roberts to be practically ended, and in this supplementary was included a sum for bringing home 135,000 of the 189,500 imperial troops, leaving 44,500, of whom 30,000 were to form the permanent garrison. The rest were expected to make South Africa their future home. The total sum voted for the war up to that time was £61,022,700. The total number of troops then in South Africa was 223,500.

The Army.—The strength of the regular army of the United Kingdom provided for in the estimates for 1900 is 8,288 commissioned officers, 1,120 warrant officers, 17,355 sergeants, 3,952 drummers, trumpeters, etc., and 154,138 rank and file; total, 184,653 men, an increase of 4,340 over 1899. The general staff numbered 351 officers, with 136 non-commissioned officers and privates; army accountants, 209; chaplains, 86; medical department, 97; veterinary department, 68, with 3 assistants; total staff and departments, 811 officers, 133 non-commissioned officers, and 7 men. The total authorized strength of the regiments was 6,670 officers, 15,681 noncommissioned officers and musicians, and 153,958 rank and file. The cavalry, including the Life Guards and Horse Guards, numbered 551 officers, 1,334 noncommissioned officers, etc., and 12,348 privates; the Royal Artillery, 1,142 officers, 2,569 noncommissioned officers, etc., and 26,474 privates; the Royal Engineers, 618 officers, 1,357 noncommissioned officers, etc., and 5,944 privates; the infantry, 3,042 officers, 7,408 non-commissioned officers, etc., and 92,905 privates; colonial corps, 280 officers, 647 noncommissioned officers, etc., and 9,007 privates; departmental corps, 753 officers, 1,464 noncommissioned officers, etc., and 3,309 privates; army service corps, 284 officers, 902 noncommissioned officers, etc., and 3,698 privates. On the staff of the auxiliary forces were 598 officers, 6,077 noncommissioned officers, and 22 men; in the military academies at Woolwich and Sandhurst, other colleges and schools, engaged in gunnery and musketry instruction, in the regimental schools, and in miscellaneous establishments were 209 officers, 536 noncommissioned officers, and 151 privates. The number of horses provided for was 18,701. The troops maintained in the United Kingdom in 1899 were 11,076 cavalry, 17,572 artillery, 5,351 engineers, and 72,087 infantry and special corps, making a total of 106,086 of all ranks, of whom 79,057 were stationed in England, 3,942 in Scotland, and 23,687 in Ireland. The number stationed in Egypt in January, 1899, was 4,257; in the colonies, 44,005; in India, 74,466; and in Crete, 1,837; total abroad, 125,165, with 15,389 horses; total at home and abroad, 231,851, with 29,281 horses. Including the auxiliary forces and the regular forces on Indian establishment, the total established strength of the British military forces in 1900 was 752,490 men of all ranks, consisting of 176,309 regular troops at home and in the colonies, 73,157 in India, 90,000 army reserves, 136,300 militia, 11,891 yeomanry, and 264,833 volunteers. The effective strength of the regular troops in home and colonial service was 157,863; in India, 74,467; army reserve, 78,839; militia, 116,582; yeomanry, 10,207; volunteers, 231,624; total effectives, 669,582.

The original estimate for the year ending March 31, 1900, provided for 184,853 men of all ranks on the British establishment. In consequence of the war in South Africa the whole of the army reserve was called out, discharges and transfers to the reserve were suspended, a number of troops were temporarily transferred from the Indian to the British establishment, and various colonial and other forces were raised for service in South Africa and the augmentation of the army at home. The supplementary estimate of Oct. 17, 1899, provided for 35,000 men, and the supplementary estimate presented on Feb. 9, 1900, for 120,000 more, making the total number 339,853 officers and men. On Jan. 1, 1900, the number of men of all ranks serving with the colors at home and abroad was 301,544, compared with 232,330 on Jan. 1, 1899, the Household cavalry having been increased from 1,298 to 1,327, the cavalry of the line from 12,169 to 18,890, the horse and field artillery from 10,196 to 18,803, the mounted and garrison artillery from 15,722 to 18,119, the Royal Engineers from 7,637 to 10,210, the foot guards from 7,249 to 12,008, the infantry from 87,095 to 133,743, the colonial corps from 7,242 to 8,778, and the army service corps from 9,266 to 13,085, making a total at home and in the colonies 234,963, against 157,863 at the beginning of 1899, while the British army in India was reduced in number from 74,467 to 66,581. The decrease of the Indian army was due to the fact that 4 cavalry regiments, 2 batteries of horse and 3 of field artillery, 4 infantry battalions, and 3 companies of mounted infantry had been withdrawn for the war in Africa. These numbers do not include the militia, about 100,000 men, all of whom had been or were to be embodied, or imperial yeomanry, about 100,000 men, or the enlisted British volunteers, numbering about 9,000 exclusive of the waiting companies, or the large force of colonial volunteer troops, estimated at 35,000 men. The estimates for the year ending March 31, 1901, provided for 430,000 men in the British army. Pay and subsistence had to be provided for as many as 500,000 troops, and the estimates reached the unprecedented total of £61,499,400. This was based on the assumption that the full field force would have to be maintained in South Africa only till Sept. 30, 1900, and would then be cut down to a garrison of about 30,000 men. A regiment of Irish guards was raised after the Queen's visit to Ireland in the summer of 1900. A permanent addition has been made to the army of 7 batteries of horse artillery and 36 batteries of field artillery, so as to provide the artillery for 2 more army corps; also of 3 howitzer batteries for each of the 12 army corps. In time of peace the new horse and field batteries are to be retained on a reduced establishment. The formation of new depots for the field artillery enables reservists of that arm to rejoin and be equipped like infantry reservists. Additions of 2,038 men of all ranks were made to the Royal Engineers. This makes the number of battalions at home equal to the number stationed abroad, and to meet the need for an increased force to be maintained abroad 12 new line battalions will be raised and attached as third and fourth battalions to existing regiments. An endeavor has been made to add to the number of men engaged for three years' service with the colors in the battalions serving at home. An addition of 29 companies, numbering 2,220 men of all ranks, has been made to the army service corps, one of 8 companies, numbering 450 men of all ranks, to the ordnance corps, and one of 260 men of all ranks to the medical corps. Regimental transport has been provided for the militia, yeo-

manry, and volunteers, and the whole of the volunteer artillery will be rearmed with 4.7-inch siege guns or with 15-pounder field guns, these latter to be obtained from the Royal Artillery as fast as it can be supplied with modern quick-firing guns. In the reserve battalions for home defense 20,000 men were enrolled in 1900. A fortnight's training was provided for the volunteers, and more than three quarters of them availed themselves of the offer. The volunteers did not go to the war in any numbers, but of the militia, numbering 99,000, inclusive of the militia reserve of 11,000 men, 22,000 were serving abroad in 1900. The regular army of 92,000 men remaining at home was useless for the field, consisting in great part of young men under the age of twenty, not fit to send out of the country until they have attained the necessary maturity, vigor, training, and discipline. The effective strength of the British garrisons abroad in 1900 was 10,663 men in Malta, 5,428 in Gibraltar, 8,827 in Cape Colony and Natal, 1,776 in Ceylon, 2,055 in Bermuda, 1,742 in Jamaica, 1,536 in Barbados and St. Lucia, 1,112 in Wei-Hai-Wei, 1,669 in the Straits Settlements, 3,830 in Mauritius, 1,849 on the west coast of Africa, 135 in Cyprus, 771 in St. Helena, and 4,363 in Egypt, besides 73,157 in India. These figures include colonial corps, viz., 725 royal Malta artillery, 309 native artillery for Sierra Leone and the West Indies, 130 submarine miners in the East Indies and 141 in the West Indies, 3,334 men in the West Indian regiments, 1,014 in the Hong-Kong regiment, 1,083 in the Chinese regiment, 1,076 in the West African regiment, and 1,100 in the British Central African regiment; total, 9,934 native and colonial troops.

The Navy.—The effective strength of the British navy in the beginning of 1900, excluding obsolete vessels and such as are only suitable for coast defense, was 20 first-class, 24 second-class, and 11 third-class battle ships, 9 second-class armored cruisers, 21 first-class, 45 second-class, and 34 third-class protected cruisers, 33 torpedo gunboats, 80 destroyers, 2 torpedo ships, and 11 first-class and 71 second-class torpedo boats. There were 10 first-class battle ships launched and being fitted for service and 6 more building or projected, 2 first-class armored cruisers already launched and 12 building or to be built, 1 small protected cruiser launched and 8 more in hand, and 16 destroyers being fitted and 12 under way. The obsolete and coast-defense armor clads numbered 21, obsolete and small cruisers 28, third-class torpedo boats 95, and of vessels for miscellaneous services there were 89, besides 2 not yet completed and 4 building or authorized. The unfinished vessels and vessels awaiting armament were 12 battle ships, 16 first-class, 6 second-class, and 10 third-class cruisers, 6 sloop and 4 twin-screw gunboats, 41 destroyers, and 1 royal yacht. The number of vessels in commission on Jan. 1, 1900, was 174, exclusive of coast guards, vessels in port service, depot ships, gunboats, and all small craft, and these vessels were stationed as follows: Mediterranean and Red Sea, 43; China, 30; Cape of Good Hope and West Africa, 16; North America and West Indies, 15; Channel squadron, 14; Australia, 12; East Indies, 10; Pacific, 8; southeast coast of America, 4; training squadron, 4; surveying, 7; on particular service, 11.

The type of battle ship which was adopted in connection with the naval defense act of 1889 was that of the Royal Sovereign, launched in 1891, which was followed in the Empress of India, Ramillies, Repulse, Resolution, Revenge, Royal Oak, and Hood, all sister ships, having a displacement of 14,150 tons, 18 inches of armor over the

vitals, 13,000 horse power, 17½ knots speed, and an armament of 4 13.5-inch guns in barbetstes and 10 6-inch, 16 6-pounder, and 12 3-pounder quick firers. The Hood is an exception, having her heavy guns mounted in turrets. The Centurion and Barfleur, of 10,500 tons, with 12 inches of armor, 13,000 horse power, a speed of 18 knots, and an armament of 4 29-ton guns in barbetstes and 10 4.7-inch, 8 6-pounder, and 12 3-pounder quick firers, are lighter ships of the same type, which was an improvement on the Admiral class, with better protection, higher freeboard, and greater weight of fire. The building of 9 first-class, 29 second-class, and 4 third-class cruisers and 18 torpedo gunboats completed the programme of 1889. The Majestic type of battle ship was adopted in the programme of 1892, and on the model of the Majestic, launched in 1895, were constructed the Magnificent, Victorious, Prince George, Mars, Jupiter, Illustrious, Hannibal, and Cæsar, of 14,900 tons, 14-inch armor, 12,000 horse power, a speed of 17½ knots, and an armament of 4 12-inch guns that can be loaded by hand and are protected by armored shields revolving with the turntables, the guns being mounted in pairs in armored barbetstes, 12 6-inch quick-firing guns well protected, 16 12-pounder quick firers of a new design, and 12 3-pounders, 4 submerged torpedo tubes and 1 above water, a length of 390 feet, 78 feet extreme breadth, and a mean draught of 28 feet. The Renown, of 12,350 tons, is an improved Centurion, having a better protected and more powerful quick-firing armament, consisting of 10 6-inch, 14 12-pounder, and 12 3-pounder guns, and developing a speed of 18 knots with engines of 10,000 horse power. The Canopus, launched in 1897 and followed by the Ocean, Goliath, and Albion, is a type designed for speed and quick maneuvering, having a displacement of 12,900 tons, with 12 inches of extreme armor and a belt of 6 inches, instead of 9 inches as in the Majestic, engines of 13,500 horse power giving a speed of 18½ knots, and carrying 4 12-inch of the new type of breechloaders and 12 6-inch, 10 3-inch, and 6 3-pounder quick firers. The Glory and Vengeance, launched in 1899, have a stronger armament. Heavier armor was adopted for the Formidable and Irresistible, launched in 1898, of 14,700 tons, engines of 15,000 horse power, making 18 knots, and having a more powerful secondary armament, consisting of 12 6-inch Vickers guns and 16 3-inch and 6 6-pounder quick firers. Of this type are the London, Implacable, Bulwark, and Venerable, launched in 1899, having 18 3-inch guns and 8 3-pounders in their quick-firing battery and a 9-inch Krupp steel belt extending to within a few feet of the bow. The Duncan and Cornwallis have an improved armament. The Russell, Exmouth, Montagu, and Albemarle, of 14,000 tons, are a development of the London class, in which a lighter belt is used, one of 7 inches, not merely for greater speed but for less draught to enable them to pass through the Suez Canal. Their extreme armor is 11 inches; their armament consists of 2 pairs of 12-inch guns in barbetstes, 12 6-inch quick firers, and 12 of the 3-inch or 12-pounders and 6 3-pounders; their engines, of 18,000 horse power, are expected to give a speed of 19 knots. All the later battle ships, from the Canopus on, as well as the cruisers, are fitted with Belleville water-tube boilers. The protected cruisers Powerful and Venerable, of 14,200 tons, armed with 2 9.2-inch, 12 6-inch quick-firing, 18 12-pounders, and 12 3-pounders, have engines of 25,000 horse power and can easily steam 22 knots with forced draught. The Dido, Doris, and Isis, launched in 1896, displacing 5,600 tons, carry

5 6-inch and 4 4.7-inch quick firers, besides smaller ones, and with 9,600 horse power can steam 19½ knots. The Furious, Gladiator, Vindictive, and Arrogant, of 5,750 tons, carry 4 6-inch, 6 4.7-inch, 9 9-pounder, and 8 small quick-firing guns, and have engines of 10,000 horse power giving the same speed. The Hermes, Hyacinth, and Highflier, of 5,600 tons, are armed with 11 6-inch and 15 small quick firers, and can make 19½ knots with engines of 9,600 horse power. The Diadem, launched in 1896 and followed by the Andromeda, Niobe, Europa, Spartiate, Argonaut, Amphitrite, and Ariadne, is the latest development of the protected cruiser, displacing 11,000 tons, carrying 16 6-inch quick firers, 14 12-pounders, and 20 small ones, and steaming 20½ knots, with Belleville engines of 16,500 horse power. All these later vessels have a 4-inch curved steel deck covering their vital parts. Their strong armament is well protected, their freeboard is high, the bow and stern guns are placed well above water, and the numerous water-tight compartments make it impossible to sink them. The armored cruisers of the new programme of 1897 were the Cressy, Hogue, Aboukir, Sutlej, Euryalus, and Bacchante, of 12,000 tons, carrying 2 9.2-inch, 12 6-inch quick-firing, and 14 12-pounder quick-firing guns, and having engines of 21,000 horse power capable of making 21 knots with natural draught, their length being 440 feet, beam 69½ feet, and draught of water 26 feet 3 inches. Their armor-piercing guns of a new type have extraordinary range and penetrating power. The supplementary programme of 1898 called for 4 armored cruisers of 9,800 tons—the Kent, Monmouth, Bedford, and Essex—carrying 14 6-inch quick firers and a large number of small ones, and having engines of 22,000 horse power, capable of making 21 knots with natural draught. The latest type of the armored cruiser is represented by the Drake, King Alfred, Leviathan, and Good Hope, of 14,100 tons, armed with 9.2-inch bow and stern chasers of the new kind and 16 6-inch and 14 12-pounder quick firers, and fitted with engines of 30,000 horse power to produce a speed of 23 knots without forced draught. Of the latest destroyers 3 have made 32 or 33 knots with the newest water-tube boilers and the steam turbine wheel has been tried with 1 in order to attain a higher speed.

The navy estimates for 1901 amounted to £27,522,000, an increase of £928,100 over those of the preceding year, the growth in five years having been nearly 50 per cent. They do not include £2,000,000 expended under the naval works act. Subsequently a supplementary estimate of £1,269,300 increased the expenditure for the year to £28,791,000. The supplementary estimate was to provide additional reserves of guns, gun mountings, ammunition, and torpedoes, to replace old machine guns with Maxims, to purchase 5 destroyers, to build a repairing ship.

Commerce and Production.—The area sown to grain in Great Britain in 1899 was 7,406,887 and in Ireland 1,371,719 acres, to green crops in Great Britain 3,149,103 and in Ireland 1,101,991 acres, to flax in Great Britain 476 and in Ireland 34,986 acres, to hops in Great Britain 51,843 acres, small fruits in Great Britain 71,526 acres, clover and hay in Great Britain 4,807,951 and in Ireland 1,251,262 acres, bare fallow in Great Britain 338,574 and in Ireland 13,018 acres, pasture in Great Britain 16,630,747 and in Ireland 11,442,318 acres. There were in Great Britain 2,000,981 acres in wheat, 1,982,108 in barley, 2,959,755 in oats, 249,056 in beans, 162,751 in peas, 547,682 in potatoes, and 1,740,993 in turnips. In Ireland 51,859 acres were in wheat, 169,660 in barley, 1,135,675 in oats,

1,988 in beans, 426 in peas, 662,898 in potatoes, and 301,455 in turnips. The crops of grain obtained in Great Britain were 65,529,000 bushels of wheat, 67,716,000 of barley, and 114,747,000 of oats. In 1888 there were harvested in Great Britain 73,029,000 bushels of wheat, 68,052,000 of barley, 118,921,000 of oats, 7,200,000 of beans, 4,849,000 of peas, 3,283,000 tons of potatoes, and 21,337,000 tons of turnips; in Ireland, 1,856,000 bushels of wheat, 6,679,000 of barley, 53,657,000 of oats, 67,000 of beans, 9,000 of peas, 2,942,000 tons of potatoes, and 5,163,000 tons of turnips. The yield of wheat was 34.74 bushels an acre in Great Britain and 35.16 bushels in Ireland; of barley, 35.75 bushels in Great Britain and 42.23 bushels in Ireland; of oats, 40.76 bushels in Great Britain and 46.04 bushels in Ireland. In 1899 only 32.75 bushels of wheat were obtained in Great Britain. The live stock of Great Britain in 1899 consisted of 1,516,630 horses, 6,795,720 cattle, 27,238,754 sheep, and 2,623,813 pigs; in Ireland there were 501,982 horses, 4,507,272 cattle, 4,364,076 sheep, and 1,363,311 pigs.

Of 56,401,544 acres, the total area of Great Britain, 12,181,909 acres were under farm crops in 1900, and of the rest 4,373,000 acres were permanent meadow and 12,355,936 acres permanent pasture land, so that 28,910,944 acres, little over half the area of the island, were utilized to provide food for the population. The acreage under wheat declined to 1,845,042 acres; that under barley increased to 1,990,265 acres; that under oats to 3,026,088 acres; that under potatoes to 561,361 acres. Clover and rotation grasses occupied 2,557,377 acres. The number of cattle in 1900 was 6,805,170; of sheep, 26,592,226; of pigs, 2,381,932.

The quantity of fish landed on the coasts of the British Islands during 1899 was 730,315 tons, valued at £8,864,970, besides £1,520,632 worth of shellfish. The quantity of fish conveyed by railroad in 1898 was 486,784 tons. The imports of fish were 129,369 tons, valued at £2,931,764. The value of £2,586,752 was exported, including herrings worth £1,896,540. The quantity of iron ore raised in 1898 was 14,176,938 tons, valued at £3,406,628, containing 4,850,508 tons of iron, worth £12,740,043; the quantity of iron pyrites was 12,108 tons, worth £4,804; the quantity of lead ore was 32,985 tons, valued at £267,402, containing 25,355 tons of metal, of the value of £332,995; the quantity of copper ore was 9,001 tons, valued at £25,849, containing 640 tons of copper, of the value of £35,523; the quantity of copper precipitate was 130 tons, value £1,300; the quantity of zinc ore was 23,552 tons, valued at £117,784, containing 8,574 tons of zinc, valued at £179,482; the quantity of bog iron ore was 5,418 tons, value £1,354; the quantity of aluminum clay and shale was 26,019 tons, worth £4,600, containing 310 tons of metal, worth £45,880; the quantity of sodium obtained was 85 tons, worth £12,750; the quantity of silver extracted was 211,403 ounces, worth £23,728; the quantity of gold ore was 703 tons, valued at £1,158, containing 395 ounces or £1,299 worth of gold; total value of ores, £4,119,204; of metals, £13,717,512. The production of coal was 202,054,516 tons, worth £64,169,382; of clays, 14,738,474 tons, worth £1,616,358; of sandstone, 5,242,115 tons, worth £1,632,786; of slate, 668,859 tons, worth £1,000,228; of limestone, 11,980,578 tons, worth £1,256,154; of salt, 1,878,665 tons, worth £620,115; of oil shale, 2,137,993 tons, worth £534,498; of granite, 1,875,817 tons, worth £576,457; of basalt, 2,602,491 tons, worth £465,543; of chalk, 4,298,014 tons, worth £180,651; of gravel and sand, 1,625,690 tons, worth £135,538; of gypsum, 196,028 tons, worth £71,316; of arsenic and

arsenical pyrites, 15,318 tons, worth £01,931; of barytes, 22,225 tons, worth £23,253; of ocher, 19,827 tons, worth £13,003; of other nonmetallic minerals, 98,100 tons, worth £38,646; total value, £73,295,859, or including ores £77,415,063. There was an increase over 1897 of £5,371,202 in the value of minerals and of £1,449,421 in the value of metals produced. Of the total value of mineral products England furnished £55,400,674, Wales £10,474,420, Scotland £11,271,000, Ireland £214,126, and the Isle of Man £53,982. The number of workers in the mines was 741,125, of whom 706,984 were in the coal mines and 34,231 in metaliferous mines, and in quarries 134,478 persons were employed. The exports of coal in 1898 were 36,562,796 tons, valued at £18,135,502. The exports went to France, Italy, Germany, Sweden, Russia, Egypt, Spain, Denmark, Brazil, Norway, the Argentine Republic, Holland, Portugal, and Algeria. The quantity of iron ore imported in 1898 was 5,468,396 tons, valued at £4,030,648, of which five sevenths came from Spain. The quantity of ore smelted in 378 blast furnaces was 20,958,167 tons in 1898, producing 8,609,719 tons of pig iron. The quantity of pig and puddled iron imported was 159,523 tons; pig and puddled iron exported, 1,042,853 tons. The export of bar and angle iron was 150,119 tons; railroad iron, 609,403 tons; wire, 44,123 tons; plates for tinning, 58,327 tons; tin plates, 250,953 tons; cast and wrought iron, 355,662 tons; hoops and plates, 327,788 tons; old iron, 84,802 tons; steel, unwrought, 285,249 tons; steel and iron, 35,071 tons; total iron and steel exports, 3,244,350 tons. The import of copper ore and regulus was 104,707 tons; of copper, 72,957 tons; of lead, 194,479 tons; of tin, 20,329 tons; of zinc, 77,470 tons.

The quantity of raw cotton imported in 1898 was 2,128,548,352 pounds; retained for home consumption, 1,925,475,888 pounds; exported, 203,072,464 pounds. The importation of raw wool was 694,299,738 pounds; retained for home consumption, 410,881,985 pounds; exported, 283,317,748 pounds. Of the total quantity imported 447,587,548 pounds were Australian wool. The consumption of cotton in 1899 was 1,759,000,000 pounds; of wool, 631,000,000 pounds; of flax, 227,000,000 pounds. The value of cotton manufactures exported was £67,555,000; of wool manufactures, £21,508,000; of linen manufactures, £5,584,000. The imports of raw cotton in 1899 were 1,626,000,000 pounds, of which 284,000,000 pounds were exported, leaving for home consumption 1,342,000,000 pounds. The imports of sheep and lamb wool in 1899 were 665,000,000 pounds; obtained from imported sheepskins, 31,000,000 pounds; domestic production, 140,000,000 pounds; goats' hair imported, 28,000,000 pounds; import of woollen rags, 73,000,000 pounds; total wool supply, 937,000,000 pounds, from which are deducted 284,000,000 pounds of foreign and 22,000,000 pounds of domestic wool exported, which leaves 631,000,000 pounds retained for home consumption. The imports of flax and tow in 1899 were 221,000,000 pounds and the home production amounted to 15,000,000 pounds, while the exports were 9,000,000 pounds, leaving 227,000,000 for home consumption. The cotton yarn exported in 1899 was 213,000,000 pounds in amount; woollen yarn, 64,000,000 pounds; linen yarn, 18,000,000 pounds. The total value of cotton goods exported in 1899 was £67,500,000; of woollen goods, £21,500,000; of linen goods, £5,600,000; total, £94,600,000.

The total value of imports into the United Kingdom in 1899 was £485,075,514; exports of British produce, £264,060,647; exports of foreign

and colonial produce, £65,019,549; total imports and exports, £814,755,710. The per capita value of the commerce passed £19, which was less than in 1889, 1890, and 1891, but more considerably than in the intervening years. The share of England and Wales in the total trade of 1898 was 90.6 per cent.; of Scotland, 7.9 per cent.; of Ireland, 1.5 per cent. The total value of imports in 1898 was £470,378,583; of exports of British produce, £233,359,240; of exports of colonial and foreign produce, £60,654,748; total trade, £764,392,571. The imports from British possessions and the exports to them of British produce and manufactures in 1898 are given in the following table:

BRITISH POSSESSIONS.	Imports.	Exports.
India.....	£27,470,061	£29,729,589
Australasia.....	28,850,294	21,123,086
British North America.....	20,754,642	6,154,773
South and East Africa.....	6,173,876	12,457,194
Straits Settlements.....	3,941,909	2,778,312
Hong-Kong.....	726,637	2,226,115
British West Indies.....	1,223,413	1,899,980
Ceylon.....	4,847,731	1,177,138
British Guiana.....	575,714	807,247
Channel Islands.....	1,553,065	1,067,577
West Africa.....	2,352,225	1,999,505
Malta.....	92,889	790,785
Mauritius.....	100,883	289,242
All others.....	710,686	1,241,588
